WIDE WORLD

VIETNAM 1967: Weariness overcomes a U. S. infantryman during a pause in the fighting. The war grew in intensity during the year.

PREFACE

In an age of communications marvels, a lot of people were failing to communicate with each other in 1967. The calamities resulting from that failure are described in this 46th edition of THE AMERICANA ANNUAL.

Even as earthbound scientists were manipulating a metal claw on the surface of the moon, and sending one of their machines into the atmosphere of Venus some 49 million miles away, the world's politicians and diplomats were unable to communicate across the width of a conference table, if they sat down at a table at all. As a consequence, an old war in Vietnam and a new war in the Middle East produced—in this day of scientific wonders—the same misery and degradation that have afflicted man from his primitive beginnings.

The gulf between the darker and brighter sides of man's nature remained all too apparent in 1967, but other chasms were widening all over the world—between the rich and the poor, between the industrialized and the underdeveloped nations, and between the food supply and a soaring population. But perhaps nowhere were the divisions as dramatically evident as in the United States. Deep and bitter gaps were opening between supporters and critics of the war in Southeast Asia, between young people and their elders, between the affluent and the impoverished, and, most tragically, between blacks and whites. The Negro protest movement was taking new and alarming directions, and violence broke across the land like a summer storm.

Scarcely seven years had elapsed since that bright, frosty noon in Washington, D. C., when John F. Kennedy delivered his first and last inaugural address. Americans whose hearts were stirred by that exalted restatement of the nation's highest ideals now looked upon the debris of their strife-torn cities, the brutalizing war in Vietnam, and the angry alienation of their youth. They might well wonder, as Army tanks rumbled through the streets of Newark and Detroit, when and where America had lost its way.

It was a year of tribulation in other countries, too. Spectacularly in the Middle East, but also in mainland China, Nigeria, and Greece, upheavals occurred that sent reverberations around the world. The pace of history seemed to be quickening as the world entered the last third of the 20th century. Developments in technology, medicine, religion, culture, and economics affected the lives of everyone and promised even greater changes for the future.

Each year it becomes increasingly difficult to select from the welter of news the most important, the most meaningful, or simply the most interesting events for inclusion in THE AMERICANA ANNUAL. The editors are profoundly indebted to the thousands of persons who helped in the endeavor to meet that challenge in the present volume.

CHRONOLOGY • PART 1

OUTSTANDING DATES OF 1967

JANUARY

13—Togo Army Chief of Staff Col. Étienne Eyadema deposes President Nicolas Grunitzky in a swift, bloodless coup.

27—U. S. astronauts Virgil I. Grissom, Edward H. White II, and Roger B. Chaffee are killed in a flash fire in the Apollo spacecraft during a test on the launch pad at Cape Kennedy, Fla.

30—USSR President Nikolai V. Podgorny confers with Pope Paul VI while on an official visit to Italy.

FEBRUARY

5—Anastasio Somoza Debayle, Jr., son and brother of presidents, sweeps Nicaraguan presidential elections after riot-torn campaign.

12—Representatives of 21 Latin American states, meeting in Mexico City, negotiate treaty banning nuclear weapons in Central and South America and the Caribbean region.

20—President Sukarno of Indonesia transfers his executive powers to General Suharto.

24—Congress party is returned to power in India after national elections, but with a greatly reduced majority.

MARCH

12—India's Prime Minister Indira Gandhi is reelected.

12—Indonesian Congress formally strips Sukarno of all his titles, retroactive to Feb. 22.

18—Tanker *Torrey Canyon* goes aground and breaks up at western entrance to English Channel, releasing oil that pollutes coasts of southwest Britain and Normandy (France).

19—French Somaliland, in a referendum on independence, chooses to continue its association with France.

21—Secret exchange of letters between U. S. President Johnson and North Vietnamese President Ho Chi Minh is revealed; Ho rejected Johnson's proposal for peace talks.

23–27—Military junta seizes control in bloodless coup in Sierra Leone after post-election controversy; Lt. Col. Andrew Juxon-Smith is named chairman of an 8-man National Reformation Council.

31—First U. S.-USSR consular treaty since the Russian Revolution is signed by President Johnson.

APRIL

14—Summit meeting of the Organization of American States (OAS) at Punta del Este, Uruguay, ends with agreement to form a Latin American common market by 1985.

19—Former West German Chancellor Konrad Adenauer dies in Rhöndorf, West Germany, at age 91.

21—Military junta seizes control in Greece.

21—Svetlana Alliluyeva, daughter of late Soviet dictator Joseph Stalin, takes up residence in the U. S. after having defected to the West (March 6) while on a visit to India.

24—Soviet cosmonaut Vladimir M. Komarov becomes the first known casualty of an actual space mission, when his spacecraft crashes on re-entry.

MAY

6—Vice President Dr. Zakir Husain is elected president of India, succeeding Sarvepalli Radhakrishnan, who declined to run for reelection.

15—Kennedy Round negotiators of the General Agreement on Tariffs and Trade (GATT) reach agreement in Geneva on marked reductions in import duties.

18—UN Secretary-General U Thant orders withdrawal of UN peace-keeping forces from the United Arab Republic-Israel border at UAR President Nasser's demand.

19—UN General Assembly votes to establish a UN council and a UN commissioner to administer South West Africa; South Africa claims the territory under a League of Nations mandate terminated by the UN in 1966.

22—UAR closes the Gulf of Aqaba to Israeli shipping.

26—Seventh-largest known diamond is found on a small claim in northeastern Lesotho.

30—Eastern Region of Nigeria declares itself the independent Republic of Biafra.

30—Anguilla secedes from the associated state of St. Kitts-Nevis-Anguilla in the Commonwealth of Nations.

JUNE

5–10—In a 6-day war, Israel defeats the Arab states, occupying most of Egypt's Sinai Peninsula and Gaza Strip, Jordanian territory west of the Jordan River (including Old Jerusalem), and the heights of southwestern Syria; UN Security Council adopts 3 cease-fire resolutions.

9–10—UAR President Nasser resigns, then bows to "people's will" and decides to remain in office.

13—President Johnson appoints Thurgood Marshall the first Negro associate justice of the U. S. Supreme Court.

17—Communist China announces that it has successfully exploded its first hydrogen bomb.

23, 25—President Johnson and Soviet Premier Kosygin hold "useful" talks on a wide range of issues at Glassboro, N. J., during Kosygin's visit to the United States to address the UN on the Mideast situation.

26—U. S. and Panamanian negotiators reach agreement (subject to ratification) on new treaties governing the Panama Canal and Canal Zone.

29—Kenya breaks diplomatic relations with Communist China, charging interference in its internal affairs.

30—Plane carrying Moïse Tshombe, exiled former premier of the Congo (Kinshasa), is forced to land in Algeria.

JULY

6—Fighting erupts between Nigerian federal forces and Biafran troops.

12–17—Six days of rioting in Negro section of Newark, N. J., results in 26 deaths and widespread devastation.

18—Britain announces it plans a staged military withdrawal from Southeast Asia by the mid-1970's.

21—Former Zulu Chief Albert Luthuli, winner of the Nobel Peace Prize for 1960, dies in South Africa.

23–30—Eight days of rioting in Detroit result in death toll of 43 and damage estimated above $150 million; at the request of Michigan Gov. George W. Romney, President Johnson authorizes (July 24) sending of federal troops to aid National Guard and local and state police.

24–26—French President de Gaulle, in Montreal, calls for a "Free Quebec"; cuts short his official visit after rebuke by Canadian Prime Minister Lester B. Pearson.

AUGUST

4—Czechoslovakia and West Germany establish diplomatic relations on the consular level.

10—First conference of the Communist revolutionary Organization of Latin American Solidarity, in Havana, Cuba, ends with the adoption of a manifesto supporting revolutions and condemning U. S. "imperialism" and "reactionary" Latin American regimes.

22—Communist Chinese Red Guards invade, burn, and sack British diplomatic compound in Peking.

24—U. S. and USSR jointly present to the 18-nation UN Disarmament Committee in Geneva identical but incomplete drafts of a treaty outlawing the proliferation of nuclear weapons.

31—Malaysia and Indonesia establish diplomatic relations.

SEPTEMBER

3—Nguyen Van Thieu becomes president and Nguyen Cao Ky, vice president in South Vietnamese elections.

8—Uganda officially becomes a republic under a new constitution, which confers broad powers on the president.

10—Voters in British colony of Gibraltar reject Spanish rule in a British-sponsored referendum.

18—United States announces plans to deploy a limited missile defense system against the possibility of attack by Communist China.

22–24—OAS foreign ministers, meeting in Washington, adopt new anti-Cuban policies and agree on steps to fight subversion within the hemisphere.

OCTOBER

4—Nigerian troops capture Biafran capital of Enugu.

5—India announces that it suffered 251 casualties in recent border clashes with Communist China.

10—Bolivian army confirms the capture (Oct. 8) and death of Cuban insurrectionist Ernesto (Che) Guevara.

12—U. S. Secretary of State Dean Rusk declares that U. S. security is at stake in Vietnam.

18–19—Separate Soviet and U. S. Venus probes transmit data on planet's atmosphere.

21—Thousands protesting the Vietnam War are repulsed by marshals and soldiers at the Pentagon in Washington.

21—UAR missiles sink the Israeli destroyer *Elath*.

24—Israel shells UAR oil installations in Suez city.

26—Shah of Iran crowns himself and Empress Farah.

28—Kenya and Somalia agree to curb their border war and restore diplomatic ties.

28—Mexican and U. S. presidents participate in ceremonies restoring to Mexico the contested El Chamizal area, formerly part of Texas.

29—Expo 67 ends 211-day run in Montreal, Canada, with total attendance of 50,306,648.

30—Two unmanned Soviet spaceships dock in orbit.

NOVEMBER

4—Congolese troops capture Bukavu, stronghold of mercenaries and Katangese rebels.

5—Abdul Rahman al-Iryani becomes provisional head of Yemen after President Abdullah al-Salal is overthrown.

9—U. S. Saturn 5, world's biggest known rocket, orbits unmanned Apollo spacecraft.

18—British pound is devalued 14.3% to U. S.$2.40.

22—UN Security Council unanimously adopts a British-sponsored framework for peace in the Middle East.

30—Former British territories of Aden and South Arabia become a single independent state, the People's Republic of South Yemen.

DECEMBER

2—Francis Cardinal Spellman, cardinal in the Roman Catholic Church and leader of the New York archdiocese, dies.

3—Greece and Turkey reportedly reach an accord averting war over Cyprus.

3—South African surgeon Dr. Christiaan Barnard performs the world's first human heart transplant.

8—Last UAR troops leave Yemen.

13–14—King Constantine of Greece unsuccessfully attempts to oust the military junta; goes into exile in Rome.

17—Australian Prime Minister Harold Holt disappears while swimming in dangerous surf off Portsea, Victoria.

17–18—Military coup overthrows government of President Christophe Soglo in Dahomey; Maj. Maurice Kouandete becomes head of state.

CHRONOLOGY • PART 2

TOPICAL SURVEY OF THE YEAR

This survey is a selected chronology of the year's most significant events. The important events of 1967 are listed in chronological order under their appropriate subject headings. This manner of presentation allows the reader to review quickly the events of the past year in any single subject. A special emphasis has been laid on both national and international political developments. Articles on all the countries, persons, organizations, and fields of interest listed here will be found in the main text of this volume. Main subject headings are listed in alphabetical order. The cross references refer only to headings within this survey.

ACCIDENTS AND DISASTERS—See Alaska; Belgium; Brazil; Colombia; Turkey; Venezuela

SPACE EXPLORATION

Communications Satellite Corporation launches Pacific 1, second Intelsat, satellite, as link between North America and Far East, **Jan. 11**

U. S. Environmental Science Services Administration orbits ESSA 4 weather satellite, first of three 1967 launches in this series, **Jan. 26**

Astronauts Virgil I. Grissom, Edward H. White II, and Roger B. Chaffee are killed in flash fire on launch pad at Cape Kennedy, Fla., while testing Apollo craft, **Jan. 27**

U. S. Lunar Orbiter 3 achieves successful orbit around moon and begins 14-day photographic mission to study 12 possible sites for future manned landing, **Feb. 8**

Intelsat 2 F-3 is launched to provide commercial communications link over Atlantic Ocean, **March 22**

Report of U. S. board of review investigating Apollo tragedy blames fire on faulty wiring; criticizes National Aeronautics and Space Administration and manufacturer of spacecraft for inadequate safety precautions, **April 9**

U. S. Surveyor 3 moon probe, equipped with claw for digging, bounces three times before it soft-lands near Ocean of Storms and begins to transmit photographs, **April 19**

Soviet cosmonaut Vladimir M. Komarov becomes first known casualty of actual space mission, when his Soyuz 1 vehicle tangles in its parachute lines while descending from 1-day flight and plunges 4.3 miles, **April 24**

Italy sends San Marco 2 into near-equatorial orbit and becomes fourth nation to launch an earth satellite, **April 26**

Lunar Orbiter 4 enters orbit of moon to continue mapping mission of U. S. series of probes, **May 8**

Molniya 1 E, first of three Soviet communications satellites launched in 1967, is placed in orbit, **May 24**

Lunar Orbiter 5 begins final mission of U. S. series, in which it also photographs the earth from the moon, **Aug. 5**

U. S. Biosatellite 2 research laboratory, carrying biological specimens to study effects of weightlessness and radiation, returns from 2-day orbital mission, **Sept. 9**

U. S. Surveyor 5, equipped to make a simple chemical analysis of the lunar surface material, soft-lands on moon at edge of Sea of Tranquillity, **Sept. 10**

USSR parachutes instrumented capsule from Venus 4 spacecraft to surface of Venus; data show atmospheric conditions inhospitable to life, **Oct. 18**

U. S. Mariner 5 space probe passes behind Venus at distance of 2,480 miles and sends back data, **Oct. 19**

Two unmanned Soviet satellites, Cosmos 186 and 188, are docked by command from earth while in orbit and fly together 3½ hours before separating, **Oct. 30**

U. S. Surveyor 6 lands safely at center of visible face of the moon and begins returning pictures and data, **Nov. 9**

U. S. Saturn 5 rocket blasts unmanned Apollo craft into orbit in flawless flight of 8½ hours, **Nov. 9**

Australia becomes fifth nation to launch a satellite, orbiting WRESAT 1 weather satellite, **Nov. 28**

U. S. Test and Training Satellite 1 is launched (with Pioneer 8 solar orbiter) to serve as a checkpoint for Manned Space Flight Network, **Dec. 13**

SPAIN

Police battle 5,000 rioting workers in Bilbao, **April 4**

Demonstrations are staged against the Franco regime in 13 Spanish cities, giving rise to the worst outbreak of violence since the Spanish Civil War, **May 1**

Voters in Gibraltar reject Spanish rule in a British-sponsored referendum condemned by a UN committee, **Sept. 10**

Spaniards vote in the first direct election under the 1966 constitution for members of the Cortes; some opposition to the Franco regime is registered, **Oct. 10**

Spain, following the lead of Britain, devalues its currency (the peseta) by 14.3%, **Nov. 20**

Spanish supreme court rules all strikes illegal, **Dec. 12**

SPELLMAN, Francis Cardinal

Cardinal of Roman Catholic Church and leader of New York archdiocese dies in New York at age 78, **Dec. 2**

SPORTS

Purdue University defeats University of Southern California, 14–13, in Rose Bowl game, **Jan. 2**

Green Bay Packers defeat Kansas City Chiefs, 35–10, in first Super Bowl (for professional football championship) at Los Angeles, **Jan. 15**

UCLA, led by Lew Alcindor, routs Dayton, 79–64, at Louisville, Ky., for the NCAA basketball title, **March 25**

Gay Brewer posts 280 to finish first in Masters golf championship at Augusta, Ga., **April 9**

Philadelphia 76ers win National Basketball Association championship, defeating San Francisco Warriors, 4 games to 2, **April 24**

Cassius Clay, undefeated heavyweight boxer, is divested of his title for refusing induction into the U. S. Army, **April 28**

Toronto Maple Leafs win Stanley Cup hockey title, defeating Montreal Canadians, 4 games to 2, **May 2**

Proud Clarion, Bob Ussery up, wins Kentucky Derby by a length at Louisville, **May 6**

A.J. Foyt of Houston takes Indianapolis 500 auto race, **May 31**

Jack Nicklaus wins U. S. Open golf championship at Baltusrol Country Club, Springfield, N. J., **June 18**

Jim Ryun of University of Kansas betters his own world record for the mile (3:51.1) at Bakersfield, Calif., **June 23**

Billie Jean King defeats Ann Haydon Jones of Britain, 6–3, 6–4, to retain Wimbledon tennis crown, **July 8**

Debbie Meyer, 15-year-old swimmer, sets a world mark of 17:50.2 for the 1,500-meter freestyle in national AAU meet at Philadelphia, **Aug. 20**

U. S. yacht *Intrepid* defeats Australian *Dame Pattie* in four straight races for America's Cup, **Sept. 12–18**

St. Louis Cardinals win baseball's World Series by beating Boston Red Sox in 7th and deciding game, **Oct. 12**

Green Bay Packers defeat Dallas Cowboys, 21–17, to retain the National Football League title, **Dec. 31**

SUDAN

Summit meeting of Arab leaders is held at Khartoum; financial aid for war-damaged UAR and Jordan is approved, **Aug. 29–Sept. 1**

SUPREME COURT, U. S.

Supports freedom of the press, ruling that damages cannot be collected for invasion of privacy by articles giving false reports, unless these are deliberate or reckless, **Jan. 9**

Declares unconstitutional New York state loyalty law barring appointment or retention of teachers unless they sign certificates that they are not members of the Communist party, **Jan. 23**

Orders that children accused of crime be given the same rights as adults, including the right to have a lawyer and to be warned against self-incrimination, **May 15**

Holds unconstitutional an amendment to the California state constitution allowing property owners to discriminate in resale or rental of housing, **May 29**

Declares unconstitutional the Virginia statute forbidding marriage between whites and nonwhites, **June 12**

Thurgood Marshall is named by President Johnson to succeed retiring Associate Justice Tom C. Clark; Marshall is the first Negro to serve on the court, **June 13**

SWEDEN

Major political parties agree to support wide-ranging constitutional reforms, **March 17**

Sweden applies for associate membership in the European Economic Community, **July 28**

A switch from left-hand to right-hand driving is made on Sweden's roads after four years of preparation, **Sept. 3**

SYRIA

Syrian and Israeli jets engage in air clashes, **April 7**

Jordan orders Syrian ambassador to leave; common border is closed, **May 23**

During Israeli-Arab war, Syria joins with Jordan and the United Arab Republic; loses Golan highlands to Israeli occupation before cease-fire, **June 5–10**

Syria denounces and boycotts Arab summit conference in Khartoum, Sudan, **Aug. 29–Sept. 1**

President el-Atassi denounces UN Security Council resolution on the Middle East, **Nov. 23**

TANZANIA

President Julius K. Nyerere issues the Arusha Declaration, a blueprint for Tanzanian socialism, and proceeds to nationalize numerous private industries, **February 5**

THANT, U—See UNITED NATIONS

TOGO

Army Chief of Staff Col. Étienne Eyadema deposes President Nicolas Grunitzky in a bloodless coup, **Jan. 13**

Eyadema assumes presidency, promising army withdrawal when situation returns to "normal," **April 14**

TRACY, Spencer

U. S. stage and screen actor dies in Beverly Hills, Calif., at age 67, **June 10**

TURKEY—See also CYPRUS

Premier Süleyman Demirel reshuffles his 22-man cabinet after 9 ministers resign, **April 1**

President Cevdet Sunay begins a 9-day visit to the United States, **April 3**

Three severe earthquakes kill some 200 persons and injure many more, **July 22–30**

Turkey and Greece work out accord in crisis that threatened to bring them to war over Cyprus, **Dec. 1–3**

UGANDA

Nation officially becomes a republic under new constitution, which confers broad powers on the presidency, **Sept. 8**

UNION OF SOVIET SOCIALIST REPUBLICS—See also KOSYGIN

President Nikolai V. Podgorny confers with Pope Paul while on an official visit to Italy, **Jan. 30**

Dependents of Soviet embassy personnel in Peking are ordered home after instances of harassment, **Feb. 4**

Premier Aleksei N. Kosygin pays state visit to Britain; arranges Anglo-Soviet "hot line," **Feb. 6–13**

Svetlana Alliluyeva, daughter of late dictator Joseph Stalin, arrives in the United States after having defected to the West (March 6) while on a visit to India, **April 21**

Cosmonaut Vladimir M. Komarov is killed when his spacecraft crashes on reentry, **April 24**

Government ratifies pact with the United States and other nations to ban nuclear weapons in space, **May 19**

USSR breaks diplomatic relations with Israel, **June 10**

Kosygin denounces Israel at Soviet-sponsored emergency session of the UN General Assembly on Middle East, **June 19**

Kosygin and U. S. President Johnson hold summit conference at Glassboro, N. J., **June 23, 25**

Aleksandr N. Shelepin, a member of the ruling Politburo, who once was regarded as a potential head of the Soviet Communist party, is transferred (demoted) from his post as secretary of the party's Central Committee, **July 11**

United States and USSR submit partial draft treaty, banning the spread of nuclear weapons, to the UN Disarmament Committee in Geneva, **Aug. 24**

USSR concludes agreements with North Vietnam providing for continuing military and economic aid, **Sept. 23**

Instrument capsule from Soviet spacecraft Venus 4 lands on planet Venus; data show atmospheric conditions inhospitable to life, **Oct. 18**

Two unmanned Soviet spaceships dock in orbit, **Oct. 30**

U. S. Secretary of Defense Robert S. McNamara reports that USSR is developing an orbital missile, **Nov. 3**

Andrei A. Grechko is named minister of defense, succeeding Rodion Y. Malinovsky, who died March 31, **April 12**

Celebration of the 50th anniversary of the Bolshevik Revolution begins in Moscow, **Nov. 4**

United States and USSR reach agreement to limit Soviet fishing off the U. S. Middle Atlantic coast, **Nov. 25**

UNITED ARAB REPUBLIC

President Nasser demands that UN peace-keeping forces be withdrawn from the Gaza Strip and the Sinai Peninsula; UN Secretary-General U Thant acquiesces, **May 18**

UAR closes Gulf of Aqaba to Israeli shipping, **May 22**

Nasser signs defense pact with King Hussein of Jordan, his former adversary, **May 30**

During the 6-day Israeli-Arab war the UAR suffers heavy losses and defeat, losing the Gaza Strip and the Sinai Peninsula to Israeli occupation; the Suez Canal is closed, **June 5–10**

The UAR severs diplomatic ties with the United States, **June 6**

Nasser resigns the presidency but, bowing to "people's will," decides to remain in office, **June 9–10**

Nasser names himself premier and assumes the leadership of Egypt's sole political party, the Arab Socialist Union, **June 19**

UAR forces are reported evacuating Yemen, **Sept. 10**

UAR missiles sink Israeli destroyer *Elath*, **Oct. 21**

Israel destroys UAR oil refineries at Suez city, **Oct. 24**

UNITED NATIONS

Secretary-General U Thant orders withdrawal of UN peace-keeping forces from the United Arab Republic–Israel border at UAR President Nasser's demand, **May 18**

General Assembly special session votes to establish a UN council and a UN commissioner to administer the territory of South West Africa, **May 19**

25th Amendment to U. S. Constitution, redefining lines of presidential succession, is ratified, **Feb. 10**

President Johnson directs the Central Intelligence Agency (CIA) to end covert financial backing of private organizations following furor over disclosure of secret CIA financing of National Student Association and other groups, **March 29**

Former Senate aide Robert G. Baker, convicted on Jan. 29 of income tax evasion, theft, fraud, and conspiracy, is sentenced to 1 to 3 years in prison, **April 7**

New York (Harlem) Congressman Adam Clayton Powell is reelected to House in special election; Powell was previously denied his seat by a House vote of 307 to 116 on March 1; charges against him included misappropriation of funds and defying the courts, **April 11**

Spacecraft Surveyor 3, launched April 17, makes soft landing on moon and sends photos; its mechanical scoop digs up soil-like moon surface, **April 19**

Supreme Court upsets Virginia law against interracial marriage, **June 12**

Cassius Clay, who was stripped of his world heavyweight boxing title on April 28 because of his refusal to be drafted, is convicted of violating the selective service law and sentenced to 5 years in prison, **June 20**

Senate votes 92–5 to censure Sen. Thomas J. Dodd (Connecticut Democrat) for using political campaign funds "for his personal benefit," **June 23**

Six days of rioting in a predominantly Negro section of Newark, N. J., result in death toll of 26, property damage estimated at $15–30 million, and devastation of a 10-square-mile area, **July 12–17**

Eight days of rioting in Detroit result in death toll of 43 and damage estimated above $150 million; at the request of Michigan Gov. George W. Romney, President Johnson authorizes (July 24) sending of federal troops to aid National Guard and police, **July 23–30**

President Johnson appoints 11-member Advisory Commission on Civil Disorders to investigate and report on causes of urban violence and to recommend remedial measures, **July 27**

George Lincoln Rockwell, founder of the American Nazi party, is shot to death in Arlington, Va., **Aug. 25**

Secretary of Defense Robert S. McNamara announces plans to deploy limited missile defense system against possibility of attack by Communist China, **Sept. 18**

Spacecraft Mariner 5 passes Venus and collects data on planet's atmosphere, **Oct. 19**

Federal marshals and soldiers repulse thousands of demonstrators storming the Pentagon after an anti-Vietnam War rally that brought estimated 50,000 protesters to Washington, **Oct. 21**

In off-year elections, two Negro Democrats are elected mayors of large cities: Carl B. Stokes in Cleveland and Richard G. Hatcher in Gary, Ind., **Nov. 7**

Saturn 5 rocket blasts unmanned Apollo spacecraft into successful orbit and splashdown—a major step to a manned moon landing; Saturn 5 is the heaviest object man has propelled into space, **Nov. 9**

U. S. population officially reaches 200 million at 11:03 A.M., **Nov. 20**

President Johnson nominates Defense Secretary McNamara to head the World Bank, **Nov. 27**

Lynda Bird Johnson, daughter of President Johnson, is married to Marine Capt. Charles S. Robb in the White House, **Dec. 9**

FOREIGN AFFAIRS

President Johnson holds strategy meeting with South Vietnamese leaders in Guam; communiqué states that talks demonstrated determination of the allies to "defend freedom" in South Vietnam while searching for an "honorable peace," **March 20–21**

North Vietnamese press agency reveals, and U. S. State Department confirms, secret exchange of letters between President Johnson (Feb. 2) and President Ho Chi Minh (March 10); Johnson suggested direct negotiations, with reciprocal military de-escalation, but Ho rebuffed offer and demanded unconditional cessation of U. S. bombing, **March 21**

First U. S.-USSR consular treaty since Russian Revolution is signed by President Johnson, **March 31**

Svetlana Alliluyeva, daughter of former Soviet dictator, Joseph Stalin, takes up residence in the United States following defection from the USSR on March 6, **April 21**

United States ratifies 1966 UN-sponsored treaty banning nuclear weapons in space (signed Jan. 27, 1967), **April 25**

President Johnson and Soviet Premier Kosygin communicate via "hot line" to avoid misunderstandings during Middle East crisis, **June 5, 8**

Defense Department reports that 34 men were killed on communications ship *Liberty,* when it was mistakenly attacked by Israel in Mediterranean on June 8 during Israeli-Arab war, **June 14**

President Johnson and Soviet Premier Kosygin meet for the first time and hold "useful" talks on a wide range of issues at Glassboro, N. J., **June 23, 25**

U.S. and Panamanian negotiators reach agreement on treaties providing that the United States yield sovereignty in Panama Canal Zone and that both countries participate in operating canal, **June 26**

President Johnson authorizes air attacks on targets in North Vietnam previously off limits, including Hanoi-Haiphong area, **Aug. 8**

U. S. and USSR jointly present to Geneva Disarmament Committee a partial draft treaty outlawing spread of nuclear weapons, **Aug. 24**

President Johnson and Mexican President Díaz participate in ceremonies in Juárez, Mexico, transferring to Mexico 437 acres formerly in Texas, **Oct. 28**

Presidential envoy Cyrus R. Vance ends 10-day mission to Greece and Turkey after securing agreement averting war over Cyprus, **Dec. 3**

APPOINTMENTS

President Johnson names Ramsey Clark to succeed Nicholas deB. Katzenbach as attorney general, **Feb. 28**

Ellsworth Bunker is appointed ambassador to South Vietnam, succeeding Henry Cabot Lodge, **March 15**

Johnson nominates as secretary of commerce Alexander B. Trowbridge, who had been acting secretary since John T. Connor resigned on Jan. 18, **May 22**

John Charles Daly is named director of the Voice of America, succeeding John Chancellor, **May 29**

Johnson names Solicitor General Thurgood Marshall to the Supreme Court, replacing Tom C. Clark, who announced his retirement June 12 to avoid possible conflict of interest following nomination of his son Ramsey Clark as U. S. attorney general; Marshall is the first Negro appointed to the court, **June 13**

Paul R. Ignatius is named secretary of the Navy, replacing Paul H. Nitze, who was appointed deputy secretary of defense June 10, **Aug. 4**

Johnson nominates Secretary of Defense Robert S. McNamara as president of the World Bank, succeeding retiring George D. Woods, **Nov. 27**

URUGUAY

Oscar D. Gestido is inaugurated as president for a 5-year term, **March 1**

A summit conference of American presidents is held at Punta del Este, **April 12–14**

President Gestido declares a state of siege to control social and labor disorders, **Oct. 9**

A 100% devaluation of the peso is announced, **Nov. 6**

President Gestido dies of a heart attack; Jorge Pacheco Areco is sworn in as president, **Dec. 6**

VENEZUELA

Constitutional guarantees, restored March 2, are suspended again following guerrilla assassination of the brother of Venezuela's foreign minister, **March 3**

Organization of American States (OAS) report substantiates Venezuelan charges that Cuban government was behind guerrilla landing near Caracas, Venezuela, in May, **June 26**

Caracas and nearby towns are rocked by series of earthquakes; death toll stands at 277, **July 29**

VIETNAM, South—See also Vietnam War

Premier Nguyen Cao Ky begins a 10-day visit to Australia and New Zealand, **Jan. 18**

Constituent Assembly adopts new constitution, **March 18**

Premier Ky and Chief of State Nguyen Van Thieu confer with U. S. President Johnson in Guam, **March 20–21**

Voting begins for village and hamlet officials in elections scheduled to continue for 10 Sundays, **April 2**

Ellsworth Bunker replaces Henry Cabot Lodge as U. S. ambassador to South Vietnam, **April 25**

Nguyen Van Thieu wins a 4-year term as president, and Nguyen Cao Ky becomes vice president; Senate elections are held on the same day, **Sept. 3**

Electorate goes to the polls again to elect 137-member House of Representatives, **Oct. 22**

President Thieu is inaugurated; appoints Nguyen Van Loc premier, **Oct. 31**

U.S. paratroopers honor fallen comrades (symbolized by boots) in South Vietnam.

UPI

HURRICANE BEULAH hits the Texas coastal area in September and drives these shrimp boats aground at Port Isabel.

ACCIDENTS AND DISASTERS

Every three seconds—the time required to take one breath—someone in the United States suffers a disabling injury from an accident, according to the National Safety Council.

Accidents in the United States. In the first eleven months of 1967, accidental deaths totaled about 101,900, a 1% decrease from the same period in 1966. On the basis of rates established during the first eleven months of 1967, motor vehicle fatalities may nearly equal the record toll of 53,000, set in 1966.

Motor vehicle and public accidents showed no change in the number of fatalities compared with the same period in 1966. Home fatalities were down 3% and work fatalities decreased 1%.

ACCIDENTAL DEATHS IN THE U.S., 1962–67

Year	Total[1]	Motor vehicle	Public nonmotor vehicle	Home	Work
1962	97,139	40,804	17,000	28,500	13,700
1963	100,669	43,564	17,500	28,500	14,200
1964	105,000	47,700	18,500	28,000	14,200
1965	108,004	49,163	19,500	28,500	14,100
1966	113,000	53,000	19,500	29,500	14,500
1966 (Jan.-Nov.)	103,000	47,960	18,200	26,700	13,400
1967 (Jan.-Nov.)	101,900	47,810	18,200	25,900	13,200

[1] Duplication between motor vehicle, work, and home accidents are eliminated in total. (Sources: National Center for Health Statistics and National Safety Council.)

Accidents remained the fourth leading cause of death in the United States in 1966, exceeded only by heart disease, cancer, and vascular lesions. For persons between the ages of one and 37, accidents were the leading cause of death. This was in spite of the fact that between 1912 and 1966 accidental deaths per 100,000 population were reduced 29%, from 82 to about 58. It is estimated that if this rate had not been reduced, 1.2 million more lives would have been lost.

All accidents in 1966 took 113,000 lives in the United States—an increase of 5% over 1965. The 1966 fatality rate also increased to 57.7 from 55.7 deaths per 100,000 persons in 1965. Of the major causes of accidental deaths in the United States in 1966, motor vehicle accidents took 53,000 lives; falls, 20,000; fires and burns, 7,900; drownings, 7,000; poisonings, 3,600; firearms accidents, 2,600; and accidents involving machinery, 2,100. Besides accidental deaths, 10,800,000 persons were accidentally injured in 1966.

Costs of Accidents. It is estimated that accidental deaths and injuries cost the nation $20 billion in 1966. These costs included wage losses, medical fees and expenses, insurance administrative costs, property damage and destruction, and lost production. On-the-job accidents alone cost U. S. industry $6.8 billion, about $90 for every employee.

Canada. Canada reported 10,978 accidental deaths in 1965. That nation's death rate per 100,000 was 56.1, up from 54.9 in 1964. Motor vehicle accidents claimed 5,049 lives in 1965—more than any other accidental cause of death—followed by falls (1,635), drownings (1,119), fire and burns (656), railroad accidents (249), and gas poisoning (155).

TAD Project. In 1967 the state of Oregon tested a new method of traffic accident reporting that could eventually help the nation's police pinpoint crash causes. The National Safety Council's Traffic Accident Data (TAD) Project developed the new system, which was scheduled for statewide use in 1968. Under the new method, a minimum of essential facts is collected on every accident reported. On a sampling basis, a supplementary section of the accident report goes into greater depth on a selected factor of the vehicle or driver.

MAJOR ACCIDENTS AND DISASTERS OF 1967

AVIATION

Marine Corps Reserve bomber crashes into a retirement community southeast of Los Angeles after air collision with second plane; 4 persons killed, 5 injured, Jan. 22

All 38 persons aboard an airliner are killed in crash near Findlay, Ohio, Mar. 5

Brazilian jetliner crashes in Monrovia, Liberia, killing 48 of 89 aboard, Mar. 5

Jetliner carrying 25 persons and a light plane with one aboard collide near Urbana, Ohio, killing all involved, Mar. 9

U. S. Navy C-47 crashes near Phanrang, South Vietnam, killing all 25 on board, Mar. 10.

South African turboprop crashes in Indian Ocean, killing all 25 on board, Mar. 13

DC-8 jetliner on a training flight crashes into motel on the edge of New Orleans airport, killing 6 persons on plane and 12 on the ground, Mar. 30

South Korean C-46 crashes in densely populated area of Seoul, 57 persons killed, Apr. 8

Algerian DC-4 crashes in Sahara desert, killing at least 35 persons, Apr. 11

Swiss jetliner crashes on Cyprus, killing 124 of 130, Apr. 20

U. S. Air Force radar picket plane crashes off Nantucket Island, killing 15 of 16 crewmen, Apr. 25

Crash of British airliner in Pyrenees kills all 88 aboard, June 3

Crash of British charter DC-4 in Stockport, England, kills 72 of 84 aboard, June 4

Airliner collides with private plane in North Carolina killing 82 persons, including Secretary of the Navy-designate John T. McNaughton, his wife, and son, July 19

Czech airliner crashes during takeoff at Gander, Newfoundland, killing 34 persons, Sept. 5

British airliner crashes off southwest Turkey after explosion in air, killing all 66 persons aboard, Oct. 12

Spanish jet airliner crashes into wooded area in Surrey, England, killing all 37 persons aboard, Nov. 4

Airliner crashes one mile short of runway at Greater Cincinnati Airport, killing 66 of 82 persons aboard, Nov. 20

DC-4 crashes into mountain in jungles of Huánuco, Peru, killing 67 persons including 4 Americans, Dec. 8

EARTHQUAKES

Andean village, Guacamayas, in Colombia, is wiped out by earthquake; 100 persons killed, Feb. 9

Earthquake in Java kills 51, injures about 300, Feb. 20

Turkey hit by three severe quakes in eight-day period; more than 200 persons killed, July 22–30

Caracas, Venezuela, and nearby towns rocked by three earthquakes; 277 persons killed and more than 1,700 injured, July 29

Earthquake shakes 500-mile stretch of India's west coast, killing 172 persons, injuring more than 1,000, Dec. 11

FIRES

McCormick Place, Chicago's lakefront exhibition center, is ruined by fire, Jan. 16

Penthouse restaurant in downtown Montgomery, Ala., swept by fire; at least 25 persons killed, Feb. 7

Worst forest fires in history of Tasmania wipe out 12 townships around capital city, Hobart; at least 55 persons killed Feb. 7

French orphanage at Taninges gutted by fire; 18 children killed, Mar. 6

L'Innovation, major department store in Brussels, Belgium, razed by fire that kills 322 persons, May 23

Flash fire in prison camp in Jav, Fla., kills 37 inmates, July 16

U. S. aircraft carrier *Forrestal*, off North Vietnam, sustains damage estimated at $100 million as fires set off by explosions on flight deck kill 129 crewmen, July 29

FLOODS AND LANDSLIDES

Torrential rains cause floods and mudslides at Rio de Janeiro and Sao Paulo, Brazil, leaving about 200 dead, hundreds missing, Jan. 23

Rio de Janeiro, Brazil, hit by tropical rains again, suffers floods and landslides; 119 persons dead, Feb. 20

Landslides caused by heavy rains kill more than 100 persons in Caraguatatuba, Brazil, Mar. 19

Fairbanks, Alaska, is devastated by flooding of Chena River; 6 persons dead, damage estimated at $175 million, Aug. 14–15

Niigata and Yamagata provinces, Japan, hit by floods, 53 persons killed, Aug. 31

Record rainfall and floods kill 457 persons in area around Lisbon, Portugal, Nov. 25

STORMS

Record-breaking blizzards and winds paralyze much of the Midwest; 76 persons killed in 5 states, Jan. 25–26

Violent storms batter northern Europe, causing more than 40 deaths, Feb. 23–24

Tornadoes in Chicago, Ill., area kill 55 persons, injure 1,500, Apr. 21

Southern Minnesota hit by six tornadoes; 16 persons killed, Apr. 30

Cyclone near Dacca, East Pakistan, kills at least 50 persons, May 1

Typhoon hits Kyushu and Honshu islands, Japan; 300 persons killed, July 9

Heavy monsoon rains cause at least 210 deaths in northern and central provinces of India, Sept. 5–9

Hurricane Beulah strikes Dominican Republic and southern Haiti, killing at least 18 persons, Sept. 11

Texas coast battered by Hurricane Beulah, causing floods that killed 37 persons and caused $1 billion in property damage, Sept. 20–24

Typhoon Emma kills at least 24 persons and causes extensive damge in central Philippines, Nov. 4

MISCELLANEOUS

Two buses collide and plunge into a gorge 45 miles from Manila, Philippine Islands, killing 87 persons, Jan. 6

Soviet fish-processing vessel sinks off coast of Denmark: 57 of 79 on board are drowned, Feb. 28

Underground mine explosion near Natal, British Columbia, kills at least 14 miners, Apr. 3

In Peshawar, Pakistan, 25 persons are burned to death in crash of station wagon in which they were riding, May 8

Fifty African miners are suffocated or crushed to death during panic in shaft of mine near Johannesburg, South Africa, July 25

Excursion train falls off cog railway at Mount Washington, N. H., killing 8 persons, injuring 30, Sept. 17

Riot at soccer game in Kayseri, Turkey, leaves 42 persons dead, 600 injured, Sept. 17

Insecticide contaminates bakery products in Tijuana, Mexico, killing 17 persons, Sept. 27

Express train derails near London; 51 persons killed and 111 injured, Nov. 5

Bread contaminated by rat poison kills 77 persons in Chiquinquira, Colombia, Nov. 25

Suspension bridge over the Ohio River between Point Pleasant, W. Va., and Kanauga, Ohio, collapses; at least 46 persons killed, Dec. 15

KEYSTONE

LONDON-BOUND TRAIN that overturned on the evening of November 5, killing 51 persons and leaving 111 others injured, is examined on the morning following the disaster.

PIX

KONRAD ADENAUER, leader of West German recovery following World War II, died in April 1967 at the age of 91.

ADENAUER, Konrad

West German political leader: b. Cologne, Jan. 5, 1876; d. Rhöndorf, Rhineland, April 19, 1967.

Konrad Adenauer achieved historic stature as the statesman under whose leadership West Germany recovered from World War II in an amazingly short period of time. High credit must go to him for building up a peaceful democratic state in Germany, and maintaining the political stability that in turn made economic recovery possible. Adenauer succeeded in gaining for the new Germany the confidence of Western nations. He became one of the foremost champions and architects of European integration.

Adenauer was not a sophisticated intellectual, but he possessed extraordinary political shrewdness. He was a great political tactician among politicians, but at the same time he had the gift of making political issues clear to the people. Ministers and parliamentary deputies complained about his imperiousness and autocratic manners. Although he did not hesitate to use the authority that his office conferred on him, he recognized the rules of the game in a democracy. As a public speaker he was sober and without affectation, and his diplomatic partners could rely on his word.

Konrad Adenauer was born in Cologne, the son of a court clerk. He went to school in Cologne and from 1894 to 1897 studied law at the universities of Freiburg, Munich, and Bonn. In 1906 he became a city councilman in Cologne, and in 1909 first city councilman.

Mayor of Cologne. In 1917, Adenauer was elected lord mayor of Cologne. In spite of the adversity of the times after World War I, Adenauer proved himself a singularly active and successful administrator. His first major achievement was the founding and development of a university in Cologne, followed later by a school of music and a school of athletics. He attracted industrial firms, including the German Ford works, to Cologne in order to create jobs. The port facilities on the Rhine were expanded, and facilities for holding trade fairs in Cologne were built. For recreation, large sports fields were constructed and a broad belt of parks laid around the old city by using the land that became available as fortifications were removed. He was also responsible for the construction of the first autobahn (superhighway) in Germany, from Cologne to Bonn.

In 1933 the Nazis removed Adenauer from office. During the course of the next 12 years they arrested him twice and finally sent him to a concentration camp. But he managed to survive these years by secluding himself in a small house on the Rhine, not far from Bonn, which remained his residence until his death.

After the occupation of Cologne in 1945, Adenauer was reinstalled by the U.S. Army as lord mayor of the city. But the British commanding officer disliked Adenauer's strong opinions and his methods of administration. On Oct. 10, 1945, he abruptly dismissed Adenauer from the office. It was in all probability a lucky event. If he had continued in the mayor's chair, Adenauer, now close to 70, might have been satisfied to resume his work for the community that he had served earlier.

Founding of the CDU. Removed from his post, he devoted himself entirely to the building of a large party that was to be a bulwark against bolshevism and a safeguard of Christian tradition in the future Germany. Adenauer recognized that for this purpose the mere revival of the old Roman Catholic Center party, to which he himself had belonged, would not suffice. The new party would have to appeal not only to Roman Catholics but to Protestants as well. Under the Nazi regime both Catholics and Protestants had learned that they had common interests to defend. Thus, the new Christian Democratic Union (CDU) could be created.

Adenauer became its chairman in the British occupation zone. He also became a member of the diet of North Rhine-Westphalia and was made chairman of the CDU delegation in the diet. In 1948 the Allied military governors called a "parliamentary council" in Bonn. It was a body of 65 members, all of them delegates of the existing 11

IMPORTANT DATES IN ADENAUER'S LIFE

Born in Cologne, Jan. 5, 1876.
Married Emma Weyer, 1904.
Became a Cologne councilman, 1906.
Elected lord mayor of Cologne, 1917.
Married Auguste Zinsser, 1919.
Removed from office by Nazis, 1933.
Reinstalled as lord mayor by Americans, 1945.
Dismissed from office by British authorities, 1945.
Helped to organize the CDU, 1945.
Presided over the parliamentary council, 1948–49.
Chosen chancellor of West Germany, Sept. 15, 1949.
Accepted independent status for West Germany, May 5, 1955.
Signed Franco-German friendship treaty, Jan. 26, 1963.
Resigned the chancellorship, Oct. 15, 1963.
Died in Rhöndorf, April 19, 1967.

UPI

Adenauer (*from left to right*) as a young boy, as a young man at the turn of the century, as mayor of Cologne (in which post he served from 1917 to 1933), and at the age of 50.

KONRAD ADENAUER

From the ashes of World War II, "Der Alte" restored his country to the world community.

Although active in German politics most of his life, Konrad Adenauer achieved international prominence only when he was more than 70 years old. As West German chancellor from 1949 to 1963 he dealt largely with elder statesmen who came into power after World War II. With international affairs dominated by the political style of such men as Eisenhower and de Gaulle, he functioned with unique effectiveness in bringing his country back into the family of nations.

At a 1966 political rally, Adenauer confers with Ludwig Erhard, who succeeded him as chancellor of West Germany.

PICTORIAL PARADE

During the 1950's, Adenauer formed close ties with President Dwight Eisenhower, with whom he is shown in 1954.

UPI

provincial diets. On Sept. 1, 1948, Adenauer was elected president of this council, which was charged with drafting a constitution for West Germany as a whole.

Adenauer took an active lead in the deliberations for a constitution. The document tried to improve on the Weimar constitution—for example, the federal president, in contrast to the president of the Weimar Republic, would exercise very limited powers, which, however, made it necessary to strengthen the position of the federal chancellor. In May 1949 the parliamentary council passed the constitution, which was also approved by the military governors and the provincial diets.

The Chancellorship: Western Cooperation. On Aug. 14, 1949, elections were held for the first federal parliament. A month later, on September 15, the parliament elected Adenauer the first federal chancellor. It is probably correct to say that Adenauer elected himself, because he received only a one-vote majority. He formed a government in coalition with the Free Democratic and the German parties. The new government, however, was not sovereign. Although Allied military government in the strict sense was abolished, the Allied governments retained far-reaching powers in Germany, which they exercised through high commissioners. But step by step Adenauer persuaded the Allies to turn over additional power to the German government. In May 1955 the German government, for all practical purposes, gained sovereignty and equality among the nations. The Allied powers merely retained control over Berlin and the right to intervene in case of an emergency.

The Chancellor left nobody in doubt that Germany's place was among the Western nations and that Germany's democratic future would be best safeguarded by its close integration into a supranational European union. He accepted eagerly the proposal of French Foreign Minister Robert Schuman to pool the coal and iron production of the western European states. In July 1952 the European Coal and Steel Community, formed by France, Germany, Italy, and the three Benelux countries, became operative.

Adenauer did not hesitate to promise the Western Allies a German contribution for the defense of western Europe after the outbreak of the Korean War revealed the need for larger security forces in Europe. It took great courage to make such a proposal, because there was strong opposition in Germany to rearming. Adenauer again wanted to make German rearmament a means for European integration. He did not wish to resurrect a German army but to contribute to a European army consisting of mixed national units. The projected defense community finally failed, however, because the French parliament rejected the plan. The Federal Republic became instead a member of the Western European Union and of the North Atlantic Treaty Organization (NATO) in 1954. All German armed forces were placed under NATO. At the time of Germany's accession to NATO the German government renounced any production of atomic, biological, or chemical weapons.

The failure of the European Defense Community blocked progress toward European political integration. But economic integration took a big step forward with the Rome treaties of 1957. These treaties committed the six nations to abolishing internal customs by stages and to forming a common market and customs union. Simultaneously a European atomic community was created to carry on research for the peaceful use of atomic energy.

Franco-German Friendship. Adenauer was always convinced that the union of Europe depended chiefly on rapprochement between France and Germany. He conducted negotiations with France on the return of the Saar to Germany in a way that left no ill feelings in France. In 1957 the Saar was reincorporated into Germany. In the following years close relations developed between Adenauer and President de Gaulle. Finally, on Jan. 26, 1963, Adenauer and de Gaulle signed a Franco-German friendship treaty providing for cooperation between the two countries on all important questions of foreign policy, defense, education, and youth.

Reparations to Israel. Adenauer felt it to be the moral obligation of Germany to compensate Israel, as much as it could, for the losses that the Jews had suffered in Germany prior to and during World War II. In 1953 he concluded with Israel an agreement by which Israel received substantial German payments over a period of years.

Domestic Policies. In his domestic policies Adenauer aimed in particular at the creation of social justice in the Federal Republic. For this reason he was willing to have the government accept considerable social burdens. Although this policy necessitated large government expenditures for welfare purposes, it created a favorable social climate. Communism, as a result, gained no foothold in West Germany.

Later Years. Adenauer's popularity reached its height in 1957 when the CDU managed to gain a majority in the elections. But after 1959—when he announced his candidacy for the office of federal president but quickly withdrew when he realized that as federal president he would have much less power than he possessed as chancellor—his reputation came under a cloud. It was also felt that he used his authority too readily to protect his ministers or staff members against well-justified criticism. He was reelected chancellor for the fourth time after the elections of 1961, but his party made it a condition that he would resign early enough to give a successor sufficient time to prepare himself for the next federal elections.

After more than 14 years as chancellor, "der Alte" (the Old Man) resigned on Oct. 15, 1963. He was displeased that Ludwig Erhard followed him in the chancellor's office, and he did not hesitate to continue his criticism of Erhard in private life.

Adenauer died on April 19, 1967. The state funeral that he received, which was attended by presidents Johnson and de Gaulle, among other foreign leaders, testified to the respect that Adenauer had gained not only in Germany but throughout the non-Communist world.

PRESIDENT'S COUNCIL ON PHYSICAL FITNESS

ADVERTISING COUNCIL

POSTER AD for public cooperation in physical fitness programs was produced by the Advertising Council in 1967.

ADEN. See COMMONWEALTH OF NATIONS; GREAT BRITAIN; MIDDLE EAST; UNITED ARAB REPUBLIC.

ADVERTISING

When the economic outlook becomes murky, advertising is often the first expense that corporations curtail. This point was reaffirmed in 1967. Advertising expenditures in all kinds of media in the United States totaled $16.89 billion, an increase of 2% over expenditures in 1966. But media costs had increased by more than 2%, and thus the physical volume of advertising space and time decreased for the first time in a decade.

Revenues. Television was the only medium to have a truly good year. National advertisers spent $2.49 billion on network and spot television, or 5.7% more than the record high in 1966.

The biggest loss was suffered by network and spot radio, which showed a decrease of 4.5% to $343 million in spending by national advertisers.

National advertising in newspapers dropped 2.1% to $955 million. Magazine advertising rose 1.2% to $1.31 billion. Advertising in business papers (trade and merchandising publications) increased 1.1% to $719 million. In 1967 National advertisers increased their spending on outdoor advertising by 2% to $120 million.

Spending by national advertisers in all media (including direct mail, point-of-purchase displays, specialties, and others that are not measured individually) increased 2.6% to $10.37 billion. Local advertisers spent $6.59 billion, or 0.5% more than the total in 1966.

Advertising expenditures were stifled in the fall by the Ford Motor Company strike that halted production of the new 1968 models. Introductory advertising was held back by Ford and its dealers until November.

Controversies. Because of its ubiquity and intentional obtrusiveness, advertising is always subject to criticism. The chief controversies involving advertising in 1967, however, centered on whether advertising adequately performs its economic function and whether brand names are of value to consumers.

At the year's end, the Senate passed a bill that, in effect, would require doctors to prescribe drugs by generic names, rather than brand names, for patients under the Medicaid plan. Brand-name pharmaceuticals generally cost more than those without brand names, with advertising and promotion expenses being a major reason for the difference.

Similarly, the Federal Trade Commission (FTC) said it plans to require analgesic advertisers to prove claims that their products are more effective than ordinary aspirin. This is based on the assumption that all of the popular analgesics are equally effective in the same quantities, whether or not an ingredient is added to the basic aspirin formulation.

This same point was made in "commercials" on the Public Broadcast Laboratory, a new program carried by 119 educational television stations.

Advertisers have traditionally argued that advertising is a "value added' to the product because the manufacturer's goodwill is at stake. This position was upheld by the Court of Appeals in Chicago when it upset a Federal Trade Commission decision against the Borden Company. In a 10-year-old case, the commission had ruled that Borden was guilty of price discrimination when it sold condensed milk under the Borden brand for more than it sold the same milk with no brand to supermarkets.

In another controversial action, the FTC issued complaints charging false advertising by nine apartment developers because their advertisments did not disclose that "the apartments are not available to applicants who are Negro."

Editor, "Marketing/Communications"

AEROSPACE INDUSTRY

Aerospace industries continued their preeminence in 1967 as the major research and development enterprise in the world. Besides producing aircraft, spacecraft, and missiles, they provided new technologies for general industrial use.

United States. The U. S. aerospace industry began 1967 with the expectation that sales would crest around $26 billion—a $2 billion rise over 1966 and an $11 billion increase from five years earlier. With a $28 billion backlog of business at the beginning of 1967, aerospace firms had $10 billion more in orders than at the beginning of 1966. The heavy requirement for military products for the Southeast Asia conflict and a record demand for new civil aircraft contributed to the increase in backlog. Because demand for U. S. commercial jet transports more than doubled in 1966, the industry had a backlog of $10 billion in jet orders in early 1967.

New problems faced the U. S. aerospace industry in 1967 in financing, developing, and planning new production facilities to meet burgeoning military and civil orders for "hardware," the industry's term for completed products, as opposed to studies and designs.

Missiles. Needs increased for both tactical and strategic missiles in 1967. The Vietnam War created heavy production demand for air-to-air, air-to-ground, and air defense missiles of all varieties, plus development requirements for an improved new generation of these missiles. Production was increased for the Minuteman 3 and the submarine-launched Poseidon to counter Soviet deployment of an intercontinental ballistic missile defense system. Programs for development of new reentry vehicles, penetration aids, and multiple warheads for ICBM's underwent major expansion. (See also MISSILES.)

Aircraft. Military aircraft production continued at peak rates. Introduction of new subsonic commercial jet transports continued, but there were some delivery delays because of military priorities. Firm design and production of the U. S. supersonic transport by the Boeing Company neared fruition.

Space Technology. Sales in space technology during 1967 were expected to top $7 billion. Adding to the increased sales in this area were military space expenditures. The manned orbital reconnaissance laboratory (MOL) headed toward flight hardware construction. There were increased requirements for unmanned communication, navigation, and reconnaissance operational satellite systems.

Business Flying. Delivery of more than 500 new turbine-powered aircraft plus a 10% to 15% increase in deliveries of piston-powered aircraft in 1967 were expected to push this segment of the industry into the billion-dollar class for the first time. Executive jet transports accounted for about half the dollar volume of 1967 sales. They boosted the operational jet fleet to about 1,400 aircraft by the end of 1967, radically changing the character of business flying. Initial success of the jet-powered executive transport for business uses was evidenced in 1967 by plans of most major manufacturers to introduce new larger-capacity and longer-range models in the next few years. The new models will provide the same mobility for international travel that executive jets now offer in domestic business flying.

Other Fields. This segment of the aerospace industry accounted for a small part of aerospace sales in 1967, but in the next few years it is expected to broaden rapidly. It involves applying aerospace technologies, including management skills, to other areas of the industrial, economic, and social spectrum. Products range from aircraft gas-turbine power plant applications (for high-speed boats, trains, air cushion vehicles, and generating electricity) to integrated transportation systems for the developing countries. Also included are deep sea research, shipbuilding systems management, and automated medical systems. Sales in these areas totaled slightly more than $2 billion in 1966 and increased to over $2.5 billion in 1967.

Sales. Data supplied by the Aerospace Industries Association of America show that aerospace sales in 1966, by product group, were: aircraft, $11,951,000,000; missiles, $4,052,000,000; space vehicles, $5,903,000,000; and nonaerospace products, $2,323,000,000. The contribution to the gross national product by the aerospace industry rose from 1.7% in 1965 to 1.8% in 1966.

Britain. The British aerospace industry, with an all-time high annual record of nearly $600 million

EXECUTIVE JET TRANSPORTS of a type increasingly popular in 1967 near completion at a British plant. The twin-engine jets can fly at speeds over 500 miles per hour.

HAWKER SIDDELEY AVIATION LTD.

in exports behind it from 1966 efforts, moved toward a period of production stability during 1967. Agreements with France in 1966 and 1967 on large-scale military orders solidified the position of Britain's main airframe manufacturers, but a reduction in employment was inevitable, according to industry analysts.

The United Kingdom's defense posture was still in a state of transition, and a gradual move toward a firm government commitment in the size and scope of its defense requirements remained of primary importance to its aerospace industry. About half of the industry's 250,000 employees were in defense work in 1967.

France. The French aerospace industry took strides in 1967 to streamline its operations through plans for consolidating its two major national groups —Nord and Sud.

Competition between the two national groups would be eliminated under this merger concept by shifting all aircraft development responsibility to Sud and all missile and launch vehicle work to Nord. French government spokesmen advocated this approach because the cost of developing advanced aircraft and space systems could no longer be justified for the French national market alone. Consolidation plans also included merging the nation's major private companies.

During 1967 French aerospace industry total sales were expected to peak out around $1.25 billion, compared with $1.1 billion in 1966. Exports for the industry in 1967 were about $580 million, compared with $500 million for the previous year.

BERNARD K. THOMAS, JR.
"Aviation Week & Space Technology"

AFGHANISTAN

The reform cabinet of Premier Mohammed Hashim Maiwandwal, which was installed in November 1965 and which is supported by the King, remained in office throughout 1967. Western-style political institutions, introduced by the constitution of 1964, operated with increasing effectiveness during the year. In March the government inaugurated a third 5-year economic plan, calling for a 25% increase in expenditures for national development.

In its foreign relations, Afghanistan continued a policy of "active nonalignment." It sought to retain the friendship of the United States and the Soviet Union, and to continue receiving aid from both countries, as well as from Communist China.

Economic Development. The third 5-year plan (1967–72) intensified the effort to give the largely agricultural and pastoral country a modernized and more productive economy. The new program emphasized the creation of a vigorous private sector in industry and commerce.

A foreign and domestic private investment law, enacted in January 1967, offered significant concessions in return for private investments of capital in industry, mining, agriculture, tourism, and the service industries. In the late summer, two U. S. loans of $12 million and $4.6 million were announced, the first to assist in the financing of a hydroelectric power plant to supply Kandahar, Afghanistan's second largest city, and the second to improve 5,000 acres of agricultural land in the Helmand and Arghandab valleys.

Foreign Affairs. On March 25, Premier Maiwandwal arrived in the United States for a 2-week visit. He conferred with President Johnson in Washington, D. C., where the President reportedly agreed to make $40 million in U. S. economic aid available to Afghanistan in 1967–68.

While relations with the United States were being cemented, those with the Soviet Union were also maintained on a cordial basis. From May 30 to June 2, Soviet President Podgorny paid an official visit to Afghanistan. In the interest of improving relations with two of Afghanistan's most important export markets, King Mohammed Zahir Shah made a state visit to India from January 28 to February 7 and, en route home, conferred in Rawalpindi with President Ayub Khan of Pakistan.

In June and July, Abdul Rahman Pazhwak, Afghanistan's principal representative at the United Nations and president of the 21st General Assembly, presided over the Assembly's special session on the Middle East crisis. During that session, the Afghanistan delegation supported attempts to secure Israeli withdrawal from Arab territory occupied during the 6-day conflict.

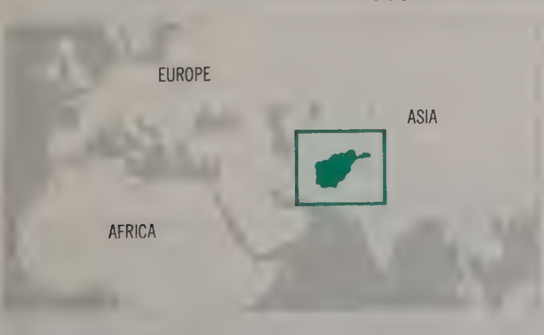
AFGHANISTAN • Information Highlights



Area: 249,999 square miles (647,497 sq km).
Population: 15,960,000 (April 20, 1966, est.).
Chief Cities: Kabul, the capital, 449,500 (1965 census); Kandahar, 119,000 (1964 est.); Herat, 62,000 (1964 est.); Mazar-i-Sharif, 40,000 (1964 est.).
Government: *King*—Mohammed Zahir Shah (b. 1914, acceded 1933); *Premier*—Mohammed Hashim Maiwandwal (took office 1965). **Parliament**—Upper House (Meshrano Jirgah, or "House of Elders"), 87 members; Lower house (Wolesi Jirgah, or "House of the People"), 214 members.
Religious Faiths: Muslims, 99% of population.
Education: *Literacy rate* (1963), 10% of population. *Total school enrollment* (1964)—406,736 (primary, 358,037; secondary, 33,982; teacher-training, 5,716; technical, 5,550; higher, 3,451).
Finance (1966–67 est.): *Revenues,* $180,000,000; *expenditures,* $180,400,000; *monetary unit,* afghani (45 afghanis equal U. S.$1).
Cost of Living Index (1961), 98 (1958=100).
Manufacturing (metric tons, 1965): Cement, 170,000; sugar, 10,000; cotton yarn (1962), 300; lumber, 450,000 cubic meters.
Crops (metric tons, 1965–66 crop year): Sugar beets, 60,000; cottonseed (1967), 51,000; cotton (lint), 50,000.
Minerals (metric tons, 1965): Bituminous coal, 132,000.
Foreign Trade (1966): *Exports,* $72,880,000 (chief exports: fruits and nuts, $21,980,000; raw cotton, $16,770,000; karakul skins, $12,630,000; wool $17,420,000); *imports,* $55,310,000 (chief imports, 1965: petroleum products, $6,912,000; sugar, $4,837,000; tea, $4,572,000). *Chief trading partners* (1965): USSR (took 25% of exports, supplied 46% of imports); U. S. (took 16% of exports, supplied 15% of imports); West Germany (took 8% of exports, supplied 13% of imports).
Transportation: *Roads* (1965), 4,200 miles (6,758 km); *motor vehicles* (1965), 18,050 (automobiles, 8,800); *national airline,* Ariana Afghan Airlines; *principal airport,* Kabul.
Communications: *Telephones* (1966): 9,000; *radios* (1965), 200,000; *newspapers* (1965), 17 (daily circulation, 94,000).

GUERRILLA TRAINING in Tanzania for Black Africans of other nations provoked strong protest from South Africa. Shown at Bagamoyo are trainees from Mozambique.

AFRICA

The face of Africa changed little in 1967. Most of the major events of the year were little more than new manifestations of old, deep-rooted conditions—such as poverty and lack of development, chronic instability of regimes, and the general disparity between the frontiers of the new states and tribal and geographic realities. Every year seems to provide a new set of illustrations of the fact that existing state frontiers in Africa are monuments to the convenience and mutual rivalries and accommodations of certain 19th century European colonial powers—and only to such factors. The boundaries obviously were not drawn to fit African conditions.

Yet the African states that have emerged within these old colonial borders show little disposition to change their frontiers, for reasons that are quite understandable. A revision of boundaries would, in some cases, lead to one state's losing territory to another. African leaders are no more eager to accept such a result than are national leaders in other parts of the world; indeed, in view of the precarious tenure of power of many of the African leaders, they would be less able to survive a loss of territory.

The same considerations apply to possible changes that would give sovereignty to a part of an existing state that has an obviously distinct character. The right of self-determination applies to African areas with respect to European powers, but not to independence-seeking regions within an African state. Thus the integrity of existing African states, although often open to question in logic, is not open to question as a matter of practical politics. These attitudes explain the resistance to the attempted secession of Katanga province in the Congo (Kinshasa) in past years and the civil war in Nigeria in 1967.

Nigerian Civil War. The former reputation of Nigeria—the ex-British colony that is Africa's most populous state—as a model of functioning democratic and federal government had perished before 1967. It died with the murder in January 1966 of the federal prime minister and the premiers of two of the regions, the subsequent massacres of Ibos in the Northern Region, and the successive changes of regime in Lagos that reflected increasingly desperate endeavors to hold the country together in the face of regional separatism.

Disorder in Nigeria degenerated into civil war after the first five months of 1967 had been passed in largely verbal sparring between the two leading figures, Lt. Col. Yakubu Gowon, in power in Lagos and nominal ruler of all Nigeria since August 1966, and Lt. Col. Odumegwu Ojukwu, military governor of the Eastern Region. The conference of the supreme military council of Nigeria attended by the two men and held, significantly, at Aburi, Ghana, on January 4–5, produced an ephemeral agreement that was subject to different interpretations by Gowon and Ojukwu. Gowon was not ready to meet the demands of the Eastern Region leader for increased autonomy, especially in financial matters. A constitutional conference scheduled for May 5 never met. Attempted secession followed, with the vote of the Eastern regional assembly on May 27 in favor of independence and the proclamation on May 30 that the former Eastern Region of Nigeria had become the independent state of Biafra.

War did not begin until federal troops invaded Biafra on July 6. In August, Biafran troops swept into the Midwest Region, but this success was short-lived, and federal troops captured the Eastern (or Biafran) capital of Enugu on October 4. The war degenerated into a guerrilla struggle in the countryside. The Organization of African Unity (OAU), meeting in September, named a 6-nation mission to negotiate an end to the Nigerian conflict, but no settlement emerged from its meetings with both the federal and Biafran sides in November.

It was difficult to derive any clear conclusions from the tragic sequence of events in Nigeria. Ibo separatism in the Eastern Region had proved serious enough to lead to civil war. On the other hand, the reassertion of Nigerian national unity by the federal forces had been successful, at least in a military sense. Much would turn on how far the policy of amnesty toward the Ibos proclaimed by Gowon was observed in practice.

The Troubled Congo (Kinshasa). Nigeria provided the only example in Africa of organized war on any scale in 1967, but the Congo continued to present a picture of considerable disorder. President Joseph Mobutu retained the power that he had seized in November 1965, but the Congo seemed too large, too disorganized, too subject to tribalism and local influences, to be truly susceptible of being ruled by Mobutu or any likely successor. During the year Mobutu appeared to be following a restless search for new and attractive policies to organize his supporters, but in truth none of them seemed likely to have favorable effects. Nevertheless it may be that his policy, which the Washington *Post* (February 19) called one of "strident nationalism," is the only one with any chance of evoking unity in the chronically disunited Congo.

The remarkably tenuous nature of authority in the Congo was demonstrated once again in July and August by the panic shown over the activities in the eastern Congo of a quite small number (about 200) of white mercenaries, under Belgian-born Col. Jean Schramme, leading some 1,200 Katangese troops loyal to ousted former Premier Moïse Tshombe.

The mercenaries, who had been under contract to the Congolese Army, rebelled on July 5 and with their Katangese allies temporarily occupied Kisangani (formerly Stanleyville). Despite contrary claims by the Mobutu government, the Congo was not invaded by foreign mercenaries and there was no evidence of "imperialist aggression."

The rebel troops soon gave up the cities they had occupied, but their position proved impregnable when they retired to Bukavu near the Rwandan border. Their political purposes were not clear, and whatever these were they did not achieve them. Since the rebels could not be defeated, however, Mobutu agreed to an OAU plan to permit them to leave the Congo under international supervision. Schramme reportedly declined this offer of amnesty in October, but by November 5, after the Congolese Army had closed in on Bukavu, the rebels had fled to Rwanda. Several days later the army claimed to have driven back a force of invaders from Portuguese Angola.

While this rebellious situation was simmering in Katanga, former Premier Tshombe, once a Katangese secessionist leader and then exiled in Spain and under death sentence in the Congo, was kidnapped in his own plane and forced to land in Algeria on July 1. Held prisoner there, Tshombe was apparently being used by the Algerian government as a lever to influence Congolese policy, making it a condition of his extradition that Mobutu break the Congo's highly useful links with Israel and the United States.

In pursuit of national unity, Mobutu on April 7 announced a proposed new constitution to replace that of July 1964. The document, approved in a referendum in June, concentrates executive power in the presidency and abolishes the premiership and the senate. It provides for the possibility of two political parties. (No legal opposition exists at present.) However, rule by decree will continue until 1968, and the first presidential election is not envisaged until 1970. On April 28, Mobutu installed himself as the founder-president of the new government party, the Mouvement Populaire de la Révolution.

Nationalism in East Africa. The zealous nationalism of Mobutu in the Congo found a parallel in the actions of President Julius K. Nyerere of Tanzania. Nyerere's avowedly socialist regime embarked on a far-reaching series of economic measures designed to put socialism into practice. On February 4, Nyerere promulgated the Arusha Declaration, largely a theoretical celebration of the glories of socialism, and on February 11 he followed this up with the nationalization of a large number of firms, including most of the large-scale enterprises oper-

AFRICA

The political map of Africa was not changed in any respect in 1967. But civil war, regional and tribal insurgencies, and national rivalries continued to threaten the political stability of the Black African nation states that have emerged from the colonial arrangements of the 19th century. Civil war engulfed Nigeria. Katangese tribesmen, aided by European mercenaries, continued their efforts to regain independence from the Congo republic, and ethnic rivalries threatened to ignite border wars in East Africa.

ating in Tanzania. The government also planned to acquire majority holdings in a large number of other companies. Compensation would be given for expropriated enterprises.

Nationalization was a doctrinaire step not likely to benefit Tanzania in any tangible way. Indeed, the reverse was true, as Nyerere found later in the year, when he expressed pained surprise at the curtailment of foreign investments.

A further manifestation of nationalism to be found both in Tanzania and in neighboring Kenya was the growing animosity toward the half million Asian residents of East Africa. Tireless and successful businessmen, virtual monopolists of the retail trade in many areas, the Asians are bitterly resented by the less skilled, less prosperous, and often unemployed Africans. Resentment is rapidly turning into pressure on the Asians to intermarry and assimilate or else leave Africa. Anti-Asian riots were common in the East African states in 1967.

Questions of Internal Stability. In the half dozen years since most of the African states became independent, internal instability has been a common problem, by no means confined to the sprawling and composite states such as the Congo or Nigeria. However, there was some improvement in this respect in 1967. Even if African states were typically still far from enjoying an assured stability, at least the rash of coups d'etat that had occurred since midsummer 1965 had eased off. This was no triumph for democracy; rather, it meant that the military regimes established in those various coups still were firmly entrenched.

Only in Sierra Leone was the familiar pattern of succession of civilian government by the military repeated in 1967. There, on March 22, Brigadier David Lansana, army commander in chief, took control and arrested both the governor-general and the premier he had just appointed. Lansana himself was replaced on March 23 in a junior officers' coup led by Maj. Charles Blake, who nominated Lt. Col. Ambrose P. Genda, then serving with the Sierra Leone UN mission, as chairman of a ruling military council. On March 27, Genda was replaced by Lt. Col. Juxon-Smith, reportedly to create a better tribal and regional balance in the national leadership.

In Togo, which essentially has been under military rule since the assassination of President Sylvanus Olympio on Jan. 13, 1963, the fourth anniversary of that event was marked by the peaceful ousting of the titular president, Nicolas Grunitzky. In his place Col. Étienne Eyadema assumed power, naming himself president on April 14, with a council of four senior army officers and eight civilians.

Boundary Disputes. Among the new states of Africa, frontier disputes are as common as they were among the states of 18th and 19th century Europe. One of the most dangerous situations is the controversy between Ethiopia and Somalia, which has territorial ambitions in the adjacent Ethiopian province. When a referendum was held in French Somaliland on March 19 offering a choice of independence or continued association with France, it appeared possible that a vote for independence might bring Ethiopia and Somalia into armed conflict over the future fate of the territory. However, the option of continued association with France won handily.

In the north, the 4-year-old boundary dispute between Morocco and Algeria grumbled on. Morocco, in January, claimed that Algerian forces had driven deep into Moroccan territory. Meanwhile, the discovery of rich phosphate deposits in Spanish Morocco seemed likely to set off a three-cornered struggle among Morocco, Algeria, and Mauritania for eventual control of these resources.

African International Organizations. The Organization of African Unity (OAU) did little of note in 1967. The 4-year-old bloc continued to have little motive for cohesion except its desire to end white supremacy in the southern tip of Africa. The meeting of the heads of state of the OAU held in Kinshasa, Congo, September 11–14, adopted a fairly sober policy with a restricted budget, and struggled with the problems in Nigeria and the Congo, but the main objective remained the "liberation" of Africa south of the Zambezi.

The prospects for achievement of the goals of the OAU are in all probability small beside the solid accomplishments and prospects of some African regional organizations, notably those linking the French-speaking states, such as the Organisation Commune Africaine et Malgache (OCAM) and the Conseil de l'Entente. Félix Houphouët-Boigny, president of the Ivory Coast and a champion of free enterprise, argued in an address at Montreal, Canada, on August 24, that the road to African unity lay by way of regional economic groupings and not larger, illusory unions. Several French-speaking African states are eager for closer cultural and economic links with France—a project for a "French-speaking commonwealth," which they call *francophonie*. France, while sympathetic, has been extremely cautious and is allowing the African proponents to develop the idea.

In June the presidents of Kenya, Tanzania, and Uganda signed a 15-year East African Cooperation Treaty to go into effect Dec. 1, 1967. The treaty establishes an East African Community and an East African Common Market. Other states may negotiate for association with the community.

Southern Africa. There was no substantial change in the political situation in the southern tip of Africa, and what change there was suggested a strengthening of white regimes rather than trends toward majority rule. The new prime minister of South Africa, Balthazar J. Vorster, proved to be an adroit and flexible policymaker. His pragmatic course scored a striking success in the trade agreement concluded with Malawi on March 13. Significantly, Malawi was the only member-state of OAU not represented at the Kinshasa meeting. South Africa also started active economic cooperation with the Portuguese African colonies and aided Rhodesia in repulsing "trouble makers" attempting to enter from Zambia. Vorster declared that his nation would not recognize the UN council set up in May to administer South West Africa. South Africa's mandate to this territory was terminated by the UN in 1966.

The white administration of Ian D. Smith in Rhodesia, which celebrated its second year of independence on Nov. 11, 1967, continued to upset the expectations of many prophets. The Rhodesian economy, though seriously hampered by UN economic sanctions (particularly in the tobacco sector), has been forced into diversification, which probably will prove to be beneficial in the long run. Prime Minister Smith received the overwhelming support of his party for his cautious, step-by-step policies.

AGRICULTURE

AGRICULTURE

Developments in agriculture in 1967—record production, scientific advances, and expanded government services—are reviewed in this article under the following headings: (1) U. S. Agriculture in 1967; (2) Agricultural Research; and (3) Farm Services.

U. S. AGRICULTURE IN 1967

Production of both crops and livestock soared to record highs in the United States in 1967. Gross farm income and net cash income, however, declined from the high levels of 1966.

Gross income dipped to about $49.2 billion from the record of $49.7 billion in 1966. Mainly because production expenses rose to new highs, net cash income fell to about $14.8 billion, down from the near-record level of $16.4 billion in 1966. Nevertheless, net income was higher than for any year since 1952 except for 1966.

For the first time since 1959, net income per farm declined from the previous year. The 1967 average net income per farm was about $5,000, down only slightly, however, from the 1966 record high of $5,049. The continued decrease in the number of farms helped hold up the average income per farm despite the sharp dip in total net income.

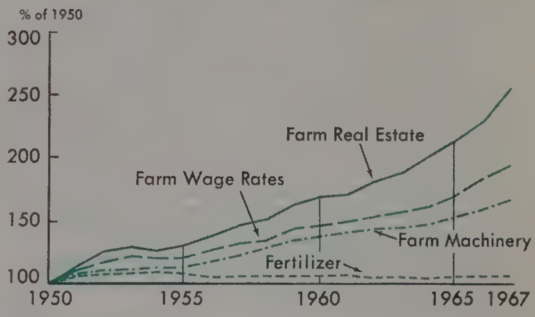
Farm Income and Prices. The decrease in net farm income occurred despite near-record direct government payments to farmers, and it stemmed mainly from substantial increases in production expenses. Lower farm prices were partly offset by an increased volume of farm marketing, especially of livestock products.

Direct government payments to farmers totaled about $3.1 billion, down from the 1966 record high of $3.3 billion. This dip, the first since 1963, was attributed to smaller payments to farmers for reducing feed-grain plantings under federal acreage-cutting and income-supplementing programs. Payments under similar programs for curbing cotton and wheat plantings were higher, but they were not high enough to offset the lower outlays for the feed-grain programs.

Average crop prices fell 5% below the 1966 level, but they were partly offset by an increase in volume of marketings. Prices for livestock and livestock products were down 6% from the previous year's averages, but the volume of livestock marketing was up 3.5%. Average prices received by farmers for all products were down 5.5% from the 1966 averages, yet the larger volume of marketings kept cash receipts only 1% below the 1966 totals.

The high level of farm marketing from 1966 production and the prospect of larger production in 1967 were quickly reflected by a decline in prices. Meat and poultry supplies were plentiful in the first six months of the year. Beef output was up 6% from the same period in 1966, while other increases were pork production, 15%; lamb and mutton, 2%; and poultry, 16%. The 6-month total was 21 billion pounds, 10% higher than in the same period of 1966.

HOW FARMERS' COSTS HAVE RISEN



Data from Economic Research Service, U.S. Department of Agriculture

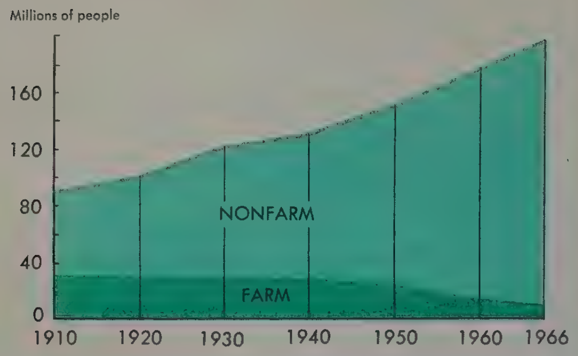
PHOTO BY GRANT HEILMAN

With supplies so plentiful, cattle prices in the first half of 1967 averaged $21.91 per 100 pounds, almost 4% below a year earlier. And hog prices plummeted 21% to an average of $19.22 per 100 pounds. Egg prices averaged 32 cents a dozen, down 5 cents from the average for the first six months of 1966. Broiler prices averaged 14 cents a pound, down 2.4 cents from a year earlier. Turkey prices averaged 20.5 cents a pound, down more than 3 cents from a year earlier.

In the second half of 1967, meat supplies were more in line with demand, and prices improved somewhat. Milk was an exception to these trends—output in the first half declined slightly, and wholesale milk prices reached a record high at around $5.00 per 100 pounds, nearly 10% above the previous record in 1966.

A sharp drop in cash receipts from cotton marketing, stemming from steep declines in output, played a major part in reducing income from crop marketing. The production cutback resulted from government restraints on planting and from income-boosting payments to growers aimed at reducing a cotton surplus standing at a record high. The lower

THE DWINDLING FARM POPULATION



Data from Bureau of the Census and Economic Research Service

cotton receipts were offset by larger marketings of corn, wheat, and soybeans.

Production expenses climbed to more than $34.4 billion, up from the previous high of $33.3 billion in 1966. Feed costs were up 6% from 1966. Prices for motor vehicles and farm machinery rose as much as 4%. Purchases of fertilizer were larger in volume. Interest and taxes payable per acre rose well above those of 1966. Farm wage rates were up 7%, but the number of hired hands was down about 8%. The only major farm input lower in price in 1967 than a year earlier was feeder and replacement livestock, down about 5%.

Food Production. The U. S. all-crop production index (1957–59=100) rose to a record high 116 in 1967, up from 112 in the previous year, and one point above the previous high in 1965. The per-acre yield for 28 major crops was placed at an index figure of 123, up from 122 in 1966, but 1 point below the record of 124 in 1965. Record crops were harvested in wheat, feed grains, soybeans, rice, peanuts, and sugarcane.

Supplies of fresh vegetables and eight principal vegetables for processing were up 11% above 1966 stocks. The citrus crop, heavily damaged by hurricanes, was 28% below the previous year's record output. The tonnage of noncitrus fruits was down 14%. Potato output was down about 2%.

Crops planted for the 1967 harvest totaled 316 million acres, up 6% (18.8 million acres) from a year earlier and the largest in seven years. The increase in acreage, mainly for grain crops, plus near-record per-acre yields, account for the record crop output. The government eased planting restrictions on grains to make certain of adequate supplies. In the mid-1960's, high consumption at home and abroad and federal crop-production controls have sharply reduced the once troublesome wheat and feed-grain surpluses.

An estimated total of more than 4.7 billion bushels of corn flowed into the markets—nearly 15% greater than the previous high in 1966. Corn output, together with that of the three other feed grains—sorghum, barley, and oats—swelled feed-grain production to a record 175.1 million tons, up 11% from 1966's near-record total. The previous high production was the 157.4 million tons achieved in 1965.

Wheat output totaled a record of more than 1.5 billion bushels, up from 1.3 billion bushels in 1966 and 67 million bushels more than the previous high in 1958. The huge crop more than made up for depleted reserve stocks, which had fallen to their lowest levels since 1952. It resulted in the first increase in total U. S. supplies of wheat since 1960.

Soybean production also attained a record high at 973 million bushels, 5% more than the previous high a year earlier. Average soybean prices received by farmers declined for the first time since 1959. The decline, however, began from a record high $2.77 a bushel.

Rice output at 89.6 million hundredweight was up 5% from the previous high in 1966. Peanut production at 2.5 billion pounds was up 4% from the previous record a year earlier. Sugarcane tonnage totaled 25.2 million, up 7% from 1966 and 4% more than the previous high in 1964.

Meat and poultry production rose to about 43 billion pounds in 1967, up from 41.5 billion pounds in 1966. Milk marketed totaled about 119.6 billion pounds, slightly less than in 1966 and down from the record 127 billion pounds in 1964. Meat and poultry production expanded in response to an extended period of favorable prices.

Food Consumption. The average American ate about 1% more in 1967 than a year earlier. The per capita food consumption index (1957–59=100) rose to 103.5, matching the record set in 1946. Increased supplies, growing population, and strong consumer demand accounted for the gain.

Meat and poultry consumption per person rose to 223.4 pounds in 1967 from 214.3 pounds in the previous year. The average American ate a record of about 105 pounds of beef, up from the previous high of 104 pounds in 1966. Pork consumption increased to 61.5 pounds, up from 58 pounds in 1966. But the consumption of veal, lamb, and mutton declined slightly. During 1967 the average consumer ate nine more eggs than in 1966.

Americans ate the same amount of fish per person as in 1966. They consumed more fruit and vegetables but smaller quantities of dairy products, except cheese. Chicken consumption rose to 37.5 pounds from 36 pounds in 1966, and turkey to 8.6 pounds from 7.8 pounds.

Agricultural Employment. The index of farm wage rates (1957–59=100) rose to a new high of about 147 in 1967, up from 136 in the previous year. Wages averaged $1.11 an hour in 1967, up about 8 cents—or about 8%—in a year. The farm work force declined about 5% from 5,214,000 in 1966. Thus the decline in numbers of hired hands virtually offset the higher cost from increased hourly pay.

Farm Assets and Land Values. The market value of farm real estate on Jan. 1, 1968, totaled an estimated $191.5 billion, up $9.5 billion (5.2%) from a year earlier. The value of agricultural assets, including crop and livestock inventories, was estimated at $281.2 billion on Jan. 1, 1968, up $11.7 billion in a year. Liabilities against those assets, including debt on real estate and loans from other creditors, were estimated at $49.9 billion, leaving a balance of $231.3 billion in agricultural equities (up $7.5 billion).

Agricultural Exports. For the fiscal year ending June 30, 1967, exports of U. S. farm commodities rose to a record high of $6.8 billion, up from the previous record of $6.7 billion in the preceding 12 months. Volumes of farm exports were mostly down, but higher prices for soybeans, wheat, and feed grains helped push the total value of exports to the record high.

The increase came from commercial sales, which attained a record of $5.2 billion, up from $5.1 billion, the previous high, in fiscal 1966. Sales under special programs entirely financed by the government, including donations to some nations, accounted for the rest of the exports.

Wholesome Meat Act. The year's most important new law affecting U. S. agriculture, the Wholesome Meat Act, strengthened existing federal interstate inspection regulations and established a program of federal-state cooperation aimed at bolstering intrastate meat inspection. It was signed by President Johnson on Dec. 15, 1967. The core of the law provides that state governments must upgrade their meat inspection programs within two years or face federal regulation of meat processing plants. The act authorizes grants to the states of up to 50% of the cost of making their inspection systems "consistent with" federal programs.

The new law defines "adulterated" or "misbranded" meat in line with definitions used by the Food and Drug Administration. The act makes mandatory the inspection of animals before slaughter as well as afterward.

In addition, the secretary of agriculture is authorized to draw up regulations for both storage and handling of meat in interstate commerce. Meat not intended for human consumption must now be denatured before being sold. Processors and packers of dead, dying, disabled, or diseased animals are required to sell such meat only under federal restrictions set by the secretary.

Food Stamp Program. Congress approved a two-year extension of the expanding Food Stamp Program and appropriated $185 million to operate it in the fiscal year that began July 1, 1967. The program, begun in 1961, is aimed at helping farmers expand markets indirectly by providing low-income families with more food-purchasing power. This is done by issuing coupons to eligible families at a discount.

Although the amount varies according to family income and family size, average recipients pay $6 for $10 worth of coupons. The coupons are accepted as cash for most foods at grocery stores. The Treasury Department redeems the coupons through the banking system.

Food for India. Early in 1967, Congress voted specific approval of President Johnson's request for emergency food aid to famine-threatened India. (In advance of the vote, the President already had the needed authority.) The legislation approved U. S. participation in cooperation with other countries and international organizations in efforts to help India achieve self-sufficiency in food. The U. S. share of emergency aid was as much as 3 million tons of grain if others matched this amount. Congress agreed to an outlay of as much as $190 million to cover costs of the grain and an additional $25 million in direct food assistance through American voluntary agencies.

AGRICULTURAL RESEARCH

The Agricultural Research Service (ARS), an agency of the U. S. Department of Agriculture, conducts research in farming, human nutrition, consumer and food economics, marketing, and new uses for agricultural products. The agency also carries on regulatory activities to control pests that afflict livestock and plants, to prevent the entry of animal and plant pests into the United States, and to assure that pesticides meet acceptable standards of safety and effectiveness. Much of this work is done in cooperation with state agricultural experiment stations.

Food Processing and Packaging. Marketing specialists continued to find ways to get products to consumers in better condition. They developed a radically new machine, called the unitized brush-sizer, which nestles apples between two soft brushes during sorting, brushing, and sizing, for maximum protection from bruising. They also found that packaging pears at the shipping point in specially designed trays of molded pulp reduces bruising while providing an attractive display package.

A tasteless, odorless fat from cottonseed oil may lead to major changes in the packaging of nuts, meats, and produce. Sprayed on the product in a very thin film, it locks out oxygen and retards rancidity for long periods, eliminating the need for canning or other costly packaging. Packaging treated nutmeats in bags costs about 15 to 20 cents per case; canning costs about 95 cents per case.

Refrigerated fresh apple slices will keep their natural flavor, color, and crispness up to six weeks when treated by a new method developed by ARS researchers. With present methods, apple slices stored at temperatures above freezing will keep for about a week before turning brown. The new process should help food service operators improve their services.

Tomatoes can be processed to the desired consistency—thin juice or firm gel, and almost any consistency in between—by adjusting the acidity when the tomatoes are crushed, scientists found. Crushing activates certain enzymes that break down the pectins that control consistency. The activity of the enzymes may be controlled by addition of the proper amount of acid.

Diet Research. Restricted diets high in fat and low in carbohydrates are no more effective for reducing true body weight than restricted diets low in fat, studies with rats showed. Rats on high-fat restricted diets apparently weighed less than those on low-fat diets, but this was because they carried lighter loads in their digestive systems. Otherwise the weight of rats was no different whether the diet was high or low in fat; but with a high-fat diet the proportion of fat in the body was generally greater. Future research will show whether the findings can be applied to humans.

Plant Research. ARS has established a new Plant Air Pollution Laboratory at Beltsville, Md., to study how best to combat the growing problem of air pollution, which damages some plants. Basic research in the laboratory will be directed toward a better understanding of how air pollutants act on agronomic, horticultural, and ornamental plants, and toward developing methods for controlling damage to plants.

Plant explorers continued to search for exotic plants capable of providing new crop and ornamental species that will grow in the United States. A recent trip to South Korea turned up a new lily, a yellow-flowered Weigela, a red-fruited spicebush, and a pine with edible, nutlike seeds.

Plant breeders have developed a hybrid buffel grass, a Southern pasture grass; a cantaloupe line that resists virus; soybeans with more protein; an oat variety that matures earlier than any other variety grown in the United States; and a new lima bean, which resists downy mildew.

Plant Research. Researchers studying rust diseases

AGRICULTURAL RESEARCH SERVICE, U. S. DEPARTMENT OF AGRICULTURE

CATTLE TESTING helps to reduce brucellosis. These cows are tagged for blood tests during slaughtering process.

of cereal crops have developed a sampling instrument, mounted in a small airplane, that continuously records populations of rust-causing fungus spores over long distances. They have determined accurately the degree of rust infection in specific areas by counting the spores they trapped high above the fields. In the future the instrument may be used to learn more about the nature of rust spores—how they survive in the atmosphere and how they move for long distances from infected areas to other grain-growing areas.

Livestock and Poultry Research. A test capable of detecting trace amounts of foot-and-mouth disease virus has been developed. It may prove valuable in preliminary safety testing of certain foot-and-mouth disease vaccines in countries where vaccination is used to protect livestock from the costly disease. It may also be used to screen animal products to make sure they are free of viruses. The test can find live virus in very small amounts in the blood, organs, or tissues of some animals.

Dairy cattle scientists have taken the first step toward developing a chromosome "map"—a tool that will help researchers and farmers do a better job of selecting breeding stock. They have discovered the location and relationship of four of the many genes that make up this map for dairy cattle.

Scientists have developed a fertile chicken-quail hybrid that could help geneticists learn how to transfer desirable characteristics—such as disease resistance—from wild birds to domestic poultry.

Insect Research. Scientists have identified the substance in the wood of balsam fir that prevents insects from developing into adults. The substance, a hormonelike compound called juvabione, causes insects to develop into overgrown nymphs that perish instead of developing into virile adults. If the substance can be synthesized inexpensively, it may be a safe and effective method of insect control.

ARS scientists are searching the world for insects that eat weeds without harming crops. A promising one is the *Altica* beetle native to Europe. It may help to control the Canada thistle, a pest in large parts of the United States, especially the North.

Housing for Migrants. Researchers have developed design guides for economical housing for migrant farm workers. Buildings are easy to maintain and have space and facilities for clean, healthful living. Studies by the Agricultural Research Service show that farmers save by providing good housing because it usually attracts better workers.

Animal Disease Control. ARS and the states carry on programs against animal diseases. The programs showed the following results by mid-1967:

(1) The number of hog cholera outbreaks rose 18% in 1966, with 689 confirmed outbreaks reported. There had been 583 outbreaks in 1965, 1,110 in 1964, and 1,118 in 1963. All states are actively participating in the campaign to eradicate hog cholera, and 29 of them—containing 62% of the nation's hogs—have progressed to the final phases of the eradication program.

(2) More than 91% of U. S. counties had reduced the incidence of brucellosis in cattle to less than 1%. The disease had been eradicated from 873 counties in 32 states, the Virgin Islands, and Puerto Rico. Certified brucellosis-free status was achieved by Connecticut, Maine, Massachusetts, New Hampshire, Nevada, Rhode Island, Utah, Vermont, Wisconsin, Washington, and the Virgin Islands.

(3) Efforts to eradicate brucellosis from swine continued, and validated brucellosis-free herds totaled more than 2,300 in 1967. There were 131 brucellosis-free counties (including all of Vermont, Utah, Nevada, and the Virgin Islands), compared with 123 in 1966.

(4) In the campaign to eradicate cattle tuberculosis, 608 counties in 23 states, Puerto Rico, and the Virgin Islands were accredited free of bovine tuberculosis. All counties in Maine, New Hampshire, and the Virgin Islands have this status.

Animal and Plant Inspection. Under laws protecting U. S. livestock from foreign diseases and other pests, 1,349,314 foreign animals were inspected and allowed to enter the U. S. in the fiscal year 1966. A total of 43,952 animals were rejected.

Plant quarantine inspectors intercepted 41,015 diseases, insects, and other plant pests and found 587,530 lots of prohibited plant material. In their efforts to keep out foreign plant pests, they inspected more than 34 million ships, planes, and automobiles, and more than 48 million pieces of baggage.

Robert B. Rathbone
U. S. Agricultural Research Service

FARM SERVICES

Agencies assigned by the U. S. Department of Agriculture to provide loans, credit, and crop insurance to rural Americans established records in their activities in 1967. The Farmers Home Administration (FHA) lent nearly $1.4 billion, more than ever before. The Federal Crop Insurance Corporation wrote $775 million worth of insurance—a record high—on farm crops produced on 18 million acres. The Farm Credit System lent a record $8.3 billion to farmers, ranchers, and cooperatives. The Rural Electrification Administration (REA) continued to extend electric and telephone service.

Farmers Home Administration. In the fiscal year 1967 the FHA, which supplements credit from private sources, benefited an estimated 3.2 million persons through its activities. Loans made and insured by the FHA totaled a record of almost $1.4

billion, compared with $1 billion the previous year.

Loans and grants for the construction of modern urban-style water distribution systems and waste disposal systems amounted to more than $197 million for 1,112 projects in 48 states, compared with $134 million for 800 projects in 12 states in 1966. This expanding program, totaling $440 million since it was begun in 1961, has brought running water or sewage disposal facilities to more than 2.2 million persons in rural areas. About 65% of the total was in FHA-insured loans from private investors.

Rural development efforts by the agency included the lending of $28 million for 211 community recreation facilities and $1,167,000 for pilot rural-renewal projects. The FHA also made over $28 million in economic opportunity loans to 16,453 low-income rural families and 382 cooperatives serving low-income people.

The oldest FHA program—family farm loans—provided more than $560 million in credit to 78,933 families. Farm-operating loans accounted for $300 million of the total, and farm ownership loans to 14,000 families made up the rest.

The agency also extended $94.6 million in emergency operating credit to farmers in areas hit by floods, drought, and other disasters. This amount brought to more than $1 billion the total lent under this program in 18 years.

Rural-housing loans for construction and remodeling were granted to 48,573 families and rural groups in 1967. The total of $442.1 million advanced for housing included $10.1 million for rural housing for the elderly and $6.5 million for rental housing for farm workers.

Loans outstanding at the end of the fiscal year 1967 totaled nearly $4.9 billion, compared with $3.2 billion in 1966. Principal and interest repayments of $657 million in 1967 were the largest in FHA history. The total lent under FHA auspices during its 32 years of operation amounted to $10.7 billion.

Farm Credit System. The Farm Credit System is made up of 12 federal banks and 695 affiliated federal land bank associations, 12 federal intermediate credit banks and 463 affiliated production credit associations, and 13 banks for cooperatives. These federally chartered lending institutions are supervised by the Farm Credit Administration, an independent agency of the U. S. government.

Funds lent to farmers and their cooperatives are raised by selling bonds and debentures on the open market. All expenses of the Farm Credit Administration are paid by the banks and the associations of the system.

The Farm Credit System had $10.4 billion in loans outstanding at the end of fiscal 1967. This was an increase of $1.3 billion, or 14%, over 1966. Farmers and their cooperatives borrowed a record $8.3 billion from the system during the year, 8% more than the $7.7 billion borrowed the previous year.

The federal land bank associations provided $1.2 billion in long-term mortgage loans for 46,000 farmers during fiscal 1967, more than in any other year except 1966, when 60,000 farmers borrowed $1.4 billion. At the end of the fiscal year, 381,000 farmers had $5.3 billion in loans outstanding.

Production credit associations made $5.1 billion in short- and intermediate-term loans in fiscal 1967. This was 13% more than the $4.5 billion lent the previous year.

Banks for cooperatives lent $1.7 billion to 2,474 farmer cooperatives during the year. By the end of fiscal 1967, 3,016 cooperatives had $1.3 billion in loans outstanding, an increase of 12% over the total on June 30, 1966.

Federal Crop Insurance Corporation. This corporation paid an estimated $42 million in 1967 to compensate some 74,000 farmers whose crops did not return production costs because of drought, freeze, storms, insects, plant diseases, and other unavoidable natural causes of crop loss.

The corporation's $775 million worth of insurance on crop-production investments in 1967 represented a large increase over the $640 million in 1966. The 1967 insurance covered crop investments on 18 million acres, up 2 million from a year earlier. Insurance coverage protected farmers in 1,363 counties in 38 states.

With the addition of sugarcane and grapes in 1967, the corporation wrote policies on 25 types of crops, including corn, wheat, cotton, and soybeans. Citrus fruits, raisins, peaches, apples, grapes, and some other specialty crops are insured only against such hazards as freezing and wind damage. A new development is the increasing use of federal crop insurance policies by farmers as loan collateral.

Rural Electrification Administration. More than 240,000 rural people will be added to the lines of electric and telephone systems financed by REA as a result of loans approved in the fiscal year 1967.

REA approved 259 electric loans during the year to bring central station electric service to 156,981 rural consumers for the first time. The loans totaled $352.4 million, bringing the cumulative amount of loans made in the 32-year-old program to almost $6.3 billion.

By the end of fiscal 1967, REA-financed rural electric systems had made principal and interest payments of $2.7 billion on the $5.3 billion in loan funds advanced to them for investment in their local electric facilities.

REA's nearly 1,000 active electric borrowers serve 5.8 million meters, or some 20 million persons, and more than half of the nation's 3.3 million electrified farms. They provide service in 2,610 of the 3,092 counties in the United States. REA-financed rural electric systems operate in 46 states.

Retail electric power rates were reduced by 92 electric borrowers during the year for annual savings to their consumers of $1.9 million. Usage per capita reached a new high of 708 kilowatt-hours per month in fiscal 1967, an increase of 242 kw-hr per consumer over the fiscal 1960 average.

REA approved 188 telephone loans during fiscal 1967 to bring new and improved all-dial telephone service to 83,590 subscribers. The loans totaled $119 million, raising the cumulative total of loans made in this 17-year-old program to almost $1.4 billion. By the end of fiscal 1967, REA-financed telephone systems had made principal and interest payments of $276.4 million on the $1.1 billion of loan funds advanced to them for investment in their local telephone facilities.

The 867 rural telephone systems—636 commercial companies and 231 cooperative associations—serve nearly 2 million rural subscribers in 1,872 counties in 46 states.

In fiscal 1967, the REA-financed systems continued an accelerated program of upgrading service toward their long-range goal of all-dial, single-party service.

GENERAL DYNAMICS

NEW AIR FORCE TACTICAL FIGHTER, the variable-sweep-wing F-111A built by General Dynamics, became operational in an improved version in late 1967.

AIR FORCE

The U. S. Air Force in 1967 continued to prosecute the war in Vietnam, with tactical fighter-bombers regularly pounding targets in North Vietnam and flying mainly close-support missions in the South.

At the same time the Air Force also maintained its air defense and strategic forces in a high state of readiness, both in the United States and in Europe. On Sept. 18, 1967, the Air Force marked its 20th anniversary as a separate service.

Vietnam Operations. By June 18, 1967, two years after beginning their heavy bombing assaults, B-52's had flown more than 1,000 missions (over 10,000 individual flights) and dropped more than 190,000 tons of bombs. Prisoners of war attested to the morale-shattering effectiveness of the strikes. B-52's were operating against suspected Communist hideouts in South Vietnam, and even performed some close-support missions.

Close air support in South Vietnam and interdiction missions in North Vietnam were flown in the F-4C Phantom, F-100 Supersabre, F-5 "Skoshi Tiger," F-104 Starfighter, and F-105 Thunderchief. Two A-1E squadrons were also flying close-support missions in South Vietnam. KC-135 flying tankers were refueling many of the fighter-bombers.

Aerial reconnaissance over North Vietnam was performed in the RF-4C, equipped for both day and night photography, and the RF-101. Meanwhile, 0-1 observation aircraft were flown on visual reconnaissance and airborne forward air control missions in South Vietnam. A number of C-47's, dubbed "Puff, the Magic Dragon," and armed with 7.62-mm miniguns, were helping to defend outposts, escort convoys, and supplement strike aircraft.

Other C-47's and Helio U-10 short-takoff aircraft were flying psychological warfare missions—dropping leaflets and broadcasting messages to the Communists. C-47 and C-123 flare ships were illuminating battlefields at night. Modified C-123's, converted to sprayer aircraft, were defoliating dense jungle growth to hamper Communist supply movements. Air-sea rescue planes, both helicopters and fixed wing types, were plucking downed pilots from land and sea, often under enemy fire.

Logistic aircraft were resupplying not only U. S. and South Vietnamese forces but also Vietnamese civilians. The C-123, the C-130, and the Canadian-built C-7A Caribou (transferred from the Army to the Air Force early in 1967) were flying in-country missions, while the C-141, C-124, and C-133 were carrying supplies from the United States. Civilian carriers ferried most of the personnel and a third of the military cargo to Southeast Asia.

A special feature of the airlift effort was the Red Ball Express. Begun on Dec. 8, 1965, it was delivering an average of 30 tons a day of priority equipment to the U.S. Army in South Vietnam—a 10,000-mile (16,040-km) trip—in 168 hours or less from the time it was requested by the Army unit in the field.

Air Force special warfare forces in 1967 were particularly helpful in supporting the pacification program by transporting nonmilitary cargo to remote areas. They were also working with the South Vietnamese in building schools, improving sanitation facilities, constructing small dams and bridges, and establishing cottage industries. Air Force medical men immunized or treated thousands of people.

Both air combat and air logistic support for the effort in Southeast Asia in 1967 rested on 10 major air bases in South Vietnam and 8 in Thailand, as well as dozens of smaller airfields in both countries. (See also VIETNAM WAR.)

Research and Development. Efforts in 1967 were being directed primarily toward better aircraft, missiles, munitions, and electronic, reconnaissance, and countermeasure devices. New high-strength materials, high-temperature alloys, laminar-flow control, and engine designs could reduce aircraft weight by 25% to 40% and revolutionize design.

In space research, about 67% of all launches in the national space effort since the program began have been provided by USAF boosters and crews. The Eastern and Western test ranges, located at Patrick AFB, Va., and Vandenberg AFB, Calif., respectively —as well as many more specialized facilities—were being operated by the Air Force. About 95% of the tracking and control of space vehicles in orbit—about 1,200 man-made objects in 1967—was being done by 10 USAF facilities located around the world.

NORTH VIETNAM
HANOI

WIDE WORLD

AIR FORCE COL. ROBIN OLDS achieved a record by downing four MIG's in the air war over North Vietnam.

Space programs made up three fourths of the Air Force's advanced development effort in 1967. Among the projects under way was the Manned Orbiting Laboratory (MOL), consisting of a Titan IIIM space booster, a Gemini B spacecraft, a laboratory vehicle, and supporting equipment. Objectives of the MOL are to determine in detail the capabilities of man in space, and to test and develop improved equipment and technology. Contractors for the MOL are working toward a first manned flight in 1969 or 1970.

Work continued on Defense Satellite Communications programs. The initial system was completed by a multiple Titan IIIC launch on June 28, 1967, but some of the satellites, up since June 1966, were to be replaced in 1968. A Tactical Satellite Communications program (TACSATCOM) was being developed for land, sea, and air forces in the field.

The Air Force was also working on lifting-body configurations in the START (Spacecraft Technology and Advanced Reentry Tests) program. This could lead to a maneuverable reentry system, replacing the present ballistic type of return from space. See also SPACE EXPLORATION.

Strategic Air Command. SAC forces in 1967 included the B-52 Stratofortress and B-58 Hustler bombers and the SR-71 and RC-135 reconnaissance aircraft. Early models of the B-52, as well as the B-58 force, were to be replaced by the FB-111, a bomber version of the F-111 tactical fighter, in the early 1970's. Armed with short-range attack missiles (SRAM), the FB-111 was expected to penetrate enemy defenses at low altitudes.

Missiles in the strategic inventory in 1967 included the Minuteman I and II and the Titan II. The last, no longer in production, was to be phased out gradually. The first Minuteman II missile wing became operational in 1966, and the Air Force was moving toward an ultimate strength of 1,000 Minuteman II and III missiles, with Minuteman I phased out by 1972. The Minuteman III was to have greater range, accuracy, survivability, and payload

THE FIRST BOMBS FALL on Phucyen airfield, a North Vietnamese MIG base, in October 1967.

U. S. AIR FORCE

capacity, allowing it to carry more penetration aids to counter an antiballistic missile defense.

The strategic forces in 1967 remained in a high state of readiness, with a percentage of the bombers on 15-minute ground alert and others airborne at all times. Missiles were on continuous alert in hardened sites. (See also MISSILES.)

Air Defense Command. ADC in 1967 was providing about 70% of the personnel and facilities for aerospace defense of the North American continent. Fighter aircraft included the F-101B Voodoo, F-102 Delta Dagger, F-104 Starfighter, and F-106 Delta Dart interceptors. (Bomarc B surface-to-air interceptor missiles were also on station.) The supersonic jet fighters were armed with air-to-air rockets, including the Falcon, the nuclear-tipped Genie, and the Sidewinder with its heat-seeking guidance system and nonnuclear explosive.

The $124 million underground Combat Operations Center in Cheyenne Mountain, near Colorado Springs, Colo., has directed these aerospace defense forces since April 1966. The center is a complex of steel buildings mounted on shock-absorbing springs and protected by 1,200 to 1,750 feet of granite.

Fourteen Back-Up Interceptor Control (BUIC) II sites were completed by late 1967, and work was under way on 19 enlarged BUIC III stations. BUIC, a high-speed surveillance-and-control system using electronic computers, is a standby monitor system that automatically takes over air defense tasks if the primary Semi-Automatic Ground Environment (SAGE) system becomes inoperative.

The Ballistic Missile Early Warning System (BMEWS) was fully operational, assuring up to 15 minutes' warning of a ballistic missile attack across the North American approaches. Over-the-horizon radar and systems to warn against sea-launched ballistic missiles improved U. S. detection ability.

Tactical Air Command. TAC strength was up to 23 wings in 1967, with over 1,600 aircraft, including the F-100 Supersabre, F-105 Thunderchief, and F-4C/D Phantom II. The number of F-4 aircraft—the newest, fastest, and highest-flying operational fighter in the inventory—was scheduled to reach about 1,000. The F-111A was expected to enter the inventory in quantity in 1968, and the A-7 in 1969.

TAC also operates the Special Air Warfare Center at Hurlburt Field, Eglin AFB, Fla., where pilots and support personnel learn guerrilla warfare techniques. A combat applications group at the center develops new methods and weapons to combat guerrillas. The Tactical Fighter Weapons Center, established at Nellis AFB, Nev., in September 1966, identifies problem areas and develops new combat equipment and techniques for fighters. Special air warfare units are sent to many non-Communist nations to train their air forces in counterinsurgency operations.

Among training exercises were One Shot 1-67 and 2-67, with simulated fighter attacks and airdrop of heavy equipment, weapons, and 600 paratroops. Clove Hitch III, in the Caribbean, used 21,000 men of all services in an amphibious-airborne test.

Military Airlift Command. MAC had more than 1,700 aircraft assigned to both active and Reserve airlift units in 1967. The inventory included the C-130 Hercules, C-133 Cargomaster, C-124 Globemaster, C-135 Stratolifter, and C-141 Starlifter. The latest to enter the inventory, the C-141, could deliver 60,000 pounds (27,200 kg) of cargo a distance of 4,000 miles (6,400 km) or 30,000 pounds (13,600 kg) a distance of 5,800 miles (9,300 km) at a nonstop speed of 500 mph (800 km/hr).

MAC's airlift capacity more than doubled from 1961 to 1967 and was expected to double again by 1970. The C-5A, due to become operational in 1972, is expected to revolutionize U. S. airlift capabilities. Despite its size (243 feet, or 74 meters, long, with a wingspan of 223 feet, or 68 meters) and load-carrying capacity (265,000 pounds, or 119,200 kg over a 3,100-mile, or 5,000-km, range), the C-5A will use only half the runway length required for present-day jetliners. It also will be able to operate on sod fields, and is designed to carry entire combat units to any point on the globe in 24 hours.

Strength. More than 1.5 million persons were directly involved in 1967 in the Air Force's more than 200 installations in the United States and 24 other countries. Military personnel rose to over 897,000 during the 1967 fiscal year, including about 135,000 officers and over 762,000 airmen. Approximately 285,000 men were serving overseas. Air Force Reserve strength (Ready Reserve) on June 30, 1967, was about 204,000, and Air National Guard was about 84,000. About 355,000 civilians were working for the Air Force, including those directly hired and those working for contractors.

The budget for fiscal 1968, signed on Sept. 30, 1967, provided $23.9 billion for the Air Force. Of this, $989.1 million was to purchase F-111A aircraft, and $47 million for research and development of the AMSA (advanced manned strategic aircraft). (See also AVIATION; NATIONAL DEFENSE.)

AIRCRAFT AND AIRLINES. See AVIATION.

U. S. AIR FORCE

PROPAGANDA LEAFLETS stream from an Air Force O-2 Super Skymaster, first used for psychological warfare in Vietnam in summer of 1967.

ALABAMA

The first woman governor of Alabama and the third woman governor in the history of the United States, Lurleen Burns Wallace, was inaugurated on Jan. 16, 1967. The wife of former Gov. George C. Wallace, she pledged in her inaugural address to carry on her husband's policies.

Legislature. The legislature met on March 2 in a special session on roads and highways. The session, which lasted through May 2, passed a $160 million road bond measure, effected a division of gasoline tax money more favorable to urban areas, and passed the first state aid program for municipal streets.

Governor Wallace urged the legislature, convening in regular session on May 2, to "give continuing priority to the investigation of federal court decisions on integration." The regular session, which finally adjourned on August 31, enacted a $562 million, 2-year appropriation for public education and a $121 million appropriation for other state agencies. Other legislation passed during the session included bills on mental health, parks, and property assessments; an antiriot measure; a 5% pay raise for state employees; a legislative pay raise, and a law that would have given parents the right to choose the race of their children's teachers. The last measure, which had been called by the Governor "the most important proposal which you have been called upon to consider this session," was subsequently struck down by the federal courts. Also thrown out was a tuition grant law, despite the Governor's declaration on September 8 that she would withhold state appropriations to Tuskegee Institute, a predominantly Negro college, unless this legislation were upheld.

Education. On March 22, a 3-judge federal court in Montgomery handed down a far-reaching decree ordering Governor Wallace and state educational officials to "take affirmative action" toward integration of the state's public school systems. The court noted that the "defendant state officials have engaged in a wide range of activities to maintain segregated public education." The court, which also declared unconstitutional a 1965 state tuition grant law for private schools, called for state officials to notify city and county school systems that they must submit and adopt desegregation plans for all grades beginning in September 1967.

On March 30, before a statewide television audience, Governor Wallace affirmed her resistance to the school order, promising to do what she could "to prevent the destruction of our public school system." Two weeks later the court refused to issue a stay of its order and branded as "erroneous and misleading" statements by Governor Wallace about the order.

On April 4, following criticism by some legislators of a student government symposium at the University of Alabama, university president Frank A. Rose gave strong backing to the principle of academic freedom. A few days later, Gary Dickey, editor of the Troy State College newspaper, who had supported Rose, was subjected to editorial censorship. His subsequent disciplining and expulsion from school prompted litigation that was still under way at the end of the year. Rose testified on April 17 before a legislative committee against proposed legislation prohibiting people with Communist inclinations from speaking at state colleges and universities.

Other Civil Rights Actions. State and federal courts were considering the legality, under the Civil Rights Act of 1964, of certain provisions of Alabama's public welfare program, mental health program, and prison system. Early in 1967 the federal government threatened to cut off funds from the state's welfare and mental health programs unless they complied with federal antidiscrimination standards.

On June 8, Governor Wallace vetoed an Office of Economic Opportunity (OEO) grant of nearly $400,000 to a farmer's cooperative in southwest Alabama because of its alleged association with civil rights activities. This veto was subsequently overridden by Sargent Shriver, head of the OEO.

Governor's Illness. Governor Wallace announced on June 26 that medical tests indicated the existence of a malignancy that might require surgery. In July she entered the M. D. Anderson Hospital of the University of Texas, where she underwent surgery for the removal of a tumor in the lower abdomen. She returned to Houston for postoperative treatment at various times during the remainder of the year.

Constitutional Referendum. In a special constitutional referendum held on December 5, Alabama's voters ratified 16 new amendments to the state's constitution. Included were measures to spend $43 million for improving and expanding state parks and $15 million for mental health facilities.

Third-Party Plans. Former Gov. George C. Wallace spent much of the year pressing his campaign as a potential third-party candidate for the presidency. Late in the year, Wallace's American Independent party qualified for listing on the 1968

ALABAMA • Information Highlights

Disastrous Fire. On February 7, 25 persons, including Public Service Commissioner Ed Pepper and his wife, were killed in a fire at Dale's Penthouse Restaurant in Montgomery.

ROBERT J. FRYE
University of Alabama

ALASKA

Disaster struck Alaska in 1967 when, on August 14–15, the Chena River flooded Fairbanks, the state's second largest city. More than 18,000 persons were evacuated from the area at the peak of the flood. Damage was estimated at $176 million. The centennial exhibit in Fairbanks, commemorating the U. S. purchase of Alaska from Russia, was extensively damaged and did not reopen.

President Johnson declared Alaska a disaster area and alloted $1 million in federal funds for flood relief. In a special 6-day session of the Alaska legislature, expenditures of $15.2 million were authorized for the flood area. Homeowners who repaired damage prior to May 1968 were to be granted a property tax credit equal to 12% of the cost of repairs. Gov. Walter J. Hickel was authorized to spend up to $1 million for post-disaster work, and unemployment insurance coverage was extended from 28 to 42 weeks. Special taxes levied to cover the flood damage included a $10 annual head tax on all wage earners to create a $7.5 million disaster fund and an increase of 1% in the oil and gas production tax.

Legislation. The regular session of the Alaska legislature convened in January with Republicans in the majority in both the House and the Senate. A majority of the bills proposed by Governor Hickel were passed. The emphasis was on the development of Alaska's economy. A $103-million budget, exceeding by $10 million the 1966 budget, was passed.

Fisheries. Alaska's salmon catch in 1967 was the smallest since the turn of the century. In southeastern, central, and western Alaska, the catch was less than one third of what it had been in 1966. Shellfish catches in 1967 were almost as large as in 1966, with a decrease in king crab and an increase in shrimp and Dungeness crab. Because of the failure of the salmon catch, the Bureau of Indian Affairs is supplying several thousand native fishermen in the Bristol Bay area in the north with food and fuel to use through the winter. In the southeast, needy fishermen will be given monthly relief checks.

Daugherty; Commissioner of Dept. of Education, Dr. Clifford Hartman; chief justice, Buell A. Nesbett. *Legislature*—Legislature of the State of Alaska (Special session Sept. 29–Oct. 4, 1967): (met Jan. 23–April 9, 1967); Senate, 20 members (14 Republicans, 6 Democrats); House of Representatives, 40 members (25 R, 15 D).
Education: *School enrollment* (1965–66)—public elementary, 44,000 pupils (1,700 teachers); public secondary, 22,500 pupils (1,100 teachers); nonpublic schools, 2,600 pupils (180 teachers); college and university (1965), 4,734 students, *Public school expenditures* (1965–66)—$40,200,000 ($718 per pupil); average teacher's salary, $8,460.
Public Finance (fiscal year 1966): *Revenues,* $245,183,442 (no sales tax; motor fuel tax, $7,077,336; federal funds, $93,515,947). *Expenditures,* $220,052,876 (education, $49,643,538; health, welfare, and safety, $27,137,790; highways, $97,316,399). *State debt,* $65,872,000 (June 30, 1967).
Personal Income (1966): $907,000,000; average annual income per person, $3,421.
Public Assistance (fiscal 1966): $4,159,263 to 81,396 recipients (aged, $2,103,147; dependent children, $2,056,116).
Labor Force (employed persons, 106,100 1967): *Agricultural,* 1,000; *nonagricultural* (wage and salary earners), 86,400 (12.8% manufacturing, 13.8% trade, 39.1% government). *Unemployed persons* (mid-July 1967)—7,000.
Manufacturing (1965): Value added by manufacture, $106,490,000 (lumber and wood products, $13,685,000; food and products, $50,544,000).
Agriculture (1966): *Cash farm income,* $4,543,000 (livestock, $3,315,000; crops, $1,228,000).
Mining (1966): *Production value,* $82,683,000. *Chief minerals*—gold, 27,325 troy ounces; silver, 7,000 troy ounces.
Fisheries (1966): *Commercial catch,* 588,000,000 pounds ($74,000,000). *Leading species* (1965)—salmon, 274,844,200 pounds ($48,274,270); king crab, 131,670,700 pounds ($12,729,360); halibut, 30,984,000 pounds ($6,770,350).
Transportation: *Roads* (1965), 6,587 miles (10,598 km); *motor vehicles* (May 1967), 118,217; *railroads* (1967), 552.5 miles (888.9 km); *airports* (1967), 391.
Communications (1966): *Telephones* (1967), 64,000; *television stations,* 8; *radio stations,* 20; *newspapers,* 11.

Forest Industries. The Alaskan lumber industry had a record year in 1967. For the first time, stumpage receipts for a single year exceeded $1 million. The production of lumber and cants (squared logs) was 25% greater in 1967 than in 1966. The Ketchikan Pulp Company near Ketchikan provided over 210,000 tons of pulp to the eastern United States and to other countries, including India and Colombia. The 180,000 tons of pulp produced by the Alaska Lumber and Pulp Company at Sitka was shipped in its entirety to Japan. Pulpwood chips from wood waste were produced at three sawmills in Alaska and shipped to pulp mills. Construction was begun on the state's first green veneer plant, in Wrangell, in conjunction with sawmill operations there.

UPI

HOUSE BURNS unattended amid the flood waters that devastated Fairbanks, Alaska, in August. Flood damage was estimated at $176 million.

Oil, Gas, and Chemicals. With the completion of more drilling platforms in Cook Inlet, oil production in that key area has exceeded 88 million barrels, with a daily production in excess of 120,000 barrels. A large chemical complex consisting of an ammonia plant and a urea plant was under construction on the Kenai Peninsula. A plant to liquify natural gas for shipment to foreign countries will be completed on the peninsula in 1968.

Power. Work progressed on the Snettisham hydroelectric project south of Juneau in 1967. It is expected to produce 47,000 kilowatts by 1972.

Tourism. Alaska's tourist business, as reflected in the traffic using the three seagoing ferries that run from Prince Rupert in British Columbia to Skagway, increased during 1967. The ferries carried about 13% more passengers and 12% more cars and trucks than in 1966. Half-decks are being installed over the vehicle sections of the ferries to increase their vehicle capacity by 20%.

Litigation. Two important cases involving Alaska school teachers were in the courts in 1967. In one case, the superior court of the state of Alaska ruled that the election to the state legislature of three teachers directly employed by the state department of education was in violation of the state constitution. The case was appealed to the state supreme court.

The other case concerned two teachers who were discharged from their jobs because they openly criticized the school administration. Their case, which involves freedom of speech, will be heard by the U. S. Supreme Court.

I. J. MONTGOMERY
Former Director, Alaska Merit System

ALBANIA

Albania in 1967 launched the second phase of her Chinese-inspired cultural revolution. On February 6, Enver Hoxha, first secretary of the Albanian Labor party (Communist), issued an appeal to his countrymen to eradicate all remaining bourgeois influences from their homeland. A month later the party launched a concerted drive to "emancipate" Albanian women. The Albanian Red Guards, first organized in 1966, were given a major role in implementing these party decrees.

While it appears that the Albanian cultural revolution was in part initiated to please the Chinese, there were also a number of purely national considerations that prompted the Albanian leadership to take this action. Among the most important of these were the desires of the Albanian rulers to bring all aspects of Albanian life under strict party control, rekindle a revolutionary spirit among the youth of Albania, and eliminate "revisionist" influences.

Foreign Relations. Albania remained Communist China's most faithful ally during the year. The two nations exchanged numerous delegations and pursued a common policy toward the Soviet Union, the Communist bloc, and the non-Western world.

An Albanian delegation headed by Defense Minister Beqir Balluku and Politburo member Hsyni Kapo visited China from January 12 to February 13 and was accorded a warm reception. In late September, Premier Mehmet Shehu went to China to participate in the celebration of the 18th anniversary of the establishment of the People's Republic of China. While in Peking, Shehu was granted an audience with Mao Tse-tung.

Education: *Literacy rate* (1955), 71.5% of population aged 9 and over. *Total school enrollment* (1964)—417,060 (primary, 349,141; secondary, 29,783; teacher-training, 7,366; technical, 18,833; higher, 11,937).

Finance (1965 est.): *Revenues,* $684,000,000; *expenditures,* $672,000,000; *monetary unit,* lek (5 leks equal U. S.$1).

Manufacturing (metric tons): Cement (1965), 150,000; gasoline (1964), 52,000; sugar (1966), 15,000; beer (1964), 10,900; olive oil (1963), 3,000.

Crops (metric tons, 1964–65 crop year): Maize, 188,000; sugar beets, 135,000; wheat, 124,000; cottonseed (1966), 16,000; oats, 15,000; barley, 8,000; rye, 6,000.

Minerals (metric tons, 1965): Crude petroleum, 800,000; nickel ore, 370,000; coal, 350,000; chromite, 315,000; copper ore, 160,000.

Foreign Trade (1964): *Exports,* $60,000,000 (chief exports: fuels, minerals, and metals, $32,500,000; foodstuffs, $13,800,000; raw organic materials, $10,000,000); *imports,* $98,000,000 (chief imports: machinery and equipment, $48,680,000; fuels, minerals, metals, $14,680,000; raw materials for food industry, $11,320,000). *Chief trading partners* (1964): Communist China (took 41% of exports, supplied 63% of imports); Czechoslovakia (took 19% of exports, supplied 9% of imports); Poland (took 10% of exports, supplied 7% of imports).

Transportation: *motor vehicles* (1965), 7,800 (automobiles, 2,300); *railways* (1965), 65 miles (105 km); *merchant vessels* (1966), 8 (33,000 gross registered tons).

Communications: *Telephones* (1966): 4,813; *television stations* (1967), 1; *television sets* (1967), 1,000; *radios* (1964), 76,000; *newspapers* (1965), 2 (daily circulation, 87,000).

Among the most interesting of the Chinese groups to visit Albania was a contingent of Red Guard leaders who attended the fifth congress of the Working Youth of Albania (June 26-June 29).

Tiranë and Peking continued their attacks on the foreign and domestic policies of the USSR and the Communist states of eastern Europe. Albania and China both claimed that the Soviet Union was in league with the United States to undermine world communism.

Despite the continuing hostility of the Albanians, the USSR in late June sought at least a partial reconciliation with Albania by offering to resume trade. Albania rejected this overture just as it rejected a Russian invitation to participate in the Soviet Union's celebration of the 50th anniversary of the Bolshevik Revolution.

In March the United States made a modest gesture toward improving relations with Albania by lifting the ban on travel by United States citizens in Albania. The Albanians responded by issuing a regulation prohibiting U. S. citizens from entering their country.

Economic Developments. While it appeared that the industrial sector of the economy was meeting its goals under the fourth 5-year plan (1966–70), the agricultural sector of the Albanian economy continued to be plagued with problems. To remedy this situation the government sought to achieve virtually complete collectivization of agriculture and to grant concessions to the peasants. The state made additional credit available to farmers, lowered their taxes, and permitted them to buy consumer goods and tools at special reduced prices. In April, retail prices were reduced on a nationwide basis by 10 to 30%.

ALBEE, Edward. See biographical sketch under AMERICAN LITERATURE.

ALBERTA

Alberta in 1967 continued the economic and social advances that it has made with virtually no interruption since the end of World War II. As during the past several years, the chief economic progress was realized in development of the north.

Economy. A decline in grain production, caused by inadequate moisture, was largely compensated for by excellent harvesting weather. This resulted in high grades for grain, particularly wheat, although markets were less buoyant in 1967 than before.

Oil production expanded rapidly at Rainbow Lake, where a "new town" of the same name was established. Other "new towns" in northern Alberta are Grande Cache (1966) and Fox Creek (1967). Construction advanced on the Alberta Resources Railway, which will open up lumbering, coal, gas, and oil areas.

Government. A general election on May 23, 1967, saw the Social Credit government easily returned to office, although Education Minister R. H. McKinnon lost his post. Raymond Reierson succeeded him, while also retaining the labor portfolio. Alfred J. Hooke succeeded retired Leonard C. Halmrast as minister for welfare. Newly elected Peter Lougheed headed the Conservative opposition, which won six seats.

Education. A third provincial university, that of Lethbridge, opened in 1967. Increasing concern was devoted to other post-school education besides that at the university level. Attention was also given to the increasing integration of Indians into the system of provincial public education.

Human Resources. A staff was recruited for the federal-provincial Alberta New Start anti-poverty project in the northeast.

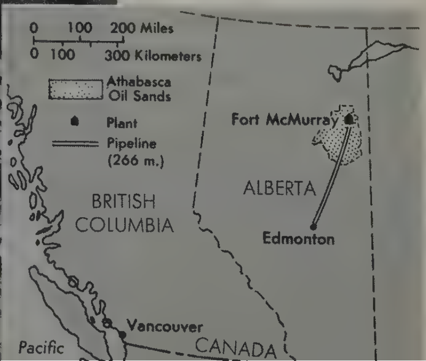
SUN OIL COMPANY

MASSIVE NEW PLANT has been built to process crude oil obtained from the rich deposits found in the oil sands near Fort McMurray, in northern Alberta. Athabasca River is in the background.



ALGERIA

The Middle East crisis in June and an attempted coup in December dominated events in Algeria in 1967. The regime of President Houari Boumedienne seized the opportunity presented by the war to silence the opposition and rally the masses. But when the danger had passed, antigovernment forces staged a coup.

The Opposition. Early in 1967 dialogue between the government and the governed was breaking down. Opposition movements were organizing in Europe, and students and labor unions were pressing for a share in decisions. Efforts at solidifying the nation's single party, the National Liberation Front (FLN), had failed. Peasants refused to hand over surplus crops, and urban residents were negligent in paying taxes.

A circle of Boumedienne's close associates known as the "Oujda group" (Foreign Minister Abdelaziz Bouteflika, Interior Minister Ahmed Medgheri, and Finance Minister Ahmed Kaid) had become the arbiters of power, assisted by the technocrats led by the minister of industry and energy, Belaid Abdesselam. To many in the opposition it seemed that the regime was intent on creating a bureaucratic, highly centralized state and limiting the influence of ex-guerrilla fighters, now integrated in the army, as well as that of labor unions and students. Army Chief of Staff Col. Tahar Zbiri crystallized this discontent and become the leader of the opposition.

Effects of the June War. The Israeli-Arab war occurred at a propitious moment for the Boumedienne camp, who attempted to use it as a rallying point and as a means of squelching seditious movements. For several days Algerians were led to believe that the war front stood at their own front doors. As soon as Israel attacked Egypt, Algeria declared war on Israel, introduced an emergency budget, levied special taxes, mobilized the population, and dispatched troops and equipment to the front.

Imbued with war fervor, mobs sacked the U. S. cultural center and marched on the British embassy. The press and radio labeled the British and Americans aggressors and charged them with having flown air cover for Israel. Algeria broke relations with the United States on June 6; relations with Britain had been severed earlier over Britain's allegedly "soft" policies toward Rhodesia. Washington withdrew its ambassador and cut off $20 million in aid.

WIDE WORLD

PRESIDENT Boumedienne (*left*) inspects troops at Algiers before they were sent to aid Egypt in the June war.

Mutiny. It proved easier, however, to mobilize than to demobilize. After a month of listening to the slogan "the Arabs only lost a battle but will win the war," Algerians became weary of their state of emergency—especially as the foreign news media informed them that events had not taken place as their government had indicated. However, President Boumedienne had had sufficient time to shore up his support in the army, and when the mutiny broke he stood ready.

An attempt at rebellion by Zbiri on November 1 led Boumedienne to station tanks and reinforcements on the major roads leading to the capital. When Zbiri staged his attempted coup on the night of December 14, the rebels were stopped en route to Algiers. The following day the coup was reported crushed. Zbiri fled to the mountains; his ally, Labor Minister Abdelaziz Zerdani, disappeared, and the

head of the first military region, Saïd Abid, reportedly committed suicide.

At the end of the year the police were rounding up suspects. Boumedienne was faced with the prospect of purging the army of dissidents. A cabinet reshuffle expected in 1968 is likely to crown the victory of the Oujda group and the technocrats.

Foreign Affairs. As a result of the Middle East war and internal problems, Algeria emerged as one of the most radical Arab states. Its demands that the Soviet Union break its policy of peaceful coexistence and intervene on the Arab side antagonized the Russians, who had supplied Boumedienne's regime with $250 million in aid in 1967.

On June 30 a plane carrying former Congolese Premier Moïse Tshombe was hijacked over Spain, where he was living in exile, and diverted to Algeria. Extradition of Tshombe, who was under death sentence in the Congo (Kinshasa), was approved by the Algerian supreme court on July 21. At the end of the year, however, he was still being held in Algeria, although his European companions had been released.

Late in 1967, Algeria showed signs of turning more attention to problems closer to home. Significantly, the government began mending diplomatic fences with Morocco. An arms buildup since 1966 has given Algeria a weapons edge over Morocco. As a result, Moroccan claims on Algerian territory have abated, opening the way for regional cooperation.

Economy. Crude oil production remained the brightest aspect of Algeria's economic development, reaching 38 million tons in 1967, or 15% more than in 1966, and reserves were still expanding. The prognosis for cereal production was less optimistic. Experts predicted crop yields of nearly 2 million tons (1.8 million metric tons), or double the 1966 harvest, but twice that amount is needed to feed the population. After the United States cut off its Food for Peace aid, France and the Soviet Union began making up the shortage.

Another agrarian problem was the wine surplus, unmarketable after France backed out of a huge purchase commitment. The government sought to convert vineyards into more profitable cash crops.

Nationalization of commercial enterprises continued in 1967. By June, 13 U. S. and British firms —mainly oil companies—were placed under state control and supervision, while 3 retail distributors (Esso, Mobil, and Shell), as well as Procter and Gamble's Algerian affiliate, were nationalized. The government promised to pay indemnities.

ALUMINUM

The North American aluminum industry was expected to set a sixth consecutive record year of production in 1967. During the year, the industry's customers reduced their excess inventories, causing a slowdown in the growth of product shipments.

Production. The output of primary aluminum in 1966 totaled a record 2,968,366 tons in the United States, 902,012 tons in Canada, and 23,470 tons in Mexico (short tons). Once again North America's record production accounted for slightly more than half of the estimated world output of 7.7 million tons. Production in 1967 was expected to total about 3.3 million tons in the United States, 950,000 tons in Canada, and 24,000 tons in Mexico.

Industry Expansion. Primary aluminum production capacity in North America was expanded in 1967 to more than 4.3 million tons, an increase of nearly 400,000 tons, or about 10% above the capacity at the end of 1966. The Aluminum Company of America raised its capacity by 100,000 tons by adding new potlines at its plants at Badin, N. C., and Wenatchee, Wash. The Intalco Aluminum Corporation added 76,000 tons of new capacity, doubling the capacity of its plant at Bellingham, Wash. Ormet, Inc., added a 55,000-ton line to its smelter at Omal, Ohio. Kaiser Aluminum & Chemical Corporation increased its overall capacity by 20,000 tons, and Reynolds Metals Company increased its capacity by 90,000 tons. Alcan Aluminium Limited increased its overall Canadian capacity by about 88,000 tons.

Shipments and Markets. Net U. S. shipments of aluminum ingots and mill products (including primary, secondary, and imported metal) to markets in 1966 was a record 4,528,000 tons. The percentage distribution of these shipments to major markets was as follows: transportation, 23.1%; building and construction, 21.6%; electrical, 14.4%; consumer durables, 10.1%; packaging, 8.1%; machinery and equipment, 7.2%; exports, 6.5%; and all other, 9.0%.

The two largest U. S. markets for aluminum products in 1967 continued to be the building and transportation industries. Defense shipments, largely included in the transportation market, once again accounted for the largest percentage increase. In the civilian market, the largest increase was in the container and packaging field, where more and more aluminum was being used in the ends and bodies of cans. The second largest increase was in the electrical conductor field, where the expansion of transmission line facilities and the high price of copper spurred the use of aluminum. Shipments of aluminum products to other major markets declined or leveled off during 1967 as customers worked off excess inventories.

Exports. In 1966 the major exporters of primary aluminum in the non-Communist world were Canada (716,476 tons), Norway (383,612), France (188,543), the United States (188,239), Cameroon (53,086), and Austria (40,878). The major exporters of aluminum semifabricated products in 1966 were Belgium-Luxembourg (136,146 tons), the United States (97,859), West Germany (88,505), France (64,092), the United Kingdom (50,599), and Canada (35,051). AMBASSADORS AND ENVOYS

Ellsworth Bunker, a former U. S. ambassador-at-large with experience in difficult diplomatic situations, succeeded Henry Cabot Lodge as U. S. ambassador to South Vietnam in March 1967. The United Arab Republic (with some other members of the Arab League) and the United States severed diplomatic relations during the Israeli-Arab war in June. Diplomatic ties have not been reestablished. The following is a list of ambassadors and envoys from and to the United States as of Dec. 31, 1967. Diplomatic designations are as follows: A—ambassador extraordinary and plenipotentiary; CA—chargé d'affaires.

AMERICAN LIBRARY ASSOCIATION

The American Library Association (ALA) opened its principal international relations office in Washington, D. C., in 1967, and the controversial question of whether the whole ALA headquarters office should move to Washington or remain in Chicago was decided by a vote of the membership to remain in Chicago.

National Library Commission. In 1967, officers, committee chairmen, and staff members of the ALA appeared before the National Advisory Commission on Libraries to present information and opinions directed toward the commission's objective: "to appraise the role and adequacy of our libraries, now and in the future." The commission, made up of distinguished citizens and experts in the field of library science, was appointed by President Johnson in September 1966.

Publications. In 1967 the ALA announced plans for the largest single publication ever undertaken, a new *National Union Catalog* which will list the combined holdings of 2,000 libraries in the United States and Canada. The catalog will cover all books printed through 1955, and when complete will comprise 610 volumes, each 704 pages in size.

Among publications of interest to librarians that were issued in 1967 were *Library Statistics: A Handbook of Concepts, Definitions and Terminology,* which isolates and defines those aspects of library activity that can be measured and expressed in numerical terms; and *Books for College Libraries,* a selected list of 53,000 titles to support a college teaching program. The official code for cataloging all types of library materials, *Anglo-American Cataloging Rules,* was prepared by the ALA with the collaboration of the Library of Congress and the British and Canadian library associations.

Conference. The 86th annual conference of the American Library Association was held in San Francisco from June 25 to July 1. The more than 8,000 delegates attending concentrated on the critical shortage of library manpower. New officers installed were: Foster E. Mohrhardt of the National Agricultural Library, president; Roger H. McDonough of the New Jersey State Library, first vice president and president-elect; and Mrs. Carma Russell Zimmerman Leigh of the California State Library, second vice president.

Awards. The J. Morris Jones-World Book Encyclopedia-ALA Goals Award was given in two parts. The Association of College and Research Libraries received $15,000 for a junior college library information center, and the American Library Trustee Association was awarded $9,000 to support workshops for state library trustee associations. Louis Shores, retired dean of the Library School at Florida State University, Tallahassee, received two awards: the Beta Phi Mu Award for distinguished service to education in librarianship, and the Isadore Gilbert Mudge Citation for contributions to reference librarianship.

The Melvil Dewey Medal and citation for creative professional achievement went to Walter H. Kaiser, librarian of the Wayne County (Mich.) Library. The Exhibits Round Table Award was presented to the Intellectual Freedom Committee of the California Library Association.

The Grolier Award for achievement in guiding and stimulating the reading of children and young people was won by Lura E. Crawford, director of the Oak Park and River Forest (Ill.) High School Library. Edmon Low, librarian at the Oklahoma State University Library, Stillwater, received the Joseph W. Lippincott Award for distinguished service in the library profession.

The John Newbery Medal was presented to Irene Hunt for *Up a Road Slowly.* The Caldecott Medal went to Evaline Ness, author and illustrator of *Sam, Bangs, & Moonshine.* The H. W. Wilson Library Periodical Award went to *The British Columbia Library Quarterly,* edited by Alan Woodland.

Helen T. Yast, librarian, American Hospital Association, received the Association of Hospital and Institutional Libraries' Award, and Mrs. Ruth Sheahan Howard, staff librarian, Fort Meade, Md., was the recipient of the Armed Forces Librarians Section Achievement Citation.

The Francis Joseph Campbell Citation for advancing library service to the blind was presented to Kenneth Jernigan, director of the Iowa Commission for the Blind.

G. Sumner Spalding, editor of *Anglo-American Cataloging Rules,* received the Margaret Mann Citation. Recipients of Trustee Citations were Mrs. Helen W. Sweasy, trustee of the Carnegie-Lawther Public Library, Red Wing, Minn., and James L. Love, board chairman of the T. L. L. Temple Memorial Library, Diboll, Tex.

Scholarships and Grants. The Grolier-Americana Scholarships in school librarianship went to the graduate library program at Florida State University, Tallahassee, and to the undergraduate program at the University of Maryland, College Park.

For study in the field of library work, the Frederic G. Melcher Scholarship was presented to Mrs. Florence L. Willson of Prince George, British Columbia. Mrs Sharon Midkiff Edge of Fordsville, Ky., received the Library Binding Institute Scholarship Award. Clayton E. Rhodes, school liaison librarian at the Enoch Pratt Free Library, Baltimore, received the E. P. Dutton-John Macrae Award to support his study proposal on school and public library relations.

American Library Association

AMERICAN LITERATURE

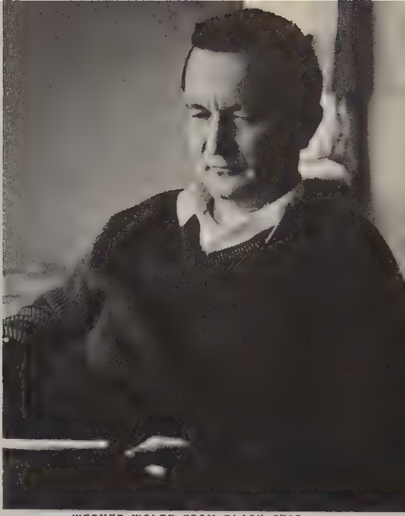
American literature in 1967 was distinguished by the large number of books produced, rather than by the arrival of any immediately recognizable classics.

Novelists were unusually productive. Although the quality of their work was somewhat uneven, excitement was ensured by the appearance of new works by such authors as William Styron, Wallace Stegner, Norman Mailer, Wright Morris, James Jones, Herbert Gold, and Philip Roth. Styron and Stegner, in particular, each published distinguished novels quite unlike anything either writer had ever written before. Other literary highlights of the year included works by such poets as Kenneth Rexroth, Robert Lowell, and John Berryman; a highly publicized account of the assassination of President John F. Kennedy by William Manchester; a new and important study of F. Scott Fitzgerald by Robert Sklar; a memoir by Edmund Wilson; and several new contributions to an understanding of the American past by a number of historians. It was also the year of the death of the beloved American poet Carl Sandburg.

The National Book Awards produced few surprises. Bernard Malamud received deserved honors in fiction for *The Fixer*. Justin Kaplan won the arts and letters award for his fine biography, *Mr. Clemens and Mark Twain,* while the history and biography award went to Peter Gay for *The Enlightenment: An Interpretation*. James Merrill's *Nights and Days* was judged the most distinguished work in poetry, and Oscar Lewis won the science, philosophy, and religion prize for *La Vida*.

Pulitzer Prizes were awarded to Bernard Malamud for *The Fixer,* to Edward Albee for his drama *A Delicate Balance,* and to Anne Sexton for her book of poetry *Live or Die*. Katherine Anne Porter and Arthur M. Schlesinger, Jr., both received medals for literary achievement from the National Institute of Arts and Letters.

Novels. The most widely discussed novel of the year was William Styron's *The Confessions of Nat Turner,* a fictionalized account of a slave rebellion that actually took place in Virginia in 1831. The story, which is narrated by Nat Turner, the leader of the rebellion, shows the effects of slavery on both masters and slaves. The book is distinguished by its memorable portrayal of Turner, who would have been an unusual man in any context. Styron manages to combine realistic dialogue with a stately 19th century narrative style that a few critics found jarring, but that is on the whole very skillfully handled. Historically sound, the novel also contains trenchant if indirect commentary on the relations between races in our own time.



WILLIAM STYRON received wide acclaim for his study of a rebellion in *The Confessions of Nat Turner.*

WERNER WOLFF FROM BLACK STAR

Equally impressive, in a very different way, was Wallace Stegner's novel, *All the Little Live Things,* a work that deals with the contemporary scene. The book, which is set in California, presents a moving study of the conflict between the generations as an older man tries to find some meeting ground between himself and the hippies who settle near him, and also attempts to cope with personal tragedy. The problems are not resolved in the novel, but Stegner provides a strong affirmation of life and of the need for an effort at understanding among people of very different temperaments and backgrounds. In this novel also, Stegner reveals once again his unusual talent for evoking and depicting nature.

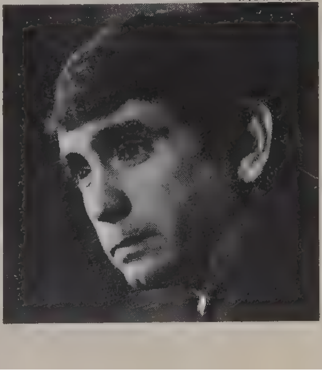
A number of well-known novelists of the postwar generation produced new works this year. Norman Mailer's *Why Are We in Vietnam?* is only indirectly concerned with U. S. involvement in Asia. This strong but self-indulgent book actually represents a further step in Mailer's exploration of American sexual behavior. Sex is also emphasized in James Jones' *Go to the Widow-Maker,* together with skin diving and the trials of a writer who in many ways resembles Jones himself. The style is turgid, the book is overly long, and Jones' ventures into psychology are juvenile. Other disappointing novels by contemporaries of Mailer and Jones included Gore Vidal's political potboiler, *Washington, D. C.,* Vance Bourjaily's slick but unconvincing *The Man Who Knew Kennedy,* and Thomas Berger's unfortunate venture into the field of crime, *Killing Time.*

Herbert Gold's *Fathers* is described by him as a novel in the form of a memoir. It is a moving portrayal of the struggles and achievements of an immigrant Jew, who is sustained by an unquestioning acceptance of life. His vigor and persistence are in marked contrast to his son's neuroticism. Philip

EDWARD ALBEE, one of the foremost young American playwrights, won the 1967 Pulitzer Prize in drama for his play *A Delicate Balance* (1966). His earlier, controversial drama *Who's Afraid of Virginia Woolf?* (1962), which won a number of honors, including the Antoinette Perry Award, was highly successful both as a stage production and as a motion picture. In 1963, however, it was turned down by the Pulitzer Prize advisory board after it had been chosen for the award by a jury. Albee's other plays include *The Zoo Story* (1958), *The Death of Bessie Smith* (1961), *The American Dream* (1961), *The Ballad of the Sad Café* (1963), *Tiny Alice* (1965), and *Malcolm* (1966).

Born in Washington, D. C., on March 12, 1928, Albee became the grandson, by adoption, of the co-founder of the Keith-Albee chain of theaters. He graduated from the Choate School in Wallingford, Conn., and attended Trinity College in Hartford, Conn., but left after three semesters. He was elected to the National Institute of Arts and Letters in 1966.

WIDE WORLD



Roth's *When She Was Good* offers a sympathetic but damning picture of a Midwestern girl whose early insecurity leads to a need to dominate those around her, and who is eventually destroyed by her own willfulness. The work is an abrupt departure, in style and subject matter, from his earlier fiction. Elizabeth Spencer's *No Place for an Angel* is a beautifully written delineation of modern marriage. Chaim Potok reached the best seller list with his novel *The Chosen*, a low-keyed but fascinating study of Jewish life in New York.

Among the writers of a still younger generation, Susan Sontag attracted the most attention with *Death Kit*, an interesting but uneven and cranky exploration of the nature and meaning of reality, coupled with a harsh criticism of contemporary American life. William Melvin Kelley's *Dem* is a satiric study of the white world as seen through the eyes of a perceptive and skeptical Negro. John A. Williams explores the possibility of love between the races in *The Man Who Cried I Am*. In *The Farm*, Clarence Cooper, Jr., gives a harrowing portrayal of the forces that drive his protagonist into drug addiction, narcotics peddling, and finally prison.

There were several fine first novels in 1967. One of the most interesting was Robert Stone's *Hall of Mirrors*, the contemporary story of three young derelicts trying to survive in the political and social maelstrom of New Orleans. The book brilliantly expresses the hazards of life in the grim underside of the affluent society. Joyce Carol Oates writes in an older tradition, piling up naturalistic detail into an impressive structure in *A Garden of Earthly Delights*. Paula Fox made a promising debut with *Poor George*. Wieslaw S. Kuniczak's *The Thousand Hour Day* depicts the downfall of Poland at the start of World War II.

A number of books by established writers deserve mention. Peter de Vries produced another of his caustically humorous morality tales in *The Vale of Laughter;* Jessamyn West returned to the scene of the American past in *Leafy Rivers;* and John Hersey presented four obtrusively symbolic characters engaged in a battle with the sea in *Under the Eye of the Storm*. Thornton Wilder published *The Eighth Day*, Wright Morris contributed one of his lesser novels in *In Orbit*, and Stanley Elkin evoked black humor in *A Bad Man*.

Short Fiction. Few noteworthy collections appeared in this somewhat neglected field. James Leo Herlihy's *The Story That Ends with a Scream, and Eight Others* demonstrates a powerful talent and a predilection for the grim and the grotesque. Louis Auchincloss continued his rather genteel examination of the upper levels of New York society in *Tales of Manhattan*. A disciple of Henry James and Edith Wharton, Auchincloss writes well but never generates much interest in his staid and often conventional characters. Paul Bowles' *The Time of Friendship* contains further studies of the exotic, nightmarish world that all of his characters inhabit.

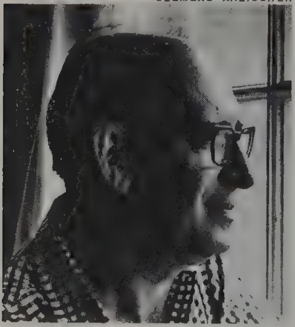
Norma Rosen revealed great insight and wrote with compassion in her book *Green: A Novella and Eight Stories*. In *People in Glass Houses: Portraits from Organization Life*, Shirley Hazzard turned a grimly amused eye on the antics of bureaucrats in the United Nations Secretariat. Michael Rumaker's *Gringos and Other Stories* details the exploits and misadventures, mostly sexual, of a sordid group of characters. Sallie Bingham contributed *The Touching Hand and Six Short Stories*.

Poetry. Several retrospective collections of poetry provided the opportunity for a look at the development of important talents. The works in Kenneth Rexroth's *The Collected Shorter Poems*, for example, demonstrate his consistent lyricism and love of life and show once again his unsurpassed ability to evoke the interplay between the natural world and human emotions. Peter Viereck's sharp eye and versatility are manifested in *New and Selected Poems, 1932–1967*, while Isabella Gardner's flexible intelligence is the dominant quality of *West of Childhood: Poems 1950–1965*. James Dickey, a younger poet who has received many honors, was represented by *Poems 1957–1967*. This collection shows that his view of the world has been steadily darkening over the years; the ebullience of his early poems is missing in the more thoughtful recent work.

A number of highly regarded poets published new collections. *Berryman's Sonnets* by John Berryman is a poetic sequence recording a summer love affair. Both humorous and sad, these poems show a modern poet's brilliant and inventive treatment of a traditional form. Robert Lowell's reputation as one of America's most powerful poets was not greatly enhanced by his *Near the Ocean*. Half the poems in Lowell's volume have contemporary settings in Maine or New York, and half are translations of classics. However, the work as a whole is uneven and surprisingly tentative for a craftsman of Lowell's stature. Richard Eberhart published *Thirty One Sonnets*, a new collection of poems that were written many years ago and that have primarily historical interest. Elizabeth Bishop's *Questions of Travel* is the product of a detached, lucid, and flexible talent.

David Wagoner, who is both a novelist and a poet, shows his versatility in *Staying Alive*, which stresses the hopeful possibilities of life in an age of tension, when mere survival is uncertain. Wagoner does not offer any easy solutions, but neither does he counsel despair. In *The Sorrow Dance*, Denise

CLEMENS KALISCHER



BERNARD MALAMUD won the 1967 Pulitzer Prize and National Book Award in fiction for his best-selling novel *The Fixer* (1966), based on the case of Mendel Beiliss, a Jew in czarist Russia, who was accused of ritual murder. His earlier novel *The Assistant* (1957) had won him the Rosenthal Award of the National Institute of Arts and Letters and the Daroff Memorial Award. A few years ago he also received a National Book Award for his collection of short stories, *The Magic Barrel* (1958). His other books include *The Natural* (1952), *A New Life* (1961), and *Idiots First* (1963).

Malamud was born in New York City on April 26, 1914, and studied at City College (B.A., 1936) and Columbia University (M.A., 1942). In 1949, after teaching evening high school in New York City for several years, he joined the English department of Oregon State College as an instructor. From 1959 to 1961 he served there as an associate professor. Since 1961 he has been a member of the literature division at Bennington College in Vermont.

WILLIAM MANCHESTER became involved in a controversy with the Kennedy family before his book, *Death of a President,* was finally approved for publication. The account of the assassination was one of the most highly publicized books in years.

THE DEATH of a PRESIDENT

PICTORIAL PARADE

Levertov also directs her attention to the strains of modern life. The poems in this volume deal with the major social and political issues of the day, and while some of them are direct and moving, others have a somewhat strident tone. A collection that focuses on one of the problems troubling Miss Levertov is *Where Is Vietnam? American Poets Respond,* edited by Walter Lowenfels. This work is more notable for the commitment of its contributors than for their poetic achievement.

Two Roman Catholic divines published new collections of poetry. Brother Antoninus (William Everard) produced *The Rose of Solitude,* speculations upon sacred and profane love drawn from his own experiences. John L'Heureux, a priest, demonstrated a tolerant and amused attitude toward the foibles of the world in *Rubrics for a Revolution.*

Among the younger poets, A. R. Ammons is still one of the most difficult to comprehend. However, his *Northfield Poems* are the product of a versatile technician. Turner Cassity's *Watchboy, What of the Night* contains a number of mannered poems, somewhat reminiscent of W. H. Auden in their persistent reliance on irony. Several women poets published volumes of interest. These include Jeannette Nichols' *Mostly People,* May Swenson's *Half Sun Half Sleep,* and Carolyn Kizer's *Knock Upon Silence.*

Literary History and Criticism. American critics were highly productive in 1967, giving special emphasis to studies on 20th century writers. One of the important works that ranged over a wide area of interest was Philip Poirier's *A World Elsewhere: The Place of Style in American Literature,* an informative and fascinating study of the interplay between technique and theme. The veteran theater critic Walter Kerr made an urbane contribution to the understanding of drama with *Tragedy and Comedy.* George Steiner published a collection of provocative essays, *Language and Silence: Essays on Language, Literature and the Inhuman.*

There were also several important scholarly editions of 19th century writers. Andrew Hilen edited *The Letters of Henry Wadsworth Longfellow, vol. 1, 1814–36; vol. 2, 1837–43.* Three volumes in the new collected edition of Mark Twain's work appeared: *Mark Twain's Letters to His Publishers, 1867–1894,* edited and with an introduction by Hamlin Hill; *Mark Twain's Satires and Burlesques,* edited and with an introduction by Franklin R. Rogers; and *Mark Twain's "Which Was the Dream?" And Other Symbolic Writings of the Later Years,* edited and with an introduction by John S. Tuckey.

Edward Wagenknecht wrote a thorough biographical study, *John Greenleaf Whittier: A Portrait in Paradox,* which shows the poet's historical importance without overstating his limited poetic achievement. Richard O'Connor carefully examined the mysterious life of Ambrose Bierce in *Ambrose Bierce: A Biography.* Jay Martin's *Harvests of Change: American Literature 1865–1914* and Larzer Ziff's *The American 1890's: Life and Times of a Lost Generation* discuss American literature of the late 19th and early 20th centuries.

Several important studies of outstanding figures in modern poetry were published in 1967. R. W. B. Lewis defended the tormented art of Hart Crane in *The Poetry of Hart Crane.* While Lewis occasionally overrates Crane's achievement, his readings of the poems are lucid and intelligent, and the book is a genuine contribution. Herbert J. Stern brought some fresh insights into the work of another difficult poet in *Wallace Stevens: The Art of Uncertainty.* In *Theodore Roethke: An Introduction to the Poetry,* Karl Malkoff produced the first extended examination of a poet whose reputation has grown steadily.

One of the most impressive studies of modern fiction was Robert Sklar's *F. Scott Fitzgerald: The Last Laocoön.* In this work, Fitzgerald is seen as a lonely defender of the romantic tradition. Sheilah Graham described Fitzgerald's reading program for her in *College of One,* an interesting footnote to the writer's life and ideas. William A. Gordon produced a study of the veteran avant-gardist Henry Miller in *The Mind and Art of Henry Miller.* Andrew Field discussed the American and Russian works of Vladimir Nabokov in a knowledgeable book, *Nabokov, His Life in Art.* Doris Grumbach provided an acerbic commentary on the life and fictional writing of satirist Mary McCarthy in *The Company She Kept.*

Two important books studied recent trends in fiction. In *The Fabulators,* Robert Scholes argues that the recent fiction of such writers as John Barth, Terry Southern, and John Hawkes displays a renewed interest in allegory and symbolism in which language becomes more important than either character or action. Daniel D. Galloway investigates

The Absurd Hero in American Fiction: Updike, Styron, Bellow, Salinger, an excursion into existentialist criticism which helps to place these writers in a philosophical context.

Among the older critics, the outlook was retrospective. *A Primer of Ignorance,* a posthumous collection of essays by Richard P. Blackmur edited by Joseph Frank, discusses the interaction of American and European cultures. Malcolm Cowley's *Think Back on Us . . . A Contemporary Chronicle of the 1930's,* edited by Henry Dan Piper, contains a number of essays written during those years for *The New Republic,* and provides useful reminders of the political and literary events of that troubled decade. Edmund Wilson's first volume of memoirs, *A Prelude: Characters and Conversations from the Earlier Years of My Life,* is an interesting collection of stories, poems, and occasional pieces from Wilson's college and war experiences through the year 1919, with his current observations on those experiences.

History and Biography. Although there were a number of books on wide-ranging topics of historical interest, the emphasis in 1967 was on studies of relatively limited sectors of American history. In *The Search for a Usable Past And Other Essays in Historiography,* the veteran historian Henry Steele Commager discussed the problems of the study of history. Allen Guttman produced a critical but careful analysis of *The Conservative Tradition in America.* Military historian Russell F. Weigly provided a *History of the United States Army.* Stephen Birmingham, a novelist and social historian, wrote an interesting study, *Our Crowd: The Great Jewish Families of New York.*

The American Revolution and the early days of the republic came in for extended examination in several books. In *The Ideological Origins of the American Revolution,* Bernard Bailyn showed that the colonists' revolt was based primarily on political and philosophical grounds. Donald Barr Chidsey selected a more limited topic, the actual fighting of the Revolution in one area: *The War in the North.*

The years between 1812 and 1861 have begun to receive a share of the attention lavished in recent years on the leaders and events of the Civil War. Several books concentrated on individual figures. Leonard Falkner wrote *The President Who Wouldn't Retire,* a study of John Quincy Adams and the decline of New England's national influence. In *Aaron Burr: Portrait of an Ambitious Man,* Herbert S. Parmet and Marie B. Hecht studied that enigmatic figure without resolving the mysteries of his character. With *James K. Polk: Continentalist, 1843–1846,* Charles Sellers produced the second in a 3-volume study of an important but obscure president.

The political and social developments of the 19th century were treated in a number of books. Roy F. Nichols studied *The Invention of American Political Parties.* Douglas T. Miller discussed *Jacksonian Aristocracy: Class and Democracy in New York, 1830–1890.* The veteran historian Frederick Merk contributed *The Oregon Question: Essays in Anglo-American Diplomacy and Politics.* The old West was the subject of two books. Allan W. Eckert's *The Frontiersman: A Narrative,* which put special emphasis on the role of the pioneer and Indian fighter Simon Kenton, and Ralph Moody's *Stagecoach West.* Among biographical studies of the later 19th century, Gay Wilson Allen's *William James: A Biography* was an outstanding analysis of the distinguished philosopher and psychologist.

Books dealing with events and persons of the last 70 years have by and large emphasized wars and military problems. Charles H. Brown analyzed *The Correspondents' War: Journalists in the Spanish American War.* In *The Odyssey of Henry Ford and the Great Peace Ship,* Burnet Hershey told the full story of an odd side issue of World War I. A famous military controversy was the subject of Burke Davis' *The Billy Mitchell Affair.* Arthur H. Landis revealed the activities of American volunteers in the Spanish Civil War in *The Abraham Lincoln Brigade.* On more peaceful subjects, Donald R. McCoy presented the career of a laconic politician in *Calvin Coolidge: The Quiet President,* and William A. Swanberg studied a giant of journalism in *Pulitzer.*

World War II continues to be the subject of numerous historical works. Basil Collier produced a general study, *The Second World War: A Military History.* Several other books focused on specific battles. These included Martin Blumenson's *Kasserine Pass,* William Craig's *The Fall of Japan,* and Walter Lord's skillful reconstruction of the Battle of Midway, *Incredible Victory.* The war was also an important factor in a major autobiography, George F. Kennan's *Memoirs 1925–1950.* Kennan, who was the architect of the policy of containment, describes the frustrations he experienced in presenting unpopular but realistic views of foreign affairs to several unsympathetic administrations.

The most controversial book of the year was unquestionably William Manchester's *The Death of a President.* A thoroughly detailed, often painful reconstruction of the assassination of President John F. Kennedy, the book was published only after a prolonged and bitter legal struggle between the Kennedy family, who had originally authorized its writing, and the book's author and publisher. Although the work is valuable for its wealth of information, it is sensationalized and sometimes misleading.

Other Nonfiction. A number of interesting general works dealt with aspects of the modern scene. In *La Vida,* Oscar Lewis produced a prize-winning documentary account of what life in New York and San Juan is like for members of a poor Puerto Rican family and those associated with them. The book is distinguished by Lewis' use of tape-recorded conversations and his careful attention to detail. In many ways it reads almost like a novel, but it also raises disturbing social questions. Other books dealing with contemporary social problems are Piri Thomas' *Down These Mean Streets,* Jonathan Kozol's *Death at an Early Age: The Destruction of the Hearts and Minds of Negro Children in the Boston Public Schools,* and Hunter S. Thompson's *Hell's Angels.*

Other aspects of contemporary culture elicited controversial books: John Kenneth Galbraith continued his assault on classical economics in *The New Industrial State;* Lewis Mumford carried forward his analysis of technology in *The Myth of the Machine;* Paul Goodman evaluated American society in *Like a Conquered Province: The Moral Ambiguity of America;* and Marshall McLuhan and Quentin Fiore tried to demonstrate our changing modes of perception in *The Medium is the Massage.* A more philosophic and somber book was Eric Hoffer's unhappy look at modern America, *The Temper of Our Time.*

OFFICIAL U. S. COAST GUARD PHOTO

ANTARCTICA

Several nations conducted active research in Antarctica in 1966–67. Two jet aircraft flights landed there during the winter months for the first time, demonstrating the feasibility of such flights. On March 30 the Netherlands became the fourth nation to accede to the 1959 Antarctic Treaty. Tourist cruises were again made to the northern Antarctic Peninsula by the Argentine ship *Lapataia*.

U. S. Activities. About 150 scientists took part in 46 summer field projects of the U. S. Antarctic Research Program (USARP) under the auspices of the National Science Foundation, and 250 men spent the winter on the continent. The year's largest field operation was the planned three-camp Byrd Land Survey of the coastal area from Cape Colbeck to Grant Island. In late October the first camp was established 700 miles (1,120 km) from McMurdo Station. For the next three months observations were made within the 175-mile (280-km) range of the camp's three helicopters, and Soviet exchange scientist Lev V. Flimov identified old gneiss complexes in western Byrd Land. The U. S. icebreaker *Eastwind* inspected activities at eight foreign bases in eastern Antarctica and the South Orkney Islands. There was no evidence of treaty violations, and considerable friendliness and hospitality were exhibited.

In the U. S. Geological Survey's topographic program, acceptable coverage was obtained of 335,000 square miles (867,650 sq km)—about twice that obtained in previous seasons. The 10-man American Antarctic Mountaineering Expedition included in the program reached the summit of previously unclimbed Vinson Massif (at 16,860 feet, or 5,130 meters, the highest peak in Antarctica) on Dec. 17, 1966. The climbers planted the flags of the 12 charter nations of the Antarctic Treaty at the summit.

Skuas and Adelie penguins were examined at Cape Crozier for parasite content. The distribution of mites and springtails seems to be governed by the amount of moisture in the soil. Three of the 40 penguins flown inland 1,500 miles (2,415 km) in 1964 were found at their home rookery near Mirny Station (USSR), having traveled a distance of some 3,000 miles (4,830 km). A crabeater seal was captured about 70 miles (110 km) inland and returned to the sea. For over 60 years skeletons or mummified bodies of seals have been found in dry valleys of Victoria Land, where they traveled for some unknown reason.

McMurdo. Operation Deep Freeze 67 got under way on Oct. 1, 1966, with the arrival of four Hercules LC-130F's. On November 14 a C-141 Starlifter jet transport landed at Williams Field near McMurdo with 12½ tons of cargo—a capacity twice that of the Hercules. The trip from New Zealand took only 5 hours 52 minutes and demonstrated the jet's superiority for cargo movement. Two winter flights to Williams Field (June 18 and Sept. 2, 1967) showed that such flights are possible within the boundaries of adequate safety margins. The arrival of two Hercules on Oct. 2, 1967, inaugurated Deep Freeze 68, during which 263 persons are to winter at McMurdo. Studies of microorganisms in the soil of dry valleys disclosed that bacteria increase in number with depth, but are still far fewer than in typical desert soils.

Byrd. A major project at Byrd Station was the installation of a deep-penetration drill for coring the ice cap to a depth of 7,500 feet (2,500 meters). Several breaks in the southern leg of the nearby 21-mile (34-km) wire antenna—constructed in 1965 for radio-signal studies—were repaired. The solar proton event of January 28 that blacked out communications and prevented flights in Antarctica for about 10 days provided excellent data for the upper atmosphere and magnetosphere research programs.

Palmer. Scientists at Palmer Station conducted investigations into marine productivity, the parasites of vertebrates and invertebrates, and the distribution of marine fungi. A field party continued studies of the movement and melting of the polar ice cap. Station personnel harvested their first crop of hydroponically grown lettuce—20 succulent leaves.

Plateau. Summer studies were made in glaciology, very low frequency radio signals, and the medical histories of wintering personnel. A new generator was installed and vehicles were readied for the resumption of the Queen Maud Land traverse party.

South Pole. Gravity measurements revealed that the ice sheet and station are moving horizontally toward South America at about 150 feet (45 meters) per year. The 21 men who wintered at the station included Soviet exchange scientist P. G. Astakhov.

Activities of Other Nations. A geological party from Australia spent 20 days mapping the Arena Valley. Detailed measurements are being made of the small vertical movement of the ice cap near Wilkes Station. A project is under way for drilling through the 1,000-foot-thick Amery Ice Shelf.

Roland Souchez of the Institute of Geography of Brussels, Belgium, conducted geomorphological research in the dry valleys west of McMurdo.

The 8th Japanese Antarctic Research Expedition arrived at Showa Base on Jan. 14, 1967. Unloading and construction of five new buildings proceeded along with scientific field studies.

New Zealand geologists reported that Mount Melbourne is an active volcano—the second discovered on the continent in 125 years. Several parties made biological studies in the McMurdo-Hallett area, at Cape Bird, and on the Snare Islands. Future plans call for a six-man station in Wright Valley near Lake Vanda to study dry valleys.

Olav Orheim of the Norwegian Polar Institute made studies of sastrugi (variations in snow surface) in the vicinity of Plateau Station.

In December 1966 a Hercules landed at the USSR's Vostok Station with 20 visitors from five nations, and joint upper atmospheric studies were made. On March 3 a Soviet traverse party arrived at the U. S. Plateau Station; they exchanged gifts, refueled, saw a James Bond movie, and set off the following day. Soviet scientists have invited their French colleagues to join them in making new measurements of the rate of ice movement between Mirny and Vostok Stations.

Antarctic Specialist

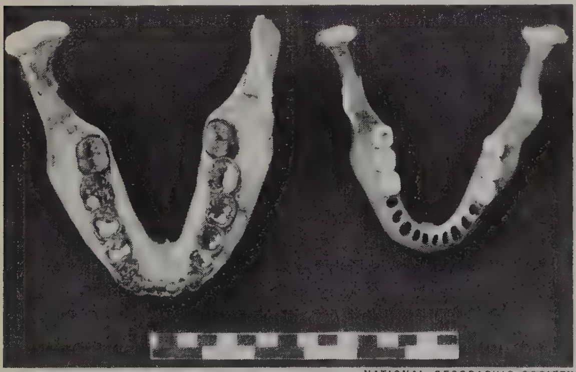
ANTHROPOLOGY

Anthropologists in 1967 continued their efforts to develop an international organization that will facilitate research in cultures undergoing rapid change. In the search for new knowledge of human evolution, attention remained focused on Olduvai Gorge and the fossil hominids of Africa (see also ARCHAEOLOGY). A field study was conducted of lemurs, and there was a comparative study of primate systems of communication. Advances were made in obsidian and carbon-14 dating techniques.

Cultural Anthropology and Ethnology. Much momentum was gained in 1967 by the international organization to stimulate and encourage research in societies undergoing rapid cultural change, and especially in those facing extinction. The Wenner-Gren Foundation and the Smithsonian Institution, which sponsored a planning conference in 1966, have also established a small grant program in urgent anthropology. A summary of the program was issued in the October 1967 *Current Anthropology.*

The modernization of traditional societies is the subject of *Contemporary Change in Traditional Societies,* edited by Julian H. Steward. The three volumes consist of research carried out by ten workers sponsored by the Studies of Cultural Regularities Project centered at the University of Illinois. The discussion of societies from Africa, Asia, Mexico, and Peru includes native tribal societies and rural segments of states. The theoretical implications of these studies are to be published in a revised edition of Steward's *Theory of Culture Change.*

A summary of George Peter Murdock's *Ethnographic Atlas* was published in the April 1967 issue of *Ethnology.* In this summary, 862 societies are organized into 412 culture clusters. There is a description of each society's geographical location, the approximate time level to which the ethnographic data pertain, an estimate of the population, and a

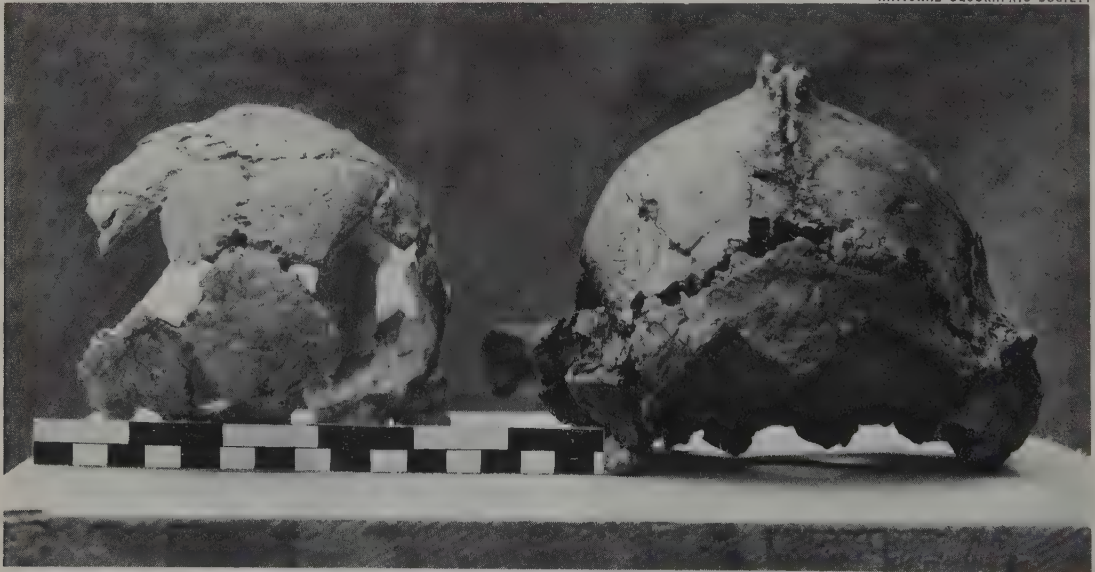


NATIONAL GEOGRAPHIC SOCIETY

(*Left*) *ZINJANTHROPUS* JAWBONE, found on a Tanzania expedition led by Richard Leakey (son of L. S. B. Leakey), is compared with jawbone of present-day man on right. Its grinding teeth are massive and differently shaped.

(*Below*) SKULL OF *ZINJANTHROPUS* (*right*), about 1.7 million years old, is compared with that of contemporary but more advanced hominid species, *Homo habilis.* As in present-day man, *habilis* skull is wider higher up than at base.

NATIONAL GEOGRAPHIC SOCIETY



reference to the pages in *Ethnology* where sources are cited. The culture clusters are coded for information on political, social, and economic organization, kinship and marriage systems, socialization practices, linguistic affiliation, and aspects of technology and material culture. Another landmark in ethnography was the publication of Franz Boas' *Kwakiutl Ethnography,* edited by Helen Codere.

Physical Anthropology. The two most important publications on human evolution in 1967 dealt with the Australopithecus discoveries in Africa. *Olduvai Gorge* (vol. 2) is a detailed description by P. V. Tobias of the most famous of the L. S. B. Leakeys' discoveries—*Australopithecus* (*Zinjanthropus*) *boisei.* W. E. LeGros Clark, in *Man-Apes or Ape-Men? The Story of Discoveries in Africa,* provides a historical summary and personal assessment of the Australopithecines and related forms from South and East Africa. In the study of primate societies, Alison Jolly's *Lemur Behavior: A Madagascar Field Study* extends man's knowledge of free-ranging primate species to *Propithecus verreauxi, Lemur catta,* and *Lemur macaco.* Stuart Altmann edited the proceedings of the 1964 (Montreal) American Association for the Advancement of Science symposium on communication and social interaction among primates.

Advances in Dating Techniques. For several years the process of hydration in obsidian—a volcanic glass used by primitive man—has been under investigation as a possible dating technique. The rate of hydration varies with the kind of obsidian and its source, and with the temperature of the ground in which the specimen was buried. By controlling these variables, a dating technique has been developed that will be valuable in checking on site chronology. The fact that all obsidian artifacts from the same site can be dated with relation to each other means that there is a built-in chronological ordering of such artifacts. Analysis of obsidian and other materials by neutron activation and spectrometry is leading to identification of the sources of materials used and the tracing of trade patterns.

In recent years the extension backward of carbon-14 dating has been increased to 55,000 years, and potentially to 70,000 years. The new estimated half-life of carbon-14 is 5,730 ± 40 years, but dates will continue to be published with the old estimate of 5,570 years. Old dates are converted to the new value by multiplying by 1.029. Refinements in the thermoluminescent dating of pottery have brought results of the technique into loose correlation with those of the radiocarbon process.

New materials found more or less satisfactory for carbon-14 dating are seashells and collagen from bones. Using tree ring dates from Douglas fir and bristlecone pine, it has been possible to chart variations in the formation of natural carbon-14 concentrations. A deviation of +13% about 5,000 years ago makes radiocarbon ages in this period about 1,000 years too young. A −9% deviation about 10,000 years ago is indicated by data derived from pollen zone boundaries, as dated by varves (alternately darker and lighter clay or silt deposits).

Annual Meetings. The 66th meeting of the American Anthropological Association was held in November in Washington, D. C. Irving Rouse succeeded Frederica de Laguna as president of the association. New areas of concern for anthropologists were represented by symposia on anthropology and war and on psychedelic anthropology. Increased concern with more complex cultures was reflected in sessions on Spain, peasant society, Japanese culture, and aspects of U. S. culture (particularly urban ghetto subcultures). Other sessions were devoted to Negroes in the New World, diseases and human evolution, markets and economics, and medicine and curing.

U. S. DEPARTMENT OF THE INTERIOR, GEOLOGICAL SURVEY

RADIOCARBON STUDIES of samples are prepared by U. S. Geological Survey scientist from specimens unearthed near Mexico City. This research may help to prove that man inhabited the New World earlier than previously supposed.

At the American Association for the Advancement of Science's 134th meeting, held in December in New York City, there were three special anthropology symposia: entrepreneurship in cross-societal perspective, obsidian studies in archaeology, and anthropology's contributions to applied fields. Vice President Alexander Spoehr stressed the need to define anthropology's relationship to the national government and to work toward an international anthropology.

GERALD M. HENDERSON

Brooklyn College, City University of New York

RALPH MATTHEWS, FROM OFFICE OF ECONOMIC OPPORTUNITY

VISTA VOLUNTEER works among poor people in southern Missouri. VISTA volunteers serve in many areas of the U. S. anti-poverty program.

ANTI-POVERTY PROGRAM

In its third year of operation, the Office of Economic Opportunity (OEO) in 1967 continued its innovative and coordinated assault on poverty in the United States. Office of Economic Opportunity programs during the year included Job Corps, Neighborhood Youth Corps, Adult Work Training, Community Action, Migrant Assistance, Rural Loans, Work Experience, and Volunteers in Service to America (VISTA).

Opposition and Support. The year was highlighted by both public opposition to and support for the national war on poverty led by OEO. Republican gains in the 1966 elections strengthened congressional opposition to the administration's anti-poverty program, and urban riots during the summer of 1967 sharpened the hostility of a segment of the public.

President Johnson requested an authorization of $2.06 billion for anti-poverty measures for fiscal 1968. Although the Senate voted $2.26 billion, the poor prospects of the bill in the House of Representatives alarmed supporters of OEO, who feared that combined Republican-Southern Democratic forces would severely cripple the program.

While the outcome of the bill was still being debated, governors and mayors of both parties expressed firm support for the anti-poverty effort. When funds were still in doubt, governors, mayors, city councils, and businessmen offered their own resources to continue operating existing programs. Amendments that would have distributed the functions of OEO among other federal agencies were defeated. The House approved the bill with the largest affirmative margin (283–129) since the original enactment of the anti-poverty program in 1964.

Congress settled on a two-year extension of OEO, and $1,773,000,000 was appropriated for fiscal year 1968. This meant that the Office of Economic Opportunity could continue to operate at about the same level as the previous year.

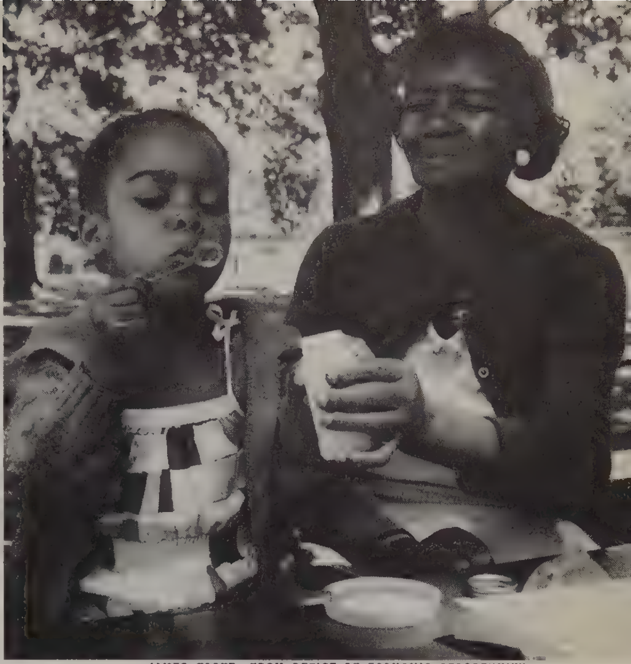
Widespread support of the war on poverty was demonstrated by the fact that national organizations contributed more than 350,000 volunteers for national anti-poverty programs. Over 2,400 Americans, young and old, volunteered for summer VISTA service. The Young Lawyers Section of the American Bar Association unanimously endorsed OEO's Legal Services Program. The American Medical Association endorsed and urged expansion and extension of OEO's Neighborhood Health Centers. American industry, including many of the nation's corporate giants, increased its involvement in OEO activities.

New Programs. During the fiscal year 1967, five new programs were inaugurated: Adult Work Training, Special Urban Employment Impact, Emergency Loan Program for Low-Income Families, Comprehensive Health Services, and Special Projects on Adult Basic Education. Fiscal 1967 also brought major program shifts—the transfer of Adult Basic Education to the Department of Health, Education, and Welfare, and of Small Business Loans to the Small Business Administration. The Economic Opportunity Amendments of 1966 placed new emphasis on OEO programs for the elderly. Consequently, OEO established its Office of Older Persons Programs in the spring of 1967.

Congress had appropriated $1.6 billion, plus a supplemental $75 million for special summer programs, for OEO in fiscal 1967.

Job Corps. For the operation of the 123 Job Corps centers, which, as of mid–1967 were providing education and training for 42,032 young men and women aged 16 through 21, $211 million was authorized. From January 1965, which marked the formal beginning of operations, through the end of June 1967, 90,000 youths had been trained by the Job Corps. Of these, 70% were placed in jobs, returned to school, or entered the armed forces.

Youth Corps. By the end of fiscal 1967, the Neighborhood Youth Corps had provided over 1,300,000 poor youths with work opportunities to help them to remain in school, return to school, or improve their chances for better employment in today's complex job market. The work opportunities were in such public or private nonprofit areas as schools, parks, and government offices. This program, which is administered by the Department of Labor for OEO, obligated $372 million and conducted over 1,400 local projects in fiscal 1967.



FOSTER GRANDPARENT and child play together at a suburban New York children's home. Foster Grandparents, partly administered by OEO, are all men and women over 60.

JAMES FOOTE, FROM OFFICE OF ECONOMIC OPPORTUNITY

Adult Work Training. Adult Work Training programs, also administered by the Department of Labor for OEO, reached more than 548,000 severely disadvantaged men and women in fiscal 1967. Community Employment and Training, which combines Operation Mainstream and New Careers, was funded at $84.5 million. For the Special Urban Employment Impact program, $24.4 million was allocated.

Foster Grandparents, which is included in the funding for Operation Mainstream, will continue to be funded and administered directly by OEO in cooperation with the Department of Health, Education, and Welfare. During fiscal 1967, there were 63 Foster Grandparents projects, funded at a cost of $5.6 million, with over 4,000 men and women 60 years of age and older participating. More than 8,000 institutionalized children at a given time received from these elder citizens a measure of love and care missing from their lives before.

Community Action. A total of $852 million in federal funds was invested in local-initiative urban and rural Community Action programs. These programs focus on manpower, housing, education, and training. Over 500 Neighborhood Multi-Service Centers brought a variety of formerly inaccessible programs directly to those in greatest need.

Community Action activities on Indian reservations were expanded in fiscal 1967. It is estimated that more than 210,000 reservation residents have been reached through the projects, which were increased from 78 at the beginning of the fiscal year to 101 by the end of the year.

Head Start, for disadvantaged preschool children, provided learning experiences, opportunities for emotional growth, and nutritional and medical care for more than 465,000 children in the 1967 summer program. Nearly 240,000 children participated in the year-round program. Fiscal 1967 Head Start projects were funded at a total federal cost of $337 million. These projects were carried out through neighborhood child development centers.

Comprehensive Health Services—preventive, diagnostic, and therapeutic—were provided for more than one million needy persons in 39 health centers in fiscal 1967. Appropriations totaled $60 million.

Through Upward Bound, over 22,000 high school students from low-income families were enrolled in 249 projects conducted in participating schools and colleges during the summer of 1967 and the ensuing school year. Upward Bound, which was begun as a demonstration project in the summer of 1965, has produced 6,000 high school graduates (or 80% of the participants) who enrolled in college.

Serving approximately 300,000 urban and rural poor in fiscal 1967 were 299 Neighborhood Legal Services Projects, funded at a total cost of $25 million.

Under its Emergency Loan Program, OEO funded 16 projects totaling $1.6 million to provide emergency loans (not to exceed $300 at a maximum of 2% interest) to persons in low-income families to meet immediate and urgent family needs.

Special Projects on Adult Basic Education, funded at a total cost of $6.3 million in fiscal 1967, provided education-supportive services to 102,000 adults to improve their employability and increase their independence.

Migrant Assistance. Grants for Aid to Migrant and Seasonal Farm Workers, funded in fiscal 1967, totaled 94. These projects, which covered 35 states, included youth education, adult literacy training, day care services, temporary housing, and permanent self-help housing.

Well over 90,000 children and adults were served by this program, for which $33 million of OEO funds was allocated.

Rural Loans. The Rural Loan program, which provides loans and management assistance to individuals and cooperative associations, is administered for OEO by the Department of Agriculture. In fiscal 1967, 16,453 individual loans and 382 cooperative loans were made, totaling $32 million for the period. Rural loans have been very nearly the sole source of aid to two of the nation's most destitute groups—the elderly rural-area dweller and the rural Negro family.

Work Experience. By the end of fiscal 1967, Work Experience, administered for OEO by the Department of Health, Education, and Welfare in cooperation with the Department of Labor, had served a total of 250,000 enrollees since its inception. Work Experience provides vocational training and a variety of family services for unemployed heads of households with children under 18 years of age. Fiscal 1967 projects, which numbered 31, were funded at $98.6 million.

Volunteers in Service to America. Volunteers in Service to America, a "domestic Peace Corps" of workers 18 years of age and older, continues to be involved in almost all OEO pursuits—Urban and Rural Community Action programs, Job Corps, Migrant Assistance, and Health Services.

By June 1967, 7,351 full-time volunteers had joined the ranks of VISTA. With a fiscal 1967 appropriation of $26,430,000, the organization swelled its ranks by 4,257 full-time volunteers and 2,063 part-time or Summer Associate volunteers and initiated or continued 412 projects.

UPI PHOTOS

ANCIENT MINOAN CITY, including unbroken jars (*above*), was found in 1967 by archaeologists on the Greek island of Thíra. About 1500 B. C. a volcano destroyed the city. Some scholars link Thíra with the so-called "lost continent" of Atlantis.

ARCHAEOLOGY

Man's knowledge of his origins and development continued to be extended farther back into the past by archaeologists in 1967. Remains of ancient cities were discovered, and possible communications between a number of early cultures were examined. This article summarizes the year's archaeological research in two major sections: (1) Eastern Hemisphere and (2) Western Hemisphere.

EASTERN HEMISPHERE

Important discoveries in the Eastern Hemisphere ranged from the oldest known hominid bone to the earliest writing found in Europe.

Fossil Man. The distal end of a humerus found near Lake Victoria in Kenya has been dated at 2.5 million years old. This bone has been identified as clearly hominid in anatomical structure and function. The fragment, therefore, is almost 750,000 years older than the remains of the earliest known Australopithecine hominids.

Paleolithic Excavations in France. Publications about the Magdalenian site of Pincevent, France, near Montereau, have set new standards in the methodology and interpretation of Upper Paleolithic materials. The site, representative of an extensive reindeer-hunting culture that existed about 14,000 B. C., has provided new information on techniques for producing tools used in hunting and butchering. The uncovering of three tentlike structures that suggest the kind of Magdalenian architecture used in open-air settlements made possible a direct association of tool types with the structures.

Neolithic Cultures. Concentrated research and excavations continue to focus on the Neolithic period throughout the Eastern Hemisphere. Cultural relations between Neolithic villages in Palestine, Iraq, Syria, and Anatolia have been established through chemical analysis of obsidian tools. Such analysis suggests that the obsidian found on these sites derived from a common source in eastern Anatolia. Extensive trade contacts and cultural relations thus were already evident about 6000 B. C.

Recent important excavations at Tekkalakota, Sanganakallu, and Hallur in the southern Deccan region of India have uncovered the presence of previously unknown early Neolithic phases in India. The rich material content of all three sites—pottery, flint tools, mat impressions, numerous human burials, and substantial architecture—adds a new dimension to the understanding of human settlement in this area between 2000 and 1000 B. C. At Hallur, iron objects that date from about 1000 to 800 B. C. confirm recent evidence that iron arrived in India far earlier than the previously accepted date of 500 B. C.

The earliest Neolithic village in Europe has been discovered in Yugoslavia. The occupation of this site is believed to date back to 6000 B. C. A well-developed permanent architecture and technologically developed pottery production is in evidence at the site.

Bronze Age in Southeast Asia. Recent excavations in Thailand suggest that the traditional dating of the introduction of bronze working into this region—in the Dongson culture of 800 to 300 B. C.—is far too late. Excavations at Non Nok Tha uncovered three sandstone double molds for the production of axes, and radiocarbon dating of objects from the level above the molds suggests dates of 2325±200 and 2290±90 B. C. Thus bronze presumably was already worked at this site about 2500 B. C.

The site of Mlu Prei in northern Cambodia has exposed bronze axes identical to those that would have been produced in the molds at Non Nok Tha. Associated finds of pottery and certain architectural features suggest that this Southeast Asian Bronze Age was also in contact with cultures as far as central Europe. The evidence for such contact and for the early development of a Bronze Age in the area has resulted in a dramatic revision of the archaeologist's conception of the extent and distribution of cultures in Southeast Asia during this period of time.

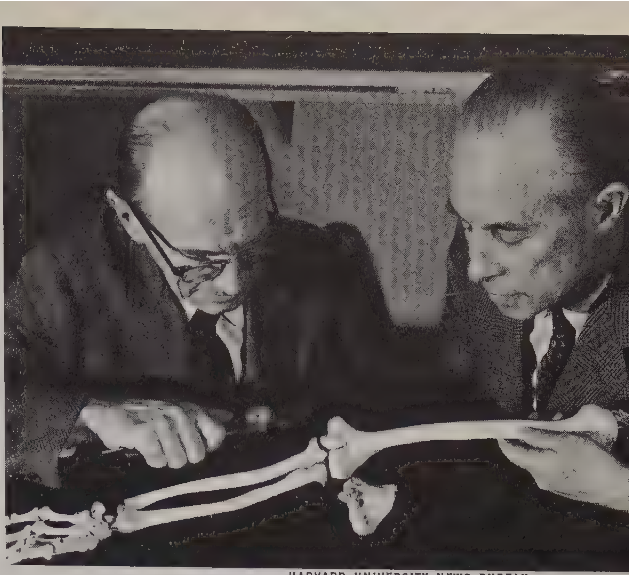
Earliest Writing in Europe. The earliest writing in Europe has been recovered from an early Neolithic pit-grave near the village of Tartaria, Rumania. The writing, on three clay tablets, is very similar to that found on the earliest tablets from the Middle East. It is assumed that the technique and idea of writing were brought by migrants from the Middle East to central Europe. Prior to this discovery the earliest known European writing—from approximately 1000 B. C.—was that of Crete; the Tartaria tablets are dated at 2900 B. C. A discrepancy exists between this date and the radiocarbon dating of cultural material associated with the tablets at 4100 B. C. The tablets nevertheless represent the earliest evidence for writing in Europe.

A New Minoan City. The discovery of an entire Minoan city buried by a volcanic eruption about 1500 B. C. on the Greek island of Thíra has suggested to some scholars that the island was part of the "lost continent" of Atlantis. Digging through many levels of ash and pumice, workers uncovered 2-story and possibly 3-story buildings in an excellent state of preservation. The standing walls of some of the buildings had brilliantly colored frescoes preserved on their surface. The absence of human skeletons and of precious objects indicates that the inhabitants had sufficient warning to flee the city before the eruption.

The site of the digging covered more than half a square mile (about 1.3 sq km). The discovery of this city, which with its excellent preservation is one of the most important finds in Aegean archaeology in years, is expected to provide new insights into the daily life of Minoan civilization and into the sudden collapse of Minoan power.

Middle Assyrian Finds in Iraq. The discovery of a Middle Assyrian merchant's archive, as well as of new architectural information about temple and ziggurat construction, is a major contribution stemming from the excavation at Tell al Rimah, Iraq. The facades of the temple and the ziggurat are decorated by more than 270 half-columns, of which 50 were modeled after a palm tree trunk. Only one other palm trunk column of mud brick is known, and that is from the bastion of Warad-Sin at Ur, about 1830 B. C.

The merchant's archive contained a number of important tablets dating from the reign of Tukulti-Ninurta I (about 1235–1199 B. C.) of Assyria, showing that the final abandonment of the site took place toward the end of the 13th century B. C. Excavations also have uncovered important economic texts, Assyrian architectural features, and works of art of the Middle Assyrian period in Iraq.



HARVARD UNIVERSITY NEWS BUREAU

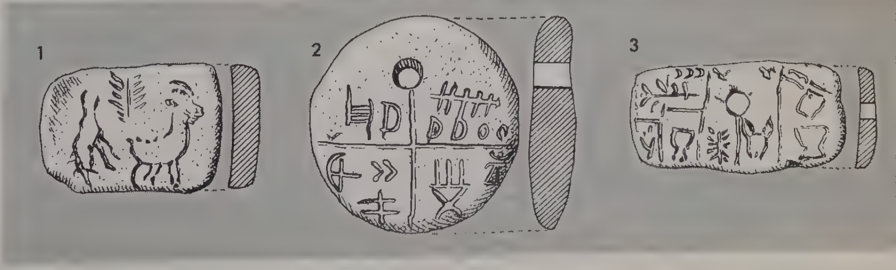
DISCOVERY of an elbow bone fragment (shown with arm skeleton of modern man) of a manlike creature 2.5 million years old was announced in 1967 by Bryan Patterson (*left*).

Glass Manufacture at Bet She'arim. This ancient necropolis, 12 miles (19.3 km) southeast of Haifa, Israel, lies in an area known to have been a glass-making region during the Roman period. A large buried slab was encountered in a cistern adjacent to some of the catacombs at the site. Analytic examination of the slab proved beyond doubt that it is glass. The slab is 11.1 by 6.4 feet (3.4 by 1.9 meters) and about 20 inches (50 cm) thick, and weighs about 8.8 tons (9.7 metric tons). It is by far the largest single piece of glass known from ancient times. Excavations around the slab suggest a date somewhere between 300 and 700 A. D. The engineering skills needed to construct a furnace capable of containing 11 tons of raw material and heating it to a temperature in excess of 1832° F (1000° C) for several days represent technological abilities that were unsuspected for this period.

Excavations in Sierra Leone. Considerable expansion in the archaeology of Africa has taken place in the past few years. Excavations at Yangema Cave in Sierra Leone have yielded one of the earliest and most extensive assemblages of prehistoric materials in western Africa. An early period had a dolerite, quartz, and schist industry of tools and weapons, and a later period used pottery and had a developed stone industry. The pottery is coarse and decorated entirely by punctuation of the material. The dates of the site are estimated at somewhere between 2000 and 1600 B. C.

C. C. Lamberg-Karlovsky
Peabody Museum, Harvard University

LONDON TIMES



CLAY TABLETS found in Rumania have been determined to contain a form of writing older than any other European writing. Radiocarbon data suggest the tablets may be 4,000 years old, thus predating Sumerian writing.

WESTERN HEMISPHERE

North American archaeology in 1967 was hampered over much of the United States by unusually heavy and continued precipitation that caused flooding of excavations and loss of working time. More serious was the cut in federal funds allocated for salvage archaeology. On the credit side was the increase in the number of technical reports issued or awaiting publication during the year.

Michigan. Work carried on at the Mikado earthworks—one of the largest in Michigan, and considered to be of late prehistoric age—uncovered a total of 1,825 square feet (169.5 sq meters). The encircling wall was cut in four places to determine the palisade pattern of the wall. Refuse pits, hearths, and a house pattern were also uncovered. Lithic and ceramic materials were scarce, but workers found charred corn, corn cobs, beans, and seeds.

In Chippewa county, Mich., excavations carried out on Naomikong Point suggest that it may be one of the most important sites in the upper Great Lakes region. Early results show stratigraphic evidence of the occupation of the site from the Middle Woodland period down to historic times.

Kentucky. Excavation at Savage Cave in Logan county, Ky., concentrated on the levels containing Late Archaic and Early Woodland cultural remains. Higher levels at the site have yielded material that permits their assignment to Historic and Late Woodland cultures. Objects eroded from the lower levels at the mouth of the cave indicate that occupation began in the Paleo-Indian period.

Kansas. Work was continued in central Kansas at sites attributed to the ancestral Wichita culture of about 1600 A. D. Each of the two sites under investigation showed the presence of a complex of long curved structures arranged in a tight circle. The two circles (and another excavated in 1965) are on a line oriented to the rising and setting sun at the winter and summer solstices.

Evidence of contacts between Plains and Pueblo Indians is seen in a turquoise pendant found at one site, and the small amounts of metal and of glass beads recovered probably came through the same source. Data on the burial pattern of the Wichita group were obtained. Finds of corn, beans, and pumpkin or squash seeds, combined with the presence of many scapula hoes, furnish evidence of a subsistence economy based on agriculture as well as hunting.

Arizona. Archaeologists from Prescott College, Arizona, conducted a survey of a previously inaccessible part of the Grand Canyon area by helicopter. Sites were located from the air, and landings were made at most of them. Some 250 ruins were located, at least 200 of which were new to the scientific record. These include some Southern Paiute and Havasupai sites dating from later than 1150 A. D. and a majority of early Pueblo III Kayenta Anasazi structures probably dating between 1100 and 1150 A. D.

New Mexico. Excavations by the University of New Mexico at the Rio Rancho site on the western outskirts of Albuquerque have proved the site to be Classic Folsom. It is reported to be more extensive and to have yielded more material than the Lindenmeier site in Colorado.

At Zuñi Pueblo excavations were made preparatory to restoring the old Zuñi Mission. The nave, baptistry, and original foundations of the church and convents were uncovered. Complete restoration plans are being prepared for the mission, which dates from the early 18th century.

Mexico. A project whose members included specialists in history, archaeology, and physical anthropology from Mexico and the United States was initiated to conduct excavations in Magdalena, Sonora. Its purpose was to discover the remains of Eusebio Kino (1645–1711), a pioneer Jesuit missionary. After extensive research and excavation the remains of Padre Kino and other individuals were found and preserved.

The second season of extensive archaeological investigations at the site of San Lorenzo Tenochtitlán, on the Río Chiquito in the state of Veracruz, has uncovered numerous Olmec stone monuments of great artistic value. Radiocarbon dates and associated materials put all monuments in a single Early Pre-Classic Culture called San Lorenzo, dating from 1200 to 900 B. C.

Peru. An archaeological reconnaissance has been carried out at various localities in the Peruvian highlands between Cuzco and the Ecuadorian border to locate dry caves containing plant remains associated with occupational debris. Small collections made at 16 caves in the south central highlands suggest that man was already living in the area by 8500 B. C. Plans are being made for an archaeological-botanical investigation of the region.

Excavations at late preceramic sites on the central Peruvian coast promise to clarify the sequence of cultural units in the period from about 3500 to 1800 B. C., and to shed light on changes in the economic pattern resulting from the appearance of domestic plants in the area. Preliminary studies show that beans, gourds, and squash are common in the earlier sites but tend to disappear later, and that fishing becomes less important after the appearance of domesticated plants.

Chile. Work in the vicinity of Salar de Talabre, a dry lake basin dating from the end of the Pleistocene, has allowed two major complexes to be isolated. The earliest, called the Chuqui, comes from eight sites located on high terraces said to date to a period of glacial advance in the Andes, contemporary with the Mankato or Port Huron glaciation in North America. Tools of the complex include burins (flints with beveled points), keeled denticulate (toothed) implements, and psuedo burins.

Argentina. Archaeologically, one of the least known portions of Argentina is that of the northeast. A 3-year program designed to remedy this situation began in 1966. In 1967 five parties undertook a systematic survey along the principal rivers, making surface collections and stratigraphic tests in order to construct a serially arranged sequence of cultures.

Brazil. Many lithic sites are under investigation in the state of São Paulo. Preliminary analysis of the crudely chipped tools suggests that several cultural complexes are involved. The superficial nature of the sites and the absence of associated material for radiocarbon dating have hampered construction of a chronological sequence. Meanwhile an international program of archaeological research successfully completed the second year of a 5-year program and is developing culture sequences from Paleo-Indian sites to historic sites with pottery in the Tupi-Guaraní tradition.

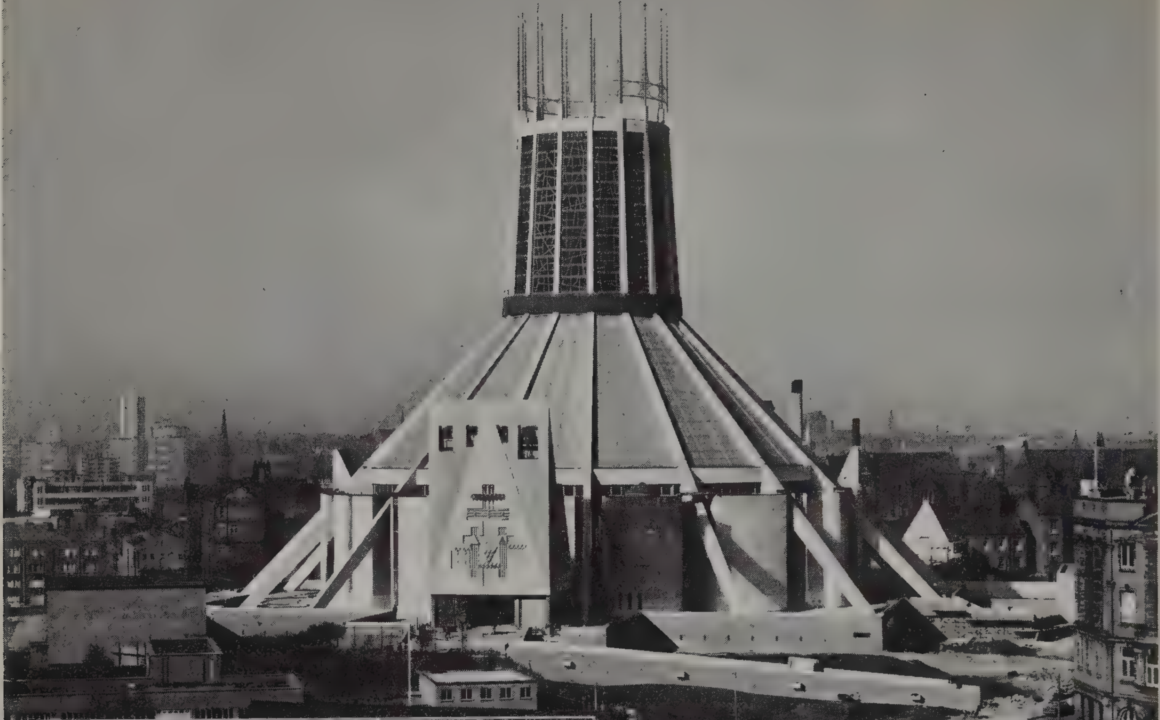
ARCHITECTURE

HOTEL LOBBY becomes a courtyard garden for every guest at the Regency Hyatt House in Atlanta. View is from a 17th floor gallery.

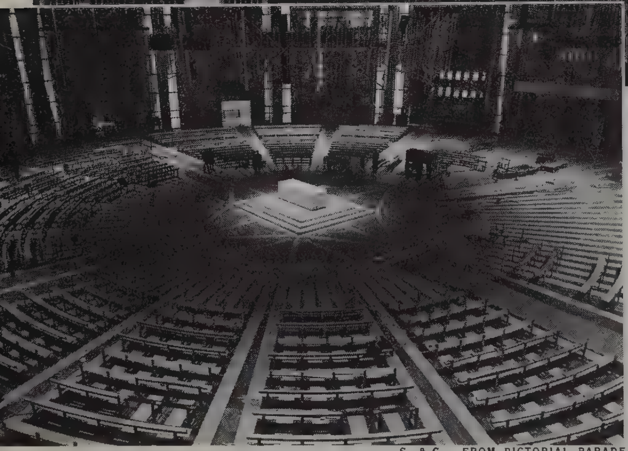
ARCHITECTURE

The many different directions in which architecture is headed were apparent in the major architectural projects of 1967. American architects sought reference points for their work in such various sources as the giant rocket-launching structures at Cape Kennedy, with their impressive use of technology, or in the offshore drilling rigs in the Gulf of Mexico—for their visual impact focusing the idea of independent, technologically oriented communities. Other architects were pursuing esoterically argued versions of "Op" or "Pop" architecture.

Expo 67. The main architectural event of the year was Expo 67 in Montreal, Canada, built on two islands and a peninsula in the St. Lawrence River. Designers of Expo faced many of the major problems current in city planning—for example, the necessity of moving large numbers of people. This was adroitly solved through the use of public transit and automated trains that carried visitors around all the pavilions, and through the glistening U. S. pavilion, a 250-foot-diameter geodesic structure of aluminum tube and acrylic panels, designed by R. Buckminster Fuller to be converted into an aviary after the fair closed. Its appearance changed through responding to changing sun conditions by means of electronically operated blinds within each panel. Designed by the Cambridge Seven Associates, the interior was a series of elevated platforms.



JOHN MILLS, FROM PIX



S. & G., FROM PICTORIAL PARADE

RADICAL CHURCH DESIGN characterizes the new Roman Catholic cathedral consecrated on May 14 in Liverpool, England. The open bell tower (above entrance), 112-feet feet high, is embellished with abstract sculpture. The interior space (*left*) is centered on a starkly simple altar.

Among the more impressive smaller pavilions were Quebec, with its façades of reflecting mirror glass, and Cuba, an elegant steel structure designed to be dismantled and returned to Cuba for use as a school. The West German exhibit was housed under a suspended-cable roof, covered with plastic sheet. It was a prototypical form for tension structures developed over many years by the German architect Frei Otto.

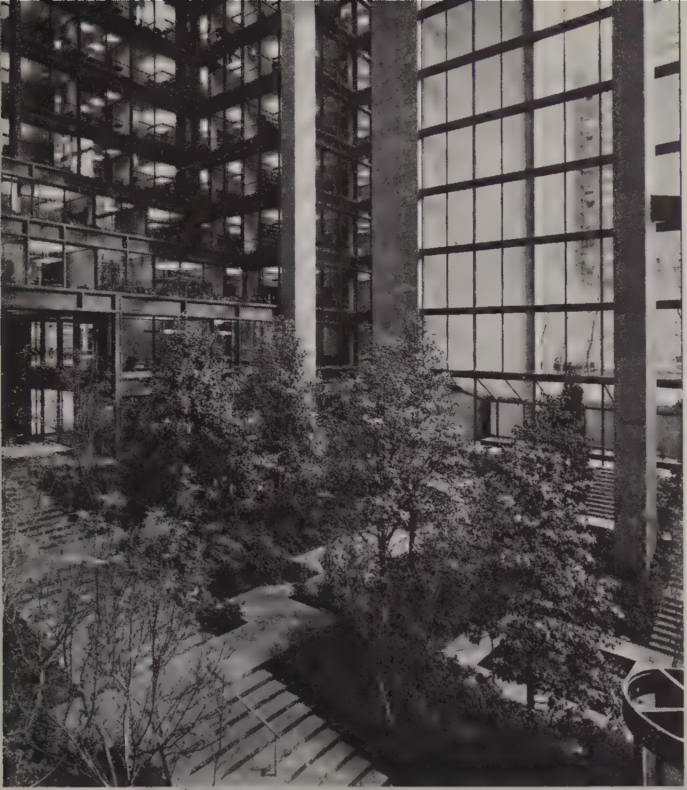
At the water's edge was one of the most exciting of the permanent structures of Expo 67, a group of 158 apartments, called Habitat 67, designed by the young Israeli architect Moshe Safdie. The apartments are 80-ton, prefabricated concrete boxes stacked in a stepped, ziggurat form reminiscent of Mediterranean hill towns. The one- and two-story apartments have large terraces, and are accessible by open "streets in the sky," which, with their plexiglass windbreakers, offer open spaces with views of the skyline. The shortcomings of Habitat 67, arising from its random form, were a lack of privacy and structural inefficiency. (See also EXPO 67.)

Major Architectural Projects. Two foreign architects who received major commissions for work in the United States in 1967 were James Stirling, an English architect in charge of the master plan for renewal of a section of the West Side of Manhattan, and the Finnish architect Alvar Aalto, who was commissioned to design a library for Mount Angel Benedictine College, in Oregon. Aalto's design utilizes his characteristically organic forms in a semicircular fan-shaped library set against a rectangular building containing offices and the lobby.

U. S. architects working on major projects abroad include Louis I. Kahn, who designed the Assembly building for Islamabad, the new capital city of Pakistan. The design is distinguished by a masterful articulation of natural light. Kahn's building for the Indian Institute of Management, in Ahmedabad, India, might have tempted a lesser architect to import a Westernized aesthetic; instead Kahn demonstrated his architectural sense of technology by using the local brick in highly sophisticated forms entirely appropriate to the country.

Mies van der Rohe completed a 60-story office building for the Dominion Bank of Canada, in Toronto, with a dark curtain wall and an open ground floor plaza. He was also scheduled to design a similar structure in the historic center of London.

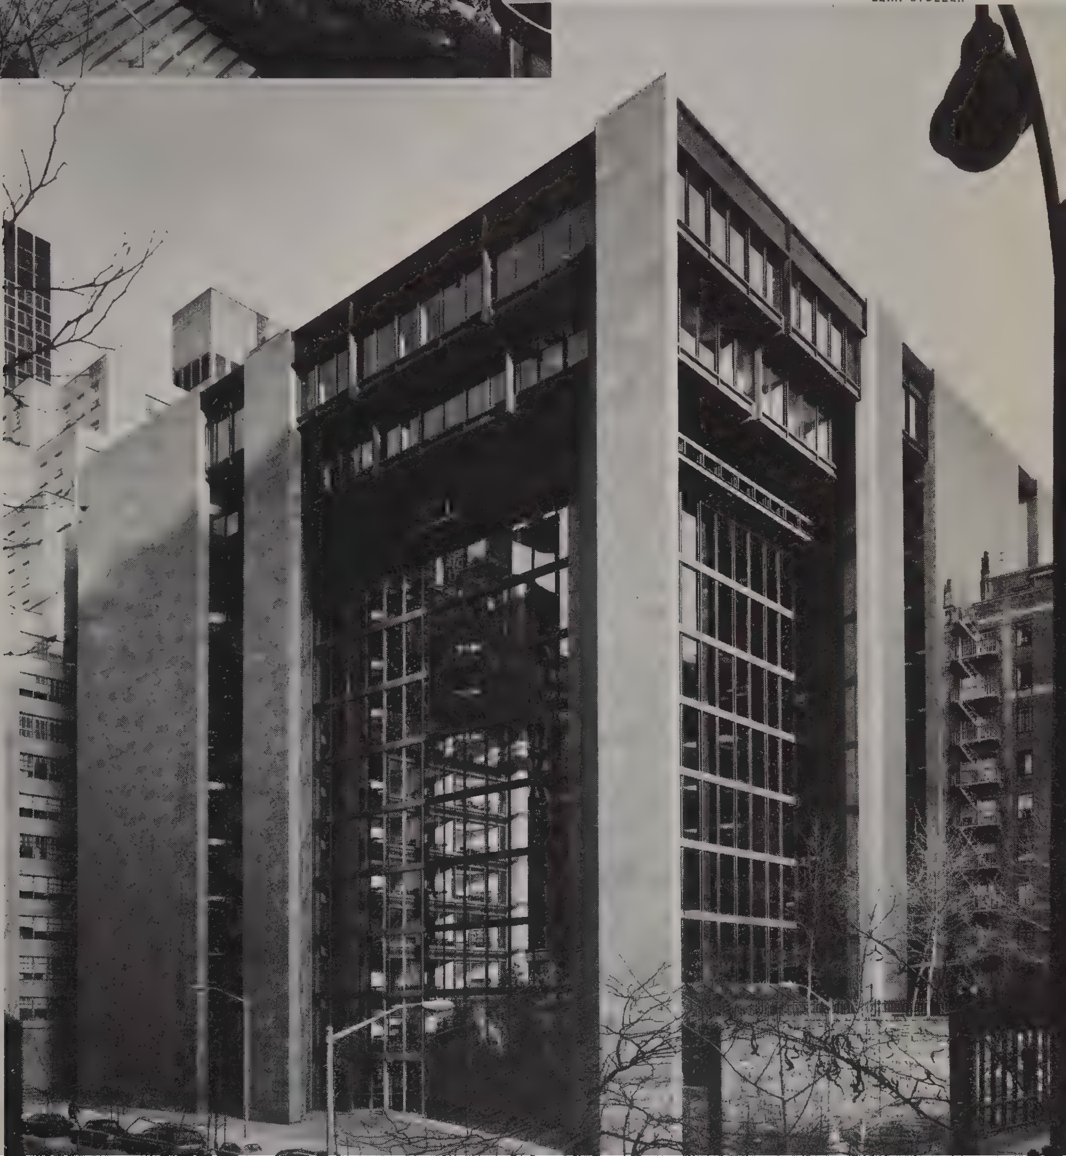
The Metropolitan Cathedral of Christ the King was inaugurated in Liverpool, England, in 1967. The commission for the design was won in competition by Frederick Gibberd in 1960, and consists



THE FORD FOUNDATION'S new offices on East 42d Street in New York City overlook a garden (*left*) growing within the building's walls. Garden is enclosed on two sides by L-shaped office wings and on two sides by 10-story glass curtain walls (seen in exterior view below). Kevin Roche, John Dinkeloo and Associates designed the structure.

EZRA STOLLER

EZRA STOLLER



EDWARD DURELL STONE'S plantation house inspiration for the new Museo de Arte de Ponce, at Ponce, Puerto Rico, won American Institute of Architects Honor Award.

of a circular drum with a central altar lit from a stained glass lantern rising 235 feet above the floor. The building is supported by radially disposed boomerang-shaped supports, suggestive of flying buttresses, that define 16 free-standing chapels.

Two major auditorium facilities were opened in the United States during the year, the Jesse Jones Hall for the Performing Arts in Houston, Texas, and the Charles Center Theater in Baltimore. The Jesse Jones Hall, by the architects Caudill, Rowlett and Scott and the theater designer George Izenour, is the first auditorium that can be physically and acoustically changed by means of a movable, tunable ceiling from a 3,000 seat-house to an 1,800-seat house. The project received an American Institute of Architects (AIA) Honor Award. The Charles Center Theater, by John Johansens, in the heart of Baltimore's new development, is a vigorously expressive, exposed concrete form superimposed on a ground floor podium designed for stores.

The year 1967 gave hope for improvement in the architecture of official Washington, D. C. Roche and Dinkeloo, in collaboration with Charles Eames, planned a new structure for the National Fisheries Center and Aquarium. It consists of a raised 432-foot-square platform containing exhibition rooms and two auditoriums. Rising from one corner is a 100-foot-high semicircular glass enclosure covering a re-creation of a section of the Florida Everglades.

Also in Washington, Victor Lundy's somber granite and dark glass United States Tax Court Building was presented in 1967. It has a strongly cubic and symmetrical composition, with courtrooms in a long block that appears to be suspended two stories above a podium and generous entrance steps by means of a 55-foot cantilever.

As a fitting postscript to his work, a pavilion designed by Le Corbusier to house a permanent exhibition of his own drawings and lithographs was opened in Zurich, Switzerland. It consists of two saddle-shaped metal roofs enclosing exhibition areas defined by panels of glass and brilliant enameled metal panels.

The laboratories for the Bell Telephone Company in Trenton, N. J., was one of the last buildings designed by Eero Saarinen and perhaps his best. Saarinen gave the site plan the formality of Versailles; the enormous one-way mirror façade reflects the landscape. The building is comprised of two functional laboratory blocks placed back-to-back; between them is an enormous, planted, skylit reception court.

Another laboratory facility—the National Center for Atmospheric Research by I. M. Pei—is sited on a high mesa at the edge of the Rocky Mountains near Denver, Colo. The building's complex plan deftly separates the conflicting requirements of exhibition space and laboratory space in a strongly monolithic, red concrete structure with shielded openings that minimize the effect of high winds and strong light.

The University of California's campus at Santa Cruz will be one of the largest in the country, accommodating 27,500 students. Its master plan, by John Carl Warnecke, calls for a division of the heavily wooded, ravined, 2,000-acre campus into 15 or 20 residential liberal arts colleges. The first college, completed in 1967, was designed by Joseph Esherick, utilizing the indigenous vocabulary of stucco and single-pitch clay-tile roofs in a series of three-storied structures, clustered irregularly.

In New Haven, Conn., Roche and Dinkeloo organized 1,600 students into four "houses" in their Richard C. Lee High School. The classroom level is a dramatically articulated, cantilevered concrete structure, set over a ground floor that accommodates the cafeteria, assembly hall, and workshops. Gunnar Birkert's design for the Lincoln Elementary School in Columbus, Ind., is equally forceful. It is circled

EZRA STOLLER

by thick trees; from the front only the formal entrance steps and dense greenery are visible.

Paul Rudolph made his new Creative Arts Center for Colgate University, Hamilton, N. Y., into a gateway for the campus by elevating the studio accommodations on three-story columns.

The new Museum overlooking Lake Merritt in Oakland, Calif., by Roche and Dinkeloo, creates a verdant open space out of the terraced roofs of the gallery spaces. The same architects designed the 12-story office building for the Ford Foundation in New York City of granite and Cor-ten rusting steel. It is L-shaped in plan with a 100-foot-square skylit garden enclosed by 10-story-high glass walls.

Prizes and Awards. Twenty projects were selected in 1967 for the American Institute of Architects (AIA) Honor Awards. Five of the projects were designed by Skidmore, Owings and Merrill. They are the seven-story American Republic Insurance Company headquarters in Des Moines, Iowa, a long-span concrete structure; the Beinecke Rare Book Manuscript Library at Yale University, suggestive of an alabaster-filled concrete casket set on four columns; the Banque Lambert Office Building and residence in Brussels, Belgium, an elegant precast-concrete structural system with richly detailed and furnished interiors; the utilitarian, concrete Vannevar Bush Center at Massachusetts Institute of Technology, Cambridge, Mass.; and the Mauna Kea Beach Hotel in Hawaii, a stepped form that is evocative of Le Corbusier's Palace of Justice in Algiers.

Another AIA Honor Award went to Moore, Lyndon, Turnbull, and Whitaker, for the design of Sea Ranch, a three-hour drive north of San Francisco. A compact compound of condominium vacation apartments, it is sited overlooking the Pacific Ocean. (See also PRIZES AND AWARDS.)

JOHN FOWLER
Yale University School of Architecture

ARCTIC REGIONS

The geology, subsurface features, ice masses, ocean water, atmosphere, plants, and animals of the Arctic regions continued to be studied actively in 1967. Economic motives were behind some of these investigations, as was military interest in this strategic area. In addition, certain fundamental questions of meteorology and climatology can be studied only in the Arctic. An example is the basic problem of changes in the earth's climate and how they are produced. According to some theories, the Arctic Ocean is a key factor in producing such changes; hence, evidence in support of these theories must be sought in the Arctic regions.

Settlement and exploitation of the Arctic have proceeded along with exploration. Southwest Greenland is one of the most highly developed Arctic regions; a relative prosperity has been brought about in recent years by commercial fishing. Most northern regions have not reached this kind of development, however, and they remain poor by modern standards of industrial civilization. U. S. and Canadian companies have searched for oil and minerals at an increasing tempo in recent years. This search can be expected to increase as other sources are depleted.

United States. The Arctic Research Laboratory at Barrow, Alaska—the northernmost U. S. town—continues to be the main base for scientific research in northern Alaska and the Arctic Ocean region. A broad program of biological, geophysical, geological, and social science research is conducted there by visiting investigators. Fletcher's Ice Island (T-3), a center for research, is supplied by aircraft from the laboratory. The island is a floating ice mass about 4 by 7 miles (6 by 11 km) in size, with a thickness of about 100 feet (30 meters). Scientists on the floating station conduct research on many aspects of the polar environment.

Canada. Much of Canada's research effort in the far north is under the guidance of government surveys and of the Polar Continental Shelf Project. The project continues its extensive program in the Canadian Arctic archipelago. Field parties from various institutions also avail themselves of the facilities provided on Devon Island by the Arctic Institute of North America.

An attempt (led by an American) to reach the North Pole by motorized sleds was initiated on March 28, 1967. The attempt failed; the party turned back after traveling about 265 miles (427 km) from a base camp in Eureka on Ellesmere Island. The pole has not been reached by a surface party since Admiral Peary's expedition of 1909.

USSR. Research by the Soviet Union in Arctic regions is commensurate with its large extent of land and coastline north of the Arctic Circle. For example, the USSR pioneered in the use of drifting ice stations in the Arctic Ocean and continues to maintain two of these stations. In 1967 the USSR offered to make its northern sea route open to all nations. (The route, extending 2,500 miles [4,025 km] over northern Europe and Asia, is kept open 150 days a year by icebreakers.) However, the USSR denied passage through Vilkitski Strait in August to two U. S. icebreakers attempting to circumnavigate the North Pole; the Soviets claimed that this would be a violation of territorial waters.

KENNETH L. HUNKINS
Lamont Geological Observatory

UPI

FLOODS, after eight days of almost continual rainfall in early October, caused many deaths and forced the evacuation of more than 40,000 in the Buenos Aires area.

ARGENTINA

The political crisis that began in Argentina in 1966, when the armed forces seized power from President Arturo U. Illia and named Lt. Gen. Juan Carlos Onganía his successor, continued throughout 1967. Although there were civilians in the cabinet and other important government posts, the Onganía government continued to be a military dictatorship.

Trends in the Regime. The regime continued to proclaim, as it had done from the beginning, that it intended to stay in office for 10 years and that it would bring about fundamental changes in the national economy and in society. However, it neither developed any very clear sense of direction during 1967 nor gave definite evidence of the nature of the revolutionary changes that it sought to achieve.

Although there was a tendency for the government to harden politically, it remained fundamentally split. One faction, which was of a right-wing nationalistic tendency, included some groups of hangers-on that were definitely anti-Semitic. The other faction was made up of self-proclaimed "liberals." Their liberalism was confined principally to economics, where they advocated the extension of free enterprise, but there was little indication that they were strong advocates of political liberalism and a return to constitutional government.

Gen. Julio Alsogaray, the army commander in chief, gave evidence of being the principal representative of the liberals in the military high command during 1967. The liberals' chief civilian spokesman was Adalberto Krieger Vasena, who became minister of economy on January 4. In the cabinet reorganization that took Vasena into office, Gen. Pascual A. Pistarini, generally considered a military leader of the more intransigent element in the government, was replaced as minister of defense by Gen. Antonio Lanusse.

When leaders of the old political parties, which had been outlawed after the military takeover in 1966, began to demand that the government take steps for calling new elections, President Onganía brought them up short. In a speech on May 26 he conceded that sooner or later elections would be held but indicated that discussion of the matter was premature.

The Regime and Labor. During its first months the Onganía government had sought to gain the friendship of the Peronists (supporters of Juan D. Perón, president of Argentina in 1946–55) or at least to obtain their neutrality, but such efforts were abandoned during 1967. In February the National Security Council cut all ties with Peronist-dominated labor, particularly the CGT (General Confederation of Labor). It froze the bank deposits of a number of key unions.

The previously powerful and militant labor movement showed almost no reaction to this drastic move by the government, which was followed by enactment on March 4 of a "civil defense" law. This law gave the government the right to draft all residents over 14 years of age whenever the "vital interests" of the state are threatened and to exercise this power even when a state of war does not exist.

Although unable to retaliate effectively, the CGT announced on August 28 that it no longer recognized the authority of the government because Onganía

JUAN CARLOS ONGANÍA, president of Argentina, was installed on June 29, 1966, by the 3-man military junta that had overthrown President Arturo U. Illia. Upon taking office, Onganía dissolved the legislature, banned political parties, curbed the national universities, and generally curtailed civil liberties. In 1967, after reorganizing his cabinet to meet demands of the military, he instituted an austerity program, announced strict fiscal reforms, and curbed the main trade unions and union leaders. In August he signed a law severely restricting the activities of suspected Communists.

Onganía was born on a small farm in Buenos Aires province on March 17, 1917. Educated in Argentina's School of War, he served in the cavalry and the armored corps, rose steadily through the military ranks, and acquired a reputation for efficiency and discipline. Within the armed forces he was known as a moderate Peronist, but he generally avoided political controversy. Appointed commander in chief of the army in 1963, he resigned in 1965.

WIDE WORLD

was not a constitutional president. He replied that the CGT did not represent the organized workers.

Economic Policy. That the liberals were dominant during most of 1967 was evident in the liberal economic policy that the government followed. One of the main elements of this policy was an attempt to rehabilitate the country's two major export industries—livestock raising and grain growing.

A major step toward rebuilding the livestock industry was the launching in Buenos Aires province, in July, of a $39 million program to increase beef production through granting extensive low-interest loans to ranchers to improve pasture, buy machinery, and fence their land. Reorganization and strengthening of the grain economy were furthered by a $35.4 million program to improve the storage and handling of wheat and other grains in the country's chief grain-exporting ports. It was hoped that by 1970 the grain-exporting capacity would be doubled.

These programs—which were aided, respectively, by loans from the International Bank for Reconstruction and Development and the Inter-American Development Bank—were complemented by a decree granting tax reductions to farmers who would purchase breeding cattle and hogs, employ additional technicians, and invest in locally produced agricultural machinery and equipment.

A second major aspect of the government's economic program was the devaluing of the Argentine peso to encourage foreign investment and make the country's exports more attractive. On March 13 the peso was devalued by 40% (350 pesos to the dollar).

A third element of the economic policy was the rescheduling of the country's foreign debt to stabilize the peso and increase the currency reserves of the central bank. Intensive negotiations were conducted with creditors in Europe, in the United States, and elsewhere to convert short-term debts, which come due within a matter of months, into longer-term obligations. By early May, $400 million had been so converted.

Finally, the government turned its attention to the oil industry problem. Between 1958 and 1962, President Arturo Frondizi had negotiated agreements with foreign oil companies allowing them to participate in exploitation of national oil reserves. President Illia had canceled those agreements in 1963, with the result that by 1966 Argentina was again a major importer of petroleum products—a position from which Frondizi had retrieved it.

As a first step in dealing with the problem, the Onganía government reached a final agreement on April 9, 1967, with two U.S. oil companies—Cities Service Company and Pan American Argentina (a Standard Oil of Indiana subsidiary)—whereby those companies would be permitted to resume operations under most of the conditions agreed to under Frondizi. A second step was taken on June 22, when President Onganía signed a new law permitting foreign oil companies to engage again in exploration and production of petroleum under concession.

Perhaps in part as a result of these measures, the economic situation of Argentina improved somewhat during the year. The stock market rose, the rate of inflation slowed, and the international value of the peso was more or less stabilized.

Restrictions on Civil Liberties. After enacting the civil defense law in March, the regime moved to restrict civil liberties further. An anti-Communist law, signed on August 25, defined a Communist as "one who carries out activities that are proved to be undoubtedly motivated by Communist ideology." Any such person is to be banned from holding public office; becoming a citizen or being a teacher; administering radio, television, or publishing enterprises; and holding office in unions or in professional organizations. The law set penalties of one to eight years in prison and made no provision for appeal. Although no large-scale attempt was made to apply the anti-Communist law during 1967, there were prosecutions in several provinces of relatively unknown figures.

Repression of the national universities began in July 1966, when a decree stripped them of their autonomy and placed them under the minister of education. Soon afterward, many leading faculty members resigned, and a large number of them found jobs abroad during 1967. The fact that members of physical science departments went abroad in particularly large numbers may mean a permanent loss of intellectual resources.

A new law for governing the universities was announced on April 22, 1967. It deprived students and alumni of their votes in university governing bodies and ended the traditional sanctuary that had existed on university campuses.

International Affairs. On January 5 the government issued a decree extending Argentina's offshore boundaries from 3 miles (5 km) to 200 miles (322 km). The extension was aimed at curtailing the activities of foreign fishing fleets.

Between February 15 and 26, Buenos Aires was host to the Third Inter-American Conference of the Organization of American States and, concurrently, the meeting of OAS foreign ministers. The latter prepared the agenda for the April meeting of American presidents at Punta del Este, Uruguay, which was attended by President Onganía. (See also Latin America.)

WIDE WORLD

DEMOCRATIC SENATOR Carl Hayden of Arizona, who has been a senator for 40 years, slices a cake at a celebration in Washington on his 90th birthday, Oct. 2, 1967.

ARIZONA

During the shortest session in the state's history, the Arizona legislature in 1967 passed an impressive total of 135 bills. The legislature (the first to be controlled by Republicans) met for 64 days—from January 9 to March 31—in regular session, as well as in three separate special sessions.

Legislation. The legislature was in a reform mood. It established a new state department of property valuation; created a centralized purchasing agency within the department of finance; drew up a code of ethics, with penalties, for public officials; and authorized planning for a state-sponsored Central Arizona water development project. It also revamped the organization of the state liquor department, and increased the state's contribution to employee retirement funds to 5% of the total.

In the three special sessions the legislature implemented the new statewide property appraisal program and devised a reapportionment plan. Four property assessment classifications were established that will have the effect of increasing state aid to schools and controls on local district financing.

The reapportionment plan devised in special session was attacked as Republican-oriented by the Democratic party. A petition was circulated that succeeded in forcing the issue onto the ballot in the 1968 elections.

Labor Disputes. The nationwide copper strike that began July 15 idled more than 20,000 employees in Arizona and had a significant adverse effect on the economy (see also LABOR). Tucson's two daily newspapers, the *Arizona Daily Star* and *Tucson Daily Citizen,* were struck in November by members of the International Typographical Union but managed to continue its publication during the strike.

Racial Disturbances. A mild racial disturbance flared in Tucson in July. Later the same month violent disorders broke out in Phoenix, and Mayor Milton Graham placed 30 square miles of the city under curfew. The incidents were the first racial outbreaks in Arizona's modern history.

Blizzard. One of the heaviest snowfalls on record in Arizona dumped more than 7 feet of snow on the northern part of the state in December. Thousands of persons were stranded in small communities and on farms. Air Force planes and helicopters dropped food and other supplies to stranded families, most of whom were Navajo Indians living on the extensive reservation areas in northern Arizona. At least nine persons died, and ranchers lost thousands of cattle and sheep.

Air Disaster. A U. S. Air Force F-4 jet trainer taking off from Davis-Monthon AFB crashed into a Tucson supermarket on December 18, killing four persons and causing extensive property damage.

James Kidd Estate. A court decision finally settled the litigation surrounding the will of James Kidd, who bequeathed $250,000 to anyone who could prove the existence of the human soul. Dozens of contestants were involved in the case, but the court awarded the money to the Barrows Neurological Research Center in Phoenix.

City Elections. In elections in Tucson the Democrats gained control of the mayor's office when James N. Corbett, Jr. was elected and retained control of the City Council. In Phoenix, Mayor Milton Graham won an unprecedented third-term victory in a sweep of the Charter Government Association party. Regional councils of government were organized for both the Phoenix and Tucson areas.

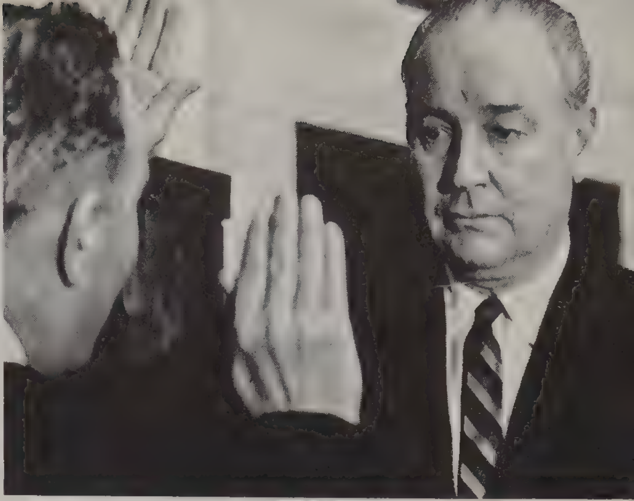
ARKANSAS

In 1967, Winthrop Rockefeller became the first Republican governor of Arkansas since 1874. His first year as governor was marked by partisan controversy between him and an almost solidly Democratic legislature. Exposés of brutality in state prisons, accusations of misconduct against some officials, charges of legislative bribery, and pleas for reform dominated the headlines. By the end of the year, however, few reforms had been accomplished.

Legislature. In its regular biennial session the General Assembly passed a record 658 bills. Among these were acts establishing a department of administration, a constitutional revision study commission, and a governmental efficiency study commission. Also passed were a lobbyist registration act; a closed primary law requiring voters to register party affiliation (although a referendum petition later required that it be submitted for popular approval in the next election); a vehicle safety inspection act; and a turnpike authority act. For the first time in recent years the legislature overrode some of the governor's vetoes, 4 out of 36. However, it accepted his veto of a controversial bill legalizing gambling. By the end of the year an impending revenue deficit and pressures for a constitutional convention made it likely that the governor would call a special session for February 1968.

The Governor. Rockefeller's programs were characterized by reform activities. A newly appointed insurance commissioner revitalized the state's insurance regulation program. The new state police director stopped organized gambling where local officials failed to act. However, he was jailed for refusing to reveal an informant to a grand jury and was later found to be ineligible for office because he did not meet a ten-year residency requirement. The governor accused members of the game and fish commission of official misconduct and started ouster proceedings which were checked by court order. Disclosure of antiquated prison practices led to attempts to inaugurate a more modern penal system.

Rockefeller lost some control over the administration when the Senate confirmed 93 appointments made by the previous governor. The Senate also passed a law requiring its approval of future appointments to boards and commissions. However, under the supervision of the chief executive, the newly formed department of administration consolidated comptroller, purchasing, and personnel functions.



UPI

WINTHROP ROCKEFELLER (*right*) is sworn in on January 10 by Chief Justice Carleton Harris as Arkansas' first Republican governor since the period after the Civil War.

Politics. Governor Rockefeller remained the dominant political personality in the state, and the Republican party continued to grow. The Democrats were racked by an internal struggle for leadership among segregationist groups, forces backing ex-Gov. Orville Faubus, and more moderate elements.

Education. Arkansas State College became the state's second public university. The state law prohibiting the teaching of evolution in the public schools was upheld by the Arkansas supreme court. The Arkansas Education Association threatened to resort to militant action to gain promised pay increases, a tenure law, and a negotiations act for teachers.

Economy. Industrial growth and attraction of new plants into the state continued in 1967 with the completion of such projects as the opening of a vanadium milling plant in Malvern, expansion of the plywood industry, dedication of the completed river port facilities in Camden, and construction of additional navigational facilities on the Arkansas River. Russellville was selected as the site for the first nuclear power plant to be built in the Southwest.

ALLISON DIVISION, GENERAL MOTORS

MBT-70, an important new battle tank being developed jointly by the U. S. and West Germany, incorporates several technical advances. It can be elevated for mobility.

ARMY

As the war in Vietnam's jungles and rice paddies ground on in 1967, the U. S. Army faced a new strategic mission—the construction of an antiballistic missile (ABM) system to cope with a possible future Communist Chinese intercontinental ballistic missile (ICBM) threat against the United States.

The decision to construct the ABM system had many political and diplomatic overtones. For the Army it meant a long-sought assignment extending its responsibilities for U. S. territorial defense.

Meanwhile, the defense of South Vietnam against an attempted Communist take-over continued to engage an increasing number of Army forces in 1967. The overall size of the Army grew, particularly in combat aviation.

ABM System. Before 1957, during the so-called missile gap crisis, the Army proposed construction of an antiballistic missile defense that could launch projectiles against incoming long-range missiles. The Army called its proposed "antimissile missile" the Nike-Zeus. The concept was likened to hitting a needle with a needle in the dark. The Army's proposal was rejected by the Eisenhower administration as not yet feasible, but research and development were authorized. The Army project was subsequently altered and called Nike-X, but proposals to begin production were rejected.

On Sept. 18, 1967, Secretary of Defense Robert S. McNamara announced that, while a proposed system to cope with the Soviet missile force had been rejected again, a "thin" ABM system for protection against a possible Communist Chinese ICBM threat would be constructed. The Soviets, it was said, already possessed enough ICBM's to saturate any ABM system. The USSR could be deterred only by the threat of retaliation that would end civilization.

For the presently lesser Chinese threat the administration authorized the Army to construct a network of radar and missile launchers, now called the Sentinel system, at a cost of $5 billion, over a period of five years. Each antimissile missile would cost about $1 million; each radar unit about $100 million. The first operational battery was due in the early 1970's. The system would buy a certain degree of protection for key U. S. cities and ICBM bases over a period of 10 years, after which, it was presumed, China would also have enough ICBM's to make the ABM network obsolete. (See also MISSILES.)

Vietnam. The Army's manpower commitment to the fighting in Vietnam had grown to 304,000 by the fall of 1967, over 50,000 more than the peak Army commitment to the war in Korea in 1952. Army

LOCKHEED-CALIFORNIA COMPANY, LOCKHEED AIRCRAFT CORP.

U. S. ARMY CHEYENNE is designed to "ride shotgun" for troop-carrying helicopters in Vietnam. The heavily armed craft can fly more than 250 miles per hour, but will make vertical takeoffs and landings in battle areas.

units scoured South Vietnam in "search and destroy" operations, plunging through rice paddy and jungle as often as they skipped the miles in helicopters. As North Vietnamese regulars appeared in South Vietnam in increasing numbers, the incidence of larger battles increased. For example, Operation Pershing cost American and South Vietnamese forces 483 dead, and Operation Junction City II, 282 dead. But the reported enemy death tolls were 3,410 and 2,728, respectively. In November, in a bitter battle at Dakto, the United States lost 287 dead, 18 missing, and 1,000 wounded; South Vietnam 50 dead, the enemy 1,641 dead and uncounted wounded.

Improved medical aid and the smaller-scale fighting in Vietnam, as compared with the Korean War, made a marked difference in comparative death tolls, despite the fact that the duration of the U. S. military commitment in Vietnam had exceeded that of Korea. U. S. casualties in Vietnam from Jan. 1, 1961, to Nov. 18, 1967, totaled 14,846 killed in action and 93,227 wounded, compared with Korean casualties from July 1, 1950, to July 31, 1953, of 27,704 dead and 79,526 wounded. By Nov. 18, 1967, the estimated death toll of the enemy in Vietnam was 238,787. Direct U. S. combat in Vietnam did not begin until 1964.

Along with conducting its own intensive combat operations in May 1967, the Army increased to 5,200 the number of advisers attached to all levels of South Vietnam's armed forces. About 750 Army men were assigned to civil affairs duties in support of the civic action or "pacification" effort. (See VIETNAM WAR.)

Strength. The Army in 1965 had less than a million men. By Jan. 1, 1967, it had grown to 1,405,804. Additions were to bring the strength to 1,520,000 by the end of the year, but some leveling off appeared in prospect. The authorized strength for June 30, 1968, was 1,521,000.

In 1967 the Army activated a new division (the Americal), made up of existing Army brigades in Vietnam. It also activated one separate brigade (the 198th Infantry) and one armored cavalry regiment (the 6th Armored), and announced plans to reactivate the 6th Infantry Division by mid-1968 in order to bring the Army to 19 divisions, 11 separate brigades, and 5 armored cavalry regiments.

The Army carried out the previously announced closing of the Headquarters Building, 5th Army, Chicago; Fort Douglas, Utah; Forts Slocum and Totten, N. Y.; and Lordstown Military Reservation, Ohio, as part of a cost-efficiency program.

The program begun in 1966 to "salvage" 30,400 men for Army service by July 30, 1967, and 100,000 a year thereafter by lowering mental standards for recruits appeared to be making some progress. As of Sept. 15, 1967, 35,373 former rejectees had been accepted. (See also SELECTIVE SERVICE.)

Training. In support of expanded Army aviation training, Hunter Air Force Base, Ga., was transferred to Army control. The Army expanded use of educational closed-circuit television programs for training recruits. The Continental Command introduced systems engineering into its service schools. Similarly, 11 officer career programs were altered to include operations research and systems analysis. Computers were distributed to personnel managers.

But the Army's training was not all esoteric. The so-called "quick kill" technique of rifle marksmanship—fast, unaimed, instinct shooting—for dealing with briefly glimpsed guerrilla enemy forces, was ordered adopted at all training centers.

UPI

GEN. WILLIAM C. WESTMORELAND, commander of U. S. forces in Vietnam, at a joint session of Congress in April.

WILLIAM C(HILDS) WESTMORELAND, U. S. Army general and commander of U. S. forces in Vietnam, was summoned home in April 1967 to present a personal report to the public. Addressing a joint session of Congress, he concurred with the Johnson administration's view that the Vietnam conflict was caused by "aggression from the north." He expressed confidence in ultimate victory over Communist forces.

Westmoreland was born March 26, 1914, in Spartanburg County, S. C. He graduated from the U. S. Military Academy at West Point in 1936, fought in Europe during World War II, and later in the Korean conflict. In 1958 he took command of the 101st Airborne Division, and in 1960 he became superintendent at West Point. On April 25, 1964, he succeeded Gen. Paul Harkins as commander of the U. S. Military Assistance Command in Vietnam (MACV).

Reserves. The authorized strength of the Army Reserve Force, including the Army National Guard, was 678,500 (National Guard, 418,500; Army Reserve, 260,000) when the president signed the budget in September. The projected strength for June 30, 1968, was slightly less—a total of 660,000 (National Guard, 400,000; Army Reserve, 260,000). Secretary of Defense McNamara on Nov. 6, 1967, authorized increases of 7,800 men in the Army Reserve and 12,000 in the National Guard (a 3% increase over congressional limits) to make up for the lag between discharges and new enlistments. (See also NATIONAL GUARD.)

Deployments. With 304,000 men in Vietnam, the Army continued to maintain its sizable troop commitments around the world. There were 230,000 Army troops in Europe at the end of the year. In Korea, the 8th Army and supporting units totaled 50,000 men. In Hawaii, Headquarters U. S. Army of the Pacific and the 11th Infantry Brigade included 10,000 men. The Army in the Ryukyus totaled 18,000, and Army troops in Japan numbered 5,000. The Army Southern Command in the Caribbean area totaled nearly 9,000 men, and the Army in Alaska, 12,000. Another 50,000 men were scattered in various assignments around the world.

Plans were announced in May 1967, however, for a reduction of U. S. Army strength in Germany during 1968. Two brigades of the 24th Infantry Division and certain supporting units—about 25,000 men

—were scheduled to be withdrawn to commands in the United States.

Procurement. The Army received administration approval of most of its procurement requests for the fiscal year 1968, but along with the other services suffered an across-the-board cut in Congress. The final procurement appropriation for the Army was $5,881,000,000. Reflecting the high consumption by the war, ammunition alone accounted for $2,239,000,000 of the total. The biggest item in the Army procurement appropriation, the amount for ammunition was nearly twice the amount appropriated for the 1967 fiscal year.

Army Aviation. The successful use of helicopters and other small aircraft in Vietnam produced continued support in Washington for the expansion of Army aviation. From the beginning of 1967, in accordance with an announcement Dec. 15, 1966, the Army pilot-training rate was accelerated from 410 per month to a projected goal of 610 per month by June 30, 1968. By contrast, the Army pilot-training rate in 1962 was less than 80 per month. By the end of 1967 the Army had 9,000 aircraft and more than 12,600 aviators.

More than 1,500 Army aircraft of various types were ordered in the first nine months of 1967. The long-awaited AAFSS (Advanced Aerial Fire Support System), whose first example was the AH-56A Cheyenne, was unveiled to the public. This prototype of 10 helicopter-style "aerial platforms," designed to provide direct fire support, was immediately put through flight tests. A new helicopter, AH-IG Huey Cobra, was delivered to the Army and was to be deployed in Vietnam by the end of 1967.

Research and Development. While a start was ordered in constructing an ABM system, research and development efforts on components of the Nike-X system were ordered continued with tests at Kwajalein, in the Pacific. The SAM-D surface-to-air missile continued in "advanced development," but no decision had been made for deployment. The Lance missile system was in an advanced development stage, with the ground-support equipment committed to production. The Army was pleased with advances made in a new lightweight gas turbine engine. It was also working on crash-resistant fuel tanks. The SPIW (Special Purpose Individual Weapon) project, a rifle designed to fire .22 caliber bullets or darts, or to launch grenades, continued in an exploratory program.

M-16 Rifle. Reports that M-16 rifles jammed in combat precipitated a congressional inquiry. A House panel blamed many factors including the type of powder used, single-source procurement, conflicting instructions for maintenance, and lack of training in the proper use and care of the rifle. The Pentagon, after its own investigation, ordered overhauling including use of a heavier bolt to slow down recoil action, but pronounced the M-16 satisfactory. The Pentagon promised a new testing program.

Administration. No major changes were made in the Army's civilian and military command in 1967, as Stanley R. Resor continued as secretary of the Army and Gen. Harold K. Johnson as chief of staff. Gen. Creighton Abrams, vice chief of staff, was named deputy to Gen. William C. Westmoreland, commander in Vietnam; Gen. Ralph E. Haines, Jr., became vice chief of staff. (See also NATIONAL DEFENSE.)

Author of "Power at the Pentagon"

ART

Sculpture dominated the art scene in 1967. It was sometimes strongly challenged, however, by environmental projects, which occasionally attained remarkable complexity and technical sophistication. Indeed, a technical revolution seemed to be threatening traditional concepts of art as they have not been threatened since the development of abstract art and cubism in the early 1900's. This trend, international in scope, was reflected in work seen at Expo 67 in Montreal.

EXPO 67

Symptomatic of the technical revolution was the spectacular use made of film at Expo 67. Almost 3,000 films were shown in the various pavilions. Many of them took an environmental approach, using 360° screens, screens on ceilings and floors, or multiple screens in conjunction with rotating seats, reflecting mirrors, and live actors. The Czechoslovak pavilion attracted the most attention with "polyvision," a synthesis of 8,000 slides, eight film images, and prismatic environments of flowing color.

Expo 67 displayed more art of all kinds than any similar international exposition of recent years. Masterpieces of art, ranging from ancient sculpture to paintings by Jackson Pollock, were taken to Montreal from many countries. Commissions amounting to $2.5 million were given to 50 Canadian sculptors. In Montreal, Alexander Calder constructed his largest work, a stabile standing 70 feet (21 meters) tall. The French exhibited almost 200 works, tracing the history of French art from the Middle Ages to the present. At the United States pavilion there was a selection of huge pop, op, and hard-edge paintings.

The international importance of sculpture was reflected in the popularity of Expo's survey of sculpture from Rodin to the present. Contemporary sculpture was seen at the Swiss pavilion, which showed works by Giacometti, Max Bill, Zoltan Kemeny, and Yves Tinguely, and at the German pavilion, where kinetic works by Otto Piene, Günther Uecker, Heinz Mack, Günther Haese, and Harry Kramer were shown.

SCULPTURE

From one end of the United States to the other, sculpture exhibitions were the major artistic events of the 1967 season. New trends in sculpture showed a concern with irreducible forms, serial ideas, mass-production techniques, and an eager desire to incorporate into art the latest developments of technology.

New Trends. Support for technological experimentation came from the American Telephone and Telegraph Company, International Business Machines, and the AFL-CIO. These organizations gave money and lent technicians to EAT (Experiments in Art and Technology), a group that helped Robert Whitman produce light sculpture with laser beams.

New developments in sculpture were seen in many of the one-man and group shows held at leading New York City galleries in 1967. They included soft polyurethane carpet pieces by Piero Gilardi (Fischbach Gallery), voluptuous foam rubber work by John Chamberlain (Castelli), fluorescent light "proposals" by Dan Flavin (Kornblee), colored plastic constructions by David Weinrib (Royal Marks), electromagnetic works by Takis (Wise), vacuum-molded plexiglass reliefs by Craig Kauffman (Pace), tinted color boxes by Larry Bell (Pace), modules

constantly rearranged to produce different combinations by Robert Morris (Castelli), and marble and aluminum combinations by Isamu Noguchi (Cordier & Ekstrom).

The growing interest in monumental projects was demonstrated by Sol Lewitt's scale models for huge structures (Dwan), by Claes Oldenburg's sketches for colossal surrealistic forms (Janis), and by such exhibits as "Macrostructures" (Feigen) and "Architecture Sculpture-Sculpture Architecture" (Visual Arts Gallery).

Comprehensive Exhibits. The Guggenheim International Exhibit in New York City in 1967 was devoted exclusively to sculpture for the first time. The Los Angeles County Museum showed the most comprehensive survey ever assembled of modern American sculpture, with 166 large works by 80 artists. In Washington, D. C., the Gallery of Modern Art featured constructions by Larry Bell, Ron Davis, Dan Flavin, Don Judd, Craig Kauffman, and John McCracken in a didactic show called "A New Aesthetic." The Walker Art Center in Minneapolis and the Milwaukee Art Center presented objects by Stephen Antonakos, Otto Piene, Chryssa, John Goodyear, and others in a show called "Light, Motion, Space."

Outdoor Display of Sculpture. Monumental sculpture by 30 Americans was displayed outdoors in various locations around New York City, the first exhibit of this kind ever held. Chicago unveiled its largest, most exciting outdoor sculpture, a steel form built from a model donated by Picasso. The work is 50 feet (15.3 meters) high and weighs 163 tons (148 metric tons). A smaller version of this work was seen at New York's Museum of Modern Art in the largest survey of Picasso's sculpture ever held in the United States. On the campus of the University of Chicago Henry Moore unveiled his "Nuclear Energy," commissioned to commemorate a quarter century of the atomic age.

Retrospectives. There were several important showings of "old masters" of modern sculpture during the year. A retrospective at the University of California, Los Angeles, of Alexander Archipenko's work traced his career from 1908 to 1963. The first one-man show in the United States of Henry Moore's work since 1946 was held at the Brooklyn Museum. A retrospective of Louise Nevelson's sculpture was mounted by the Whitney Museum in New York.

PAINTING

Retrospective exhibits dominated the painting scene in 1967. A new sense of social involvement was apparent in shows arranged specifically to protest against the war in Vietnam.

Retrospectives. Retrospectives provided the major attraction among the painting exhibitions in 1967. Of special importance were the shows devoted to Jackson Pollock (Museum of Modern Art); Paul Klee (Guggenheim); Roy Lichtenstein, whose first major museum showing it was, and Allan Kaprow (both at the Pasadena Museum of Art); Andrew Wyeth, whose works drew record-breaking attendance (Pennsylvania Academy of Arts and the Whitney Museum); Franz Kline (Marlborough-Gerson Gallery, New York); Fernand Léger (International Galleries, Chicago); Yves Klein (Jewish Museum, New York); Aubrey Beardsley (Gallery of Modern

UPI

THOMAS HOVING, before a statue of John the Baptist, became director of the Metropolitan Museum of Art in 1967.

THOMAS P(EARSALL) F(IELD) HOVING, who became director of the Metropolitan Museum of Art in New York City on April 15, 1967, brought to this post a profound knowledge of art history as well as a talent for organization and public relations. Soon after taking office, he began to arrange special exhibitions aimed at making the museum's art treasures more meaningful to the general public.

Hoving was born in New York City on Jan. 15, 1931. He studied art history at Princeton University (B. A., summa cum laude, 1953; Ph.D., 1959) and then joined the staff of the Metropolitan as a curatorial assistant. In 1963 he became associate curator of the museum's medieval arts collection at the Cloisters, and in 1965 he was appointed curator of the medieval arts department. As New York City's commissioner of parks (1966–67), he organized a series of cultural and recreational events in the city's parks.

Art, New York); and Édouard Manet (Chicago Art Institute and Philadelphia Museum of Art).

Protest Shows. A new kind of exhibition, the protest show, grew out of the controversy over U. S. involvement in Vietnam. In New York at the beginning of the year, artists Allan D'Arcangelo, Mark di Suvero, James Rosenquist, Leon Golub, Balcomb Greene, and others collaborated with poets, actors, and musicians in a week-long demonstration called "Angry Arts Against the War in Vietnam." Similar in purpose was the "Protest and Hope" show at the New School Art Center, New York City, which included works by Leonard Baskin, Robert Indiana, Jack Levine, George Segal, and Ben Shahn.

Theme Shows. Didactic and theme shows were popular in 1967, as they have been for the past several years. At the Loeb Student Center Art Gallery of New York University, "Poem Paintings" by Norman Bluhm and the late Frank O'Hara combined words, colors, and gestures. "Masters of the Loaded Brush" displayed 17th and 18th century oil sketches by 56 artists at Knoedler's in New York City. "Language to Be Looked at and/or Things to Be Read" at Dwan Gallery exhibited literary-visual works by Emilio Marinetti, Francis Picabia, and others.

The unusual in Oriental art was featured in "Fantastics and Eccentrics in Chinese Painting," at the Asia House Galleries in New York. "Large-Scale American Paintings," at the Jewish Museum, New York City, examined the effects of monumental size in works by the New York school of painters. The East Hampton Gallery, New York City, showed "Visionaries," which attempted to communicate erotic and mystical experiences in drawings, paintings, and an environmental light spectacle. "Two Generations," at the Janis Gallery, contrasted the formalist tradition of Europeans like Malevich and Mondrian with work by the next generation in America—Jackson Pollock, Franz Kline, Willem de Kooning, and Barnett Newman.

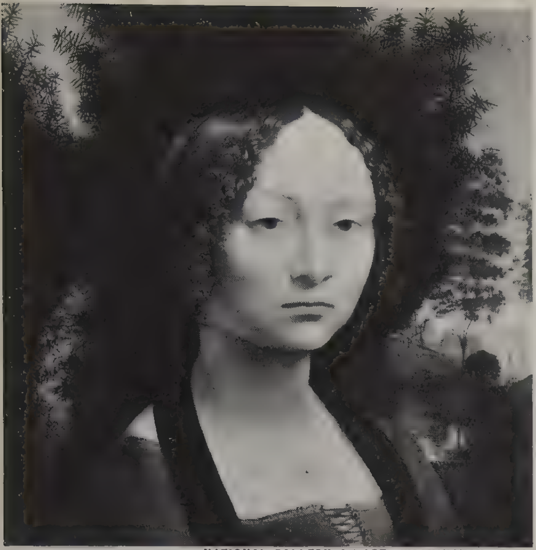
One-Man Shows. Important one-man shows were given in New York to the painters Romare Beardon (Cordier & Ekstrom Gallery), Hans Hartung (Emmerich), Allan D'Arcangelo (Fischbach), Oyvind Fahlstrom (Janis), Asgar Jorn (Lefebre), Sam Francis (Matisse), Ellsworth Kelly (Janis), Pistoletto (Kornblee), and Gene Davis (Poindexter), and in Washington, D. C., to Jules Olitski (Corcoran Gallery) and Morris Louis (Gallery of Modern Art).

Outside New York. As in the past few years, some of the most important exhibitions of art were held outside New York City. The first major exhibit of the Italian baroque painter G. B. Gaulli, called Baciccio, was held at the Allen Museum of Oberlin College. Works by Ingres were seen at the Fogg Museum, Cambridge, Mass. Other shows featured works by Gilbert Stuart (National Gallery), Hogarth (Richmond Museum of Art), Degas (Philadelphia Museum of Art), and Magnasco (University of Michigan Art Museum).

The Detroit Institute of Arts mounted a major survey of artists of the Peale family, as well as one of the year's most ambitious exhibitions of contemporary art, "Color, Image, Form," which included works by George Rickey, Robert Morris, Don Judd,

THE METROPOLITAN MUSEUM OF ART

GREEK HORSE, long considered one of the best ancient bronzes in existence, was exposed as a 50-year-old fake.



NATIONAL GALLERY OF ART, WASHINGTON, D. C.

LEONARDO DA VINCI'S *Ginevra dei Benci* was purchased by the National Gallery of Art in 1967 for over $5 million.

Tony and Richard Smith Jules Olitski, Morris Louis, Claes Oldenburg, and Andy Warhol.

Posters. The resurgent interest in posters may also be linked to the growing preference for art with an immediate relevance to life, as seen also in the protest shows. The most popular poster style was the psychedelic, or hippie, style spotlighted in various exhibitions, notably the "Joint Show" at the Moore Gallery, San Francisco. These posters, by Victor Moscoso, Wes Wilson, Rick Griffin, and others, have transformed their sources—art nouveau, German expressionism, and op art—into a new kind of folk art for the younger generation.

MUSEUMS AND COLLECTIONS

U. S. museums made several major acquisitions in 1967 and appointed new men to some key positions. Museums continued a trend toward strengthening their ties to the community.

National Gallery. The National Gallery of Art, Washington, D. C., purchased a portrait by Leonardo da Vinci from the Prince of Liechtenstein for a sum between $5 million and $6 million—the highest price ever paid for a painting. *Ginevra dei Benci* thus became the only generally acknowledged painting by Leonardo outside Europe. Also in 1967, the National Gallery received from the son and daughter of Andrew Mellon, original benefactor of the museum, $20 million to increase the role of the museum in the nation's cultural life.

Metropolitan Museum. Thomas P. F. Hoving, former New York City parks commissioner, became the director of New York's Metropolitan Museum of Art in April. Hoving, who succeeded the late James J. Rorimer, was formerly curator of the museum's medieval collection at the Cloisters.

One of the Museum's most famous works, a bronze horse long believed to be a classical Greek work, was revealed in December as a forgery. The museum's major acquisitions of 1967 were Canova's statue of Perseus, the Egyptian temple of Dendur, and Monet's *La Terrasse à Sainte-Adresse.* The 2,000-year-old temple was a gift to the United States from the United Arab Republic in appreciation for American help in saving art treasures from the waters of the Aswan dam. The Monet painting was bought for $1.4 million, an auction record for an impressionist work.

Museum of Modern Art. Bates Lowry, formerly chairman of the Art Department at Brown University, was appointed director of this New York City museum. He will replace Rene d'Harnoncourt in July 1968.

Sidney Janis, one of the nation's leading art dealers, gave his $2 million collection to the museum. The collection comprises 100 works by 54 outstanding modern artists, including Picasso, Giacometti, Kandinsky, Mondrian, Léger, Delaunay, and Pollock. The museum also acquired a gift from Alexander Calder of 19 of his pieces.

Spanish Museums. Two of the most important art discoveries of the decade were revealed in Madrid. The Prado quietly put on display a priceless painting, acquired from a private owner in 1963, of the Dead Christ by the 15th century Italian Antonello Messina. At the National Library, Madrid, 700

ARNOLD NEWMAN

pages of manuscript and drawings by Leonardo da Vinci were rediscovered. The finding of this treasure, apparently missing for 200 years, was announced in February.

Forgeries. In New York City the district attorney investigated a dealer who sold hundreds of forged Chagall and Picasso watercolors. In California the attorney general was informed of scores of forged Renoirs, Sisleys, and Dufys. The U. S. attorney general began an investigation into the forgery of paintings by Pollock and Kline, and Joan Miró flew to New York to testify in a lawsuit involving an exhibition of allegedly fake Mirós. In Texas, an oil millionaire was told by experts that 44 of the 58 works in his collection were forgeries. Dealers and collectors in London were embarrassed by art scandals involving allegedly false watercolors by Sargent.

Sales. Picasso's *Mother and Child,* painted in 1902 during the artist's Blue Period, was auctioned for $532,000, the highest price ever paid for a work by a living artist. At the same sale, at Sotheby's in London, a Cézanne brought $406,000, a record for a watercolor.

AWARDS, HONORS, AND GRANTS

The National Council on the Arts made its first awards in 1967. Among the 60 sculptors and painters to receive $5,000 awards were Charles Biedermann, Ronald Bladen, Mark di Suvero, Dan Flavin, Don Judd, Robert Morris, Charles Pollock, and Tony Smith. The National Institute of Arts and Letters elected to membership the painters Richard Diebenkorn, Joseph Hirsch, William Thon, and the late David Burliuk. Recipients of Guggenheim fellowships included James Brooks, Allan Kaprow, Nicholas Krushenick, Raymond Parker, Charles Pollock, and the late Ad Reinhardt.

Prizewinners in the 30th Biennial Exhibition of Contemporary American Painting at the Corcoran Gallery were Jules Olitski, Paul Jenkins, John McLaughlin, and Kenneth Noland. The 9th Bienal de São Paulo in Brazil awarded the grand prize of $10,000 to the British painter Richard Smith for his shaped canvases. The U. S. representation at the Bienal included a one-man show by the late Edward Hopper and works by Robert Indiana, Jasper Johns, Roy Lichtenstein, Claes Oldenburg, Robert Rauschenberg, George Segal, and Andy Warhol. The painter Ivan Albright and the architect Mies Van der Rohe were elected to the American Academy of Arts and Letters.

The Jacob M. Kaplan Fund and the National Council on the Arts each provided a grant of $500,000 to begin construction of a $10,000,000 center for painters, sculptors, and other artists on New York City's lower West Side. A city block will be converted into 500 low-income housing and studio units for artists.

OBITUARIES

Important artists and scholars of art who died in 1967 included Charles E. Burchfield (73), distinguished "romantic-realist" painter of the American scene; Albert Ten Eyck Gardner (58), associate curator of American art at the Metropolitan Museum in New York; Edward Hopper (84), internationally renowned American realist (see HOPPER); Johannes Itten (79), famous Bauhaus painter-teacher and retired director of the Zurich Kunstgewerbeschule; René Magritte (69), Belgian surrealist painter; Wilbur D. Peat (68), retired director of the Herron Museum of Art in Indianapolis; Ad Reinhardt (53), one of America's outstanding nonobjective painters; and Jean Xceron (77), European abstractionist.

ARTHRITIS

To a public conditioned by the press to expect "breakthroughs" and "miracle drugs," 1967 proved to be somewhat of a disappointment. However, very satisfactory progress was made toward understanding and defining the problems connected with arthritis yet to be solved. The great number of meetings, symposia, and workshops that took place during the year provided evidence of the cooperative research that should ultimately lead to solutions.

Rheumatoid Arthritis. At an international meeting in Amsterdam in April, rheumatologists and orthopedic surgeons were brought together to develop criteria for performing early synovectomy, an operation in which the lining of the arthritic joint (synovium) is removed. The successful removal of the inflamed synovium seems to save the joint from further destruction, and the means of proving this phenomenon and developing upon it were the subjects of this meeting. Several investigators showed that cells of the joint lining are at least in part responsible for the abnormal proteins found in the blood of people with rheumatoid arthritis. While it is by no means certain that these proteins cause the disease, their resemblance to antibodies is, at least, further evidence that the body's natural immunity mechanisms play a role in the disease.

Different approaches to the same question involved the injection of immunosuppressive or caustic materials into the affected joint. Researchers also experimented with drugs previously used mostly in treating cancer. Such drugs were generally given only to patients whose rheumatoid arthritis proved unmanageable by conventional means and only under carefully controlled circumstances. Nevertheless, some promising signs of containment of the disease were detected in these experimental studies.

Other investigators attempted to discover the antigen that evokes the immune response, and one researcher found bacteria resembling those that cause diphtheria inside some of the cells removed from afflicted joints. However, much work is still necessary to prove that these bacteria are causally related to rheumatoid arthritis.

In another attempt to find the cause of the disease, investigators continued to measure the levels of trace metals, such as copper and zinc, in the blood and tissues of afflicted patients. These metals appear to play a part in the metabolism of amino acids, the components of all proteins; and whatever their exact role, proteins are definitely known to be involved in the disease.

Osteoarthritis. In patients with osteoarthritis, it was found that discrepancies in the length of their legs commonly occur. By the time a patient reaches middle age, degenerative changes become established in the hip of the longer side and in the knee of the shorter side.

PAOLO KACK, FROM BLACK STAR

PORTRAIT OF MAO TSE-TUNG is carried at the head of a procession in Peking. Throughout the year, revolutionary fervor increased within Communist China.

ASIA

Asia continued throughout 1967 to be the focus of the world's attention and the center of the world's anxieties. Southeast Asia was still the theater of the one large-scale war being waged on the globe—a war that increased yearly in terms of the forces and the wealth committed to it. The western edge of Asia was also the scene, in June, of a short war with far-reaching implications (see MIDDLE EAST).

The heart of Asia is occupied by China, the largest nation on earth in terms of population. A revolutionary power whose internal politics and external policies alike are largely an enigma, China has preoccupied the leaders of other states.

Vietnam. The increasingly serious struggle in Vietnam continued to raise very difficult questions to which no entirely convincing answers were being found. What real prospect was there of North Vietnam's being forced to acknowledge defeat? Had the U. S. commitment to maintaining large forces on the Asian mainland any foreseeable end? On the other hand, it could be asked, what would be the consequences—for South Vietnam, for Southeast Asia, for the world—of any weakening or withdrawal on the part of the United States? The only progress to be noted in this debate (whether conducted in the United States, in the free Asian countries, or in European capitals) was an increasing realization among the more responsible debaters that there were no easy answers to these questions.

Some slowly emerging common ground might be stated in propositions such as the following: North Vietnamese aggression against South Vietnam in support of the Vietcong was a reality that must be either acquiesced in or opposed; liberal, antiseptic governments that conformed to the standards of Western democracy (which were, in any case, very difficult to find) were not the only governments that deserved support against aggression; support of South Vietnam involved grave risks, including, in the long run, war with Communist China, and in any case was not likely to be a short-term or cheap business. Lastly, it remained true that even if many governments sympathized with the position and policy of the United States, they were quite unlikely to commit their countries to serious costs or risks in support of it.

The course of the war in Vietnam steadily involved more and more U. S. troops—some 500,000 by the end of the year. The Vietcong and North Vietnamese also gained more support from China and, particularly in equipment and arms, from the Soviet Union. The odd nature of the war, which had no discernible front line and invulnerable rear areas fully controlled by the respective sides, made it difficult to assess the trend of the military events. However, it appeared that the large-scale commitment of U. S. troops, which had begun in 1965, had made it impossible for the Vietcong to win the war in the military sense. Their hopes rested on a U. S. political decision to withdraw.

The most important military development was the complete frustration of the Vietcong plans to advance from guerrilla activity to confrontation of main-force units. Where this was attempted, the Vietcong were defeated. Even in the far north, under circumstances favorable to the Vietcong, the attempt to turn the U. S. Marine encampment at Conthien—just south of the so-called Demilitarized Zone (DMZ)—into another Dienbienphu, failed in September. American and South Vietnamese hopes were pinned on the assumption that as enemy regular troops were forced to evacuate more areas, guerrillas would encounter increasing difficulties.

Vietnamese internal politics during the year continued on a surprisingly stable course—provided that "stability" is interpreted in the modest sense appropriate to so divided and unsettled a country. The military regime remained in power, but it was increasingly being legitimated. In the presidential election on September 3, Chief of State Nguyen Van Thieu was elected president, and Marshal Nguyen Cao Ky (premier since June 1965), vice president. The provisional National Assembly on October 3 ratified the election result by a slim majority (58 to 43) despite charges of irregularities. As provided in the new constitution, a House of Representatives was elected on October 22.

(*Continued on page 82*)

ASIA 1967: WORLD FOCAL POINT

The Cultural Revolution in mainland China and the continuing war in Vietnam dominated events in Asia in 1967. Mao's campaign to tighten his control over Chinese society produced an upheaval in China and repercussions that were felt throughout the Far East. In war-torn Vietnam, meanwhile, the determined prosecution of the conflict by both sides caused growing concern around the world.

In terms of international politics, perhaps the most interesting development of the year was the de-emphasis in U. S. official statements on merely defending South Vietnam's independence, and the stress placed on containing Chinese Communist aggression. This was the theme of Secretary of State Dean Rusk's much-noted October 12 press conference. (See also FOREIGN POLICY OF THE UNITED STATES; VIETNAM WAR.)

China. In mainland China the disorders and ambiguities of internal politics, that had become so prominent in the summer of 1966 with the activities of the Red Guards, continued virtually unabated. Their significance was not easy for even experts to summarize. Various provinces and cities (notably Canton) were reported as scenes of armed struggles against Red Guards or against the central government. Broadly speaking, however, what mattered was that Mao Tse-tung apparently remained in control, having ridden out the storm created by his drastic purge of the Chinese Communist party. The exuberance of the Red Guards was curbed by Mao in the course of 1967, and he seemed more inclined to turn to the army for support.

The political melee inside China has to be set against the fact that the 1967 harvest was quite good and that Chinese technology, and particularly weapons development, continued to advance rapidly. A hydrogen bomb was tested in June. If China was viewed by its neighbors as a less attractive model to follow, there was nevertheless increasing apprehension on the score of its military capacity. Evidence of Chinese power and fear that it might be used provoked a U. S. decision to build a partial anti-ballistic missile system (see MISSILES).

Chinese Policy. Certainly in 1967 the Communist Chinese government acted and spoke in complete disregard of the feelings of any other state, Communist or not. Indeed, its behavior disrupted all the patterns and conventions of normal behavior among sovereign states. At the celebrations of China's National Day (October 1) hostile references in official speeches to the Soviet Union caused Soviet representatives, as well as those of Mongolia and most of the eastern European countries, to walk out. In Peking diplomatic immunity was discarded as British, French, Russian, and other representatives suffered mob humiliation and physical violence.

The British were the main targets of these policies. On May 24 the British representative in Shanghai and his family were intimidated by a mob, and in September the British mission's Shanghai offices were confiscated. In London, members of the Chinese embassy staff fought police in August.

Activities in Hong Kong. More serious than these incidents was the terrorist campaign that the Chinese Communists mounted against Hong Kong, beginning on May 11. The British crown colony of 4 million people, whose mainland territories have a common border with China, was the target of daily outrages, in which bombs killed or wounded scores of people. There were also border incidents involving the kidnapping of British officials. Presumably, the objective was to give China the kind of control over Hong Kong that it has exercised since 1966 over the still nominally Portuguese colony of Macao.

Yet there were ambiguities in the situation. Throughout the terrorist campaign Hong Kong's New Territories (the mainland section and small offshore islands) continued to derive its water supply from China, and much of Hong Kong's food supply came from the same source. Hong Kong in 1967 proved a much harder nut to crack than had Macao. The structure of government and police in the crown colony did not break down. Yet tourism was damaged, and investments were curbed or even reversed. And it was noticeable that Britain was unwilling or unable to make any serious riposte to the Chinese campaign against its rule in Hong Kong.

Japan. Among the most significant results of Mao's ruthless purges within China and of his reckless foreign policy was the alienation of opinion in Japan. The Japanese left, always in a minority, was further discredited by events in China, and the general expectation that Japan's economic relations with China would soon be supplemented by full diplomatic recognition wilted. Prime Minister Eisaku Sato's cool separation of diplomacy and trade seemed likely to be maintained indefinitely.

The economic progress of Japan in 1967 continued to be phenomenal, and perhaps too little noted in the West. Japan has already passed West Germany to become the world's third-largest steel producer (after the United States and the USSR). Economists predicted that in two or three years Japan will also rank third in general industrial output and that in a decade the standard of living in Japan will equal the present standard in Britain.

Also little noted was the triumph in the February general election of the pro-Western Liberal Democratic government of Prime Minister Sato, who deliberately chose to fight on a platform of the continuance of the American alliance. As columnist Joseph Alsop wryly noted, a great deal more would have been heard of this election in the United States if Sato had been defeated, or if his majority had been seriously dented.

In late summer Sato embarked on an extensive series of visits to the free nations of the southwest Pacific and Southeast Asia. He was well received in Australia and New Zealand and was in the midst of his visit to the Philippines when his tour was cut short by the death on October 20 of former Japanese Prime Minister Shigeru Yoshida.

It would be naïve to claim that there are no outstanding issues between Japan and the United States. The continued U. S. occupation of Okinawa is a grievance that touches Japan closely. Also, in 1967 there was renewed student rioting in Japan—the most serious since 1960—against U. S. policy in Vietnam.

In the main, however, Japan is stable, prosperous, and pro-Western to an extent that it would have seemed absurd to predict 20 years ago. In an interesting speech at the end of September, Foreign Minister Takeo Miki urged that Japanese foreign policy should aim at the creation of a "special relationship" between Japan and Australia as the springboard to a larger "Asia-Pacific" concept of economic union that would include the United States, Canada, Australia, and New Zealand. It is evident that the ruling Japanese party was recognizing that the country's new role had to be that of a world industrial giant, rather than a purely Asian nation.

Southeast Asia. In the states lying between India and China—other than the two Vietnams—there was little in the way of major change in 1967, but what developments occurred were mildly encouraging. In Cambodia the volatile Prince Norodom Sihanouk, who had severed diplomatic relations with the United States on May 3, 1964, seemed to be again considering whether the independence of his country would not be better served by a more anti-Chinese and more pro-American policy than he has pursued in recent years. Sihanouk has found that the Chinese have not ceased to try to infiltrate his country. At the beginning of October he warned Peking to leave his country alone, dismissed two pro-Chinese ministers, and pointed out that such Chinese policies might push Cambodia into the arms of the United States. The visit of Jacqueline Kennedy to Cambodia in November was presumably without political significance, but could not have taken place in 1966.

Of Cambodia's neighbors to the north and west, Laos continued to be unhappily divided into Communist-held, neutralist, and anti-Communist areas. Thailand, however, drew closer to the United States. The United States has now invested close to $1 billion in Thailand in the shape of a new deepwater port (Sattahip), five major new airbases, and extensive highway and communications networks. These new facilities, which are of great use to the U. S. war effort in Vietnam, are also valuable to the Thais in putting down Communist infiltration in the northeastern provinces. U. S. funds spent in Thailand have been well spent—materially strengthening a nation with a genuine zeal for independence. This is likely to discourage Chinese attack, and should an attack occur, it would be easier to deal with.

In Indonesia the slow and careful moves of the new military regime of General Suharto against the deposed dictator Sukarno finally reached a decisive conclusion. Suharto had taken over Sukarno's executive powers on March 11, 1966, but the latter retained the title of president and an uncertain measure of influence and respect. On Feb. 23, 1967, Sukarno formally handed over presidential power, but not until March 12 did the Indonesian Congress strip Sukarno of all political roles and name Suharto acting president pending elections scheduled for 1968. The new Indonesian regime was necessarily still engaged in the laborious task of trying to repair the ravages of the long years of Sukarno's financial irresponsibility, to restore the country's credit, and to achieve a modus vivendi with its creditors. The pro-Chinese orientation of Indonesian policy that ended with Sukarno's fall from power in 1965 was replaced in 1967 by a virtually complete break with Peking. Relations were "suspended" by the Djakarta government (October 9) after the Indonesian embassy in Peking had been sacked and a retaliatory incident had occurred in Djakarta.

South Asia. There was a minor recrudescence of border warfare between India and China in September and early October. The Indian government reported 86 dead and 165 wounded in battles with Chinese troops in remote passes on the Sikkim-Tibet border. Developments in Nepal, the mountain state lying between Tibet and India, were ominous: Chinese influence there was increasing markedly.

India's internal politics gave rise to fears of increasing loss of stability. In the February general elections the Congress party for the first time suffered severe setbacks, losing some 100 seats and seeing its majority reduced to slender proportions. It also lost control of many state governments. Contrary to some expectations, Mrs. Indira Gandhi was maintained in office as prime minister by parliamentary vote on March 12. In the presidential election on May 6, Vice President Dr. Zakir Husain, the Congress party candidate, was easily elected president; it was noteworthy that he is a Muslim.

Observers of the Indian scene report an increasing listlessness in the government of India, a failure to face serious underlying problems. The most important problems are economic, but separatism in the states is also becoming serious and threatening Indian national unity, always fragile.

The policy of Pakistan under President Mohammed Ayub Khan continued to exhibit the delicate balance customary in recent years: the policy of a Western-trained and basically pro-Western ruler who feels that in any Indo-Pakistani dispute American and British policies always favor India (a neutral) against Pakistan (formally an ally of both), and that therefore good relations with Communist China are absolutely necessary for Pakistan's survival. Ayub Khan's political philosophy and the rationale of his policies were set forth in 1967 in *Friends Not Masters,* an autobiography and political testament rare in that it was written by a head of state and government while in office.

Pakistani leaders were gravely concerned that India might be planning to manufacture atomic weapons. They felt that such a move was entirely unnecessary and that it would alter the whole distribution of power in South Asia.

SEATO. Pakistan partially boycotted the 12th meeting of the Council of the Southeast Asia Treaty Organization, held in Washington, April 18–20. Six states were represented by their foreign ministers, France sent no delegate, and Pakistan was represented only by its ambassador to the United States. The latter dissociated himself from the final communiqué, which spoke of the continuing threat of Communist aggression in Asia.

British Retreat from Asia. A historic milestone was passed on July 18 when the British government announced that its forces in Malaysia and Singapore would be halved by 1971 and that it expected to withdraw wholly from Southeast Asia by the "middle 1970's." On Jan. 16, 1968, Britain announced that it would withdraw entirely from the Far East and the Persian Gulf by the end of 1971. This abdication of an "East of Suez" role marks the end of a British guardianship in the area several centuries old. Far from welcome to the United States, the British retreat will leave America alone —as the sole world power concerned and willing— to uphold order and resist aggression in Asia.

New Asian International Organization. A newcomer to the somewhat crowded ranks of the Asian bodies established to further economic growth came into existence on Aug. 8, 1967. This was ASEAN, the Association of Southeast Asian Nations. The founding document was signed in Bangkok, Thailand, by the foreign ministers of Thailand, the Philippines, Indonesia, Malaysia, and Singapore. The objectives of the association were acceleration of economic growth, cultural development, and social progress. The document also called for mutual assistance in technical, scientific, and administrative fields; better utilization of natural resources; and the study of common problems in trade, transport, and communications.

Since this body is strikingly similar in purpose to several already in existence, it seems reasonable to wait to judge it by its fruits rather than by the pronouncements that accompanied its launching. The continued tendency of world prices of tin, rubber, and other primary Asian products to fall presaged considerable difficulties for the economic growth of these countries.

ASTRONOMY

Major areas of astronomy under increasingly active study in 1967 included the expansion of the universe, the rotation of stars, and X-ray and infrared sources. Within our solar system, U. S. and Soviet space scientists achieved successes with instrumented probes of the moon and Venus.

Expansion of the Universe. One fundamental question in modern astronomy concerns the origin and expansion of our universe of galaxies. (A galaxy is a family of a hundred billion stars, like our own Milky Way.) For 40 years it has been known that the more distant a galaxy is, the more rapidly it moves away from us. The velocity increases about 20 miles (32 km) per second per million light-years.

An atom emits energy at certain wavelengths characteristic of the particular element. The light emitted by such atoms in stars and gas clouds in other galaxies is shifted to longer (redder) wavelengths by an amount roughly proportional to the galaxy's distance. Thus, the red shift would become infinite as the recessional velocity of a galaxy approaches that of light at a distance of about 13 billion light-years. This 13 billion years is an approximate age for our universe, if the expansion rate is constant. Going backward in time, the universe would appear to be contracting and energy to be crowded together in a single dense object. There are many apparent paradoxes in the general theory of relativity, but most observed phenomena connected with such expansion can be rationally explained by general relativity.

For such an enormous, speculative framework, 1967 has been one of radical change, new discovery, and uncertainty. On the theoretical side, Robert H. Dicke of Princeton (in collaboration with Carl Brans) proposed a general theory of relativity different from Einstein's. George Gamow revived an old suggestion by Pascual Jordan and P. A. M. Dirac suggesting that the fundamental observation in question, the red shift, is an illusion caused by changes in the constants of nature with time.

One astronomer, H. C. Arp of the Mount Wilson and Palomar Observatories, suggested that an unknown physical cause produces the red shift in galaxies emitting strong radio signals or in quasi-stellar radio sources (quasars).

On the other side of the argument, the variation of natural constants seems already to have been disproved. The continued work of Allan R. Sandage of Mount Wilson and Palomar has shown a remarkably accurate red shift/brightness relation to hold for the intrinsically brightest, apparently normal galaxies. In addition, less direct evidence is accumulating to indicate that we can now actually observe the dense, hot, early stage of our expanding universe, which is called the "primeval fireball."

The Cosmic Fireball. At present, matter in the universe is spread very thinly; the average density is about one atom per cubic yard. In water, the density is about 10^{30} times higher. If the universe once was 10^{10} times smaller than now, the average density of matter would have been equal to that of water and the entire universe would then have been only a light-year in diameter. Such a dense object,

NASA

LICK OBSERVATORY

TYCHO, A LARGE LUNAR CRATER about 50 miles (80 km) wide, was photographed on August 14 (*above*) from a height of 135 miles (217 km) by Lunar Orbiter 5. The picture has a degree of clarity and detail that earth-based telescopes cannot obtain. Tycho's position is shown on an inset of the moon (*left*) as it appears to the naked eye. The cross on the Orbiter photo marks the site where Surveyor 7 landed on Jan. 9, 1968, to photograph and conduct a soil analysis of the rugged terrain north of Tycho.

no matter how hot, would be opaque and act like a single superstar.

But, expanding at nearly the velocity of light, its density would drop to that of air in 10 years. At an age of about 10 million years and a temperature of about 5000° F (3000° C) it would become transparent, releasing its enormous heat and light. From then on, the light that had existed in the cosmic fireball would travel in all directions into space. Originally brilliant and of high effective temperature, the light would be red shifted so as to appear at larger and longer wavelengths because of the expansion of the universe.

If this theory is correct, everywhere in the universe, equally strong in all directions, we should see the light of the primeval fireball, now faint and greatly red shifted. In round numbers, the expansion ratio between now (10 billion years) and the time when the universe became transparent (10 million years) is about 1,000, so the original radiation should now appear at 1,000 times longer wavelengths, or the radio-wave part of the electromagnetic spectrum.

Advances in radio astronomy now permit the detection of very weak signals. The radio astronomers at Bell Telephone Laboratories and Princeton agree that they have detected an otherwise unexplained signal, corresponding to this fireball radiation. It is referred to as the 3° radiation because its energy distribution corresponds to that of an ideal (black body) radiator at a temperature of 3° K (degrees absolute, about −450° F, or −270 °C). This radiation has been measured at different wavelengths. The signals have the same strength in every direction. Thus, they cannot come from our solar system or galaxy. If there are no instrumental errors, such as unknown sources of receiver noise, the 3° radiation must come either from a background of very distant, unseen galaxies, or from the remains of the cosmic fireball. Such a direct observation, if confirmed, will establish definitely the concept of an expanding universe that was once very small.

Rotation of Stars. Another active field of astronomical study is concerned with the evolutionary status and importance of the rotation of stars. Most galaxies rotate and have complex forms that depend on their varying amounts of rotational angular momentum. In our own Milky Way, stars near the sun rotate at 200 miles (about 300 km) per second around the galactic center, 30,000 light-years distant. But gas clouds rotating around a distant center must have appreciable internal rotation.

An interstellar gas cloud a light-year in diameter may contain enough matter to form a star like the sun, but must shrink to one ten-millionth its original size to do so.

If the cloud's rotational angular momentum is conserved, the star would spin rapidly enough to disrupt itself. Thus the formation of stars in a rotating galaxy becomes difficult, unless a mechanism exists for disposal of angular momentum. This does not mean that the galaxy can violate one of the fundamental laws of mechanics, but that additional forces and processes are needed.

One suggested process involves both planet formation during the birth of a star and magnetic fields, which are known to exist in interstellar gas. Another idea involves magnetic fields with the continued ejection of matter from the star's surface, just as there is a "solar wind" continuously blowing the hot solar corona outward.

Observational facts on stellar rotation have been accumulating for 30 years, beginning with the work of Otto Struve and G. A. Shajn. The most startling fact is that stars with surfaces hotter than the sun by 1000° C or more can rotate rapidly, up to 400 miles (600 km) a second, while cooler stars rotate at 3 miles (5 km) a second or less. Why should surface temperature have anything to do with rotation at all? Another startling fact about the slow rotation of cool stars is shown by the distribution of the angular momentum in the solar system itself. The planets have only a few percent of the mass of the solar system, but over 98% of the angular momentum. To explain this unusual observation, Fred Hoyle of Cambridge University and collaborators suggested that during star formation the magnetic fields carry gas outward into a thin rotating disk, within which solids form eventually to become the planets. The disk would contain most of the angular momentum, and the sun at the center would be nearly rotation free.

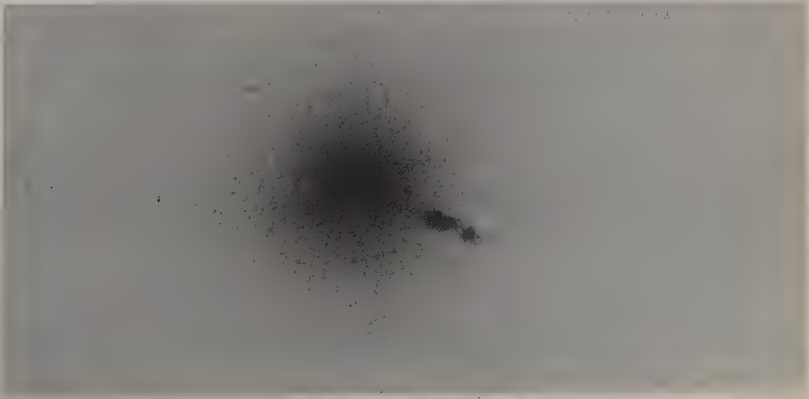
To explain why only cool stars would be slowed down, theoreticians, starting with Evry Schatzman of Paris, noted that there is a fundamental difference in the structure of the outer envelope of stars with surfaces below 10,000° F (6000° C). The outer half of a cooler star like the sun is unstable, and hot gases circulate outward in a process called convection. These convection currents transport angular momentum from the center to the surface. In addition, the surface becomes unstable and heats the outer layers of the sun, the chromosphere, and the corona. The solar wind then blows outward past the planets. In a period of several billion years it could slow the sun down from a rapid initial rotation, according to I. A. Roxburgh.

The astronomical evidence for this slowing down of cool stars has been assembled by R. P. Kraft and A. J. Deutsch of Mount Wilson and Palomar in California. Moreover, Kraft found that recently formed stars as cool as the sun in the very youngest clusters still rotated rapidly.

Deutsch has found unusually high rotation in certain evolving old stars, suggesting that only their surface layers may have been slowed down and that even cool stars still rotate in their interiors. Perhaps even the sun is still rapidly spinning.

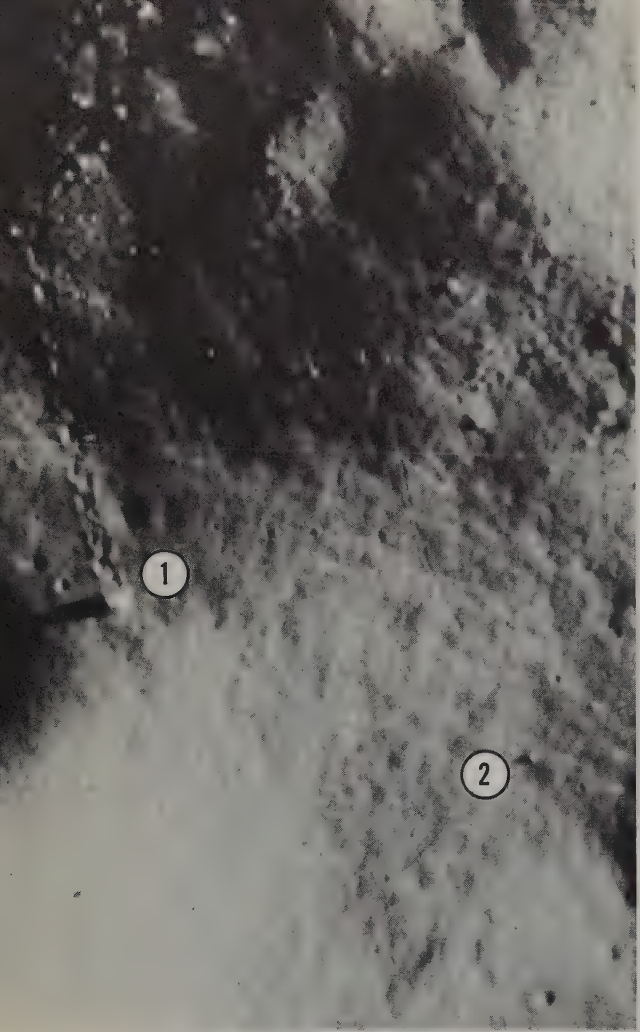
Can the sun's interior be rapidly rotating? The surface rotates in 27 days at the equator but with a longer period at the poles. H. H. Plaskett of Oxford claims to have found currents and winds in the atmosphere that require that the period of rotation below the convection zone and near the center be about 12 hours. If so, the angular momentum of the sun would be like that of hot stars with rapid surface rotation and comparable to that of the planetary system. The gas expelled from the sun with initially rapid rotation would have successfully formed the planets. If the solar core is in rapid rotation, it will be highly flattened and may have observable effects at the surface.

Dicke's new relativity theory then becomes especially interesting. In his theory, the hypothetical flattened core will cause the orbit of the planet Mercury to precess at a rate different from that predicted by Einstein's general relativity. Mercury's observed precession has been known to be slightly less than that predicted by general relativity. The flattened core should also result in a slightly flattened surface. Dicke and collaborators have made very precise and delicate measurements of the ratio of the polar to the equatorial diameter of the sun. They find slightly more flattening than would be caused by its slow surface rotation. Further detailed study of the sun and of the rotation of the stars may provide additional tests of theories of general relativity, leading in turn to new advances in cosmology.



MOUNT WILSON AND PALOMAR OBSERVATORIES

RADIO GALAXY M87 has tentatively been identified as a strong source of X rays. A luminous jet of high-speed particles extends from this "peculiar" galaxy. The photo is printed as a negative in order to accentuate details.



NASA

TRACKS LEFT BY LUNAR ROCKS (1 and 2) when they rolled down a slope were recorded by Orbiter 5. Rock 1 is about 75 feet (23 meters) wide. Study of such photos adds to knowledge of the properties of lunar surface material.

X-Ray Astronomy. Identification of areas in the sky that are strong sources of X-rays was made in 1967 during rocket flights. A possible identification with two strong radio sources has been suggested by a Naval Research Laboratory team. If correct, these results indicate that nearly as much energy is radiated in the X-ray wavelengths as in light by Messier 87, a peculiar galaxy, and by 3C 273, a quasar; X-rays from the sun are less than one millionth as strong as is the light.

Two peculiar stars in our galaxy also have been identified and found to emit more X-rays than light. Their brightness varies rapidly within a few minutes. Their spectra show that they are in rapid orbital motion, immersed in very hot gas at almost 90,000,000° F (50,000,000° C), from which some of the light and all the X-rays come. One suggestion is that the stars are close doubles and in some short-lived stage in the evolution of a nova, or exploding star. Another is that one star may be a "neutron star," an object with the mass of the sun but only 10 miles (16 km) in diameter.

Numerous X-ray sources have been located approximately from rocket flights by teams of scientists at Lockheed and at American Science and Engineering. Most seem to lie in the Milky Way, their energetic X-rays penetrating the haze of gas and dust that obscures the visible light of distant stars in the galaxy. It will soon become possible to estimate the distance to the X-ray sources from the spectrum of the X-rays that reach us, since long-wavelength X-rays are heavily absorbed.

On March 8 an X-ray experiment was carried on OSO 3, an orbiting solar observatory, to monitor solar activity. The Goddard Space Flight Center group found that X-rays strengthened by nearly a factor of 10 during a solar flare. The spectra obtained indicated that iron atoms in the sun's chromosphere had all but one or two of their 26 electrons stripped off by the very high temperature at the outburst of a flare.

Infrared Astronomy. New techniques have been developed for detecting weak sources of infrared radiation, in the wavelength range from 1 to 15 microns, and also at one millimeter wavelengths. Cool, red variable stars were found, with apparent temperatures as low as 1000°; other stars were detected highly reddened by interstellar dust. In addition, new types of objects have been detected by Harold Johnson, Frank Low, and their collaborators. Stars now being formed in dense clouds of dust and gas were shown to emit most of their energy in the infrared wavelengths. Inside the Orion nebula, a small, infrared, starlike object was detected with an effective temperature of only 610° K (337° C), and a nebula was found with a temperature of only 70° K (−203° C). In addition, the starlike nucleus, or center, of our Milky Way was found by infrared light. It is reddened by dust clouds that transmit only one billionth of its visual light, so that it had never been seen on ordinary photographs.

Scientific Satellite Research. Two solar observatories were successfully launched in 1967. OSO 4, launched October 18, included the Harvard ultraviolet spectroheliograph, a device that produces a picture of the sun in the light of any desired atom. The low layers of the solar envelope are relatively cool, 10,000–50,000° K; the outer corona is 2,000,000° K. Different atoms produce light at these different temperatures, and OSO 4 mapped their distribution.

Lunar photographic missions in 1967 provided both beautiful pictures and greater detail about the pockmarked lunar surface. Clearly, not all lunar features are produced by meteoritic bombardment; lava flows, slides, and faults have been detected similar to those on earth. The U. S. Surveyor probes have analyzed the chemical composition of lunar surface material by nuclear bombardment of its atoms. A box containing radioactive material was lowered to the surface from the Surveyor, and the characteristic radioactivity induced in the surface rocks was then measured. The U. S. photographic program has been completed successfully, fully defining the qualities of the moon's smoother areas.

The USSR's Venus 4, launched on June 12, dropped a capsule through the atmosphere of Venus, confirming the very high temperatures near the surface. (Radio observations had given nearly 700° F, or 370° C.) A day later the U. S. flyby probe Mariner 5 passed behind Venus to measure its upper atmosphere by radio techniques.

ATMOSPHERE RESEARCH

Atmosphere research in 1967 provided further data that increased man's understanding of rainfall, clear air turbulence, auroras, and tornadoes.

Origin of Ice Nuclei. Researchers continued their efforts to find out more about how rain forms in the atmosphere. In one theory of rain formation ice-crystal growth occurs in a cloud of supercooled droplets when water vapor is in equilibrium with liquid water, and aerosol particles are present to serve as nuclei for the growth of the ice crystals. These nuclei in the atmosphere apparently are provided by small particles of natural materials that rise from the earth's surface; by particles of extraterrestrial material, such as fragments of meteors; and by man-made aerosols, such as those that contribute to air pollution.

Evidence is mounting that the particles that serve as nuclei are primarily of extraterrestrial origin. In 1938 the German meteorologist Walter Findeisen first suggested that the fragmentation of meteors during entry into the atmosphere provides particles that serve as ice nuclei in the troposphere. In 1956 the Australian scientist E. G. Bowen, using worldwide rainfall records representing 20 years of observations, suggested that days of maximum rainfall occur 30 days after meteor showers. There has been a great deal of doubt about Bowen's hypothesis. In 1967, however, J. Rosinski of the National Center for Atmospheric Research at Boulder, Colo., reported the results of observations that showed that ice nuclei concentrations were higher during periods corresponding to the peak rainfall dates that fit Bowen's hypothesis. These results also seemed to indicate that meteor particles do serve as nuclei for some ice crystals, as suggested by Findeisen and Bowen.

Clear Air Turbulence. After the introduction of high-speed, swept-wing aircraft that fly at high altitudes, it was recognized that clear air turbulence was detrimental to flight safety. In several cases, loss of aircraft control, structural damage, and passenger or crew injuries were caused by clear air turbulence that buffeted the aircraft. Such cases made it evident that there was a need to know more about clear air turbulence, to forecast this disturbance, and to develop detection methods.

One region where clear air turbulence develops is in the lee of mountains, at a considerable distance from them. In 1967, H. P. Foltz of the U. S. Weather Bureau and E. R. Reiter of Colorado State University analyzed measurement data from airborne instruments and showed that standing waves in the lee of mountains have wavelengths ranging from about 10 kilometers to 10 meters. This 10-meter distance also is the size of the air pocket that characterizes regions of clear air turbulence. The correspondence between the measurement data and the size of the air pocket provides evidence that helps in understanding where and how clear air turbulence occurs. This research is a significant contribution toward improved safety in flight.

Auroras and the Ring Current. A completely satisfactory theory of the origin of auroras remains to be given; however, a great deal is now understood. The earth is immersed in the solar wind, which is a plasma of charged particles streaming out from the sun. The magnetic field of the earth has a long tail into which the magnetic field lines are driven by the solar wind flowing around the earth. In addition there is a ring current, consisting of charged particles, which encircles the earth at a distance of about 39,633 miles (63,780 km).

Lines of the magnetic field enclose the ring current on the leeward side of the earth from the sun; these field lines reconnect in a neutral sheet extending downwind in space beyond the earth. Ionized particles from the sun that have small pitch angles with these field lines are accelerated along the field lines and are precipitated into the ionosphere, where they collide with air molecules, which may then emit the visible light to produce auroras. Ionized particles that have large pitch angles are also accelerated, but they remain trapped far out in the geomagnetic field; these particles replenish the outer trapping zone and form the ring current. The trapped particles also cause changes in the ionospheric current system. These changes may provide an explanation for the occurrence of low-latitude red arcs and the blackouts of radio communication signals bounced off the ionosphere.

Electric Currents in Tornadoes. One baffling problem in accounting for the behavior of tornadoes is to identify the source of the energy that accelerates the air to near-sonic speeds. It has been calculated that the energy for this acceleration would require a temperature difference of at least 158°F (70°C). Bernard Vonnegut of Arthur D. Little, Inc., has suggested that electric currents in the funnel-shaped tornado cloud can heat the air sufficiently to produce the near-sonic wind speeds in tornadoes. Observations made at night seem to show that tornadoes do have an unusual amount of electric discharge.

Strong electric currents within a tornado should be accompanied by disturbances in the local magnetic field of the earth. Marx Brook of the New Mexico Institute of Mining and Technology has reported an unusual disturbance of the magnetic field in the vicinity of a tornado.

Very high currents within the tornado are required to explain the disturbance in the magnetic field. Long-duration currents exceeding 400 amperes have been observed in some thunderstorms, but an average thunderstorm usually involves only currents equivalent to a steady current of 1 ampere. One can infer that a tornado is equivalent to several hundred thunderstorm cells that are all active at the same moment.

After it was recognized that tornadoes may be driven by electrical forces, S. Colgate of the New Mexico Institute of Mining and Technology suggested that a tornado might be controlled or destroyed by shorting its electrical energy to ground. Experiments to short out a thunderstorm have not been very successful, but similar efforts to deal with a tornado may be more successful because it has a lower internal pressure and a higher electron concentration than a thunderstorm. One suggestion for shorting out a tornado was to inject a chaff of 4-inch-long (10-cm) fine wire needles into the tornado. Although this proposal seems to be beyond present technology, it offers hope for the future as more is learned about the electrodynamics of tornadoes. A large city threatened with high economic losses by tornado action might find that it is not too costly to undertake emergency measures to discharge the tornado's electrical energy to ground.

Environmental Science Services Administration

ATOMIC ENERGY

WIDE WORLD

SCULPTURE commemorating the beginning of the atomic age, 25 years ago, was unveiled in December at the University of Chicago. The sculptor, Henry Moore (*far right*), and Mrs. Enrico Fermi, widow of the physicist who led the 1942 experiments in controlled nuclear fission, are among the participants in the unveiling.

ATOMIC ENERGY

As the world marked the 25th anniversary in 1967 of the birth of the atomic era, concern over the nightmare of nuclear weapon proliferation increased sharply. Communist China had developed and tested a hydrogen bomb and was emerging as a major nuclear power. Meanwhile, the United States and the USSR were attempting to convince non-nuclear powers of the need to accept a nuclear nonproliferation treaty. To this end, President Johnson invited the international inspection of all U. S. nuclear facilities except those vital to defense. The nuclear arms race between the United States and the Soviet Union did not abate, however, despite the limited test ban treaty signed in 1963.

Rapid progress continued to be made in the commercial use of atomic energy. The sudden upsurge in construction of nuclear power plants evident in 1966 continued into the new year. On the other hand, budgeting for basic and applied research in atomic energy in the United States became more difficult as the government tried to limit its nondefense spending. Thus the AEC (Atomic Energy Commission) budget for fiscal 1968 was approximately $2.5 billion, of which $715.5 million was allocated for weapons development—an increase of $52 million over fiscal 1967. In addition, $110.5 million was earmarked for plant and capital equipment expenditures for weapons projects.

Curtailment of basic research was not exclusively an American problem. Countries all over the world announced cutbacks in some research projects. It became increasingly evident in 1967 that concern over major problems facing modern society was forcing some reassessment of priorities and redeployment of scientific manpower.

PEACEFUL APPLICATIONS

Several significant test projects were conducted in 1967 in underground excavation by nuclear explosion. Research continued on small isotope-energized power plants that would have applications ranging from lunar power stations to artificial hearts.

Power Production. The use of nuclear power in the generation of electrical energy is becoming commonplace. In 1967, 32 new nuclear power plants were planned in the United States, compared with 21 in 1966. On June 14 the 430-megawatt nuclear generating station at San Onofre, Calif.—the largest commercial nuclear electrical plant in the nation—began operation. The AEC predicts that by 1980 approximately 150,000 megawatts of electrical power will be produced by U. S. nuclear plants.

With the growing commercial acceptance of nuclear power, stringent safeguards on such plants are being enforced by governmental regulating agencies. As air pollution problems increase, industry is expected to develop non-polluting nuclear plants at underground locations or at off-shore island sites near large urban population centers.

The AEC announced a set of research priorities to ensure adequate power-generating facilities for the remainder of the 20th century. Research will be concentrated on liquid metal-cooled fast breeder reactors. In a breeder reactor, plutonium 239 is produced as a by-product of the fission reaction in uranium. Use of this plutonium will result in the extraction of as much energy from one ton of uranium as is obtained from 3 million tons of coal. The energy equivalent in presently operative reactors is only 10,000 to 20,000 tons of coal.

Nuclear electrical production also is increasing in other countries. Great Britain continues to lead in this area; 25 British-designed reactors account for 45% of the world's capacity. The 10 countries using nuclear power in 1967, and their capacity (in megawatts), are as follows: United Kingdom, 3,500; United States, 1,685; USSR, 1,060; France, 995; Italy, 600; West Germany 300; Canada, 220; Japan, 170; Belgium, 130; and Sweden, 10.

Excavation Projects. Prime attention was given in 1967 to Project Gasbuggy, part of the AEC's Plowshare program for developing peaceful uses of nuclear explosions. Project Gasbuggy, which in part was privately funded, was a 26-kiloton nuclear explosion set off on December 10, 4,200 feet (1,275 meters) below the New Mexico desert. Its purpose was to free natural gas trapped in impermeable rock formations. Estimates indicate that such explosions could increase U. S. gas reserves by 317 trillion cubic feet (nearly 9 tillion cubic meters).

Projects Ketch and Sloop are to follow Gasbuggy in the Plowshare series of programs. In Project Ketch, a nuclear explosion would create an underground gas reservoir, 35 miles (56.3 km) northwest of State College, Pa., that could hold 465 million cubic feet (about 13 million cubic meters) of gas. Project Sloop is a proposed underground test that would use a 20-kiloton nuclear device to recover low-grade copper ore deposits 1,200 feet (366 meters) underground near Sanford, Ariz.

Isotope Power Plants. The AEC and the NIH (National Institutes of Health) are cooperating in the development of a radioactive isotope-powered heart assistance device that could be implanted in the human body. The cardiac pacemaker, powered by plutonium 238, weighs about 3.4 ounces (96.4 grams) and has a 10-year life. It is expected to be available in the early 1970's. The even more ambitious undertaking of an artificial heart currently is under feasibility studies by the AEC and the NIH. A tiny four-cylinder engine running a hydraulic pump would be implanted in the user's abdominal cavity, anchored to the pelvis. The conversion of water to steam by isotopic heat would operate the engine, with excess heat dissipated in the blood stream.

Isotopically heated space suits for pilots who must bail out of aircraft in frigid regions are being investigated under AEC contract. The AEC also is interested in developing larger heat sources for Antarctic experiments and underwater laboratory environments. They would be composed of 300 to 400 grams (10.6 to 14.1 ounces) of cobalt 60 and would give off up to 30 kilowatts of thermal energy.

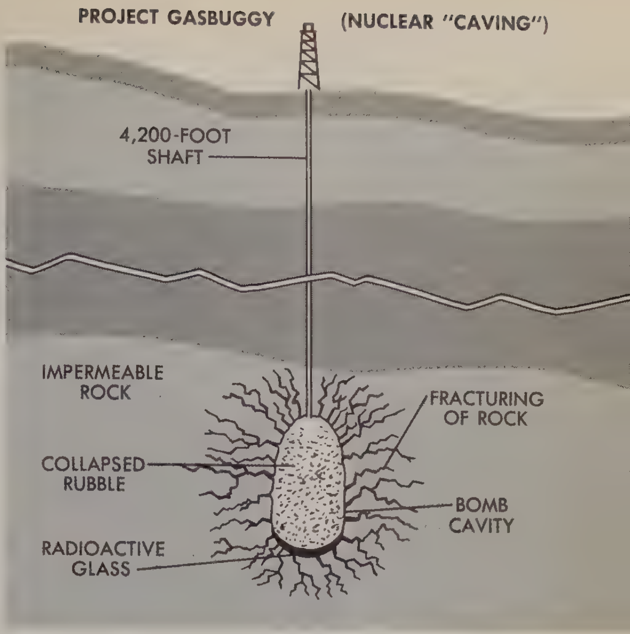
Isotopic electric generators that turn radiation into heat and then into electrical energy by means of the thermoelectric effects are becoming commercially available. They provide maintenance-free power for remotely located devices such as beacon lights and underwater oceanographic devices, and for space and lunar environments.

Radiation Uses. Progress on the application of radiation to the preservation of food was slowed somewhat in 1967 by the cautious attitude of the FDA (Food and Drug Administration), which called for data from two years of animal feedings. Petitions for several kinds of irradiated fish are currently before the FDA, and further testing of strawberries, oranges, and lemons is in progress. The FDA already has cleared canned bacon, white potatoes, wheat, and wheat flour for human consumption.

The FDA and AEC are sponsoring research at the University of Pittsburgh's Graduate School of Public Health on the effects of radiation on sugars, amino acids, and vitamins. Meanwhile the United Nations IAEA (International Atomic Energy Agency) has proposed greater international cooperation in the study of food irradiation to increase the world's food supply. (See FOOD INDUSTRY.)

Nuclear radiation is finding increased use in sterilization procedures and in curing processes that involve the cross-linking of long-chain polymers. In Copenhagen a 10 Mev (million electron volt) linear accelerator sterilizes medical supplies at the rate of 500 pounds (225 kg) of instruments an hour. In England the United Kingdom Atomic Energy Authority is constructing a 300-kilowatt, 0.1-ampere electron accelerator for curing surface coatings; the device produces a 4-foot-wide curtain of electrons.

In the United States low doses of radiation are being used to produce "settling agents" or polymers with extremely high molecular weights. Large amounts of radioisotopes are used in experiments involving the direct conversion of heat to electricity, and for inducing chemical changes in petroleum products. Medical use of tracer isotopes is widespread, and some U. S. hospitals now are considering installation of cyclotrons to produce short-lived medical isotopes. Radioactive tracer isotopes also are being used in diverse ways, from the tracking of air pollutants emitted by factory chimneys to the scanning of diseased body organs.



PROJECT GASBUGGY, a nuclear explosion set off 4,200 feet below the New Mexico desert in December, was designed to release natural gas reserves trapped in the rock.

Nuclear-Powered Transportation. The U. S. nuclear frigate *Savannah*, scheduled to be mothballed in 1967, was rescued by congressional action and will return to the Far East for a third year of charter operation. After refueling in August 1968—four fuel elements are to be replaced—the frigate will return for two more years of commercial use. Germany and Japan soon will join the United States in operating nuclear ships, each nation with a ship of its own.

Interest in the U. S. nuclear-powered aircraft project, suspended in 1961, was revived in 1967 as a result of two factors: the increasing size of commercial aircraft, and the increasing power-to-weight ratios of new reactors. For distances of 5,000 miles (8,000 km) or greater, nuclear planes are capable of bearing larger payloads.

Desalting Project. In July 1967 the former AEC chairman, Lewis Strauss, proposed an international desalting project—one that he believes will hold the key to peace in the Middle East. The proposal involves construction of three multipurpose reactors to provide nuclear power and irrigation water. Two of the units would be located on Israel's Mediterranean coast and one on the Gulf of Aqaba. Each plant would produce 400 million gallons (about 1,500 million liters) of fresh water; the IAEA would be responsible for their operation.

Atoms For Peace Award. The Ford Foundation's $80,000 Atoms for Peace award was presented on November 14 to W. B. Lewis of Canada, I. I. Rabi of the United States, and B. L. Goldschmidt of France. Each of the scientists has been a leader in his country's participation in the IAEA. The Soviet scientist V. S. Yemelyanov had earlier declined a share of the award as a protest against the involvement of the United States in Vietnam.

MILITARY AND SPACE APPLICATIONS

The most important military development in the field of atomic energy in 1967 was the rapid rise of Communist China as a nuclear power.

Chinese Hydrogen Bomb. Communist China detonated its first hydrogen bomb over the Sinkiang desert on June 17. The bomb, described by AEC sources as equivalent to about one megaton of TNT, perhaps was dropped from an aircraft and exploded above ground. It is believed that the Chinese conducted their seventh atomic test on December 25. In spite of China's internal disorders it is apparent that the country's nuclear weapons program is making rapid progress.

In response to these developments, the United States approved construction of a thin anti-ballistic missile system called the Sentinel. Its keystone is the highly classified Spectrum bomb, a one-megaton thermonuclear device that would produce an intense burst of x-rays capable of penetrating and disabling an enemy warhead by upsetting its fusing mechanism. (See also MISSILES.)

U. S. Military Projects. The United States continued its underground testing program and weapons development. Most of the increase in the AEC's military budget is for the development of two new underground test sites one in central Nevada and the other on Amchitka Island, Alaska. Other increases are scheduled for the production of warheads hardened against disruptive radiation from enemy missile defense systems, and expansion of weapons production capabilities at Oak Ridge, Tenn., Rocky Flats, Nev., and Pinellas, Fla.

In June the joint AEC-DOD (Department of Defense) test program called Latchkey was completed. There were four areas of study: AEC weapons development; DOD nuclear effects events; joint AEC-DOD nuclear explosion detection (Project Vela); and the AEC Plowshare program. Also, in order to understand more thoroughly the propagation of neutrons and gamma rays in the atmosphere, operation HENRE (High Energy Neutron Reactions Experiment) was carried out early in the year at the Nevada Test Site. Neutron sources were mounted on towers 27 to 1,500 feet (8.2 to 457.5 meters) above the earth. The results are expected to lead to improved shielding and radiation instrumentation and to a better knowledge of neutron-induced radioactivity for both military and civilian defense purposes.

Rocket Engine Development. In work on nuclear-powered rockets in 1967, emphasis was placed on graphite reactors and engine systems because of graphite's good nuclear properties and excellent structural properties. Budget cuts forced a cutback in the scope of the NERVA (Nuclear Engine for Rocket Vehicle Applications) project. Present planning calls for completion of the NERVA 1 rocket engine, developing 70,000 pounds (31,500 kg) of thrust, by 1975.

Power Sources for Space Use. The AEC's SNAP (Systems for Nuclear Auxiliary Power) series consists both of reactor and of isotope-powered generating systems. SNAP-19, scheduled for flight testing in 1968, is to provide 50 watts of power for the Nimbus weather satellite; the isotope it uses is plutonium 238. SNAP-27 ALSEP (Apollo Lunar Surface Experiment Package), also powered by plutonium 238, should deliver 63.5 watts for a period of over one year. SNAP-29, an advanced system using polonium 210 and delivering about 500 watts, is to be tested in 1969. (See also SPACE EXPLORATION.)

The first isotope-heated life support system passed a 30-day test run at AEC's Mounds Laboratory in 1967. The system uses plutonium 238, and develops 280 watts for a system of water recovery from human fluid wastes. The system, which has obvious space applications, can supply two men for 30 days at 12 ounces (375 grams) of water a day.

BASIC RESEARCH

Developments in basic research in 1967 came principally in research tools rather than in breakthroughs in fundamental knowledge.

New Soviet Synchrotron. On October 9 the USSR announced the start-up of the world's most powerful particle accelerator at Serpukhov, near Moscow—a 70 Bev (billion electron volt) synchroton. A week after start-up an energy of 76 Bev was reached. The accelerator may give the Soviet Union the lead in high energy research. Cooperative arrangements for use of the synchrotron by western scientists of CERN (European Center for Nuclear Research, in Geneva) are being planned, and CERN also has proposed building a 300 Bev accelerator.

U. S. Installations. Funding of the proposed 200 Bev accelerator at the National Accelerator Laboratory in Weston, Ill., is proceeding modestly. The director, R. R. Wilson, proposed building an "expandable" machine with a 2-kilometer (about 1.2-mile) diameter suitable for a much larger 470 Bev machine. The magnets would be run at half power, enabling the accelerator to reach its primary goal of 200 Bev by 1972; extra power supplies could be added later. Another proposal is to use separate magnets for focussing and bending the beam, permitting a smaller beam tunnel and considerably reducing costs.

Other major installations announced by the AEC are a $50 million, one Bev "meson factory" to be constructed at Los Alamos Scientific Laboratory for intermediate energy research; a plasma facility for fusion research, also at Los Alamos; and the Fast Flux Test Facility for fast neutron reactor component testing, at Hanford, Wash.

Scientists at Los Alamos announced construction of the world's smallest reactor, which used only 242 grams (8.5 ounces) of uranium 235 to achieve a chain reaction. The assembly was composed of uranium 235 plates 0.0012 inches (0.003 cm) thick, separated by 0.1244 inch (0.316 cm) polyethylene foils.

Fusion Research. Process toward solving the basic problem of thermonuclear fusion research—the creation of a magnetic "container" for the hot ionized gases—was marked by the achievement of 5% of the full current density required for such a container. Scientists at the Lawrence Radiation Laboratory are proposing a new accelerator that will enable them to reach the full density.

Transuranium Elements. The creation of the heaviest isotope ever made, mendelevium 258, was announced in September by AEC chairman Glenn Seaborg. Scientists at the Lawrence Radiation Laboratory bombarded einsteinium with alpha particles to produce the isotope. Soviet scientists claim to have produced an isotope with atomic weight 260, but the claim has not been widely accepted in the West. (U. S. and Soviet scientists also are in dispute over the element with atomic number 102. The Soviets claim to have produced it first and have named it joliot-curium; U. S. scientists claim prior discovery and have proposed the name nobelium.)

The production of transuranium elements is currently of great interest among U. S. scientists. Private commercial groups are seeking AEC support for the construction of a Van de Graaff accelerator capable of accelerating uranium ions to 1.5 Bev in order to produce relatively stable elements of atomic numbers 114 and 126. These very heavy elements may have lifetimes of about 10 years and can contribute greatly to knowledge of nuclear structure.

Particle Physics. Experiments in high energy physics in 1967 verified two fundamental principles of physics. Scientists at the Deutsches Elektronen-Synchrotron in Hamburg, Germany, through study of the creation of electron-positron pairs, verified that the laws of quantum electrodynamics are valid at distances down to 3×10^{-14} cm. And at Brookhaven National Laboratory, AEC-sponsored research into the scattering of pions by protons showed that the principle of causality is valid down to distances of 10^{-15} to 10^{-16} cm.

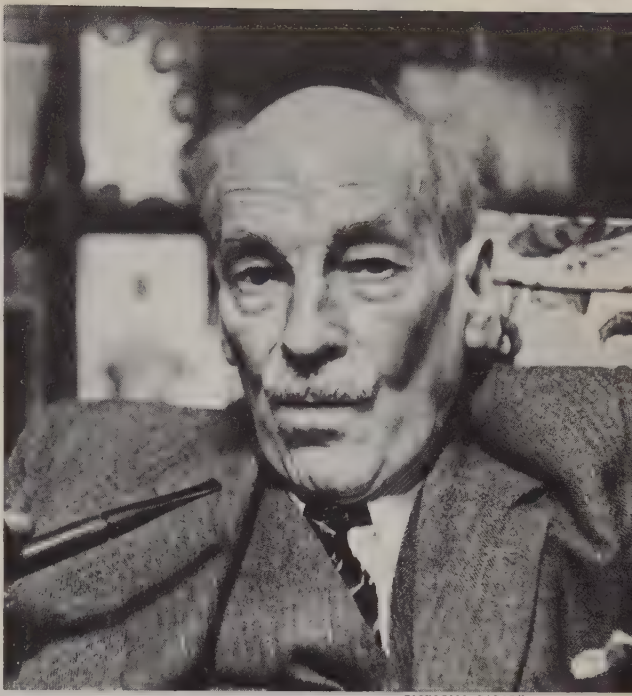
Brookhaven National Laboratory



PICTORIAL PARADE

CLEMENT ATTLEE, prime minister of Great Britain from 1945 to 1951, died in October at the age of 84. He is shown here at the time of his 80th birthday, Jan. 3, 1963.

ATTLEE, Clement Richard

British Prime Minister: b. Putney, England, Jan. 3, 1883; d. London, Oct. 8, 1967.

Clement Attlee was prime minister of Britain from 1945 to 1951. Of quiet but undoubted effectiveness, he presided over a far-reaching social revolution in Britain and the liquidation of a large part of its imperial possessions.

Early Life. Attlee was the fourth son of a prosperous London lawyer. He was educated at Haileybury College and Oxford and was called to the bar in 1906. By then he had become deeply concerned with the condition of the poor in England and had exchanged conservative politics for socialism. After service in World War I, he won a seat in Parliament as a Labour member for Limehouse in 1922.

Political Ascent. By 1927, Attlee's interest in British colonial affairs had fully developed, and he was appointed to the commission that laid the constitutional foundations of Indian independence during the next three years. In 1930 he joined the Labour government of Ramsay MacDonald as Chancellor of the Duchy of Lancaster, but in 1931 he declined to serve in MacDonald's coalition government. As one of the few prominent Labourites in Commons to withstand Labour's collapse in the elections later that year, Attlee was thrown unexpectedly into contention for the deputy leadership of his party. His success in obtaining it was partly the result of the expectation that his preferment would be temporary; but when the party leader, George Lansbury, resigned in 1935, Attlee succeeded him.

Party Leader. Attlee was less realistic about foreign affairs than about domestic ones during the first years of his party leadership. He opposed British rearmament until the late 1930's, when he finally changed his position. But after the outbreak of war, as deputy prime minister in the coalition government of Winston Churchill, he adhered completely to the government's policies while simultaneously negotiating bipartisan support for broadly extended social welfare at the war's end.

Premiership. The postwar election of 1945 gave Labour an overall majority for the first time, and Attlee became Britain's second Labour prime minister. From 1945 to 1951 he presided over important welfare innovations, the radical extension of public ownership, and the granting of independence to Egypt, Burma, and India. Unattracted by schemes for European unity, he preferred to seek British economic recovery through U. S. aid and domestic effort.

By 1950 most of Labour's reform program had been enacted. The government's rearmament program, accelerated by the outbreak of the Korean War, led to inflation and to unrest within the party. An election early that year had reduced Labour's majority to 10. To the surprise of no one, the Conservatives won a clear victory in 1951. Attlee remained party leader until December 1955 when, in poor health, he resigned and accepted an earldom.

Character and Accomplishments. Despite a singular lack of charisma, Attlee proved to be a surprisingly good prime minister. His conception of the office did not involve forcing policies on colleagues, but rather coordinating the actions of ministers who, carefully chosen, could be left to do their jobs.

Attlee's political views—as opposed to his general interest in social reform and colonial freedom—were not rigid or easily categorized. That was his great advantage as prime minister, for the fact that he was not closely identified with any party faction enabled him to coordinate and unify. Given the nature of his party and the events of his premiership, he must be accounted one of the most effective, if least dramatic, British prime ministers of the 20th century.

A. J. BEATTIE
London School of Economics and Political Science

KEYSTONE

WHILE SWIMMING off Portsea in southern Australia, Prime Minister Harold Holt disappeared on December 17. Rescue and search operations (*above*) proved fruitless, and Holt, an expert swimmer and skin diver, was presumed drowned.

AUSTRALIA

Australia was saddened in late 1967, when Prime Minister Harold Holt disappeared on December 17 while swimming in dangerous surf off the beach at Portsea, Victoria, near his seaside vacation home. Search parties were unable to locate his body and, after two days, the Prime Minister was officially presumed to have drowned. On December 19, John McEwen, deputy prime minister, was sworn in as Holt's temporary successor. Memorial services for Prime Minister Holt, attended by President Johnson and other world leaders, were held in Melbourne on December 22.

John Grey Gorton became the nation's new prime minister on Jan. 9, 1968, when he was elected to the leadership of the governing Liberal party. Gorton was to resign his seat in the Senate to seek election to the seat left vacant by Holt in the lower house, where most legislation originates.

During 1967 the newly reelected Liberal and Country parties' coalition government continued to

JOHN McEWEN (*left*), Australia's acting prime minister, and U. S. President Johnson attend memorial services for Holt on December 20. Holt was one of Johnson's strongest allies in supporting U. S. policy in Vietnam.

WIDE WORLD

support U. S. policies in Vietnam by increasing its commitment of troops there. No major changes in domestic policy were initiated during the year. In May a national referendum brought passage of two constitutional amendments. An election for the closely divided national Senate was held in November. The opposition Labor party chose E. Gough Whitlam of New South Wales as its new parliamentary leader.

Vietnam War. Australian government leaders emphasized during the year that the situation in Vietnam was improving slowly but steadily. They supported U. S. bombing of North Vietnam, warned against any negotiations which would not assure a "just and lasting peace," and praised internal political and economic improvements in South Vietnam. Policy discussions took place on January 18–22, when South Vietnamese Premier Nguyen Cao Ky visited Australia. Prime Minister Holt visited the United States in June for talks with President Johnson; and in July, U. S. Gen. Maxwell D. Taylor and Clark Clifford, chairman of the Foreign Intelligence Advisory Board, met with Australian officials in Canberra.

Prime Minister Holt announced on October 16 that Australia would increase the number of its troops in Vietnam from 6,300 to more than 8,000.

The Labor opposition called for an end to U. S. bombing in North Vietnam and urged recognition of the National Liberation Front, the political arm of the Vietcong, as a party to any negotiations. The party also recommended transforming the fighting into a holding operation. In February, South Australian Sen. Douglas C. Hannaford resigned from the governing Liberal party to become an Independent because of his opposition to the government's Vietnam policies. Criticism was also voiced by some ministers, trade unions, and student groups.

Australian casualties in Vietnam as of October 1 totaled 139 killed (of whom 49 were draftees) and 543 wounded. Of the 6,345 troops in Vietnam on October 1, more than 2,000 were draftees.

Foreign Aid. Australia increased its foreign economic aid for 1967–68 to $159 million, a rise of nearly 15% over the 1966–67 rate. The program included $5.8 million for special assistance to Indonesia and $9.3 million for the International Development Association, an affiliate of the World Bank that assists underdeveloped countries. Australia gave $10 million worth of wheat to India and a similar amount to an international food assistance program. South Vietnam received $2.2 million for water systems, road-building equipment, a resettlement center, medical centers, and textbooks.

Economy. Government and private spokesmen were optimistic about Australia's economic growth during the 1967 fiscal year. The gross national product for 1966–67 increased by 9% over the previous year, and total employment was up by 2.5%.

Area: 2,967,909 square miles (7,686,893 sq km).
Population: 11,540,764 (1966 census).
Chief Cities (1966 census): Canberra, the capital, 92,199; Sydney, 2,444,735; Melbourne, 2,108,499.
Government: *Governor-General*—Richard Gardiner Casey, Lord Casey (appointed July 29, 1965); *Prime Minister*—John Grey Gorton (took office in January 1968). Parliament—House of Representatives, 123 members (party seating, 1968: Liberal and Country coalition 81; Labor 41; Independent 1.); Senate, 60 members (party seating, 1968: Liberal and Country coalition 28; Labor 27; Democratic Labor 4; Independent 1.).
Religious Faiths: Anglicans, 35% of population; Protestants, 26%; Roman Catholics, 25%; Jews, 1%; others, 13%.
Education: *Literacy rate*, 99% of population (excluding aborigines). *Total school enrollment* (1964)—2,619,074 (primary, 1,634,569; secondary, 731,905; technical, 130,000; higher, 122,600).
Finance (1966 est.): *Revenues*, $4,966,600,000; *expenditures*, $4,850,600,000; *public debt*, $11,819,900,000; *monetary unit*, Australian dollar (.9007 dollars equal U. S.$1).
Gross National Product (1966): $22,653,000,000.
National Income (1966): $18,331,500,000; average annual income per person, $1,588.
Economic Indexes (1965): *Industrial production*, 156 (1958=100); *agricultural production*, 144 (1956–57=100); *cost of living* (1966), 119 (1958=100).
Manufacturing (metric tons, 1966): Crude steel, 5,892,000; gasoline (1965), 5,165,000; cement, 3,684,000.
Crops (metric tons, 1966-67 crop year): Wool, 441,900 (ranks 1st among world producers); wheat, 12,570,000 (world rank, 4th); oats, 1,125,000; barley, 1,213,000.
Minerals (metric tons, 1966): Lead, 367,200 (ranks 2d among world producers); coal, 33,912,000; lignite, 22,140,000; iron ore, 11,604,000; bauxite, 1,813,000; gypsum (1965), 860,000; crude petroleum, 430,800; zinc ore, 370,800.
Foreign Trade (1966): *Exports*, $3,134,000,000 (chief exports: wool, $890,022,000; wheat, $285,082,000); *imports*, $3,217,200,000 (chief imports, 1965: nonelectrical machinery, $613,099,200; textile yarn and fabrics, $278,051,000). *Chief trading partners* (1965): Britain (took 20% of exports, supplied 26% of imports); U. S. (took 10% of exports, supplied 24% of imports).
Transportation: *Roads* (1965), 550,000 miles (884,950 km); *motor vehicles* (1965), 3,767,287 (automobiles, 2,894,705); *railways* (1965), 24,933 miles (40,117 km); *merchant vessels* (1966), 105 (619,000 gross registered tons); *principal airports*, Adelaide, Brisbane, Canberra, Melbourne.
Communications: *Telephones* (1966): 2,810,833; *television stations* (1965), 52; *television sets* (1965), 1,954,000; *radios* (1965), 2,524,000; *newspapers* (1965), 61.

AUSTRALIAN NEWS INFORMATION BUREAU

JOHN GREY GORTON, senator from Victoria and minister for education and science, became prime minister of Australia on Jan. 9, 1968, when he was elected leader of the governing Liberal party, a post left vacant in December 1967 by the death of Harold Holt. Gorton was expected to continue his predecessor's policy of supporting U. S. action in Vietnam.

Born in Melbourne on Sept. 9, 1911, Gorton was reared in the state of Victoria, where his father owned a fruit farm. He attended Geelong Grammar School and was an honors graduate in history of Brasenose College, Oxford. In 1935 he married an American girl, Bettina Brown of Bangor, Me. After serving with distinction in the Australian Air Force during World War II, he entered politics in 1946 and, as a Liberal, gained a Senate seat from Victoria in 1950. In 1958 he was named minister for the navy, the first of his seven cabinet posts, by Prime Minister Menzies. Gorton, who retained his seat in the Senate from 1950 to 1968, served as minister assisting the prime minister from 1963 to 1966. He is identified with the left wing of the Liberal party.

Consumer spending climbed about 7%. Prices increased at an annual rate of 2% during the first three quarters of the year but were up to a 5% rate in the final quarter.

Wage rates became a major issue in January when a decision by the conciliation and arbitration commission increased margins above the basic wage by amounts ranging from 33 cents to $1.45 a week. In an important decision on June 5, the commission voted to abandon the long-established practice of fixing a basic wage and adding margins for skill and other factors. It adopted a policy of fixing a "total wage" and raised wage rates by $1.12 a week for all workers. In October the high court began hearings on applications from trade unions seeking to invalidate the arbitration commission's decision.

Australian farmers, in a dramatic recovery from the disastrous drought of 1966, produced a record wheat crop in 1967 and replaced more than half of the sheep that had been lost in the drought. However, following a severe drought in the southeast at the end of the year, Australia's wheat board predicted that the nation's 1967–68 wheat harvest would be only half of the 1966–67 crop.

A rise in automobile production followed increased buying in late 1966. The Ford Motor Company produced its one millionth vehicle and announced plans to increase production. The Japanese Toyata firm began producing automobiles at the rate of 5,000 annually.

Mineral production increased by 14% in 1966–67, with important developments in the production of natural gas, iron ore, and crude petroleum. The Broken Hill Proprietary Company, an Australian-owned oil firm, reported a record profit increase of 17%.

On the negative side, the closing of the Suez Canal brought an increase in the price of gasoline. A major drought in Tasmania in February produced the worst forest fires in the island's history and a serious shortage of hydroelectric power. Floods in northern Queensland and parts of central Australia in March damaged sugarcane fields and washed out railway lines.

Although the 1966 overseas trade deficit was replaced by a surplus of $95,000,000 in 1967, foreign aid and other factors resulted in a loss of $177,000,000 in external reserves. For the first time, Japan was the leading importer of Australian products, followed by Britain and the United States. Following the Kennedy Round of tariff-cutting negotiations, a new 3-year international wheat agreement provided for an increase of 19 cents per bushel in the minimum export price.

Government Finance. Treasurer William McMahon introduced a record budget for 1967–68, although the 9.5% increase in expenditures was less than in 1966–67. Defense expenditures were increased by 18%, compared with 27% in 1966–67. The only important increase in social service benefits provided additional payments under the child endowment system for persons with four or more children. Because the budget was expected to promote private development, a revenue increase of 8% with no increase in taxes was anticipated. Dependents' allowances for income taxes rose slightly, as did the amount of tax-free income allowed for persons on old-age pensions. Increased postal rates included a raise from 4 to 5 cents for first-class letters, and there were increases in telephone and telegraph charges. These increases had previously been defeated by the Labor and Democratic Labor parties in the Senate.

Decimal Currency. On August 1, six months ahead of schedule, the government issued regulations which required all contracts to be prepared on the basis of the decimal currency introduced in 1966. By this date all but 3% of the country's business machines had been converted to the new system. The government announced that all transactions were to be on a decimal basis, although equivalent denominations of the old currency would continue to be accepted until they were replaced.

Elections. The governing coalition of Liberal and Country parties failed to regain a majority in the Senate elections of November 25. In the election for half of the members of the Senate, the results produced 28 seats for the government parties, 27 for Labor, four for Democratic Labor, and one independent. Campaign issues included the Vietnam war and a wide variety of domestic problems.

In a national referendum held in May, Australian voters approved two amendments to the constitution that provided for the inclusion of members of the nation's aboriginal population in the national census and gave Parliament specific legislative power regarding the 50,000 aborigines. On July 22 the Labor party won a special election in a district in Victoria which the Liberals had held since 1949.

On April 29, voters in the northern third of New South Wales rejected by a 10% margin a proposal to create a new state to be known as New England. On May 3 a state election in Victoria produced an increased majority for the governing Liberal party.

AUSTRIA

The matter of gravest concern in Austria in 1967 was the sluggishness of the economy. Settlement of the South Tyrol border problem with Italy ran into new difficulties because of renewed terrorist outbreaks. Negotiations for Austrian membership in the Common Market also remained stalemated. Improved relations with other Danubian countries were a bright spot in an otherwise rather dull year.

Politics. The Socialist party on February 1 elected Bruno Kreisky, a former foreign minister, to succeed Bruno Pittermann as chairman of the party. Kreisky's immediate task was to heal the rather sharp differences which had developed within the party. The Socialists protested Archduke Otto of Habsburg's extended tour of East Tyrol in July, but the visit had no serious political repercussions.

Economic Development. Overall production figures for the first six months of 1967 showed an increase of 2.2%, down from 5.2% in 1966. Excluding agriculture, the economic growth rate was a discouraging 1.7% compared with 5.5% in 1966. All estimates indicate that the growth rate of the gross national product would be the lowest of the postwar years.

The cost of living continued to rise, increasing 4.5% in the first quarter and 2.8% in the second. There was also a slight increase in unemployment. However, the foreign trade deficit, compared with that in the first six months of 1966, decreased because of an increase of 6.9% in exports and a decline of 0.5% in imports. This still left an unfavorable trade balance of −18%. The government exacts a levy of 3% of the invoice value of all imported or exported goods as a foreign-trade-promotion fee. At present the Austrian economic chamber has 88 trade-promotion centers abroad. Since 1950 the Austrian government has supported the financing of exports, and during the year the ceiling for government guarantee of export transactions was raised from 6.5 million to 10 million schillings.

As a spur to the Austrian economy, a reform of the wage and income tax system was enacted, partly effective Oct. 1, 1967, and partly on Jan. 1, 1968. In a major reorganization of the nationalized industries, a new Austrian Industry Administration (OeIG) has been set up to manage the various industries as a whole.

Transportation. The last stretch of the superhighway connecting Vienna and Salzburg opened on May 12. Also the Felber-Tauern Alpine highway between Mittersill and Matrei in Tyrol was opened to traffic on June 25. This road reduces the highway mileage between south Germany and the Adriatic coast by more than 60 miles (96 km).

International Affairs. On April 11 the United Nations accepted Austria's plan to erect an international center to house the permanent headquarters of the United Nations Industrial Development Organization. The new center, to be built on reclaimed land on the north bank of the Danube, across from Vienna's inner city, will also accommodate the International Atomic Energy Agency, located in the Austrian capital since 1953.

At the request of UN Secretary-General U Thant, the Austrian contingent serving with the UN Forces in Cyprus extended its tour of duty to December 26.

On June 25 terrorist activity broke out again along the Austrian-Italian border; four Italian soldiers were killed by a bomb and Austrian frontier guards were attacked. The Austrian government dissociated itself from the terrorist activity and sent two army battalions to strengthen its border patrol. However, the Italian government notified its partners in the European Coal and Steel Community and the European Economic Community that it would oppose Austrian association with those organizations until Austria took steps to prevent terrorists from using its territory as a base of operations.

A new 5-year trade agreement was concluded with Czechoslovakia, and a 1-year agreement with Bulgaria. About one third of the roughly 200-mile (322 km) border between Austria and Hungary has been cleared of mines, and Hungary has promised to complete the task within two years. Also indicative of Austria's improved relations with the other Danubian states was the request made of Austria, and willingly acceded to, to represent the interests of Bulgaria, Czechoslovakia, and Yugoslavia after those countries broke diplomatic relations with Israel as a result of the Israeli-Arab conflict in June.

President Franz Jonas traveled to Thailand (January 16–26) and to Canada (May 8–16), where he led the observance of Austrian national days at Expo 67. Chancellor Josef Klaus made official visits to Moscow, Budapest, and Bucharest.

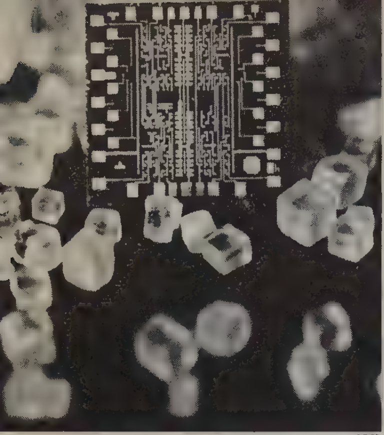
AUSTRIA • Information Highlights

Area: 32,374 square miles (83,849 sq km).
Population: 7,290,000 (July 1, 1966 est.).
Chief Cities (1964 est.): Vienna, the capital, 1,638,584; Graz, 248,620; Linz, 202,199; Salzburg, 114,472.
Government: *President*—Franz Jonas (took office for 6-year term June 9, 1965); *Chancellor*—Josef Klaus (took office April 2, 1964). *Federal Assembly*—National Council, 165 members (party seating 1967: People's party, 85; Socialists, 74; Freedom party, 6); *Federal Council*, 50 members.
Religious Faiths: Roman Catholics, 90% of population.
Education: *Literacy rate*, 98% of population. *School enrollment* (1964)—1,118,224.
Finance (1966 est.): *Revenues*, $2,602,000,000; *expenditures*, $2,700,000,000; *public debt*, $1,071,000,000; *monetary unit*, schilling (25.91 schillings equal U. S.$1).
Gross National Product (1966): $10,057,000,000.
National Income (1966): $7,571,000,000; average annual income per person, $1,038.
Economic Indexes (1966): *Industrial production*, 165 (1956=100); *agricultural production* (1965), 138 (1956–57=100); *cost of living*, 128 (1958=100).
Manufacturing (metric tons, 1966): Crude steel, 3,192,000; beer (1965), 689,600; gasoline (1965), 644,000.
Crops (metric tons, 1966–67 crop year): Potatoes, 3,007,000; sugar beets, 2,150,000; wheat, 897,000.
Minerals (metric tons, 1966): Graphite (1965), 94,529 (ranks 2d among world producers); lignite, 5,280,000.
Foreign Trade (1966): *Exports*, $1,690,000,000 (chief exports, 1965: iron and steel, $215,326,000; wood, lumber, cork, $125,398,000; yarn and fabrics, $124,645,000); *imports*, $2,336,500,000 (chief imports, 1965: nonelectrical machinery, $300,134,000; automobiles, $133,495,000; coal, $91,804,000). *Chief trading partners:* West Germany and Italy.
Transportaton: *Roads* (1964), 20,645 miles (33,224 km); *motor vehicles* (1965), 890,892 (automobiles, 789,744); *railways* (1965), 4,094 miles (6,587 km).
Communications: *Telephones* (1966): 1,008,693; *tv stations* (1965), 18; *tv sets* (1965), 711,000; *radios* (1965), 2,154,000; *newspapers* (1965), 36 (circ., 1,806,000).



INTEGRATED CIRCUIT chip of 55 logic circuits was fabricated from masks in an automated process that cut the time required by a factor of ten. Size of chip is indicated by crystals of common table salt in foreground.

IBM

AUTOMATION

A computer census taken in the United States in May 1967 showed 46,000 installations in operation, with another 26,000 on order. In 1964 there were approximately 20,000 operating computers. Thus, in three years the number of computers in use in the United States more than doubled.

Widespread Use of Computers. As the number of computers being used mounts, so do the uses to which the machines are being put. There are currently over 1,000 specific computer applications, and more are being added as programmers develop and refine techniques. Among the primary uses for these machines, for example, computers are now being used for attendance records, cost accounting, market research, production scheduling, traffic control, accounting, registration, test grading, tax return verification, hospital diagnosis, actuarial calculations, legal research, typesetting, criminal identification, quality control, commercial carrier scheduling, and engineering designs.

Time Sharing. Despite the larger number of machines available, the work that scientists, businessmen, and government specialists seek to have done on them is far greater than the capacity of existing equipment. As a consequence, and because of the extraordinarily high speed of modern computers, the time-sharing technique has been developed to permit maximum use of installed computers. Time sharing makes the capabilities of a centrally located machine available simultaneously to many remotely located users.

In such a system the user employs a teletype or similar device that is coupled to the computer by a telephone cable. He then communicates with the computer, which carries out the program that has been transmitted to it. The user may identify his program by sending a code number. After the work has been done, the user is billed periodically by the central service for the computer time used.

Thus time sharing permits many persons to use a computer simultaneously. The individual demands of each user are juggled back and forth, and, with the high speed of the machine, the work appears as though it were being done all at once. The outcome is the development of a "public utility" such as the telephone or electric companies which supply services to subscribers. It was evident in 1967 that such a utility would become an important source of computer service for many users.

As a consequence, some computer systems involving the communications industry were being developed. In these systems computer manufacturers would have to tie in their own communications terminals with the facilities of a common carrier, such as the telephone industry.

This kind of integration was illustrated in the RCA 3301 computer system, as well as in the Spectra 70 series of computer systems developed by RCA. In the latter, for example, the elements of 30 communication services and terminals were included as integral parts of the computer system. Remote visual display devices and random-access file components also were included in this system.

The advantages of these newer systems to airlines, banks, insurance companies, manufacturers, and the military are enormous. The military, for example, uses a system known as AUTODIN (Automatic Digital Information Network), which carries out military communications among units of the network by routing messages on a preestablished priority basis. The present network includes over 350 locations and is expected to expand to over 2,000 American locations and 10 overseas centers.

Automation and Industry. A recent study revealed three major areas in U. S. industry in which automation is employed: (1) the manufacturing of consumer products, such as food and clothing, which is increasingly employing process-flow methods; (2) the fabrication and assembly of heavy industrial-equipment; and (3) the continuous processing of such goods as chemicals. Not only have companies applied computers to manufacturing, but there is a continued use of these machines in marketing, distribution, and research.

While the average spent on computer systems by the firms included in the survey was on the average one-half of 1% of sales, the actual dollar expenditure ranged up to $50 million a year. The largest part of outlays for these systems was on salaries, supplies, and the like (44%), while equipment, mainly for rentals, absorbed 37% of computer costs. The balance was spent on "software" or programming. It was expected that by 1970, production and distribution of manufactured items would account for 52% of total computer costs. These areas are currently responsible for about 39% of such costs.

European Developments. While computer growth was proceeding in the United States, expansion of computer use in other countries was facing difficulties. For example, General Electric, which in 1964 bought a half interest in the French computer firm Compagnie des Machines Bull, had to invest another $30 million to strengthen Bull's financial condition. Despite a substantial growth in the French market, Bull's losses in 1966 exceeded $20 million.

Part of the situation stemmed from the vigorous competition offered by International Business Machines (IBM), which, with perhaps 75% of the world's computer installations, was far ahead of its rivals, both U. S. and foreign. In France, Bull had an estimated 38% of the market, while IBM was credited with 56%. For Europe generally, the gap was even wider, with IBM accounting for 64% of computer installations and Bull holding 13%.

Rapid changes in computer technology have imposed rising costs on European computer manufacturers. The fact that these costs cannot for the present be recaptured from the market has imposed further difficulties.

Ben B. Seligman
University of Massachusetts

FORD offered the Torino as a 1968 intermediate.

AUTOMOBILES

Passenger car production in the United States dropped to a 4-year low in the 1967 model year. U. S. factories assembled 7,664,600 cars bearing 1967 labels—nearly 1,000,000 units below the 8,611,928 cars built in the 1966 model run.

Not since the 1963 model year, when 7,346,855 cars were built has volume been so low. U. S. producers had reached an all-time record high of 8,849,032 cars built in the 1965 model year, but there followed a mild decline of 2.6% in 1966 models and a jarring decline of 12.3% in 1967 models.

1967 MODEL YEAR

Auto manufacturing executives and industry observers cited many reasons for the disappointing output of 1967 models. They blamed the downturn on overbuilding and overselling in the 1966 model year, with a consequent saturation of demand; the Vietnam War's drain of young male buyers through the military draft; lack of major styling changes on the popular standard-size and intermediate-body styles; approach of the United Automobile Workers' strike deadlines at the end of the 1967 model year (culminating in a national strike against Ford); severe winter weather early in 1967; and continued sales resistance to certain makes because of publicity about the federal government's new safety-component and antifume automotive standards.

When the slide in 1967 model sales became an irreversible fact, manufacturers lowered production schedules sharply in an effort to help dealers avoid excessive stockpiles of leftover cars. News of a decline in auto sales tends to accentuate consumer reluctance to buy until the next model is released. The production cutback, plus the 49-day Ford strike in September and October 1967, left many dealers with depleted stockpiles as the 1968 model year began.

All four major U. S. builders of cars suffered reductions in volume of 1967 models. General Motors dropped from 4,389,636 in 1966 to 4,026,535 in 1967; Ford Motor Co. from 2,472,554 to 2,141,997; Chrysler Corp. from 1,448,213 to 1,253,630, and American Motors Corp. from 295,897 to 235,522.

The brightest spot in the 1967 model year was in the so-called sportster market, first developed among domestic entries by introduction of Ford's Mustang in the spring of 1964. Ford produced a record high of 607,815 Mustangs in the 1966 model run, but competitors introduced three sportsters in the 1967 model year—Chevrolet's Camaro, Mercury's Cougar, and Pontiac's Firebird. Mustang production of 1967 models declined to 472,121, but the sportster field as a whole more than made up for the Mustang setback.

Besides the sportsters, there were eight other specialty car nameplates in the 1967 model run. A total of 1,294,364 specialty cars were built in the model year. By makes, totals were as follows: Mustang, 472,121; Camaro, 166,041; Cougar, 111,789; Firebird, 92,495; Ford Thunderbird, 77,956; Plymouth Barracuda, 62,534; Buick Riviera, 42,799; Chevrolet Corvair, 27,260; Chevrolet Corvette, 22,938; Oldsmobile Toronado, 21,790; Dodge Charger, 15,788; and Cadillac Eldorado, 14,714.

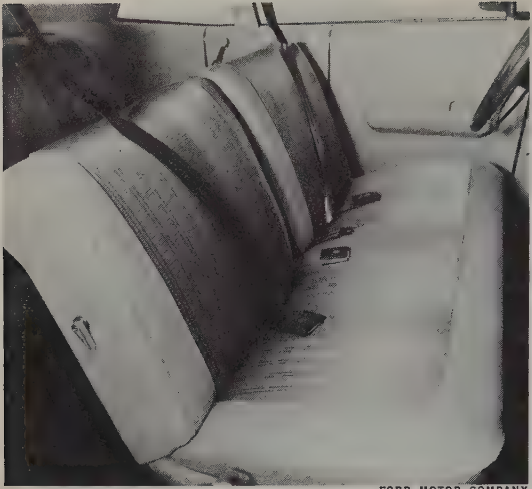
Hardest hit among the specialty cars was the Corvair, which had been named in a number of product liability damage suits by accident victims. From an output of 237,056 cars in the 1965 model year, Corvair dropped to 103,743 in 1966 and slightly over 27,000 in 1967.

THE 1968 MODELS

The number of models offered by U. S. car manufacturers for the 1968 year was trimmed to 357 from the postwar peak of 370 available at the end of the 1967 run.

By corporation, 1968 model totals were: GM, 152; Chrysler, 99; Ford Motor, 83; and American Motors Corp., 23. For the new season, GM cut 17 models from the 1967 total and AMC 3, while Ford went up 4 and Chrysler 3. To reduce the overlapping models in the lower price ranges, Chevrolet eliminated five Chevy II's and two Corvairs. Buick dropped four; Pontiac, three; Oldsmobile, two; and Cadillac, one. The AMC reduction was confined to Rambler Americans. Gains in the number of models by standard Ford, Cougar, and the intermediates lifted Ford Motor's total. At Chrysler Corp., there were increases by Plymouth in the standard and intermediate ranges, and by Charger and Dart, but

AMERICAN MOTORS introduced its Javelin.



FORD MOTOR COMPANY

SHOULDER HARNESSES limit upper-body motion in a crash. The straps became mandatory on new models Jan. 1, 1968.

Dodge Polara-Monaco dipped by three models. American Motors entered the specialty car category in the 1968 model year by introducing the Javelin. It also planned to unveil a two-seater, the AMX.

Styling. Intermediate models reflected the most pronounced design changes for 1968. Front vent windows were disappearing in line with a trend pioneered on Riviera, Eldorado, and Toronado. Vent windows were absent on the Camaro, Firebird, and Javelin. Tapered notchback lines, replacing old fastback looks, were introduced on GM's intermediate Chevelle, Tempest, Special, and F-85. Mercury lengthened its former Comet intermediate and renamed it Montego. New bodies also were introduced by Ford's Fairlane (Torino), Plymouth's Belvedere and Satellite, and Dodge's Coronet—all in the intermediate sector. Recessed windshield wipers, introduced on the 1967 Pontiac, were made standard equipment throughout the 1968 GM lines.

Labor. At the expiration of a 3-year contract on Sept. 6, 1967, the United Automobile Workers struck the Ford Motor Co. It was 49 days later, on October 25, that the union voted to accept a new 3-year contract, which would raise wages and fringe benefits about 7% overall. The union and its next target, Chrysler Corp.—which had kept producing—reached an agreement on November 8. The union canceled a strike threatened for midnight that night, but many local Chrysler plants were shut down by strikes that lasted for days. For the first time, the Chrysler agreement provided for raising the base pay of its Canadian workers to equal that of its U. S. workers within 30 months. General Motors matched the Ford and Chrysler national pattern in an agreement reached on December 15.

Prices. For the second year in a row, prices for new cars rose on 1968 models. Increases averaged 3.64% on the basis of advertised-delivered prices

(those posted on windows of new cars). This amounted to an average boost of $116.42 per car. Also for the second consecutive year, Chrysler rolled back its prices for new cars after GM posted lower increases. The Chrysler cuts in 1967 ranged from $5 to $72. Big Three manufacturers attributed the new round of price increases to higher labor and materials costs, as well as the cost of mandatory safety equipment and the new antifume devices.

AUTOMOTIVE SAFETY

The biggest innovations in the 1968 models were in the area of safety equipment and exhaust-emission-reduction systems, as required by the Federal Highway Safety Act of 1967 and the Federal Clean Air Act. Every 1968 car was required to carry as standard equipment a mechanism to reduce exhaust emissions to minimal levels. The Department of Health, Education, and Welfare established a laboratory at Ypsilanti, Mich., near Detroit, to inspect all smog-control systems offered by both domestic and foreign manufacturers.

Additional safety equipment required on new models after Jan. 1, 1968, included a seat belt for every passenger seat, padded instrument panels, ruptureproof and fireproof gasoline tanks, collapsible steering columns, dual braking systems, windshield washers, and side cornering lights. Hood ornaments and spinner hubcaps were forbidden. In response to industry criticism that insufficient time existed for compliance with them, proposed federal standards for front-seat headrests and minimum bumper heights were put off. A requirement for front-seat shoulder harnesses took effect on Jan. 1, 1968.

The National Highway Safety Bureau reported that manufacturers conducted 91 recall campaigns to correct possible defects in 1,882,050 vehicles in the 12 months ended Sept. 9, 1967. In addition, GM recalled 1,143,000 of its 1965 Chevrolets in October 1967 to replace a steering part, and Ford recalled 745,000 of its 1966 and 1967 cars—including all 1967 Mustangs—in October 1967 for inspection of steering wheels.

AVIATION

KEYSTONE

CONCORDE, the new Anglo-French supersonic transport plane, stands silhouetted against the sky during its first public appearance, December 11, at Toulouse, France.

AVIATION

The principal events and trends in aviation in 1967—the introduction of new passenger jet transports, the USSR's disclosure of major advances in aircraft design, the waging of air war in the Middle East and in Vietnam, and other developments—are reviewed in this article. They are covered under two headings: (1) Civil Aviation, and (2) Military Aviation.

CIVIL AVIATION

Civil aviation experienced a worldwide boom during 1967. Scheduled airlines in the United States employed more than 275,000 men and women, an increase of 13% over 1966, reflecting the rapid growth of civil aviation. The average annual salary for airline employees in 1967 was $8,000, close to the top for all U.S. industry.

New U. S. Planes. Civil air progress in the United States during 1967 included the issuing of certificates for new transports, as well as studies of a proposed new family of transports that are labeled "airbuses" but that would have far better accommodations than the name implies.

Federal Aviation Administration certification of the Boeing 737 short-haul transport came late in the year. Early production versions of the short-haul transport were to be delivered by Boeing to Lufthansa German Airlines and to United Air Lines. Powered by two Pratt & Whitney JT8D-1/7 jet engines, producing 14,000-pound sea-level static thrust each, the 737-100 series of the new design can carry 101 passengers and the 737-200 series can seat 117.

Additional orders during the year for the Boeing 747 jumbo jet transports included two for Swissair planned for delivery in 1971. Capable of seating 490 passengers in some configurations, the giant aircraft are the first to be purchased by Swissair from Boeing.

The maiden flight of the McDonnell Douglas DC-8-63 stretched jet transport also took place in 1967. An enlarged version of the basic DC-8 series, the -63 is the heaviest of three stretched DC-8 versions and has a maximum gross takeoff weight of 350,000 pounds.

The airbus designs proposed by major aerospace companies would have capacities of from 250 to 300 passengers. Studies suggested during the year by McDonnell Douglas included two aircraft—a DC-10-3 powered by three engines with a transcontinental range of 2,600 nautical miles, and a DC-10-4 fitted with four of the same engines to give it an intercontinental range of 5,200 nautical miles. Both designs would be powered by high-bypass-ratio turbofan engines rated at 32,000-pound sea-level static thrust. General Electric and Rolls Royce have offered engines in the 30,000- to 34,000-pound thrust category for the DC-10 designs.

Airbus designs offered by the Lockheed-California Company were keyed to utilizing engine and aircraft design technology available in this decade to meet airline operator needs beginning in the early

1970's. One Lockheed design, designated CL-1011-28, is a twin-engine transport expected to carry 250 passengers for 1,400 nautical miles. With a wingspan of 155 feet, the craft would have a design takeoff gross weight of 300,000 pounds. Power plants would be either the Pratt & Whitney JT9D, developing 48,100 pounds sea-level static thrust, or the Rolls Royce RB.207-05, designed for 50,300 pounds sea-level static thrust.

New Soviet Planes. New commercial jet transports built by the USSR appeared in June at the Paris Air Show. The Soviet Yak-40 three-engine, short-haul transport represented a change in Soviet transport design, which by tradition has usually relied on military configurations or Western layouts. The Yak-40 is scheduled to replace the still frequently operated Li-2 Soviet-built version of the Douglas DC-3.

Maximum range of the Yak-40 is 1,650 km, or 1,025 miles. Power plants are three Ivchenko AI-25 turbofan jets rated at 3,300 pounds thrust each. Maximum takeoff weight is 13.130 kg, or 28,930 pounds, not much different from the DC-3's 25,000 pounds gross weight. The cabin configuration is a 24-seat or a 31-seat arrangement.

International Traffic. Airlines flying lucrative North Atlantic routes were expected to set records in 1967 by carrying 5 million passengers in scheduled operations. Changes in airline schedules during the summer to meet big gains in passenger traffic to Europe included:

(1) Air Canada increased service between Canada and Britain from 28 to 30 round trips weekly and between Canada and the Continent from 9 to 15. Moscow and Copenhagen became new gateways for Air Canada in 1967.

(2) Air France scheduled 67 weekly round trips during peak summer months, a 34% increase over the 1966 summer season. The carrier opened nonstop service between Chicago and Paris.

(3) Japan Air Lines provided two trips weekly in its first summer on the North Atlantic routes, with each flight stopping in New York and London before continuing to cities on the Continent.

Increased air traffic in 1967 produced inroads into the Western world and the Far East by the USSR. The U.S. Civil Aeronautics Board recommended issuance of a foreign carrier permit to Aeroflot, the Soviet government airline, in a step toward removing one of the last legal barriers to direct New York-Moscow commercial air operations. Earlier, the Port of New York Authority granted Aeroflot permission to use Kennedy International Airport, and a Soviet technical delegation in a new Il-62 jet transport landed there and also in Washington in a proving flight in November.

Aeroflot and Swissair began regular service between Moscow and Zurich in July in accordance with a new air transport agreement signed by the Soviet Union and Switzerland. Flight time on the route by Aeroflot is 4 hours 15 minutes, with an intermediate stop in Vienna.

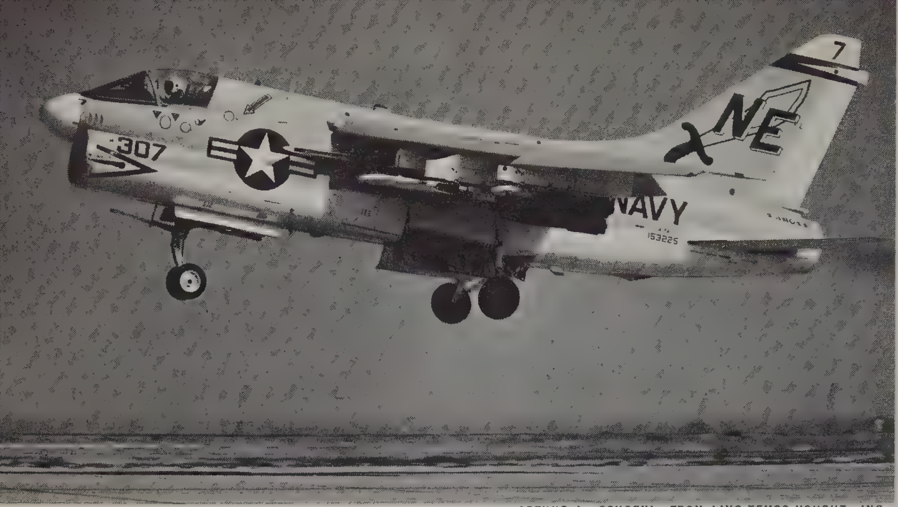
Scandinavian Airlines System inaugurated flights between Copenhagen and Southeast Asia via a great circle route over the USSR. This trans-Asian express route is expected to extend eventually to U.S. Midwestern cities, as well as to most of Europe, because it makes possible shorter flight times than the trans-Pacific routes.

Airports and Traffic Control. With the upsurge in air traffic in 1967, airport congestion was intensified. The congestion calls for new studies of advanced concepts in airport development and construction. One concept studied for the Los Angeles area included an airport built offshore on caissons. The overwater facility would be 5 miles long and 2 miles wide, providing space for four 12,000-foot-long runways.

Massive increases in funds for major improvements to expand existing air traffic control aids was called for by aerospace officials during the year. An increase of 260% over the $35 million requested by the Federal Aviation Agency (FAA) was recom-

UPI

DIRECT AIR TRAVEL between Russia and the United States came one step closer to reality in November when a huge Soviet Ilyushin jet transport was subjected to noise-level tests at Dulles International Airport, which serves Washington, D. C.



NEW BOMBER for the U.S. Navy, the A-7A Corsair, is tested in California. The carrier-based A-7's began flying combat missions over North Vietnam in December.

ARTHUR L. SCHOENI, FROM LING-TEMCO-VOUGHT, INC.

mended by Stuart G. Tipton, president of the Air Transportation Association, while testifying before the Senate Appropriations Committee transportation subcommittee. For improved safety, Tipton called for control towers at all airports providing airline service, terminal area radar for all airports having regular airline operations, and approach lights to complement instrument landing systems used by the airlines.

Supersonic Design. Worldwide competition for the supersonic transport market forced changes in the designs of all major contenders. Changes in the Anglo-French Concorde included providing more passenger room and increasing the baggage capacity by one third. Concorde seating in an all-tourist configuration was reduced from 136 to 132. Revised structural changes of the Concorde increased its maximum takeoff weight from 350,000 to 367,000 pounds. The expected maximum cruise speed was reduced from Mach 2.2 to slightly in excess of Mach 2.0 because of temperature limitation associated with its structure.

DEMOLISHED JETS litter an Egyptian airfield after Israel's crushing air victory at the start of the June war.

PICTORIAL PARADE

The Anglo-French design team rolled out one of two prototype Concorde aircraft at Toulouse, France, on December 11. The first flight of the graceful design was planned for 1968.

Designers for both the Concorde and the Boeing Company, which is developing the United States' supersonic transport, planned to incorporate canard surfaces (small winglike stabilizing surfaces forward of the wing) for improved longitudinal control during low-speed flight.

At the Paris Air Show, the USSR showed a new model of its Tupolev Tu-144 supersonic transport design. Western observers noted that the model had been revised to pair engines in two nacelles (engine housings) tapered to overcome excess aerodynamic drag. The previous display had shown four single engines.

MILITARY AVIATION

Military aviation highlights in 1967 included Israel's dramatic demonstration of the effective use of tactical airpower during the Israeli-Arab war, increased escalation of air warfare over North Vietnam by the United States, and the revelation of significant advances in aircraft design by the USSR. The Soviet advances were displayed during the first major air show by that country in six years.

Israeli Airpower. The Israeli air force applied tactical airpower in lightning-fast strikes when war

CONTROVERSIAL F-111 jet fighter, shown with its wings in swept-back position, became operational during 1967.

erupted in the Middle East on June 5, 1967. After the order to attack was given at 7:45 A. M. on the first day of the war, Israeli pilots began striking at Arab air bases. In all, 25 Arab bases were hit in four days of conflict. Israeli pilots claimed the destruction of 374 enemy aircraft in the first day of war and listed an additional 34 planes as probably destroyed. Israel admitted losing 19 aircraft the first day. For the first 60 hours of the war, the Israeli forces claimed the destruction of 451 Arab aircraft.

Aircraft used by the Israeli pilots included the following French aircraft designs: Dassault Mirage 3CJ Mach 2 fighters; Dassault Super Mystere B.2 transonic (about 600-900 mph) fighter-bombers; Dassault Mystere 4A transonic fighter-bombers; Sud Vautour light twin-jet bombers; Dassault Ouragan subsonic jet fighters; and Potez-Fouga Magister twin-jet trainer/strike aircraft.

Military observers viewed the brief war as an outstanding object lesson in the value of intelligently applied airpower. The Israeli air force destroyed more than $500 million worth of Soviet-supplied prime equipment during the first hours of the war. Their initial action opened the way for later destruction or capture of an additional $1.5 billion in weapons supplied by the Soviets over the past several years, including the first fully equipped SA-2 (surface-to-air) missile site to fall into Western hands.

Air Warfare in Vietnam. Increasing losses of tactical aircraft during the late summer of 1967 prompted U. S. military air units to strike the major MiG jet fighter base of Phuc Yen, 18 miles northwest of Hanoi, on October 24, for the first time in the Vietnam War. The base had been off limits to U. S. air strikes despite the unanimous recommendations since 1966 of the Joint Chiefs of Staff to President Johnson that the major air base be put out of action. During three days of air strikes the base runway was heavily cratered. However, it was soon repaired by North Vietnamese and Chinese laborers filling in the holes with dirt and rock and tamping them down with human foot-power.

The continuing Vietnam War required a new infusion of funds for increased numbers of tactical aircraft to be procured during 1967 and 1968 for U.S. forces. During 1967, U.S. tactical air inventories included 4,800 fighter, attack, and reconnaissance aircraft. The backbone of this force for both the Air Force and Navy was the McDonnell Douglas F-4. The Ling-Temco-Vought A-7, which began to come into active service by year's end, was expected to assume the prime attack role for both services.

Other moves taken by the Air Force to provide adequate airpower in Vietnam in 1967 included the assigning of additional aircraft, no longer in production, to special air warfare missions. These vintage aircraft included the Douglas C-47 and the Fairchild C-123. The C-123's, some augmented with jet engines for performance near that of short-take-off-and-landing craft, were used for defoliation missions in Vietnam.

U.S. aircraft that saw combat for the first time in 1967 included the O-2 and the A-37. A modified off-the-shelf version of the civilian Skymaster light aircraft, the Cessna O-2 was used for the first time in combat while performing psychological warfare missions and as a forward air controller aircraft. The Cessna A-37, originally designed as a twin-jet basic trainer, was modified to carry external ordnance loads and act as a strike aircraft on close air-support missions in Southeast Asia.

Soviet Air Show. New aircraft introduced by the USSR at a large air show in July 1967 indicated that Soviet aircraft designers are advancing across a broad spectrum of aeronautical technology. Held at the new Domodedovo civil airport 30 miles south of Moscow, the display—the first Soviet air show in six years—included 12 new and advanced aircraft designs that demonstrated the USSR's growing capability in tactical air warfare. Six of the 12 new designs were developed by designer Artem Mikoyan. Three more were attributed to the design bureau led by Pavel Sukhoi. The new aircraft included:

(1) A Mikoyan-developed variable-geometry fighter with an external appearance closely resembling the General Dynamics F-111. This single-place, twin-engine aircraft is believed to have an attack speed of Mach 2.8 with a capability of reaching Mach 3 for a short period of time.

(2) A Sukhoi-designed variable-geometry fighter design of the Su-7 Fitter attack aircraft.

(3) A Mikoyan vectored-thrust experimental attack aircraft that took off and landed vertically at the air show. Its general design features are similar to early MiG-15 and MiG-17 aircraft with a round, fat fuselage, bifurcated nose inlets, and a horizontal stabilizer mounted high on the vertical fin.

(4) A Mikoyan Mach 2.5-plus STOL (short takeoff and landing) interceptor that has a retractable slotted door just behind the cockpit to serve as an inlet for the one or more direct-lift power plants mounted vertically in the fuselage.

(5) A Sukhoi STOL version of a new Mach 2.8 twin-engine interceptor. It has two inlet doors for direct-lift engines behind the cockpit.

(6) A Mikoyan-designed STOL version of the standard Mach 2 MiG-21 Fishbed F fighter, with one or more direct-lift engines in the fuselage.

(7) A Mikoyan twin-tail, delta-wing aircraft with a Mach 2.8 attack speed. It is equipped with afterburners. The Soviets revealed in late 1967 that this aircraft, designated the E-266, had set three speed or altitude records. Records claimed by Soviet officials include: an average speed of 1,808 mph over a 1,000-km closed course with a 4,410-pound load; a flight with the same load at an altitude of

TASS, FROM SOVFOTO

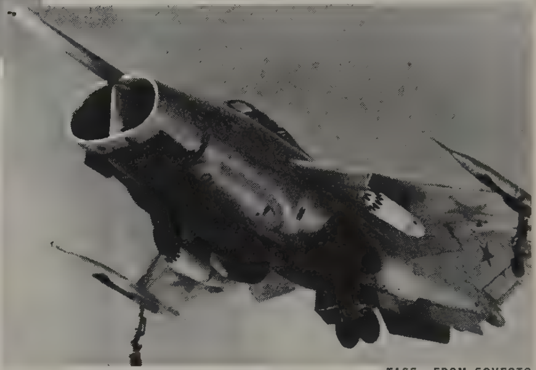
(*Below*) New vertical take-off jet fighter, designed by Artem Mikoyan, shows capabilities.



TASS, FROM SOVFOTO

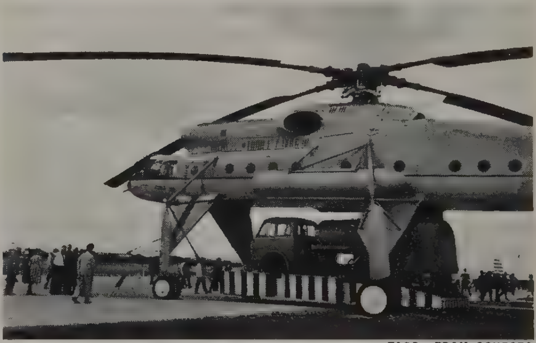
SOVIET AIRPOWER ON DISPLAY

Domodedovo Airport, 30 miles south of Moscow, was the site of the July 1967 air show held in honor of the Soviet Union's Aviation Day holiday. In addition to many new military aircraft, the show featured jet transports of a type to be used in the proposed Moscow-New York air route.

Strategic bomber, powered by four jet engines, dwarfs other military aircraft lined up with it at the July air show.

TASS, FROM SOVFOTO

(*Below*) Gas-turbine MI-10 helicopter is large and powerful enough to airlift heavy loads, such as a small tank truck.



TASS, FROM SOVFOTO

98,462 feet; and a flight over a 500-km closed course at 1,820 mph.

(8) A Yak-28P twin-engine, all-weather interceptor. It is a follow-on model to its predecessor, the Yak-28 Firebar, which was first shown at the Tushino air show in 1961. Larger and longer than the Yak-28, the two-man Yak-28P carries air-to-air missiles under each wing.

(9) A Mikoyan E-166 high-altitude, high-speed experimental aircraft that was shown publicly for the first time at the 1967 air show (although the Soviets claimed three world speed and altitude records for it in 1961). The records claimed were altitude in horizontal flight—74,380 feet; speed over a 15/25 km course—1,446 knots; and speed over a 100-km closed course—1,295 knots; Its TRD Mk. R.166 engine is rated at 22,000 pounds of thrust.

(10) A Sukhoi Mach 2.8 twin-engine interceptor with a rectangular box-type inlet on either side of the fuselage.

(11) A Tupelov follow-on to the Fiddler all-weather, twin-engine, long-range interceptor that can carry two air-to-air missiles under each wing.

(12) A Beriev Be-30 high-wing, twin-turboprop transport with a cruise speed of about 285 mph.

F-111. On May 10, General Dynamics Corporation received a $1,820,000,000 contract from the Defense Department to build the basic airframes and some electronic equipment for 493 F-111 aircraft. The variable-sweep-wing jet was designed as a two-service (Air Force and Navy) plane. However, advances in Soviet tactical aircraft—revealed in the Moscow air show—added fuel in 1967 to continued Navy opposition to procurement of the F-111B and triggered alternate design proposals to replace it. The F-111B could not meet the Navy's needs as a fighter against a threat posed by some advanced Soviet aircraft, according to a study developed at the Navy's request by the Grumman Aircraft Engineering Corp. Firms proposing alternate designs included Grumman, McDonnell Douglas, North American Rockwell, and Ling-Temco-Vought. A further blow to planned use of the F-111 design came in early 1968 as Britain canceled its planned purchase of 50 F-111K aircraft to save an estimated $960 million in 10 years.

BACTERIOLOGY

New discoveries in the field of bacteriology (microbiology) continued at a rapid rate in 1967. A few of the more important developments are described in this article.

Antibiotics. Although new antibiotics were discovered in 1967, greater attention was given to the preparation of more effective derivatives of known drugs and also to the elucidation of the mechanism of antibiotic action. Even though intensive studies have been made in the past on the antibiotic penicillin, its mode of action still remains obscure. It appears, however, that the drug acts by interfering with a step in the synthesis of a particular component (murein) of the bacterial cell wall.

Viruses and Tumors. Because cancer cells are unable to regulate their cell division, and since this characteristic is inherited, it seems that a genetic change results when normal cells are transformed into cancer cells. However, there has been some question as to whether virus-induced tumors result from the addition of genetic material, from mutations (changes in the genetic material), or from the deletion of genetic material. Recent experiments provide strong evidence that the change is due to the addition of genetic material to the normal cell from the virus.

Microbial Insecticides. Many insect pests have been found to be susceptible to certain microorganisms that are not harmful to plants or beneficial insects. The pine caterpillar, for example, has been successfully controlled in some forests by spraying viruses from a helicopter at a rate of 100 billion viruses per hectare (one hectare equals about 2½ acres). Similar results have been obtained from experimental use of microorganisms for controlling insects on cotton, citrus trees, and cabbage crops. Experiments have also been successful in destroying houseflies and mosquitoes. Although the use of microbial insectides may eventually be of great value, more comprehensive studies are necessary before they can become of general use.

Interferon. Interferon is a substance that is produced by normal cells in response to invasion by a virus. Although interferon was discovered in 1957, it was not until 1967 that important discoveries were made concerning how it works and how cells are stimulated to produce it. Interferon works by first binding itself firmly to the surface of the host cell (virus) and then inhibiting the cell from synthesizing the enzyme polymerase, an enzyme necessary for the synthesis of nucleic acids. The antiviral action of interferon can be destroyed by another enzyme, trypsin, and by the hormone insulin, and scientists are trying to determine whether the action of interferon can be affected by other substances.

Microbial Genetics. Scientists have now isolated bacterial proteins that act as regulators to turn genes on and off according to the cell's needs or activities. One of these proteins controls the action of genes that are involved in the bacterial breakdown of lactose (a milk sugar). Another recently isolated protein controls the genetic instructions that prevent a virus from destroying a host cell.

Microorganisms as a Food Source. Recent investigations indicate that certain microorganisms eventually may serve as a useful source for increasing the world's supply of protein-rich foods. It has been found that some high-protein algae grow so rapidly that they may yield 10 times as much per acre as can be produced by conventional agriculture. One such alga, *Spirulina*, has a protein content of 60% to 70%, more than that of most other foodstuffs. It is also rich in vitamins. One of the aspects that needs further improvement is the digestibility of the dried algal product. (See also BIOCHEMISTRY.)

Oxygen-Free Laboratory. At the National Heart Institute in Bethesda, Maryland, a laboratory has been built to permit the large-scale isolation, cultivation, and biochemical study of anaerobic microorganisms, organisms that cannot grow in the presence of air. Some anaerobes are responsible for producing certain diseases, such as gas gangrene, tetanus, and botulism. Others are important because they produce large amounts of vitamin B_{12} and related substances.

BALTIMORE

A new Democratic mayor, another record budget, and trouble in the public schools made headlines in Baltimore in 1967. Noticeably absent from the local news were racial disorders such as those that plagued many American cities during the summer.

Elections. Thomas D'Alesandro III, a Democrat, was elected mayor in the municipal elections. He succeeded Republican Theodore R. McKeldin, who retired from public office after two separate terms as mayor, having served two terms in the interim as governor of Maryland. D'Alesandro, who had been city council president for the last four years, takes up an office held by his father for three terms (1947–59). Democrats, as usual, won all the city council seats.

Public Finance. Baltimore adopted a record $537 million budget for the 1968 fiscal year, beginning in July. The city lowered its property tax slightly and eliminated the 1% earnings tax imposed the previous year as an emergency measure. This was made possible by a revised, graduated state income tax, which permits each county and Baltimore city (which ranks as a county) to add a local surtax of up to 50% of the state tax. The city exercised this option in full; most counties did not.

Education. The National Education Association, at the instigation of the Baltimore Public School Teachers Association, imposed partial national "sanctions" on the city's school system, warning prospective teachers and business and industry of deteriorating inner-city schools and inadequate financial support. In spite of its more aggressive attitude, the PSTA was defeated by the militant Baltimore Teachers Union in a representation election. The school budget adopted for the 1968 fiscal year represented the largest percentage increase (25.4%) in the city's history.

Race Relations. Baltimore's city population (1967 est.: city, 910,000; metropolitan area, 1,990,000) was 42% nonwhite in 1967. Baltimore had none of the serious disorders and racial riots experienced by many other cities. A crash summer employment program aimed primarily at Negroes was carried out. The city council approved a unique self-help housing program, devised by poverty-area residents, that provides for neighborhood sanitation inspectors, stepped-up refuse removal, "tool pools" to lend out at nominal rentals tools for home repairs, and landlord-tenant councils. The liquor board adopted a policy of revoking the license of any bar found guilty of discrimination.

Transportation. Long-delayed work on the Baltimore expressway program began again, on the southern leg of the Jones Falls (north-south) Expressway, and land and building condemnation was begun for the East-West Expressway.

Construction. Charles Center development neared completion with the opening of the huge 17-story Federal Building with about 500,000 square feet of office space, a new hotel, and the $4.2 million Morris Mechanic legitimate theater. Downtown high-rise apartments, dominated by twin towers in Charles Center, continued to spring up. Development of the inner harbor, which juts into the heart of the city, was begun, with initial emphasis on a new Port Authority building and a large building to house the Maryland Academy of Sciences.

DUDLEY P. DIGGES
Baltimore "Evening Sun"

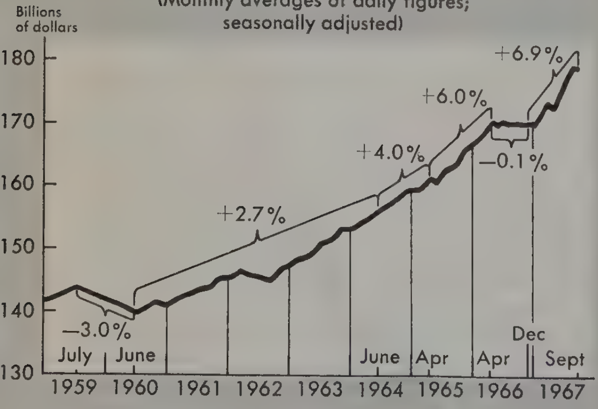
BANKING

The sustained U. S. economic expansion that began in 1960 entered its seventh year in February 1967 and continued through the year. The nation's central bank, the Federal Reserve System, pursued an expansive monetary policy in 1967. This was in contrast to 1966, when the System had actively engaged in anti-inflationary restraint until shifting its policy as inflationary pressures abated during the late fall.

In the last quarter of 1967 a renewal of inflationary conditions appeared in prospect. Although the Federal Reserve discount rate was raised from 4% to 4½% on November 20, Reserve System spokesmen voiced their intention of avoiding "excessive" monetary restraint, and the System maintained its policy of moderate ease. Apparently the System expected that the developing inflationary potential would be contained through timely fiscal policy actions—that is, an income tax increase effective in 1968, coupled with reduction in federal expenditures.

Monetary Policy in 1967. The expansive monetary policy was evidenced in March 1967 by a two-step reduction in reserve requirements on passbook savings accounts and on the first $5 million of time deposits at member banks. These actions released almost $1 billion in commercial bank reserves, about two thirds of which accrued to the nation's smaller (that is, country member) banks. In April the Federal Reserve banks' discount rate was lowered from 4½% to 4%.

U.S. MONEY SUPPLY
(Monthly averages of daily figures; seasonally adjusted)



Percentages are annual rates of change between periods indicated.

Source: Federal Reserve Bank of St. Louis

These policy actions were preceded and followed by open-market operations (Federal Reserve purchases and sales of U. S. government securities as part of its monetary stabilization policy) that provided the country's banking system with ample reserves to generate, through lending and investing, a substantial increase in money supply (demand deposits). The increase in reserves also permitted commercial (member) banks to reduce their borrowings from the Federal Reserve banks. These borrowings had reached historically high levels in 1966, but in the spring of 1967 they declined to the lowest level since the fall of 1962. Member bank borrowings continued to decline in most of the rest of the year, moreover, and from March until October the system operated with an increasing margin of net free reserves. This was in contrast to the large net borrowed reserve position imposed on it by monetary restraint during all of the preceding year.

[1] Includes 13,762 commercial banks and 504 mutual savings banks as of January 1967. (Source: Board of Governors of the Federal Reserve System.)

Money Supply and Bank Credit Expansion. Monetary expansion was rapid in 1967. Member bank reserves—a key monetary variable, including both deposits at Federal Reserve banks and cash in vault and providing a base for both bank credit and the money supply—increased at an 11% annual rate during the first nine months of the year. This compared with a 5% annual average rate of growth in the 1964–66 period, and a longer-run trend rate of 3% from 1957 to 1964. Member bank reserves are largely generated by increases in Federal Reserve bank credit flowing from expansive Federal Reserve open-market operations. This credit, adjusted for the changes in reserve requirements in March, increased at an annual rate of 16% over the first three quarters of 1967.

The nation's money supply—privately owned demand deposits and currency outside banks—remained virtually constant in 1966, mirroring central bank policies of monetary restraint then in effect. The Federal Reserve's move toward ease late in that year, however, was followed by a sharp upturn in money supply beginning early in 1967. The rate of increase in the money supply for the first nine months of 1967—about 7% on an annual basis—was the fastest rate of increase for any 9-month period in over 20 years. In contrast, the money supply grew 4% annually from 1964 to 1966, and its longer-run trend rate growth from 1957 to 1964 was 2%.

Usually, the country has experienced a substantial acceleration in private (consumption and investment) spending within a few months after a marked and sustained money-supply increase such as occurred in the first nine months of 1967. The expectation of such a step-up in private spending, plus the known difficulties of reducing public spending, underlies the many inflationary prognoses for 1968 that have been advanced.

Commercial Bank Loans and Investments. Creation of money by commercial banks through lending and investing rose sharply in 1967. For example, from December 1966 through August 1967, total commercial bank credit rose at a 14% annual rate. By comparison, there was essentially no increase in this credit from July through December 1966, and its average annual rate of increase was only 7% from 1957 to 1966.

Bank loans rose by 7% in the first four months of 1967. Starting in May, however, when business activity began to quicken, the earlier rate of increase almost doubled. Even so, bank reserves increased faster than customer loan demand. (As noted earlier, Federal Reserve Bank credit rose at an annual rate of 16%.) Consequently, much of the sharp 1967 rise in bank credit centered in bank net purchases of securities. Bank investment portfolios increased substantially, at a rate over three times as high as their 3% growth rate from 1957 to 1966.

Over three fourths of the increase in bank investments occurred in the investment category of "other [than U. S. government] securities," and consisted almost entirely of the income-tax-free issues of state and local governments and their instrumentalities. Banks reaching out for income preferred these securities because of their tax and yield advantages over U. S. government issues.

Interest Rates. The prime rate, the interest rate at which the nation's largest banks lend to their biggest and best short-term business borrowing customers, reached 6%—a historically high level—in August 1966. Two 0.25% reductions, in January and March 1967, reduced it to 5.5%, a level at which it remained until November 20. (Then, as noted earlier, the Federal Reserve discount rate was raised, and the prime rate moved back to 6%.) As a result, banks' borrowing customers were accommodated at somewhat lower rates than in 1966. More important, however, most were readily accommodated in 1967 because loanable funds were abundant. In contrast, the "tight money" conditions of 1966 had resulted in many borrowers—especially small businesses and persons wanting mortgages—being "frozen out" of the banks.

Open-market money rates declined sharply over the earlier part of the year, but then began a steep upward rise again. Yields in the various maturity ranges, however, changed significantly. Short-term yields (on 91-day Treasury bills, for example) are most directly affected by bank credit expansion; and in 1967 until almost year-end, these yields remained below 1966 peak levels. Long-term yields (such as those on corporate and government bonds), on the other hand, are heavily influenced by market expectations of future rates. Long-term yields in 1967 moved above their 1966 peaks as the market built 1968's inflationary outlook into the term structure of interest rates.

BAPTIST CHURCHES

Baptist churches throughout the United States have the largest total membership of any single Protestant denominational group in the country. In 1967 the *Yearbook of American Churches* noted 29 autonomous Baptist bodies, whose membership represents about one third of all American Protestants. The Southern Baptist Convention is the largest Baptist group. Ranking next in size is the National Baptist Convention, U. S. A., Inc., followed by the National Baptist Convention of America and the American Baptist Convention.

AMERICAN BAPTIST CONVENTION

The American Baptist Convention, which was known until 1950 as the Northern Baptist Convention, represents a total of 6,164 Baptist churches in 47 states. The convention maintains its national offices at Valley Forge, Pa. It is affiliated with the Baptist World Alliance, the National Council of the Churches of Christ in the U. S. A., and the World Council of Churches.

Missionary and benevolent work and Christian education in the United States, Africa, Asia, and Latin America are conducted by the convention through 5 national societies and boards, 37 state conventions, and 13 city societies. This work is supported by contributions (amounting to $15.6 million in 1968) from Baptist churches to the American Baptist Mission budget, representing the interests of all Baptist agencies, plus about $7 million from other sources. In addition, a world mission campaign is being conducted in 1966–68 to raise $20 million for the capital needs of home and overseas missions.

At the convention's annual meeting in May 1967, held in Pittsburgh, Pa., L. Doward McBain, pastor of the First Baptist Church, Phoenix, Ariz., was elected president of the body for the year 1967-68.

Church periodicals include *Mission* and *Crusader*, both published in Valley Forge, Pa.

Edwin H. Tuller
American Baptist Convention

SOUTHERN BAPTIST CONVENTION

The Southern Baptist Convention is the largest body of Baptists in the United States. In 1966 it had a total of 33,949 churches in 50 states. At the 1967 convention held in Miami Beach, Fla., H. Franklin Paschall, pastor of the First Baptist Church, Nashville, Tenn., was reelected president.

The 73 Southern Baptist educational institutions reported a 1966–67 enrollment of 102,250 and endowments of $137,501,144. Six seminaries—at Louisville, Ky.; New Orleans, La.; Fort Worth, Texas; Mill Valley, Calif.; Wake Forest, N. C.; and Kansas City, Mo.—enrolled 4,912 students. The American Baptist Theological Seminary for Negroes, at Nashville, Tenn., had 61 students.

The convention's 32 children's homes cared for 4,283 children and owned property valued at $39,529,660. It also supported 2,208 foreign and 2,165 home missionaries. The annuity board reported 54,000 members, with assets of $169 million.

Executive committee officers of the convention are in Nashville, Tenn. The Baptist Sunday School Board, also in Nashville, published and distributed 45 million copies of 44 quarterlies, and 28 million copies of 9 monthly publications.

Porter Routh
Southern Baptist Convention

BARBADOS

The Caribbean island of Barbados completed its first year as an independent nation on Nov. 30, 1967, and during the year asserted itself on the international scene. A member of the United Nations since December 1966, it became in October 1967 a member of the Organization of American States. As a member of the Commonwealth of Nations, Barbados received with pleasure the announcement by Queen Elizabeth of the appointment in May of the first native governor-general, Arleigh Winston Scott. On Barbados Day (Sept. 21, 1967) at Expo 67 in Montreal, Prime Minister Errol W. Barrow delivered the principal address, in French, showing his nation's concern for its international role.

The College of Arts and Science, the Barbados division of the University of the West Indies, graduated its first class in February 1967. The college was established, and the first students registered, in 1963.

Internationl Conferences. Barbados was the site of several international conferences in 1967. These included meetings of the Caribbean Shipping Council, the Caribbean Meteorological Council, the first Caribbean Family Planning Seminar, the sixth conference of the Caribbean Association on Mental Health, and the West Indian and Commonwealth delegates who gathered to discuss the crisis created by Anguilla's announcement of withdrawal from its union with St. Kitts and Nevis.

Economy. Barbados' small area is forced to support a population that is now estimated at nearly a quarter of a million (with a density of 1,465 persons per square mile, or 572 per sq km) and is growing at a net annual rate of about 2%. Sugar is the mainstay of the economy, as it has been for more than 300 years. Tourism, the second industry, continues to increase its contribution to the economy, which showed a growth of more than 5% in the gross national product during 1967.

BARBADOS • Information Highlights

SOUTH AMERICA

Area: 166 square miles (430 sq km).
Population: 245,000 (July 1, 1966 est.).
Chief City (1960 census): Bridgetown, the capital, 11,452.
Government: *Governor-General*—Arleigh Winston Scott (appointed May 1967); *Prime Minister*—Errol Walton Barrow (took office for 2d 5-year term, Nov. 3, 1966). *Parliament*—Senate, 21 members; House of Assembly, 24 members (party seating, 1967: Democratic Labour party, 14; Barbados Labour party, 8; Barbados National party, 2).
Religious Faiths: Anglicans, 70% of population.
Education: *Total school enrollment* (1964)—55,011 (primary, 39,173; secondary, 15,431; higher, 407).
Finance (1964–65 est.): *Revenues*, $18,949,000; *expenditures*, $19,272,000; *public debt*, $20,200,000; *monetary unit*, East Caribbean dollar (2.0 EC dollars equal U. S.$1 as of Nov. 21, 1967).
Gross National Product (1964): $97,000,000.
National Income (1964): $83,000,000.
Cost of Living Index (1965) 112 (1958=100).
Manufacturing (metric tons): Sugar (1966–67), 211,000.
Crops (metric tons, 1964–65 crop year): sugarcane, 1,991,000.
Foreign Trade (1966): *Exports*, $40,122,000 (chief export, 1965: cane sugar, $19,490,000); *imports*, $76,400,000.
Transportation: *Roads* (1966), 840 miles (1,352 km); *motor vehicles* (1965), 14,884 (automobiles, 11,391).
Communications: *Telephones* (1966): 15,628; *TV sets* (1965), 6,000; *radios* (1965), 43,000; *newspapers* (1965), 2.

During the year the government revised the Hotel Aids Act and the Pioneer Industries Act to provide additional incentives for building hotels and establishing new industries. The United Nations Fishery Project started to train West Indian fishermen, who, it is hoped, will contribute to a Caribbean-based fishing industry.

University of Puerto Rico

BELGIUM

The general slowdown of economic activity in western Europe spread to Belgium in 1967. Domestic demand was down, exports fell off, and the influx of foreign investments declined. Industrial growth came to an almost complete halt. In 1964 the government had begun to impose restraints to curb the inflationary boom, but wages and prices continued to rise into 1967. Unemployment, chiefly localized because of labor immobility, was higher.

Domestic Affairs. Belgium came out of World War II with its industrial plant relatively intact. The nation was able to attain postwar prosperity without modernizing its plant, but by 1967 the economy was in trouble. Industry has been slow to adopt modern managerial attitudes; industrial costs are relatively high and productivity relatively low; and less money is spent on research than in any other major western European country.

The hard-hit coal industry continued to decline in 1967, and more uneconomical mines were scheduled to be closed. It is alleged that poorly planned regional industrial policies were the consequence of giving undue consideration to balancing advantages between Belgium's two feuding linguistic groups—the Flemings and the Walloons. Foreign enterprises tend to locate in the Flemish north, with its superior transportation system, although they are offered incentives to locate in the Walloon south, where unemployment is high because of mine closings.

In April 1967 parliament gave the government of Paul Vanden Boeynants special powers to stimulate investment and industrial restructuring, to speed up regional development programs, and to improve the budgetary position through tax increases and reductions in expenditures. The bank interest rate was lowered four times during the year. The Fund for Economic Expansion and Regional Reconversion went into operation on July 1.

Belgium's socialized medical services again came under hard scrutiny. An error in a Brussels pharmaceutical house resulted in the deaths of at least 20 cancer patients in a clinic of a type already under severe criticism by Belgian doctors.

In a national disaster of major dimensions, over 300 persons were killed or injured on May 22 when a fire swept L'Innovation, Brussels' second largest department store.

Foreign Affairs. Relations with the former Belgian Congo reached a low point in the summer of 1967. At the end of 1966 the Congolese government took over the assets of Union Minière du Haut Katanga, allegedly because the company refused to transfer its headquarters from Brussels to the Congo and thus bring its operations fully under Congolese law. Shortly after the kidnapping of Congolese ex-

BELGIUM • Information Highlights

Area: 11,781 square miles (30,513 sq km).
Population: 9,499,234 (Dec. 31, 1966, est.).
Chief Cities (1965 est.): Brussels, the capital, (met. area), 1,065,921; Antwerp, 243,426; Ghent, 157,834; Liège, 155,420.
Government: *King*—Baudouin I (born 1930; acceded 1951); *Premier*—Paul Vanden Boeynants (took office March 19, 1966). *Parliament*—Chamber of Representatives, 212 members (party seating, 1967: Christian Social, 77; Socialist, 64; Freedom and Progress, 48; Flemish People's Union, 12; Communist, 6; others, 5); Senate, 151 members (party seating, 1967: Christian Social, 76; Socialist, 25; Freedom and Progress, 40; Flemish People's Union, 5; others, 5).
Religious Faiths: Roman Catholics, 95% of population.
Education: *Total school enrollment* (1964)—1,811,625 (primary, 967,124; secondary, 300,406; teacher-training, 24,840; technical, 443,766; university, 75,489).
Finance (1966 est.): *Revenues*, $4,019,890,000; *expenditures*, $4,361,638,000; *public debt*, $10,059,940,000; *monetary unit*, franc (50 francs equal U. S.$1).
Gross National Product (1966): $18,109,890,109.
National Income (1966): $14,305,694,205; average annual income per person, $1,611.
Economic Indexes (1966): *Industrial production*, 150 (1958=100); *agricultural production*, 130 (1956–57=100); *cost of living*, 120 (1958=100).
Manufacturing (metric tons, 1966): Crude steel, 8,916,000; cement, 5,796,000; gasoline, 2,207,000.
Crops (metric tons, 1966–67 crop year): Sugar beets, 2,643,000; potatoes, 1,047,000; wheat, 660,000.
Minerals (metric tons): Coal (1966), 17,508,000; lime (1965), 2,291,082; quartz and quartzite (1964), 304,572.
Foreign Trade (including Luxembourg; 1966): *Exports*, $6,830,000,000 (chief exports, 1965): iron and steel, $1,143,858,000; textile yarn, $591,082,000; *imports*, $7,174,000,000 (chief imports, 1965: road motor vehicles, $531,678,000; nonindustrial diamonds, $228,584,000). *Chief trading partners* (1965): West Germany (took 21% of exports, supplied 19% of imports); France (took 14% of exports, supplied 12% of imports).
Transportation: *Roads* (1964), 58,036 miles (93,397 km); *motor vehicles* (1965), 1,572,720; *railways* (1965), 2,760 miles; *national airline*, Sabena; *principal airport*, Brussels.
Communications (1967): *Telephones*: 1,665,508; *TV stations*, 16; *TV sets*, 1,700,000; *radios* (1965), 3,026,000; *newspapers* (1965), 54 (circ. 1,701,000).

Premier Moise Tshombe on June 30, 1967, white mercenaries and Katangese forces in the Congolese Army mutinied. Although some of the mercenaries and their leader were Belgians, the Brussels government condemned their activities. In the ensuing wave of anti-Belgian feeling, 25 Belgians were killed. The Brussels government formally charged the Congolese authorities with direct responsibility for the sacking of the Belgian embassy in Kinshasa.

From all sides there was pressure on the government to end assistance to the Congo. On July 28 the premier announced the cutting off of all military aid, amounting to $3.6 million annually, except for the training of Congolese officers in Belgium. All Belgian judges sitting in Congolese courts were withdrawn. It was also announced that Belgium would seek to put its technical aid into a multilateral framework, but this would depend on the cooperation of international agencies. On August 28 the government decided to hold up most of its technical assistance until the safety of personnel was guaranteed by the Congo. On October 27, Belgium announced that the Kinshasa government had met these demands and that the aid program was being restored.

Supreme Headquarters, Allied Powers, Europe (SHAPE) on March 31 opened its military headquarters at Casteau, Belgium, after its expulsion from France. Political headquarters of NATO were opened at Evere, a suburb of Brussels, on October 15. Eventually, permanent headquarters buildings will be constructed on the site of the 1958 Brussels Fair. (See also NORTH ATLANTIC TREATY ORGANIZATION.)

The executive commissions of the EEC, Euratom, and ECSC were merged on July 1. The new commission has its headquarters in Brussels. (See also EUROPE.)

Belgium has agreed to join with West Germany and the Netherlands in a $100-million project to build a fast breeder nuclear reactor capable of generating 300 megawatts of electric power.

BIOCHEMISTRY

Biochemists, striving to understand life processes in terms of the complex interactions of the atoms, molecules, and compounds that make up a living organism, have broadened the frontiers of their science and gained exciting and stimulating knowledge in this field. In 1967 many imaginative and ingenious approaches were used to advance man's understanding of living systems.

Nucleic Acids and Protein Synthesis. Within the past decade, the most concentrated efforts of biochemists have been directed toward determining the mechanisms of gene action, the subsequent synthesis of proteins, and the regulation of these processes. From these studies came the understanding that in addition to a protein's primary structure—the unique structure that each protein possesses as a result of its amino acid composition—the characteristic folding of a biologically active protein is essential and critical for each protein. In studies at Princeton University, biochemists in the laboratory of J. R. Fresco have shown that the biological activity of transfer RNA (tRNA) molecules, the nonprotein nucleic acid molecules important in the assembly of proteins, also depends on their unique stereochemical conformation (that is, the spatial arrangement of the molecule's components).

Important progress has been made in deciphering nucleotide sequences of tRNA molecules. At the University of Wisconsin, U. L. Raj Bhandary and H. G. Khorana have worked out the nucleotide sequence of the type of tRNA known as phenylalanine tRNA, the molecule that recognizes the nucleotide triplet (called a codon) for the amino acid phenylalanine on the messenger RNA molecule. Although this was not the first nucleotide sequence to be established for tRNA molecules, this work allows a comparison of the sequences of tRNA molecules with different specificities. It should now be possible to determine those sequences that are common to all tRNA molecules as well as those that are unique for each particular molecule.

Studies of protein synthesis have also shed some light on one of the most perplexing problems in nutritional biochemistry—the action of vitamin D. This vitamin has long been known to increase the absorption of calcium and phosphorus in the small intestine and to play a role in the mobilization of bone salts, releasing calcium and phosphorus into the blood. It also is involved in the reabsorption of phosphorus in the kidneys. For many years, there appeared to be no direct action on any known specific biochemical system, but in 1967 Hector DeLuca discovered that a metabolically active form of vitamin D induces the selective reading of a particular nucleotide sequence of DNA to form a specific messenger RNA. This messenger RNA is coded for producing proteins necessary for calcium transport systems and mineral mobilization from bone.

Some experiments on protein synthesis in 1967 involved work concerning the complex functioning of the brain. Bernard Agranoff, who worked with goldfish, and F. J. Barondes, who worked with rats, showed that substances that inhibit the synthesis of protein may interfere with memory, causing an animal to forget what it has learned.

One of the most interesting discoveries concerning nucleic acids stemmed from work on scrapie, an infectious disease of sheep. Scrapie has been known to be caused by an agent with unusual properties, but generally assumed to be a small virus. The experiments of Tikvah Alper showed that the scrapie agent, although capable of self-duplication, does not contain nucleic acid. While a plausible explanation may soon be forthcoming, some scientists fear that the whole theoretical structure of molecular biology may come tumbling down. Although these fears are probably unfounded, an elucidation of the nature of the scrapie agent will be a valuable addition to the understanding of fundamental biochemical principles.

Biochemical Technology. Advances in analytical instrumentation often allow biochemists to obtain powerful tools for studying living systems. B. E. Knox and F. J. Vastola, both of Pennsylvania State University, have coupled a laser microprobe with a time-of-flight (TOF) mass spectrometer. The laser allows the biochemist to vaporize an area of tissue as small as 100 square microns, and the mass spectrometer then analyzes the chemical components of the sample. Using this device, biochemists can determine the precise location of different molecules within a tissue and can study changes in the amount and location of molecules within very small areas.

A recent development in gas chromatography has offered a solution to a problem that has plagued analytical biochemists for years. C. W. Gehrke and D. L. Stalling at the University of Missouri have developed a method for analyzing all of the 20 naturally occurring amino acids, using gas liquid chromatography (GLC). This new technique involves preparing derivatives of the amino acids, separating them in a GLC instrument with temperature programming, and identifying them by a flame ionization detector. With this method, biochemists can rapidly and quantitatively determine the amino acid composition of much smaller samples than has previously been possible.

Search for Future Food Supplies. For many years biochemists have studied ways in which protein-rich microorganisms could be produced in large quantities and be made nutritious and palatable. The urgency of world food needs and the substantial progress toward the use of microorganisms as a food supply resulted in the International Conference on Single Cell Protein, which was held in October at the Massachusetts Institute of Technology.

This conference brought together biochemists, toxicologists, economists, nutritionists, and scientists in other related fields to discuss the remaining difficulties confronting those involved in making single-cell proteins a valuable addition to the world's food supply. The conference stressed the fact that microorganisms are good sources of high-quality protein and that they have the ability to convert inexpensive sources of energy and nitrogen into protein without using agricultural land or any products of agriculture. The present problems confronting scientists concern the industrial production, the flavor, and the possible toxicity of the microorganisms.

LONDON DAILY EXPRESS

LONDON DAILY EXPRESS

SIR FRANCIS CHICHESTER, having sailed alone around the world in the 53-foot ketch *Gipsy Moth IV*, arrived (above) in Plymouth, England, May 28.

BOATING

Pleasure boating continued its rapid expansion in 1967. At the end of the year there were 8,275,000 pleasure boats of all types in the United States, compared with about 8,000,000 at the beginning of 1967. The number is expected to total over 8,500,000 by Jan. 1, 1969. Fishing, cruising, water skiing, and hunting, in that order, continued, as in the past five years, to be the major activities that have led to boat ownership.

Sales. The pleasure boating industry registered a 5% retail business increase in 1967 over 1966, bringing sales to over $3 billion for the first time in the history of the industry. Manufacturers' sales of both inboard and outboard boats, outboard motors, and inboard engines held about steady or showed a slight loss. The major sales increases occurred in inboard-outdrive powered boats, boat trailers, hardware, and accessories, all of which rose about 10% over the previous year.

Unit sales in each product category, however, still lagged behind the record levels of 1961. Increased emphasis on service and the sale of replacement parts and used equipment raised dealer incomes to record highs in 1967. Nevertheless, profits remained steady because of the increased costs of transacting business.

Of special significance was the increased interest manifested in air-conditioning units for boats, houseboats, and allied water sports equipment. More than 40,000 canoes and 37,000 sailboats of all sizes were sold in 1967, reflecting slight gains over 1966. Outboard motor sales totaled 444,000 units; outboard boats, 260,000 units; boat trailers, 160,000 units; and houseboats, more than 1,000 units. At the same time, 36,000 inboard-outdrive boats and 36,000 inboard boats were sold. The sales of inboard-outdrive power plants increased from 40,000 in 1966 to 46,000 in 1967. Industry authorities predicted that there would be a 50,000-unit market in 1968.

Industry Trends. Diversification among boating retailers to combat the seasonal slumps in the business continued, with major activity in investments in snowmobiles and snowmobile equipment and in mobile campers and camper equipment. Considerable activity, however, was evident in the areas of nautical clothing, surfside restaurants, nautical giftwares, and fishing gear.

SIR FRANCIS CHARLES CHICHESTER, British yachtsman, aviator, and author, made a 28,500-mile solo journey around the world in a 53-foot ketch. He left Plymouth, England, on Aug. 27, 1966, and reached Sydney, Australia, on Dec. 12, after 107 days at sea. He returned by way of Cape Horn in 119 days, arriving in Plymouth, England, on May 28, 1967. Although others had sailed alone around the world, the 65-year-old Chichester had sailed farther and in less time than any other man in nautical history.

Sir Francis was born in North Devon, England, on Sept. 17, 1901. At an early age he piloted airplanes. He flew solo from Croydon, England, to Sydney in 1929; the next year he made the first long-distance seaplane flight—across the Tasman Sea from New Zealand to Australia. Among his many publications are *The Lonely Sea and the Sky* (1964) and *Along the Clipper Way* (1966). Early in 1967 he was designated a Knight Commander of the Order of the British Empire, and on July 7 he was dubbed a knight.

Fiber glass continued to be the predominant boat-building material, with aluminum a strong contender for use in such smaller boats as canoes, rowboats, prams, and runabouts. The trend continued strong in 1968 models toward an increased use of chrome and upholstery, wall-to-wall waterproof carpeting, and builder-installed accessory items. Added emphasis on engineering and safety was also evident in most of the new models.

Jet-drive boats continued to receive wide acclaim, although only 1,000 were sold in 1967. Improved engineering has overcome most of the problems associated with this type of power, and it is being gradually accepted.

A shortage of berthing facilities still exists in some places, despite the rapid increase in marina facilities.

With local, state, and federal pressures increasing to stop the pollution of boating waters, considerable improvement can be expected in this area within the next year or so. Some federal action on product safety and boat operation is also likely.

CHARLES A. JONES
Editor, "Boating Industry"

BOLIVIA

Stability, always tenuous in this high Andean country, was severely shaken during 1967. Strikes in the economically vital tin mines, harassment from powerful student unions, and continuing attacks from guerrilla bands in southeastern Bolivia plagued the new government of René Barrientos Ortuño. By the end of the year, however, these problems seemed somewhat under control, and the economy was pushing ahead.

Guerrillas. About March 23, the Bolivian government discovered the presence of a well-armed band of guerrillas in the southeastern jungles near Sucre. It was suspected and later confirmed that the forces, which called themselves the National Army of Liberation and numbered about 50 men, were led by the Argentine-born Cuban revolutionary leader Ernesto (Che) Guevara. In several clashes which ensued between the well-trained guerrillas and the inadequate Bolivian forces, the guerrillas were victorious. On April 12 the Bolivian government outlawed the Communist party, and on June 7 it declared a state of siege.

The tide began to turn in mid-August, when government forces, reinforced by U. S.-trained troops, seized four arms caches and began a policy of encirclement of the guerrilla camps. By the middle of September, the guerrillas were known to be suffering supply shortages, and had switched to a defensive position.

Perhaps the most severe blow against the guerrillas was struck when Bolivian government forces claimed to have killed Guevara on October 9. Although the body reportedly was cremated almost immediately, proofs offered included witnesses, photographs, and fingerprints. Guevara's death was confirmed by Fidel Castro in Cuba on October 15, although a denial was issued by Guevara's family. By mid-November, the guerrilla band was almost entirely dissolved.

The Debray Affair. A French leftist intellectual and confidant of Fidel Castro, Jules Régis Debray, was arrested while unarmed and wearing civilian clothes in the guerrilla area on April 20. He claimed to be there solely as a journalist. Despite international protests and pleas for leniency, including one from French President de Gaulle, Debray was sentenced to 30 years in a Bolivian military prison on November 17 for his alleged participation as "murderer" in the guerrilla movement. The prosecution produced documents taken from Guevara indicating that Debray was acting as a liaison between Castro and Guevara.

Strikes and Demonstrations. Miners in the government-owned tin mines, apparently encouraged by the early success of the guerrillas, went on strike in protest against the rigid military control by the Barrientos government. The tin mines of Bolivia, among the world's greatest deposits of that metal, have been long-time centers of opposition to the government. By the end of the year, however, the mines were under military control and production was rising.

Students in a number of cities rioted during 1967. At year-end, students still held the right to demonstrate, with the understanding that the government would step in (as it did in La Paz and Cochabamba) if demonstrations got out of control.

Political Affairs. The coalition of 4 parties and 2 political factions making up the Bolivian Revolutionary Front (FRB), which brought Barrientos to power in 1966, had nearly dissolved by the summer of 1967, partly through disagreement over sections of a new Bolivian constitution, and partly through disapproval of Barrientos' strict military controls. On August 5, Barrientos named a new 3-party coalition cabinet. It was expected that the opposition would wait for the 1970 election campaigns.

Foreign Affairs. Barrientos pushed for Bolivian access to the sea in 1967, and received some encouragement from Chile and Peru. In February, Bolivia became a member of the Latin American Free Trade Association.

Economic Affairs. The economic climate of Bolivia was fairly good in 1967. Tin prices increased, while the demand for tin and other metals remained strong, causing total metal exports to rise. Foreign concerns continued to invest in Bolivia.

SOUTH AMERICA
AFRICA

Area: 424,162 square miles (1,098,581 sq km).
Population: 3,801,000 (July 1, 1967, est.).
Chief Cities (1965 est.): Sucre, the nominal capital, 58,549; La Paz, the seat of government, 366,487.
Government: *President*—René Barrientos Ortuño (took office Aug. 6, 1966); *Vice President*—Luis Adolpho Siles Salinas (elected July 3, 1966). *Parliament*—Senate, 27 members (party seating, 1967: Bolivian Revolutionary Front (FRB), 18; Christian Democratic Community (CDC), 8; Pazestenssorist Revolutionary Movement (MRP), 1); Chamber of Deputies, 102 members (party seating, 1967: FRB, 82; CDC, 19; MRP, 1).
Religious Faiths: Roman Catholics, 94% of population.
Education: *Literacy rate* (1960), 60% of population aged 10 and over. *Total school enrollment* (1965)—630,853 (primary, 526,883; secondary, 78,380; teacher-training, 6,109; technical, 8,391; higher, 11,090).
Finance (1965 est.): *Revenues,* $53,200,000, *expenditures,* $77,090,000; *monetary unit,* peso (11.88 pesos equal U. S.$1).
Gross National Product (1965): $792,000,000.
National Income (1965): $531,000,000; average annual income per person, $144.
Economic Indexes: *Industrial production* (1965), 139 (1958=100); *cost of living* (1966), 184 (1958=100).
Manufacturing (metric tons, 1965): Gasoline, 139,000; sugar (1966), 88,000; cement, 60,000; beer, 21,700.
Crops (metric tons, 1965–66 crop year): Cassava (1964–65), 174,000; barley (1964–65), 120,000; dry broad beans, 7,000.
Minerals (metric tons, 1965): Tin, 23,723 (ranks 2d among world producers); antimony, 8,766 (world rank, 3d); crude petroleum (1966), 39,240; lead ore, 17,500; zinc (exports), 13,700; silver (exports), 4,115,295 troy ounces.
Foreign Trade (1966): *Exports,* $147,700,000 (chief exports: tin, $93,300,000; silver, $6,600,000; lead, $6,400,000; tungsten, $5,100,000); *imports,* $130,500,000 (chief imports, 1964: wheat flour, $10,830,000; motor vehicles, $3,810,000). *Chief trading partners* (1965): U. S. (took 43% of exports, supplied 43% of imports); Britain (took 44% of exports, supplied 5% of imports).
Transportation: *Roads* (1964), 15,094 miles (24,291 km); *motor vehicles* (1965), 30,130 (automobiles, 16,504); *railways* (1965), 1,734 miles (2,790 km); *national airline,* Lloyd Aéreo Boliviano; *principal airport,* La Paz.
Communications: *Telephones* (1966): 25,235; *radios* (1965), 525,000; *newspapers* (1965), 9 (daily circulation, 95,000).

BOOK PUBLISHING

With an estimated sales increase of 10% over 1966, nearly $3 billion was spent by book purchasers in the United States in 1967. This figure represents a book sales increase amounting to almost $1 billion over the past five years. A report on 5-year trends in book sales was released by the American Book Publishers Council in late 1967. Translating these publishers' receipts into consumer purchases, the American public purchased $2 billion worth of books in 1963; by 1966 the gross national book product had risen to $2.7 billion.

There were book sales increases of 10% in 1964 and 1965, and in 1966 there was a sharp increase of 18%, reflecting what the council refers to as a "one time impact of new Federal education and library programs."

These upward trends are to be found in all segments of publishing—adult trade, juvenile, Bibles, technical, business, book clubs, mass-market paperbacks, and others. The number of titles published has gone up each year as have book prices. Titles published in 1967 (based for the first time on figures obtained by a new standard of computation) totaled 28,762, compared with 30,050 in 1966. Comparative figures for the two years in the major categories (with 1966 figures in parenthesis) were: fiction, 3,080 (3,018); religion, 1,864 (1,809); science, 2,367 (2,958); technical, 1,252 (1,333); juvenile, 2,711 (2,713); education, 905 (1,040).

Not only did the domestic market continue to rise, but overseas sales were equally strong. American publishers have been devoting much time to improving the foreign market through their own efforts and in collaboration with the government. A national policy statement on international book and library activities, approved by President Johnson on Jan. 4, 1967, and issued to all agencies concerned with the U. S. government's international book and library programs, has stepped up the effectiveness of the 6-year-old government advisory committee on international book programs.

Best Sellers. The character of any publishing year is highlighted by the nature of the various best-seller lists. In 1967 a number of exciting new titles appeared on the lists.

The 20 most sought-after books were: (fiction) *The Arrangement* by Elia Kazan, *The Chosen* by Chaim Potok, *Christy* by Catherine Marshall, *The Confessions of Nat Turner* by William Styron, *The Eighth Day* by Thornton Wilder, *The Gabriel Hounds* by Mary Stewart, *Night Falls on the City* by Sarah Gainham, *Tales of Manhattan* by Louis Auchincloss, *Topaz* by Leon Uris, and *Washington, D. C.* by Gore Vidal; (nonfiction) *Death of a President* by William Manchester, *Edgar Cayce—The Sleeping Prophet* by Jess Stearn, *Madame Sarah* by Cornelia Otis Skinner, *A Modern Priest Looks at His Outdated Church* by Father James Kavanaugh, *The New Industrial State* by John Kenneth Galbraith, *Nicholas and Alexandra* by Robert K. Massie, *Our Crowd* by Stephen Birmingham, *Paper Lion* by George Plimpton, *Too Strong for Fantasy* by Marcia Davenport, and *Twenty Letters to a Friend* by Svetlana Alliluyeva.

These books, appearing as best sellers for the first time in 1967, are listed alphabetically by title and represent a composite of national best-seller lists with no attempt to establish their relative standings. These books were of sufficient interest to the reading public to keep them near the top of the best-seller lists for a considerable length of time.

An outstanding feature of the 1967 publishing record was the increased number of art books, illustrated histories, biographies, and other expensive "coffee table" volumes.

Mergers. Several newsworthy mergers took place within the book industry. The most notable of these was the acquisition by a major communications giant, the Columbia Broadcasting System, of Holt, Rinehart & Winston.

Censorship. There were no spectacular censorship clashes at the state or federal level, although the 1967 crop of books produced, in the opinion of many observers, some of the most censorable titles yet to reach the bookstores.

Manufacturing. Book manufacturing facilities remained in short supply. Toward the end of 1967, however, the slackening on governmental textbook purchases brought about a sharp drop in plant activity. Book manufacturers experienced what they hoped would be only a temporary setback to the booming book economy.

JOSEPH A. DUFFY
American Booksellers Association

BOSTON

In a mayoralty contest which caught the attention of the nation, Kevin H. White defeated Mrs. Louise Day Hicks in the November 1967 elections. Mrs. Hicks, a member of the School Committee, who campaigned for repeal of the state law requiring Boston to achieve racial balance in its schools, encountered strong opposition from the Negro section of the city. White, who had served as Massachusetts secretary of state since 1961, finished second to Mrs. Hicks in a preliminary election in September which eliminated eight other candidates. He later secured the support of Sen. Edward Kennedy and business leaders, and won 54% of the vote.

Other Election Results. Boston (1965 est. pop.: city, 670,000; metropolitan area, 3,201,000) elected nine city councillors and five School Committee members in 1967. Among the five newcomers to gain seats on the City Council was Thomas Atkins,

BOSTON'S mayoralty race loser, Mrs. Louise Day Hicks, congratulates the winner, Kevin White, at the conclusion of a campaign that was marked by racial overtones.

UPI

the first Negro to be elected since the present system began in 1951. Three of the five school committeemen were newly elected. Although the election was nonpartisan, all those elected were Democrats.

Race Relations. Boston was the scene of serious Negro rioting on June 3–5. After police broke up a sit-in at the office of the city welfare department in the Grove Hall section of the Roxbury district by a group calling itself Mothers for Adequate Welfare, rioting flared through the predominantly Negro community. At least 68 persons were injured. Mayor John F. Collins granted some of the protesters' demands but refused to request the resignation of the welfare commissioner. The rioting subsided but discontent continued in the area over welfare, employment, housing, and education.

In spite of state law and the agreement between the School Committee and the state board of education to close two Negro schools and transfer the pupils (thereby releasing frozen state funds), six more schools become predominantly Negro in 1967. Of the 92,441 pupils enrolled in the city's public schools in October, 25,482 were nonwhite. During the year, the number of white pupils dropped by 1,091 while nonwhites increased by 1,405.

Urban Renewal. Boston's extensive urban renewal program moved ahead in 1967. The new City Hall neared completion in the Government Center. Demolition began in the waterfront area, and plans for the renewal of the central business district were accepted by the City Council. In the Fenway area, work continued on a large building project of the Mother Church of the First Church of Christ, Scientist. (see also CHRISTIAN SCIENCE.)

Economy. During the mayoralty campaign, attention was focused on the role of the port of Boston in the city's economy. Imports through the port rose sharply in 1966 to 7,111,054 tons, up almost 800,000 tons over 1965; but exports, at 494,649 tons, continued to decline, showing a decrease of more than 100,000 tons for the year.

The value of products manufactured in Boston in 1965 was $1,713,349,362, and total value for the 18 communities of the Greater Boston Industrial area was $3,733,661,026. Both figures showed increases over 1964. The number of employed production workers in September 1967 in the metropolitan area was 300,500, with average weekly earnings of $118.19.

Finance. In 1967 the city tax rate rose sharply from $101.80 (1966) to $117.80. The city budget was set at $165,315,854 for the 1967 fiscal year.

Newspapers. After over a century of publication, the Boston *Traveler* ceased operation in May. The closing of the *Traveler* left Boston with two afternoon papers and four morning papers.

Baseball. The dramatic finish of the 1967 American League pennant race whipped up this traditionally staid city into a near frenzy. The beloved Red Sox won the pennant on the final day of the season, but then lost to the St. Louis Cardinals in the 7th game of the World Series.

BOTANY

Subjects of investigation in this field in 1967 included employment of new techniques in biological experiments, the longevity of seeds, species survival, life on other planets, and the relationship between structure and function.

Taxonomy. The use of terpenoids, flavonoids, amino acids, enzymes, proteins, and other compounds has been demonstrated to be of value in helping to understand the relationships that exist between plants. A. J. Bendich and E. T. Bolton (*Plant Physiol., 42:* 959–967) have now demonstrated the use of the DNA-agar technique to measure the relatedness among higher plants (rye, wheat, barley, and others).

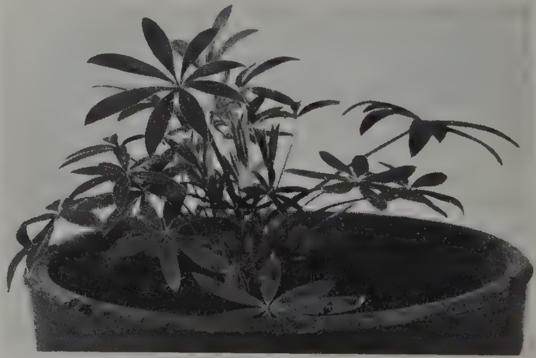
The interest in these types of investigations (chemotaxonomy or chemosystematics) has increased with the expansion of data from biochemical, immunochemical, and organic chemical research and with the development of relatively quick and simple analytical techniques. To construct any type of classification, the *sum total* of characteristics from diverse disciplines must be interpreted and evaluated. Now chemical data are beginning to be more regularly incorporated with other data in the establishment of taxonomic (descriptive) profiles (encyclopedic information) for each species, genus, or family.

Longevity of Seeds. Every few years the questions are asked once again of botanists: How long can a seed remain dormant and still germinate? How old can a seed be and still sprout? In 1967 three Canadian botanists—A. E. Porsild, C. R. Harington, and G. A. Mulligan—reported (*Science, 158:* 113–114) the germination of seeds of the Arctic lupine (*Lupinus arcticus*) which were at least 10,000 years old. A mining engineer found some two dozen seeds in ancient lemming burrows buried in frozen silt of Pleistocene age. These seeds were grown to maturity and were found to be the same as the Arctic lupine that can be seen in the tundra and subalpine forests of today. Previously, the oldest seeds that had germinated belonged to the sacred lotus (*Nelumbo nucifera*): these were 2,000 years of age when found in 1951.

Adaptive Features. The reasons why some species survive much longer than others are of interest to many biologists. Fossil records demonstrate that the group of trees known as Ginkgoales, of which today's *Ginkgo biloba* is the sole living member, dates back 200 million years. Partial responsibility for the persistence of this species is attributed to the longevity of the tree (1,000 years) and to the consequent long reproductive period. It has been shown by R. T. Major (*Science, 157*: 1270–1273) that this longevity also can be attributed to the resistance of this species to pests, such as insects, bacteria, viruses, and fungi.

ARCTIC LUPINES have recently been grown from seed that had lain dormant in the Yukon for over 10,000 years.

UPI



Botanists are constantly trying to understand the structure of plants in relation to function and selective adaptation. W. D. Billings and P. J. Godfrey (*Science, 158*: 121–123) demonstrated that hollow-stemmed plants have a physiological advantage over plants with filled stems since some of the respired CO_2 may be used in photosynthesis within the stem. This results in more efficient use of CO_2 at high altitudes where the partial pressure of ambient CO_2 is relatively low. According to the botanists, until the plant's leaves are fully expanded and the weather becomes favorable for plant growth, internal stem photosynthesis may be the major photosynthetic system of plants in cold, high-altitude, wet meadows with a short growing season.

Exobotany. The possibility of growing plants on other planets has stimulated experimental design in various laboratories. Seed germination tests in atmospheres containing various gases have been a part of several biological space program experiments. It has been discovered that seeds of several species can be germinated in rarefied nitrogen atmospheres containing high proportions of individual nitrogen oxides or their mixtures (S. M. Siegel, C. Giumarro, and O. W. Daly. *Nature, 209*: 1330–1334). These scientists indicated that plant growth in an atmosphere rich in nitrogen oxides was apparently possible, provided the substratum prevents excess acidity and that NO_2 is not present in overly great quantities. S. M. Siegel, C. Giumarro, and R. Latterell (*Proc. Natl. Acad. Sci., 52*: 11–13) have shown that seed germination and seedling growth of some vascular plants can occur with little or no oxygen.

Experiments designed to test the effects of radiation and weightlessness (which are conditions of travel in space) on living organisms continue to generate much interest among scientists. The flight of the United States' Biosatellite 2 in September 1967 marked the first time that biologists have been able to establish controlled laboratory conditions in space. The preliminary data indicate that there is variation in certain characteristics when plants are grown in space. Wheat seedlings grew faster in space than on earth, and roots of the spaceborne seedlings curved upward toward the shoots and out to the side. The leaves of pepper plants flown within the satellite curved downward on the stem. (See also SPACE EXPLORATION.)

DAVID E. FAIRBROTHERS
Rutgers—The State University

BOTSWANA

Attempts to bridge antagonisms between white-ruled southern Africa and independent countries to the north, and continued economic reliance on South Africa were Botswana's main concerns in 1967.

Foreign Relations. During the first year of Botswana's independence (beginning Sept. 30, 1966), President Sir Seretse Khama attempted to make his country a link between the white-ruled countries of southern Africa—South Africa, South West Africa, and Rhodesia—and the independent African countries to the north.

On a state visit to Malawi in early July, President Khama issued a joint statement with President Hastings K. Banda urging southern African states to "sit down together and negotiate." The following month Khama visited Zambia, which had been critical of Botswana's refusal to take a harder line on white Rhodesia's declaration of independence. He affirmed with Zambia's President Kenneth Kaunda a mutual intention to aid "genuine refugees" from southern African countries.

ASIA
AFRICA

Area: 219,915 square miles (569,581 sq km).
Population: 593,000 (July 1, 1967 est.).
Chief Cities (1964 census): Gaberones, the capital, 3,849; Serowe, 34,182; Kanye, 34,045; Molepolole, 29,625.
Government: *President*—Sir Seretse Khama (took office Sept. 30, 1966). *Parliament*—National Assembly, 37 members (party seating, 1967: Democratic party, 28; People's party, 3; other, 6); (name of 2d house:) House of Chiefs, 12 members.
Religious Faiths: Tribal, about 95% of population; Roman Catholics, 2%.
Education: *Literacy rate* (1964), 34.5% of population aged 10 and over. *Total school enrollment* (1965)—67,756 (primary, 66,061; secondary, 1,325; teacher-training, 268; technical, 102).
Finance: *Revenues* (1964–65), $11,808,000; *expenditures,* (1966–67), $21,600,000; *public debt,* $5,036,000; *monetary unit,* rand (.7142 rand equal U. S.$1).
Gross National Product (1966): $35,500,000.
Crops: Corn, cotton, cowpeas, millet, peanuts, sorghum.
Minerals (metric tons, 1965): Manganese ore, 8,815; asbestos, 806.
Foreign Trade (1965 est.): *Exports,* $15,800,000 (chief exports, 1964: cattle carcasses; cattle; abattoir by-products; hides and skins); *imports,* $23,200,000 (chief imports, 1964: general merchandise; vehicles; corn. *Chief trading partners* (1966): South Africa (supplied 65% of imports); Rhodesia (supplied 27% of imports).
Transportation: *Roads* (1965), 5,016 miles (8,071 km); *motor vehicles* (1965), 3,096; *railways* (1964), 394 miles (634 km); *national airline,* Botswana National Airlines.

President Khama became the first African head of state to visit Lesotho since its independence. He traveled to that country in April to be installed as chancellor of the University of Botswana, Lesotho, and Swaziland.

Economic Dependency. Import figures for 1966, published in July 1967, emphasized Botswana's economic dependence on South Africa, from which 65% of its imports come, and Rhodesia to the north, accounting for 27% of its imports. The remaining 8% of its imports come mainly from South West Africa and Zambia. Ten percent of Botswana's export earnings derive from its migrant laborers, who work mainly in South Africa and South West Africa.

The discovery of some 33 million tons of copper and nickel deposits, announced on February 24, may help Botswana's future economic position.

Withdrawal of British Troops. British troops flown in nearly two years earlier to protect a $1.4 million radio station in Francistown, which relays news to Rhodesia where censorship is enforced, left Botswana on August 18. Security responsibility had earlier been transferred to the Botswana police, who will be aided by a British grant for police housing near the radio installation.

RESCUE WORKERS help to safety a victim of the massive landslides that destroyed shantytowns in the hills around Rio de Janeiro in February. The landslides, which were caused by heavy rains, left hundreds dead.

BRAZIL

A new presidential administration, functioning under a new federal constitution, was unable to effect any great improvement in the political or economic situation of Brazil in 1967. The prospects for a return to democracy remained dim as the new president, Artur da Costa e Silva, continued to run—though with less rigidity—the same type of military dictatorship as his predecessor, Humberto Castelo Branco. The new Brazilian constitution, adopted in January 1967, merely formalized this dictatorship. Opposition to the government was frustrated and disorganized. Although there was modest economic growth, the slight gains were largely canceled out by a population increase of more than 3%, and the economy remained under the threat of acute inflation.

Government. During the last months of his administration, before the March 15 inauguration of President-elect Costa e Silva, President Castelo Branco pushed through Congress several controversial laws, and a controversial new constitution that replaced Brazil's liberal constitution of 1946. The new charter, approved by Congress on January 22, greatly increased the powers of the executive at the expense both of Congress and of the states. Under its provisions, the president, who is elected indirectly, appoints state governors; initiates almost all matters of legislation; and may suspend individual political rights, decree laws, declare a state of siege, and seize property "when the national security and economy are threatened." The federal government collects most of the taxes and apportions the returns to the states.

Also on January 22, Congress approved Castelo Branco's press control law, which imposed extremely stiff penalties for the publication of "classified" information, with final judgment of what is "classified" left to the president and his cabinet. The law forbids the publication—even if true—of allegations of crime against the president, vice president, presidents of the Senate and the Chamber of Deputies, and members of the supreme court. The law also prohibits foreign news agencies from distributing Brazilian national news within Brazil. The passage of the press law generated violent opposition, both

in Brazil and internationally, but the government, including President-elect Costa e Silva, remained unyielding.

A new Congress, composed of 66 senators and 409 deputies, took office on Jan. 31, 1967. All the deputies and 23 senators, together with thousands of state and local officials, had been elected on Nov. 15, 1966, in the first nationwide balloting since the military seized power in 1964. The government party, the National Renovating Alliance (ARENA), continued to hold a comfortable majority in both chambers over the opposition party, the Brazilian Democratic Movement (MDB).

Marshal Costa e Silva, former minister of war, was sworn in as president of Brazil on March 15 (he had been elected, by Congress, on Oct. 3, 1966). In his inaugural address he pledged that his administration would "humanize" Brazil's "Revolution of 1964," as the takeover by the military from the leftist government of João Goulart was called. Costa e Silva's program was slated, he declared, to improve the economic and social conditions of the country's vast rural area, with more attention paid to the health, education, and well-being of individuals.

With respect to foreign affairs, the president said that his government would remain pro-Western, would continue to play a part in international organizations, and would seek foreign economic markets and aid. The President reiterated these basic goals at the first meeting of his cabinet—in which military men held 9 of 18 posts. He declared that the Revolution of 1964 had succeeded in destroying communism, and now must work to guarantee equal rights and opportunities to all Brazilians.

The regime of President Costa e Silva was at first greeted enthusiastically, partly because of the great hostility aroused by the government of Castelo Branco. Later reactions were more reserved, and it was generally agreed, with relief in some directions, that the new president had done "nothing spectacular," either positively or negatively. It was held in the new president's favor, however, that he had made only sparing use of the enormous executive powers granted to him by the new constitution and the press control law. A case in point occurred after the death of former President Castelo Branco, in an airplane accident on July 18. Hélio Fernandes—publisher of the Rio de Janeiro *Tribuna da Imprensa*—who had been found guilty of making derogatory remarks concerning the deceased President, was sent to prison under the new law. However, after two months, he was freed.

Opposition. The greatest opposition to the government in 1967 came, not from the opposition party within the government, but from a group surrounding Carlos Lacerda, former governor of the state of Guanabara and former editor of Rio de Janeiro's *Tribuna da Imprensa*. Public opinion polls revealed Lacerda's rising popularity as a possible future presidential candidate.

Lacerda, a champion of capitalistic democracy, was at first a supporter of the coup of 1964, but later grew increasingly restive under Brazil's military rule. In 1967 he attempted to organize the opposition into a broad front that would include several of Brazil's ex-presidents. João Goulart, still in exile in Montevideo since his overthrow in 1964, was apparently favorable to the idea, as was Juscelino Kubitschek, who returned to Brazil on April 9 after a 3-year self-imposed exile. However, the vetoes of former president Jânio Quadros and the powerful Vargas family signaled the failure of Lacerda's efforts, which dwindled down to a battle in rhetoric. As a counteroffensive to the opposition, President Costa e Silva promised that his government would reject the road to dictatorship.

WIDE WORLD

BRAZIL'S PRESIDENT, Artur da Costa e Silva, applauds a fellow delegate to the Punta del Este Conference in April.

ARTUR DA COSTA E SILVA, retired army marshall and former minister of war, was inaugurated on March 15, 1967, as Brazil's 22d president, succeeding Humberto Castelo Branco. In his first policy speech, President Costa e Silva announced a program of "social humanism"—with increased benefits for the poor—and an independent, but pro-Western, foreign policy. The new President did not effect significant changes during his first nine months of office, but he seemed reluctant to use the methods of rigid presidential control adopted by his predecessor.

Costa e Silva was born on Oct. 3, 1902, in Taquarí, Rio Grande do Sul. During his 45-year army career he taught in Brazil's military schools and held various commands. He was a key figure in the military coup that ousted leftist President João Goulart in April 1964, and he served as minister of war under Castelo Branco. On Oct. 3, 1966, Costa e Silva was elected president by the National Congress.

Economy. After nearly three years in office, President Castelo Branco had not been able to control inflation, although the price rise in 1966 of 41.8% was an improvement over the 45.1% in 1965 and the high of 86% in 1964. In a final effort to check the inflation spiral, the retiring President, on February 13, issued a new cruzeiro worth 1,000 of the old cruzeiros. Also by presidential decree, a 23% devaluation of the cruzeiro brought the rate from 2.210 new cruzeiros (what would have been 2,210 old cruzeiros) to the dollar, to 2.715 to the dollar (or 2,715 of the old cruzeiros).

Brazil's recovery from acute inflation remained incomplete, for the 1967 cost of living increase was estimated at 40%, only a slight improvement over 1966. Inflation tends to discourage savings, and Brazilians prefer to buy durable goods, particularly cars, as a form of savings. Therefore, the streets of Rio and São Paulo are jammed with automobiles. However, despite such evidence of affluence in urban centers, Brazil still ranked third lowest in per capita income in South America, with an average annual income of $285 per person.

To counter some of these trends, President Costa e Silva initiated a struggle against poverty. His 3-year economic plan, announced on August 1, called for an increase in production of 6% per year, and an increase of $15 in per capita income in the first year. Price stabilization was vital to the plan.

There were some economic gains in 1967. Forecasts in October called for a 5% to 6% gain in national product. This was primarily due to a good harvest and greater industrial activity. Although foreign investments increased $1.1 billion, the administration aimed at strengthening the Brazilian-owned private sector, and also agriculture.

An encouraging aspect of the economic program was the evidence of some development in the poverty-stricken northeastern area where Sudene, the government's regional development agency, was able to lure new industry in 1967 with special tax inducements. In addition, federal, state, and foreign aid helped in the development of the area. Unfortunately the improvement was only relative, for the area still has a per capita annual income of $100.

The economic outlook was not helped by the announcement by the minister of finance on October 29 that the federal government's budgetary deficit was then running at 1.2 billion new cruzeiros ($480 million), about three times more than the 1967 budget had anticipated. Reduction of government expenses is not easy in Brazil, where about one half of the budget goes to the wages of a 700,000-man bureaucracy. There is also a history of difficulty in obtaining internal funds to support the government. Only 2.5 million Brazilians pay income taxes, with rates from 3% to 50%, after generous exemptions. Millions of middle- and upper-income citizens are undeterred by mild penalties and manage to evade these tax payments. A team of experts from the U. S. Internal Revenue Service was invited to Brazil to advise on improving tax-collection methods.

Education. Although President Costa e Silva pledged educational reform, remarkably little was done to improve Brazil's dismal educational statistics in 1967. Only 25% of the population aged 19 years and under was in school and one third of the 15–19 year-old group was illiterate. The national literacy rate was 50%, the third lowest in South America.

Foreign Affairs. On January 25, President-elect Costa e Silva began a one-week preinauguration visit to the United States. At a White House luncheon, and in apparent contrast to laws passed in Brazil just a few days earlier, he pledged common action with the United States "against those who are trying to violate and subvert justice, press, and freedom." On March 13 the United States and Brazil signed a convention for the avoidance of double taxation on incomes. The convention followed in broad outline the pattern of tax conventions already in effect between the United States and other countries.

IN BRASÍLIA, an underground cathedral designed by Oscar Niemeyer neared completion in 1967. Superstructure symbolizes Brazil's states holding up the Crown of Thorns.

UPI

Failing in its efforts to restrain Latin American countries, including Brazil, from making plans to buy jet bombers from European sources in the face of U. S. refusals, the United States withdrew its ban on the sale F-5 jets to Latin America.

U. S. aid to Brazil reached about $450 million in 1967, making Brazil second only to India in amounts of U. S. loans and grants received.

In early September, King Olav of Norway visited Brazil. He was the first Scandinavian monarch to pay a state visit to South America.

Extradition. The Brazilian supreme court agreed unanimously to extradite Franz Paul Stagl, a commandant of Nazi extermination camps in World War II, to West Germany, where he was to face trial for genocide and murder.

Natural Disasters. On January 22–24, record rains set off massive landslides in Rio, leaving over 890 persons dead. Another series of storms on February 17–20 killed about 230 persons.

University of Texas

BREWING INDUSTRY

For the sixth successive year, beer sales in the United States set a record in the fiscal year 1967. Sales totaled 107,301,357 barrels of 31 gallons each. This figure was 5,791,050 barrels higher than the previous record of 101,510,307 barrels established in the fiscal year 1966.

The brewing industry also set all-time high monthly sales records in the months of August, September, November, and December 1966, and in the first six months of the calendar year 1967. Brewers' sales from January to June 1967 climbed to a total of 53,458,231 barrels, an increase of 6% or 3,039,316 barrels over the record set during the corresponding period of 1966.

Nearly 8% of the population of the United States live in areas where the sale of beer and ale is prohibited. The results of the 1,170 local-option elections held in 1966 increased by 129,539 the number of persons living in areas where it is legal to sell these alcoholic beverages.

In the calendar year 1966, as in each of the previous 11 years, brewers paid more than $1 billion in state and federal taxes. They contributed more than $6 billion to the national economy. This figure included more than $225 million for agricultural products and $650 million for kegs, bottles, cans, containers, and related materials. It also included $520 million in direct salaries and wages, as well as substantial amounts in employee benefits.

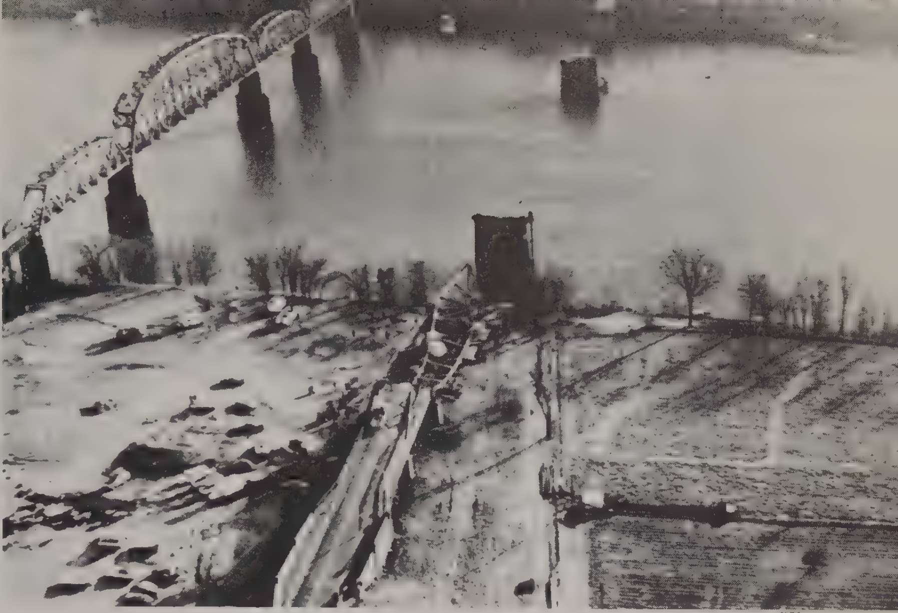
BRIDGE, Contract. See Sports.

A SUSPENSION BRIDGE between Point Pleasant, W. Va., and Kanauga, Ohio, collapsed into the Ohio River during the peak of rush-hour traffic on December 15. The disaster, which took a heavy toll in lives, left only the stumps of bridge towers remaining above water level.



UPI

BRIDGES

A spectacular failure of a 1,750-foot (533-meter) suspension bridge over the Ohio River marred the record of bridge safety in 1967. The 39-year-old span between Point Pleasant, W. Va., and Kanauga, Ohio, collapsed on December 15, plunging rush-hour automobile and truck traffic 80 feet down into the very cold waters of the Ohio River and killing at least 36 persons. The two-lane bridge, which had a span of 700 feet between its two towers, used steel eyebars for support instead of the usual steel cables. The cause of the collapse was being investigated. (See also OHIO; WEST VIRGINIA.)

Builders of bridges were active during the year as they completed new spans, worked to finish bridges then under construction, and made plans for new bridges. Bridge building in 1967 was paced by advances in suspension bridge construction and by the increasing use of the orthotropic deck bridge and the cable-stayed bridge.

Suspension Bridges. A new method for erecting the main cables of a suspension bridge is being used for the Newport Bridge in Rhode Island. The 1,600-foot (488-meter) main span of this suspension bridge has two 15.25-inch (38.8-cm) cables, each having 9,272 wires. Instead of being spun in place at the site, as has been done since John A. Roebling developed the spinning wheel more than 100 years ago, the parallel-wire cable strands are prefabricated in the shop, delivered to the site in coils, and then pulled over the bridge towers with a hauling rope. This method cuts the time for placing the cables from nine weeks to about five weeks. The $48 million Newport Bridge, scheduled for completion in 1968, spans the east passage of Narragansett Bay, connecting Jamestown and Newport, R. I. The bridge and its four-lane roadway will provide a direct traffic route between New York and Cape Cod, Mass.

A twin suspension span to the existing Delaware Memorial Bridge is being constructed across the Delaware River near Wilmington, Del. The two bridge cables for the 2,150-foot (655-meter) main span were spun in the conventional manner by using wire-spinning equipment at the bridge site. The $70 million bridge, scheduled for completion in 1968, has four lanes for westbound traffic; the older structure, built in 1951, will carry four lanes of eastbound traffic.

Another suspension bridge is under construction across the St. Lawrence River near Quebec city, Canada. The 3,414-foot (1,041-meter) structure, scheduled for completion in 1968, will have a 2,180-foot (664-meter) main span supported by two 24-inch (61-cm) cables, each having 10,600 wires. The bridge deck will provide six traffic lanes.

The longest bridge in South America—the $35 million Angostura Bridge over the Orinoco River in Venezuela—was opened to traffic in early 1967. The four-lane suspension bridge, located near Ciudad Bolívar, is 5,507 feet (1,679 meters) long and has a main span of 2,336 feet (712 meters). Its two 18.5-inch-diameter (47-cm) cables were spun in place.

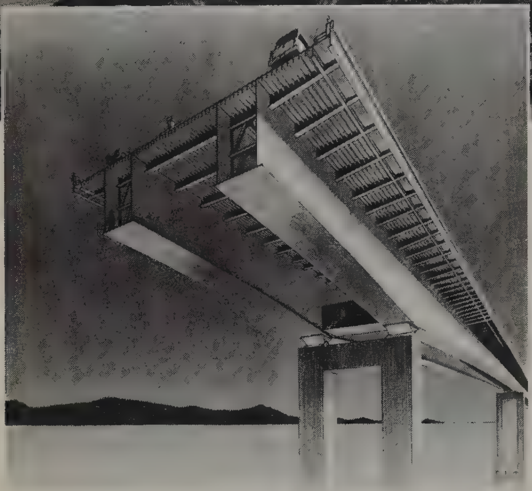
Orthotropic Deck Bridges. The orthotropic deck, a European innovation, was used for the first time in the United States in two bridges completed in 1967.

In the orthotropic design, steel plates, stiffened by longitudinal ribs, serve not only as the bridge deck but also as the top flange of the main girders. Thus, these steel plates carry the roadway and also serve as part of the support structure. With this design, less steel is needed in building the bridge than is needed with a conventional design, in which the deck plate and main girders are independent structural elements. The orthotropic deck plates are less than 1 inch (2.54 cm) thick. A protective coating of zinc paint, a thin coating of an epoxy asphalt, and a covering of bituminous concrete about 2 inches thick are applied to the deck plates to form the roadway surface.

The $70 million San Mateo-Hayward Bridge in California, a 6.75-mile (10.9-km) crossing over southern San Francisco Bay, has the longest orthotropic deck in the world. The part of the bridge that set this record is 5,542 feet (1,689 meters) long. Steel-box girders with an orthotropic steel-plate deck were used in this construction. This bridge also set another record: its 750-foot (229-meter) central span is the longest steel-box-girder span in the United States. The total length of the steel part of the bridge structure is 9,755 feet (2,975 meters); low concrete trestles form the remainder of the bridge. The bridge carries six lanes of traffic.

The $13 million Poplar Street Bridge, which crosses the Mississippi River at St. Louis, also uses

CALIFORNIA PHOTO SERVICE



AMERICAN INSTITUTE OF STEEL CONSTRUCTION

ORTHOTROPIC DECK BRIDGE, the San Mateo-Hayward Bridge crossing southern San Francisco Bay, was completed in 1967. As the drawing at the left shows, the steel deck in the orthotropic design serves both to carry the roadway and to complete the support structure. The result is an unusually light, strong, and cleanly functional bridge construction.

steel-box girders with an orthotropic steel-plate deck. The bridge has five spans, totaling 2,165 feet (660 meters); the main span, which is the longest, is 600 feet (183 meters) long. It carries eight lanes of traffic.

Cable-Stayed Bridges. Several countries have been building cable-stayed (or stayed-girder) bridges for crossings shorter than those that require the use of a suspension bridge. In a suspension bridge, the deck loads are transferred to the main cables by vertical ties. In a cable-stayed bridge the deck is supported on diagonal cables that fan out from one or two towers located along the center line of the bridge. Where only a single tower is used, it may, if necessary, be located nearer to one shore than the other. In a recently completed Rhine River bridge near Karlsruhe, West Germany, for instance, a single steel tower supports the deck by means of three sets of steel cables strung diagonally from the tower down to the deck; the deck spans 575 feet (175 meters) on one side of the tower and 383 feet (117 meters) on the other side, for a total span of 958 feet (292 meters) between shore abutments.

A cable-stayed design is also being used for a bridge across the lower Yarra River at Melbourne, Australia. This 3-mile (4.8-km) crossing will have a 1,102.5-foot (336-meter) main span between two towers. Two sets of diagonal cables running from each tower will support both the deck of the box-girder main span and the two 472.5-foot (144-meter) flanking spans. This bridge is scheduled for completion in 1971.

Transporting Bridge Materials. A cable-stayed bridge is to be built over the Luangwa River in the republic of Zambia. The two-lane, 990-foot (302-meter) bridge will have a pair of two-column towers and cables for supporting the 730-foot (222-meter) main span and similar 130-foot (40-meter) flanking spans. The English contractor is prefabricating the bridge components—girders, pier sections, and prestressed cables—in England for shipment to Cape Town. This long sea journey—5,947 miles (9,570 km) from Southampton to Cape Town—will be followed by rail and road transport to the bridge site. There the components will be assembled for the new bridge.

Future Bridges. London Bridge, renowned both in song and verse, is deteriorating and soon will be replaced. The present bridge, erected over the Thames River in 1831, is the third bridge to have been built at that location. The bridge has five stone arches, its center span is 152 feet (46 meters) long, and it carries four lanes of traffic. The new bridge, scheduled to be completed in 1970, will be a prestressed concrete bridge and will carry six lanes of traffic.

Denmark plans to cross the 11-mile (17.7-km) Great Belt, the strait separating its two largest islands, Zealand and Fyn. One prize-winning entry in a design contest proposed a motor vehicle and railroad bridge to span the wide body of water. In this design, the upper deck of the bridge would carry six highway lanes and the lower deck would carry two railroad tracks.

BRITISH COLUMBIA

British Columbia marked several milestones in 1967, including the completion of two major water storage dams. The Duncan Dam, first of three damsites under the Columbia River Treaty, was officially dedicated on August 17, about a year ahead of schedule. On September 12 the Portage Mountain Dam on the Peace River, representing an expenditure of $725 million, was named the W. A. C. Bennett Dam in honor of the premier of British Columbia. Late in 1967 a contract valued at $136 million was awarded for construction of the third Columbia River damsite, the Mica Dam, with completion scheduled for 1973.

Industrial Expansion. Major projects completed during the year were the $80 million Gold River pulp mill; expansion of the production plant at Powell River to a capacity of 1 million tons of newsprint annually; and construction of the $40 million property of Wesfrob Mines on the Queen Charlotte Islands, reportedly the largest iron ore mine in British Columbia. Among numerous manufacturing plants completed, two factories for bleaching chemicals and an oil refinery are now located at Prince George. A $42 million pulp mill is being built at Skookumchuk for completion in 1969. Of potential future importance was the 1967 drilling by Shell Canada, Ltd. off Vancouver Island.

Legislation. The legislature authorized establishment of a Home Acquisition Grant Fund of $25 million. Roughly 15,000 applications have been received, and payments total $7.5 million. A new Department of Travel Industry was established. Legislation was passed, subject to proclamation, for the creation of a British Columbia Harbours Board.

In 1967 the three-member Royal Commission on Automobile Insurance, appointed Jan. 25, 1966, continued its hearings. The report of the 1966 Royal Commission on the Invasion of Privacy was presented by Commissioner R. A. Sargent, a former county court justice. The report recommended control of "bugging" through new legislation to outlaw eavesdropping except by police or federal authorities empowered by writs of assistance.

Celebrations and Fairs. The opening of the British Columbia legislature in January 1967 was held in New Westminster instead of the capital city of Victoria. This commemorated the first session of the Legislative Council of the United Colony of British Columbia, which opened Jan. 24, 1867.

In May, the fourth British Columbia International Trade Fair featured the exhibits of 17 countries.

BUDGET, U. S.

Net receipts of the United States government in the fiscal year ended June 30, 1967, amounted to $115,794,051,894, compared with $104,631,099,018 in the fiscal year ended June 30, 1966.

Net expenditures in fiscal 1967 were $125,731,987,115, as against $106,917,396,868 in the fiscal year 1966.

The 1967 budget deficit was $9,937,935,220, compared with $2,286,297,850 in 1966.

Public Debt. The total public debt and guaranteed obligations of the federal government on June 30, 1967, amounted to $326,733,133,869, compared with $320,368,635,070 at the end of fiscal 1966. Interest payments on the public debt amounted to $13,391,068,051 in fiscal 1967, compared with $12,013,862,666 in 1966.

The per capita debt in 1967 was $1,641.00, compared with $1,627.48 in 1966.

Consolidated Cash Budget. The flow of money between the public and the federal government is sometimes called the consolidated cash budget. To

Note—Figures are rounded to nearest million and will not necessarily add to totals.

derive the total receipts and payments, transactions of trust funds are consolidated with budget transactions. Transactions between them, such as interest paid by the Treasury Department to trust funds, are eliminated, along with some other noncash transactions. For example, interest that accrues on savings bonds is counted as a budget expenditure at the time of accrual, but because the interest is not paid in cash until the bond is redeemed, the consolidation eliminates the interest accruals and includes the interest paid on redeemed bonds. As a result, the figures in the consolidated cash budget are not the same as the figures for Treasury cash deposits and withdrawals as presented in the daily Treasury statement.

New Budget Approach. President Johnson announced the use of a "new budget approach" in his State of the Union message to Congress on Jan. 17, 1968. The budget figures he presented then, for the fiscal year 1969, included all of the government's spending for all purposes. The President explained:

"A presidential commission composed of distinguished Congressional fiscal leaders and other prominent Americans recommended this year that we adopt a new budget approach, and I am carrying out their recommendations in this year's budget. The budget, therefore, for the first time accurately covers all federal expenditures and all federal receipts, including for the first time in one budget $47 billion from the Social Security and Medicare, highway, and other trust funds."

TREASURY INFORMATION SERVICE

BUILDING AND CONSTRUCTION

With the alleviation of the mortgage money tightness of 1966, a steady rebound of housing construction took place in 1967. New construction activity as a whole reached a peak—as measured in dollars—of $77 billion. The 4% gain over the 1966 level of $74.4 billion was, however, only slightly more than the rise in construction costs during the year. Thus, for the second year in a row, the physical volume of construction output failed to equal the record set in 1965.

Aside from the still-incomplete recovery of residential housing, private construction did not lend much strength to the overall performance of the construction sector of the economy. The narrow increase of 1% in private outlays matched the same uncertain gain of 1966. The value of new construction put-in-place for new housing rose by 5%, while nonresidential buildings outlays declined by 3%.

Despite the reduction of funds allotted for federally owned construction and despite high money rates that deterred the starting of many state and local projects, total public construction in 1967 repeated its 8% gain of 1966. In fact, public construction accounted for 1.9 billion out of the $2.6 billion increase in all new construction.

Labor shortages in skilled trades helped push labor costs up. Unemployment continued to stay near the lowest levels in recent years for the contract construction labor force as a group. Because of the ample capacity of building materials industries, price pressures were not as severe as in 1966.

Private Construction. The outstanding event in private construction in 1967 was the sharp reversal that made more credit available in the residential mortgage market. A record rate of inflow of savings funds into lending institutions helped lift new housing starts from a low point at the beginning of 1967, when private starts were at an annual rate of about 1,100,000 units. By the end of 1967 starts were running at the seasonally adjusted annual rate of over 1,400,000 units. Private housing starts for the year as a whole were almost 130,000 units above the depressed levels of 1966. They totaled about 1,300,000 units but were still about 300,000 below the 1963 level.

Although dollar spending for private residential buildings rose a nominal 3% in 1967, nonresidential buildings declined in the face of tight money and the temporary denial of accelerated depreciation tax allowances. Thus, virtually all types of buildings declined, with the notable exception of educational buildings.

Especially hard hit was the industrial buildings category, which showed an 8% decline in spending in 1967 after a 31% rise in 1966. Public utilities, which was the strongest construction group in 1966 with a 17% increase, had a rate of gain about half as great in 1967, rising by $500 million.

Public Construction. The strong uptrend of public construction expenditures continued in 1967 as total outlays reached a new peak of $25.9 billion. The overall 8% increase involved good gains for most of the important categories.

The upswing continued in new construction expenditures for state-owned and locally owned facilities in 1967. A decline in spending for federally owned construction was more than offset by large dollar increases in the outlays for the educational and highway categories. Educational outlays rose

THE NEW YORK TIMES

THE ARENA of the new Madison Square Garden in New York City, with a seating capacity of 20,000, is shown nearly ready for its February 1968 opening.

by over $600,000,000 to $5,950,000,000, a 12% gain over 1966. This followed a 25% rise in 1966. Similarly, a 6% rate of gain in 1967 produced an increase of $500 million in spending for new highways. Education and highways accounted for about 60% of the dollar increases in public construction.

Geographic Trends. Private housing construction remained at a relatively low level in all regions in 1967. Building permits showed mixed trends in other types of private construction. Hospital facilities gained in each area except the West.

Office buildings showed strength in the Northeast and West. The South stood out as the only region in which a substantial gain was experienced for all nonresidential buildings.

Over one third of the states showed declines in private construction. This trend involved the three largest states—California, Illinois, and New York. A few states showed large increases in permit valuations. These included Nebraska, North Carolina, Georgia, Minnesota, Ohio, and Washington, each with 1967 gains of 20% or more.

Costs and Prices. The upward pace of costs for construction as a whole was about the same as in 1966, with a 4.5% rise, although there was a halt in the swift ascent of highway costs.

Materials prices stabilized in 1967 after a more-than-normal rise in 1966. The adequate production capacity of industry and the drop in the physical output of private construction contributed to the stability. Gypsum products fell in 1967 to the lowest point since 1961.

Employment and Earnings. Employment in 1967 was about level with 1966 as about 3.3 million persons engaged in contract construction. Even with some local shortages reported, employment levels fell in trades heavily involved in housing activity, such as masonry, plastering, painting, and paperhanging. Average hourly earnings continued to increase at about the same rate (5%) as in recent years. Building and construction employees had weekly earnings averaging 5% higher than in 1966. An exception, however, occurred in highway construction, which showed only a 2% rise in weekly earnings.

BULGARIA

With the first year of the fifth 5-year plan completed, Bulgaria's new economic policy showed mixed returns in 1967. The liberalization of Bulgarian political life continued, but very slowly. Diplomatic affairs were marked by commercial treaties with Communist and Western countries.

Internal Affairs. Despite rumors in late 1966 that Communist party leader Todor Zhivkov would adopt the Russian system of collective leadership, he retained for himself both the premiership and the office of first secretary of the Bulgarian Communist party. At a party congress in November 1966 several of Zhivkov's close supporters were promoted to the central committee and the politburo. Stanko Todorov was replaced as deputy premier by Lachezar Avramov. Ivan Popov and Peko Takov were added to the council of ministers; Popov became a full member of the politburo and Takov a candidate member.

The politburo was enlarged from 8 to 11 members to include Todor Pavlov, Tsola Dragoicheva, and Pencho Kubadinsky. In the secretariat of the central committee, Nacho Papazov and the party's chief ideologist, Mitko Grigorov, failed to gain reelection. The central committee itself was increased from 101 to 137 members.

Indicative of continued conflict in the military establishment was the selection of a new first deputy minister of national defense. Col. Gen. Atanas Semerdzhiev, chief of the army general staff, replaced Ivan Vrachev.

The liberalization of Bulgarian life continued. There was some hope that the National Assembly could become a more effective governing body. In June 1967 a question was posed to the government in the National Assembly about state lands. Although it was a minor issue, Premier Zhivkov suggested that the Assembly not only had the right to raise such questions to ministers, but that if it was not satisfied with the answer, it might transfer the question into a formal query or challenge.

A more liberal code of laws was prepared by the ministry of justice. Although it stipulated harsher punishments for important crimes, such as murder and treason, lesser crimes were to be punished more lightly.

Economy. As reported in the official daily newspaper *Rabotnichesko Delo*, the new economic policy revealed significant gains for the Bulgarian economy in 1967. Industrial production for the first half of 1967 was 14.8% over that of 1966. The largest increases were made in textiles, food processing, electric power, and metallurgy. Per capita productivity of workers rose 8.5%, while national income was up 11%. Internal trade rose 11.1% and foreign trade 11.7%. Exports increased by 15.9%, of which 28.4% was mechanized equipment.

There were also evident failures in the new economic system. A Bulgarian worker still produced 50% less than his Soviet counterpart. There was a shortage of technical and scientific experts. Housing was scarce even in Sofia, the capital. Consumer goods were plentiful but expensive, and agricultural methods remained backward.

Aware of these problems, Premier Zhivkov criticized party officials for interfering with industrial management, and he established a permanent commission to guide the economic program. Soviet-born Grisha Filipov, a strong advocate of economic reform, became its head. All ministries, industries, and other institutions were ordered to begin technical training courses for their employees.

Tourists played a major role in economic plans. Bulgaria expected about 2 million visitors in 1967. In contrast to former years, private citizens were allowed to rent accommodations to tourists.

Trade. Although over one half of all its trade was with the Soviet Union, Bulgaria negotiated commercial treaties with both non-Communist and Communist nations, including Italy, France, Japan, Canada, Great Britain, West Germany, East Germany, Rumania, Yugoslavia, and others. Of particular importance were a series of agreements providing for joint enterprises to be built in Bulgaria by foreigners. At Plovdiv a new Bulgar-Renault auto assembly plant was opened. Production was to be geared to 50,000 cars annually by 1970. Plans have been made to assemble Italian Fiats and Russian Moskvich 48's in Bulgarian factories.

Foreign Affairs. Bulgaria sought better relations

WIDE WORLD

with the West in 1967; however the Israeli-Arab crisis, the Vietnam War, and the German question made progress difficult.

In October 1966, President Johnson announced a policy of closer ties with eastern Europe. Credit and trade restrictions on Bulgaria were eased, and the U. S. legation in Sofia was raised to embassy level. However, the Israeli-Arab war in June 1967 and the continued involvement of the United States in Vietnam largely dissipated any goodwill earned by these earlier moves.

While trade increased with West Germany, relations remained strained. Bulgaria refused to follow the Rumanian precedent of recognizing the Bonn government. Instead, Sofia offered to recognize East and West Germany as equals, if Western nations would do the same. Bulgaria concluded 20-year treaties of friendship with Poland, and East Germany, countries unfriendly to West Germany.

The Macedonian problem continued to disturb Bulgarian-Yugoslav relations. Premier Zhivkov has declared himself an advocate of South Slav cooperation, but his government refuses to recognize the Macedonians as a separate, non-Bulgar people.

Bulgaria continued to support the Soviet Union in the Sino-Soviet dispute, and on May 12 signed a pact of friendship, cooperation, and mutual aid with the USSR. Bulgarian delegates attended the European Communist party conference at Karlovy Vary, Czechoslovakia, on April 24–26, to discuss major international questions.

BURMA

To Burma's worsening problems of insurgency and economic dislocation was added a major complicating factor in 1967: abandonment by Communist China of its previously proclaimed policy of noninterference in Burmese affairs. It appeared likely that Peking would exploit Burma's domestic difficulties. The Burmese government's release of nearly 700 non-Communist political prisoners late in the year suggested impending moves to bolster internal unity in the face of this foreign threat.

Political Affairs. At the year's end the government controlled no more than two thirds of the country by day—probably less by night. Insurrectionists in the field numbered approximately 15,000, compared with the 165,000-man armed forces. The Karens remained the largest ethnic group in insurrection, about 5,000 members of this minority opposing the government by force. There appeared to be an increase in the strength of the Communist insurgents, who may have grown in number from 2,000 to nearly 3,000 during the year.

U Win Maung, who had held the largely ceremonial post of president of Burma when Gen. Ne Win seized power in 1962 (and who is himself a Karen), was among the 686 political prisoners released by the government in October. Brigadier Aung Gyi, a former right-hand man of Ne Win's, had been freed from detention earlier and reportedly was being asked to join the government. Former Premier U Nu, leader of the government deposed by Ne Win, and who was released from prison in 1966, was touring the country—apparently for the purpose of organizing an opposition political party.

Foreign Affairs. The clash with Communist China was precipitated by a Burmese ban on the wearing of various political insignia, including Maoist emblems. Chinese students in Rangoon, encouraged by Chinese diplomatic personnel, defied the edict, provoking anti-Chinese rioting in late June. At least 50 persons were killed, mostly Chinese. China immediately denounced the Burmese government and pledged open support to the insurgent Burmese Communist party. Anti-Chinese demonstrations spread throughout Burma following China's attacks on the government. In October, China announced discontinuance of its aid program. This program, financed by a loan of $84 million negotiated in 1961, involved nearly 400 Chinese technicians.

Rangoon was the first stop in September of Japanese Premier Eisaku Sato's five-nation Southeast Asian tour. Sato and Ne Win expressed hopes of greater efforts to bring peace to Vietnam.

Economy. Efforts in late 1966 to modify the earlier complete socialization of the economy failed to produce any appreciable moderating effects on the country's worsening economic situation. Burma, which exported 3 million tons of rice annually before World War II and 2 million tons as recently as the late 1950's, shipped abroad only about 700,000 tons in 1967.

Rice was rationed, but frequently it was not even available on the black market. There were demonstrations in Prome, Pegu, and elsewhere to stop the shipment of rice from these localities to other parts

of Burma. Widespread substitutions of bread and noodles for rice led to shortages of these food products, too, in the major urban areas. Cooking oil, sugar, and canned milk— imported because Burma has no dairy industry— were also in very short supply. Prices on the increasingly overt black market were three to five times greater than those in the nearly bare-shelf government-run "people's shops."

The budget for fiscal 1967–68, announced September 24, provided for expenditures of $1,930,900,000 and revenues of $1,942,900,000. Increased taxes were imposed on various items, including gasoline and diesel oil, which had not been taxed previously. Foreign assistance, including loans, was estimated at $42.8 million.

University of Kentucky

BURUNDI

President Michel Micombero, who seized power in a bloodless coup on Nov. 28, 1966, took measures to consolidate his power in 1967. In foreign affairs, relations were improved with Rwanda and the Congo (Kinshasa) although as a result of rebel threats against Burundi there were border tensions during the summer and early fall.

Internal Affairs. President Micombero reshuffled his cabinet on March 13, assuming responsibility for foreign affairs. He relieved army chief Maj. Albert Shibura of his command on May 8, when Shibura and others in the army and judiciary were arrested for allegedly plotting to "make use of the republic to their advantage." In early February, all student and youth groups were consolidated into one organization known as the Jeunesse Révolutionaire Rwagasore (JRR).

Foreign Affairs. In an effort to ease relations between Burundi and Rwanda, President Micombero and Rwanda's President Grégoire Kayibanda met at a conference presided over by Congo President Joseph Mobutu in March. They agreed to establish a political commission to consider ways in which the Tutsi refugees in Burundi could be disarmed and politically neutralized.

Relations with the Congo were tested by the activities of rebel mercenaries and soldiers in Bukavu, just across the border from Bujumbura, capital of Burundi. The mercenaries threatened to cut off Burundi's electric supply, which it receives from a generator in Bukavu, if the Burundi government acted in an "unfriendly" fashion.

Economic Affairs. In order to ease Burundi's currency problems, Belgium agreed in March to assume responsibility for the 1967 payment on Burundi's loan from the World Bank.

BUSINESS. See Economic Review.

CABINET, U. S. For a listing and biographies of cabinet officials, see UNITED STATES.

CALIFORNIA

California's new Republican governor, Ronald Reagan, dominated events of the year 1967. His influence was reflected in the regular legislative session, government economy drives, new taxes, and changes at the University of California.

The Governor. That Governor Reagan was determined to cut costs of government was evident immediately after he took office on January 2. A 10% across-the-board reduction of budgets was instituted, several thousand state employees (including some 3,000 in mental health programs) were released, and sharp cuts were made in medical benefits. While consistently denying presidential ambitions, Governor Reagan became increasingly active on the national speaking circuit as the year moved on. (See also REAGAN.)

Budget and Taxes. The final budget for 1967, totaling a record $5.09 billion, required tax increases of over $900 million. Many new taxes were imposed, but the most widely felt were a 1-cent increase (from 4 cents to 5 cents) in the sales tax, higher liquor and cigarette taxes, and an increase in the income tax.

University of California. Governor Reagan conducted a notable battle with the 9-campus University of California system. His proposals to cut the budget severely and to impose tuition added to the turmoil in university circles caused by the student unrest of the past two years. The governor had to be satisfied with modest budget cuts, and his tuition proposal was rejected in favor of increased fees. Clark Kerr, president of the university, was dismissed by the Board of Regents on January 20 and was replaced in September by Charles J. Hitch, a former vice president of the university. The budget squeeze was also felt throughout the state college system. Student demonstrations, mostly related to the Vietnam War, continued sporadically but without the intensity of previous years.

Legislation. During its regular session the legislature was preoccupied by budgetary considerations, but it did pass a liberalized therapeutic abortion act, a bill to prohibit the carrying of loaded weapons within city limits, and a measure restricting electronic eavesdropping to the state attorney general and full-time law enforcement officials acting under proper authority. On May 2, a band of 26 armed young Negroes invaded the chamber of the Assembly (lower house) to protest the weapons bill.

During the year the state had its first experience with the "implied consent" law, passed in 1966, under which a motorist who refuses to take a blood, breath, or urine test when suspected of drunken driving may lose his license for six months. During the first two months of its application, 1,235 persons refused to take the tests, and more than 1,000 of these had their licenses suspended.

On May 22 the U. S. Supreme Court invalidated Proposition 14, an initiative measure approved by the voters in 1964 that would have abolished all fair housing legislation and prohibited such legislation in the future.

Congressional Redistricting. Under state supreme court orders either to redistrict the state's 38 congressional districts by Dec. 7, 1967, or to accept redistricting by the court, the legislature met in special session on November 6. Before the end of the month it produced a plan designed to correct the worst imbalances while providing maximum protection to incumbents and thus to California's representative seniority in Congress. The plan was accepted by the court in December.

Special Elections. Mrs. Shirley Temple Black, former motion picture child star, ran second to fellow Republican Paul N. McCloskey, Jr., in a special election held on November 14 in the 11th congressional district to fill a vacancy caused by the death of Republican Rep. J. Arthur Younger. Because McCloskey (one of 11 candidates) did not win a majority of the votes, he faced the leading Democratic contender, Roy Archibald, in a runoff election on December 12. McCloskey won easily.

Republicans rejoiced over victory in a special election on August 15 to fill a state Senate vacancy caused by the death of Democratic State Sen. J. Eugene McAteer. The victory of Municipal Judge Milton Marks, a Republican of San Francisco, gave the Republicans and Democrats a tie in the Senate.

Executions. The 4-year moratorium imposed by former Gov. Edmund G. Brown on gas-chamber executions came to an end in April 1967, and one execution was carried out on April 12. The resumption of executions intensified the dispute revolving around continuing efforts to abolish the death penalty, but the legislature has consistently refused to adopt such

Government: *Chief Officers*—governor, Ronald Reagan (Republican); lt. gov., Robert H. Finch (R); secy. of state, Frank M. Jordan (R); atty. gen., Thomas C. Lynch (Democrat); treas., Ivy Baker Priest; supt. of pub. instr., Max Rafferty; chief justice, Roger J. Traynor. *Legislature* (convened Jan. 2, 1967)—Senate, 40 members (20 Republicans, 20 Democrats); Assembly, 80 members (38 R, 42 D).

Education: *School enrollment* (1965–66)—public elementary, 3,064,000 pupils (93,800 teachers); public secondary, 1,636,000 pupils (62,200 teachers); nonpublic schools, 441,300 pupils (15,510 teachers); higher (fall 1965), 866,746 students. *Public school expenditures* (1965–66)—$2,475,000,000 ($603 per pupil); average teacher's salary, $8,150.

Public Finance (fiscal year 1967): *Revenues*, $3,637,513,569 (3% sales tax, $1,053,249,331; motor fuel tax, $548,286,749; federal funds, $2,797,640). *Expenditures*, $4,128,678,354 (education, $1,648,926,723; health & welfare, $922,601,158; highways, $684,799,344). *Debt*, $4,265,915,000.

Personal Income (1966): $65,002,000,000; average annual income per person, $3,457.

Public Assistance (fiscal 1966): $1,024,015,726 to 1,085,324 cases (aged, $402,767,740; dependent children, $369,347,458).

Labor Force (employed persons, July 1967): *Agricultural*, 302,900; *nonagricultural* (wage and salary earners), 6,337,100 (24.8% manufacturing, 21.7% trade, 19.6% government). *Unemployed persons* (1966 annual average)—374,000.

Manufacturing (1965): Value added by manufacture, $18,876,132,000 (trans. equip., $3,000,342,000; elec. mach., $2,178,960,000; nonelec. mach., $1,330,076,000; fabricated metals, $1,189,023,000; food and products, $2,649,985,000).

Agriculture (1966): *Cash farm income*, $4,051,929,000 (livestock, $1,556,763,000; crops, $2,391,285,000; govt. payments, $103,881,000). *Chief crops* (tons)—sugar beets, 5,265,000 (rank, 1st among the states); grapes, 3,400,000 (rank, 1st); citrus fruit, 1,963,600 (rank, 2d); barley, 1,613,232 (rank, 2d); peaches, 1,104,032 (rank, 1st).

Mining (1966): *Production value*, $1,708,606,000 (ranks 3d among the states). *Chief minerals*—gypsum, 1,423,000 tons; crude petroleum, 344,560,000 barrels.

Fisheries (1966): *Commercial catch*, 458,440,000 pounds ($55,150,000). *Leading species*—yellowfin tuna, 132,595,000 pounds ($23,689,000); skipjack tuna, 51,089,000 pounds ($6,761,000); mackerel, 40,862,000 pounds ($1,424,000).

Transportation: *Roads* (1967), 171,007 miles (275,150 km); *motor vehicles* (1966), 10,496,928; *railroads* (1965), 29,240 track miles (47,056 km); *airports* (1967), 35.

Communications: (1966): *Telephones*, 10,595,800; *television stations*, 36; *radio stations*, 344; *newspapers*, 128 (daily circulation, Sept. 1965, 5,457,268).

a measure. Early in July a U. S. district court judge ordered a temporary stay of execution for all 58 men then in death row, and on July 10 a federal appeals court refused to set the stay aside. On November 14 the state supreme court stayed all executions pending hearings in death penalty cases early in 1968.

Other Events. Civil disturbances occurred during the year in San Francisco, Los Angeles, and several other cities, but no widespread damage or injuries resulted. The city of Long Beach attracted wide attention with its successful bid to obtain the Cunard liner *Queen Mary* for use as a maritime museum and hotel. California continued to attract new residents in 1967 but at a slightly diminished rate.

CAMBODIA

Cambodia's relations with the United States, South Vietnam, Thailand, Australia, Japan, and Laos deteriorated in 1967, and its political stability was slightly shaken.

JACQUELINE KENNEDY, welcomed by Prince Norodom Sihanouk, arrives in Phnom Penh in November. The friendly visit contrasted with strained U.S.-Cambodian relations.

Internal Politics. Communist elements in the impoverished western province of Battambang rioted in April while others tried to stage a revolt in the strategically located eastern province of Kampong Cham, which borders on South Vietnam.

The Battambang uprising was designed to embarrass the righ-of-center government of Premier Lon Nol. This revolt and earlier leftist demonstrations in Phnom Penh forced Chief of State Prince Norodom Sihanouk to accept Premier Lon Nol's resignation on April 30. On May 2, Sihanouk announced the formation of a new government headed by him and including his personal adviser, Son Sann, as premier, and the extreme leftist Chau Seng (identified a week earlier as one of the leaders of the Battambang uprising), as economics minister. The move restored the balance between right and left that had prevailed before the formation of the Lon Nol government in 1966.

Sino-Cambodian Relations. Sihanouk ordered the dissolution of all friendship associations with foreign countries in September, a move directed against the Cambodian-Chinese Friendship Association, a channel for Communist Chinese subversion. Leftist cabinet ministers Chau Seng and So Nem publicly opposed the move and were dismissed from their posts by Sihanouk. So Nem was the minister of health and former chairman of the association, and Chau, in addition to being economics minister, was the editor of a French-language paper that published Peking's denunciation of the dissolution. The chief of state closed all privately owned newspapers, many of which were pro-Chinese. The situation improved when Communist China pledged future noninterference in Cambodian affairs, and Sihanouk reversed his previous decision to recall his ambassador.

Vietnam War. In the fall of the year, the U. S. government expressed its belief that Cambodia was increasingly being used as a Vietcong sanctuary, and that military material was being shipped in through Sihanoukville for use in South Vietnam. American officials in the area repeatedly claimed that the Vietcong crossed the Cambodian border almost at will, although not necessarily with the knowledge of the Cambodian government. Late in November two U. S. newsmen reported the discovery of a Vietcong camp site 4 miles (6 km) inside Cambodia. It appeared to have been used for several months. Cambodia's leaders denied its existence and, although they conceded that the Vietcong cross from Vietnam, insisted that there were no permanent camps in Cambodia.

Foreign Relations. The visit in November of Mrs. John F. Kennedy to dedicate a street in Sihanoukville to her husband's memory (and to see the temples at Angkor) failed to improve U. S.-Cambodian relations, broken at Cambodia's initiative in 1965. Prince Sihanouk stated repeatedly that diplomatic ties could be restored if the United States would recognize what Cambodia claims are its borders with Thailand and South Vietnam, and would guarantee that neither American nor South Vietnamese forces would transgress its frontier.

The USSR gave Cambodia five MIG-17 fighter planes in April and improved its relations again in June by recognizing the frontiers claimed by Cambodia. It was followed in this by the Vietcong, North Korea, North Vietnam, and China. France and West Germany had already recognized them.

Economy. Premier Son Sann made efforts to restore confidence among private investors, and gave guarantees against nationalization to foreigners who aided agricultural development. Cambodia's foreign exchange reserves continued stable despite apparently increased smuggling (especially of rice), which cut into external earnings, and widespread blackmarketing of foreign currency.

CAMEROON

The year 1967 was generally stable and prosperous in Cameroon, with few changes in government or government policy. President Ahmadou Ahidjo pursued a neutral foreign policy, which extended to neighboring strife-torn Nigeria. The budget was balanced, and there was a steady flow of funds for development projects. The major note of unrest concerned a bloody riot, which occurred in late 1966.

Internal Affairs. On Dec. 31, 1966, long-standing tensions between Bamiléké and Bakossi tribesmen in West Cameroon surfaced in a riot that resulted in 68 deaths. Federal troops restored order, and by June 1967, 150 rioters had been tried and convicted. Elections scheduled for West Cameroon were postponed until Dec. 31, 1967. The Cameroon National Union retained all seats.

Government: *President*—Ahmadou Ahidjo (took office for 2d 5-year term April 1965); *Vice President*—John N. Fonda (same term). *Parliament*—National Federal Assembly, 50 members (party seating, 1967: all members of the Cameroon National Union).
Religious Faiths: Animist, 48% of population; Roman Catholics, 20%; Muslims, 14%; Protestants, 6%; others, 12%.
Education: *Total school enrollment* (1964)—726,076 (primary, 693,268; secondary, 23,356; teacher-training, 1,474; technical, 6,814; higher, 1,164).
Finance (1966–67 est.): *Revenues*, $128,000,000; *expenditures*, $121,400,000; *monetary unit*, CFA franc (246.85 francs equal U.S.$1).
Gross National Product (1965): $670,000,000.
Cost of Living Index (1966): 127 (1958=100).
Manufacturing (metric tons): Aluminum (1966), 48,720.
Crops (metric tons, 1965–66 crop year): Sweet potatoes and yams, 264,000; maize, 170,000; peanuts, 129,700; bananas (1963–64), 142,000; cocoa beans (1966–67), 85,000.
Minerals (1965): tin, 41 metric tons.
Foreign Trade (1965): *Exports*, $139,000,000 (chief exports: cocoa, $27,600,000; coffee, $26,800,000; aluminum, $19,957,000); *imports*, $152.000,000 (*chief imports*, 1964: woven cotton fabrics, $8,084,000; trucks and lorries, $4,785,000). *Chief trading partners* (1964): France (took 39% of exports, supplied 53% of imports).
Transportation: *Roads* (1964), 8,531 miles (13,729 km); *motor vehicles* (1965), 41,567 (automobiles, 18,720); *railways* (1965), 330 miles (531 km); *principal airport*, Douala.
Communications: *Telephones* (1966): 4,200; *newspapers* (1964), 3 (daily circulation, 18,000).

Also late in December 1966, Victor Kanga, a cabinet minister since 1960, was tried and convicted for disseminating false rumors.

Foreign Relations. Cameroon remained neutral while neighboring Eastern Nigeria, which had declared itself the independent republic of Biafra in May 1967, was involved in open warfare with Nigerian federal forces. At the Organization of African Unity meeting in Kinshasa, Congo, September 11–14, Cameroon was one of six nations named to a commission to investigate means of ending the Nigerian civil war. In the Middle East conflict, Cameroon aligned itself with the bulk of French-speaking Africa by taking a position midway between support of the Arabs and Israel.

During 1967, President Ahidjo traveled widely in an effort to cement friendly relations abroad. In February he visited the Ivory Coast, Mali, and Mauritania; in June, Yugoslavia; and in October, the United States.

Economy. For the second consecutive year Cameroon balanced its budget without external aid. Negotiations were begun to finance the second phase of the Transcameroon railway. Sources backing the project include the European Development Fund, France, and the U. S. Agency for International Development. Other foreign funds were allocated for road construction and development of plantations.

Washington University, St. Louis

CANADA

CANADA

Canada inaugurated the 1967 Centennial of Confederation on New Year's Eve with the lighting of a symbolic flame on Parliament Hill in Ottawa.

The highlight of the centennial was the Universal and International Exhibition of 1967—Expo 67—held at Montreal and visited by a record 50 million people in six months of operation (April 28–October 29). But every Canadian center, from the largest cities down to the smallest hamlets, joined in the celebrations throughout the year with parades, picnics, sports spectaculars, and a variety of permanent centennial projects that ranged from Ontario's multimillion-dollar Centre of Science and Technology (in Toronto) through new libraries and museums to a sewer system in one prairie town. The success of Expo 67 led to plans to make it a permanent fair honoring the concept "Man and His World." (See also EXPO 67.)

The outstanding event of the year was the state visit (June 29–July 5) of Queen Elizabeth and Prince Philip to Ottawa and Expo. On Dominion Day, July 1 (birth date of the Confederation and a national holiday), the Queen personally received addresses of loyalty from the Parliament. During the summer, the Centennial Train and the Centennial Caravan—two sets of "museums on wheels" depicting Canada's history—crisscrossed the country, as did the spectacular military tattoo produced by the Canadian armed forces.

In April, Prime Minister Lester B. Pearson announced the creation of a national system of honors, the Order of Canada, with three grades of honors and awards—Companion of the Order for outstanding service, Medal of Service for meritorious service, and Medal of Courage for acts of courage. A mass investiture of 35 Canadians as Companions of the Order and 55 with Medals of Service was held on November 24 in Ottawa.

From July 23 to August 6, Winnipeg, Man., played host to the Pan-American Games, the biggest sports event ever held in Canada. Canadian athletes placed second in the competitions, winning 92 medals; the United States took first place with 225 medals.

The enjoyment of centennial year and its many cultural activities was dampened, however, by the increasingly strong revival in the province of Quebec of expressions of discontent—especially of separatism. French President de Gaulle aggravated the situation by his outspoken campaign for a "Free Quebec," which he began during his visit to Expo late in July.

A second sobering note in the round of festivities was Canada's economic condition. While the cost of living continued to rise, unemployment increased. In an attempt to counteract inflationary tendencies (made more urgent by the devaluing of the British pound and French pressure on the dollar), the federal government twice raised the bank rate, and its November "minibudget" (a supplemental budget) placed a 5% surcharge on personal income taxes. By the end of Canada's centennial year, grave political and economic warnings were being voiced.

FIREWORKS over the Parliament Buildings (*left*) and an outsized birthday cake (*right*) marked the celebrations in Ottawa for the 100th anniversary of Canada's Confederation in July. Queen Elizabeth II is seen on steps at right.
WIDE WORLD

NATIONAL FILM BOARD OF CANADA

ROLAND MICHENER, new governor-general of Canada, meets Queen Elizabeth upon her arrival by air in Ottawa.

ROLAND MICHENER was sworn in on April 17, 1967, as the 20th governor-general of Canada, after being appointed to that post by Queen Elizabeth II on the recommendation of Canadian Prime Minister Pearson. Michener's position as the personal representative of the British sovereign is formally the nation's highest.

The son of a political leader and provincial legislator, Daniel Roland Michener was born in Lacombe, Alta., on April 19, 1900. After graduating from the University of Alberta (1920), he studied as a Rhodes scholar at Oxford University (Engand), and in 1924 he entered private law practice in Toronto. He was a Progressive Conservative member of the Ontario legislature from 1945 to 1948 and was elected to the Canadian House of Commons in 1953, serving as speaker of that body from 1957 to 1962. From 1964, Michener had been Canada's high commissioner (ambassador) to India.

POLITICAL AFFAIRS

With consistent support from the small Social Credit and Créditiste parties in Parliament, the minority Liberal government of Lester B. Pearson managed to avoid any major parliamentary crises during the year. Its most dangerous moments came in the early months when high-ranking military officers challenged the government's plan to integrate the army, navy, and air force into a single body named the Canadian Forces, and the opposition used obstructionist tactics against the controversial measure. The proposed introduction of a standard uniform for all branches and the abandonment of service traditions had already aroused strong reactions in 1966, and the emotion-charged debates in the House of Commons threatened to become a repetition of the bitter "flag controversy" of 1965 until the government enacted the legislation by using a limited form of cloture. Thereafter the controversy quickly died.

Governors-General. Roland ("Roly") Michener, a native of Alberta, was sworn into office on April 17 as Canada's 20th governor-general. He succeeded Georges P. Vanier—soldier, lawyer, diplomat, and governor-general since 1959—who died on March 5. Vanier was Canada's second native-born governor-general. His immediate predecessor, Vincent Massey, the first native-born governor-general, died in London on December 30.

Cabinet Changes. A number of cabinet changes occurred during the year. On January 4, Prime Minister Pearson announced the return of Walter L. Gordon, who had resigned as finance minister in November 1965 in consequence of Liberal reverses in the general elections. The return of Gordon, an outspoken advocate of Canadian economic nationalism and critic of United States control over Canada's economy, sparked rumors of a government policy shift away from the traditional Liberal continentalism of Pearson and Finance Minister Mitchell Sharp. Gordon was appointed minister without port-

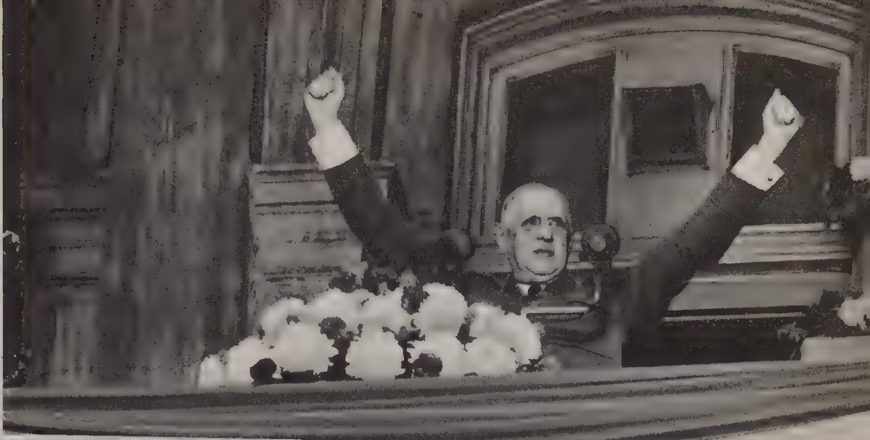
Foreign Trade (1966): *Exports*, $13,536,000,000 (chief exports: manufactured goods, $2,676,900,000; wheat, $1,058,200,000; newsprint, $895,400,000; wood, $695,600,000); *imports*, $14,900,000,000 (chief imports, 1965: nonelectrical machinery, $1,587,200,000; transport equipment, $1,146,900,000; bus and auto parts, $682,500,000). *Chief trading partners* (1965): U. S. (took 56% of exports, supplied 70% of imports); Britain (took 14% of exports, supplied 7% of imports).

Transportation: *Roads* (1964), 505,191 miles (813,004 km); *motor vehicles* (1966), 6,927,327 (automobiles, 5,499,527); *railways* (1965), 43,355 miles (69,758 km); *merchant vessels* (1966), 65 (284,000 gross registered tons); *national airlines*, Air Canada, Canadian Pacific Airways; *principal airports*, Montreal, Toronto, and Vancouver.

Communications: *Telephones* (1967): 7,880,471; *television stations* (1967), 324; *television sets* (1967), 5,900,000; *radios* (1964), 10,000,000; *newspapers* (1964), 114 (daily circulation, 4,385,000).



"Vive le Québec libre."

—French President de Gaulle, Montreal, July 24, 1967.

PICTORIAL PARADE

"Every province of Canada is free. Canadians do not need to be liberated."

—Prime Minister Pearson, Ottawa, July 25.

UPI

folio to carry out specific projects for the prime minister, but it was announced that he would get a portfolio later. On April 4 he was made president of the Privy Council. Despite reports that he and Sharp had clashed in cabinet meetings over economic policies, no such split appeared in their public statements. Gordon succeeded Guy Favreau, who had resigned as president of the Privy Council and registrar general (and who died on July 11).

In the April cabinet shuffle John N. Turner was transferred from minister without portfolio to registrar general, to which office the newly created department of consumer affairs was added in August. Lucien Cardin resigned as minister of justice and attorney general, and Pierre Elliot Trudeau assumed those posts. Jean Chrétien became minister without portfolio. These last appointments were interpreted as a move by Pearson to increase the radical Quebec voice in the cabinet, since 9 of the 27 cabinet members are from that province.

When John W. Pickersgill resigned from the cabinet and from Parliament on September 18 to become chairman of the new Canadian Transport Commission, Paul T. Hellyer moved from his controversial national defense post to become minister of transport, a step generally believed to enhance his chances of succeeding Pearson as prime minister. Léo Cadieux became minister of national defense, and Charles R. M. Granger was added to the cabinet as minister without portfolio.

Changes in Party Leadership. On December 14, Prime Minister Pearson announced that he would resign as both prime minister and party head as soon as a successor was chosen to lead the Liberal party. Persistent rumors of his forthcoming retirement had been denied so frequently during the year that the announcement came as a complete surprise. On December 17, Liberal party officials announced that a leadership convention would be held at Ottawa on April 4 to 6, 1968. (See also PEARSON.)

Earlier, John G. Diefenbaker, leader of the Progressive Conservative party (the official opposition), demanded the calling of a national party leadership convention in response to the "dump Dief" campaign led by Dalton Camp, the party's national president. The convention was held at Toronto in September. Of the several aspirants to the leadership, only former cabinet ministers George Hees and Davie Fulton and provincial premiers Duff Roblin of Manitoba and Robert L. Stanfield of Nova Scotia had any real hopes of success. At the last moment Diefenbaker announced that he would not retire but would stand for reelection. He was eliminated from the contest on the third ballot, and the victor, on the fifth ballot, was Robert L. Stanfield. Diefenbaker continued to sit in Parliament and to attract public attention by his criticism of the government, while Stanfield experienced difficulty in projecting his image as the new Progressive Conservative leader.

Another national political leader, Robert N. Thompson, resigned as leader of the Social Credit party on March 17. Réal Caouette, leader of the Ralliement des Créditistes, which broke away from Social Credit in 1964, stated that Thompson's resignation would make a national reunion of the party easier. Failure of the party to call a leadership convention led H. A. Olson, Social Credit member for Medicine Hat, Alta., to join the Liberals in Parliament on September 20.

The de Gaulle Affair. A hint of strained relations between Canada and France was noted when President de Gaulle's government virtually boycotted the special ceremony at Vimy Ridge (near Arras, France) on April 9 commemorating the Canadian Corps' victory in 1917. But the depth of the rift became apparent only when the French president visited Canada officially in late July.

Even before de Gaulle's arrival, a quarrel over precedence broke out between the Quebec government and the federal government. As de Gaulle's cruiser, the *Colbert*, entered the St. Lawrence River, on the way to the city of Quebec, it rejected the custom of flying the host country's flag. The next day (July 24), during the motor trip to Montreal (which de Gaulle compared in atmosphere to the liberation of France from the Nazis in 1944), provincial officials arranged demonstrations of French-Canadian nationalism.

A crisis was reached at Montreal when de Gaulle shouted the Quebec separatist slogan *"Québec libre"* (Free Quebec). Reacting to a deluge of protests against the president's meddling in Canada's internal affairs, Prime Minister Pearson, after a day-long cabinet meeting on July 25, rebuked de Gaulle for his encouragement of separatism. The next morning de Gaulle announced that he would return to France immediately without visiting Ottawa. Premier Daniel Johnson of Quebec said he "bitterly deplored" Pearson's rebuke to de Gaulle. (See also QUEBEC.)

The other official visits to Expo by some 60 heads of state or their representatives passed without incident, although President Tito of Yugoslavia canceled his visit in the face of threats to his life from anti-Communist refugees.

Unrest in Quebec. An unrepentant de Gaulle announced increased economic aid to Quebec in August, and at a November 27 press conference he repeated his statements supporting French Canadian separatism. The latter action was denounced by Pearson as "intolerable" interference in Canadian affairs, but the net result of de Gaulle's anti-Canadian policies was rapid escalation of separatist political activity in Quebec, including the decision of René Lévesque, a former Quebec cabinet member, to leave the Liberal party and support separatism after the Quebec Liberal Federation resolved in October to preserve federalism.

Premier Johnson of Quebec announced in September his own position on the Canadian constitutional question—namely, that his Union Nationale government was pledged to obtain a new Canadian constitution that would end Quebec's isolation. But when the unofficial, 2,000-delegate Estates General of French Canada met in Montreal in November and adopted strongly separatist resolutions, Johnson publicly disavowed their extremism.

De Gaulle's November pronouncement coincided with the Confederation of Tomorrow Conference, a meeting of provincial leaders called by Ontario Premier John Robarts and held in Toronto. There de Gaulle's statements were publicly condemned by all participants except Premier Johnson of Quebec. From the time that Premier Robarts announced the conference, Prime Minister Pearson refused all federal participation therein and countered with his own plan to hold a federal-provincial constitutional conference early in 1968.

Bilingualism Commission. On December 5 the first volume of the report of the Royal Commission on Bilingualism and Biculturalism (a commission established by Prime Minister Pearson in 1963) was released. It called for official bilingualism in Ontario and New Brunswick, conversion of the Ottawa-Hull area into a bilingual federal district, and official provincial bilingualism in areas where 10% of the population speak the second language. Public reaction ranged from doubts that the report had come in time to stop the drift toward separatism to a charge by René Lévesque that its proposals were designed as a red herring to divert the attention of Quebec from its national destiny.

Legislation. Other than the controversial act unifying the Canadian armed forces, the most important legislation of the year was the decision in November to suspend the death penalty for a trial period of five years, except in cases involving the murder of policemen or prison guards. Another controversy arose in Parliament in October over legislation for a Canadian Radio Commission to promote public broadcasting at the expense of private interests, to further Canadian unity, and to regulate all aspects of broadcasting in Canada. Legislation to broaden the grounds for divorce in Canada was still under consideration at the end of the year.

Elections. During the year provincial elections were held in Alberta, Nova Scotia, Ontario, Saskatchewan, and New Brunswick. In each election the incumbent government was returned to power (see the separate articles on the provinces). In five federal by-elections (special elections held to fill vacancies) on May 29, the Liberals retained four Quebec seats but lost one in northern Ontario to the New Democratic party. Three more by-elections, on November 6, brought no change in party standing in the House of Commons. In one of these by-elections, Robert Stanfield, the new leader of the Progressive Conservatives, entered the Commons for the Nova Scotia constituency of Colchester-Hants.

Foreign Affairs. The Canadian government's continued efforts to remain neutral regarding the Vietnam War in order to enhance Canada's claim to be an "honest broker" in international controversies came under repeated attack during the year from both pro- and anti-American interventionist groups.

In January, Prime Minister Pearson received a petition from 360 Canadian university professors requesting the Canadian government to halt the sale of arms to the United States until U. S. intervention in Vietnam ends. The prime minister replied that arms sales were part of the defense-sharing agreement to which his government was pledged.

When opposition leader Diefenbaker called on the government to condemn the bombings of North Vietnam, External Affairs Minister Paul Martin replied that such a statement would damage Canada's role as a peacemaker and expressed the hope that the International Control Commission, of which Canada is a member, might soon be able to help resolve the war. T. C. ("Tommy") Douglas, leader of the New Democratic party, compared Martin's stand to Pontius Pilate's washing his hands of responsibility, and concluded, "The time for quiet diplomacy is past; the time has come to speak out." In March, Pearson reiterated his claim that quiet diplomacy was Canada's only hope in influencing developments in Vietnam.

In a speech before Parliament on April 11, Martin unveiled a 4-point proposal for peace: (1) disengagement of military forces linked to restoration of the demilitarized zone (to be internationally inspected) between North and South Vietnam; (2) freezing of military activities; (3) an end to all hostilities; and (4) a return to the 1954 Geneva cease-fire provisions. This plan was accepted at once by South Vietnam but rejected by North Vietnam as "a crafty scheme of the United States imperialists." On September 27, Martin placed the plan before the UN General Assembly.

In the wake of the Israeli-Arab hostilities, Prime Minister Pearson outlined a plan on June 8 for guaranteeing Israeli access to the Suez Canal and the Gulf of Aqaba, creation of a UN-policed demilitarized zone between the combatants, and a just settlement of the Arab refugee problem. Eleven days later the prime minister endorsed U. S. President Johnson's 5-point peace plan, which went further than his own by urging an end to the arms race in the Middle East. On June 22, Pearson criticized the USSR for rearming the Arabs, and on June 27 he announced a Canadian grant of almost $1.5 million in aid to Arab refugees. Pearson's policy in the crisis consistently stressed Canada's neutrality and the need for a UN-arranged peace.

The controversial withdrawal of Canadian units from the UN Emergency Force at the request of the Egyptian government, which was the prelude to the outbreak of fighting, was explained in a report by UN Secretary-General U Thant in mid-July. The report showed that Egypt had demanded Canadian withdrawal out of fear that Canada's navy was about to be used to support passage of Israeli shipping through the Gulf of Aqaba.

THE CANADIAN ECONOMY

Introducing his "minibudget" (supplemental budget) at the end of November, Finance Minister Mitchell Sharp reviewed the nation's economic situation in the Centennial year. "During 1967," he said, "there has been deceleration in the rapid economic expansion which took place between 1961 and 1966." He forecast a 7% increase in the gross national product during the year but indicated that, in volume, the increase would be less than half because of rising prices. The year, he concluded, would see a "slowing down in the rate of production, a slight downturn in total employment, and a rise . . . in unemployment. The economy has ceased to be under the serious strain it experienced last year, and has developed a small amount of spare capacity."

THE CANADIAN MINISTRY

(In order of precedence in the Privy Council as of January 1968)

Prime Minister, **Lester Bowles Pearson**
Secretary of State for External Affairs, **Paul J. J. Martin**
Minister of Trade and Commerce, **Robert H. Winters**
Minister of Transport, **Paul T. Hellyer**
President of the Privy Council, **Walter L. Gordon**
Minister of Finance and Receiver General, **Mitchell W. Sharp**
Minister of Public Works, **George J. McIlraith**
Minister of Indian Affairs and Northern Development, **Arthur Laing**
Minister of National Health and Welfare, **Allan J. MacEachen**
Minister of Fisheries, **Hédard J. Robichaud**
Minister of Veterans Affairs, **Roger Teillet**
Secretary of State, **Judy LaMarsh**
Minister of Industry and of Defense Production, **Charles M. Drury**
Minister of Labour, **John R. Nicholson**
Minister without Portfolio and Leader of the Government in the Senate, **John J. Connolly**
Minister of Forestry and Rural Development, **Maurice Sauvé**
President of the Treasury Board and Minister of National Revenue, **Edgar J. Benson**
Minister of National Defence, **Léo Cadieux**
Solicitor General, **Lawrence T. Pennell**
Minister of Energy, Mines, and Resources, **Jean-Luc Pépin**
Minister of Manpower and Immigration, **Jean Marchand**
Minister of Agriculture, **John J. Greene**
Postmaster General, **Jean-Pierre Côté**
Minister of Justice and Attorney General, **Pierre Elliot Trudeau**
Minister without Portfolio, **John Chrétien**
Minister without Portfolio, **Charles R. M. Granger**
Registrar General, **John N. Turner**

Major Economic Developments. At the beginning of 1967 the Canadian economy was still operating at a high level, but concern was being expressed that a recession might be approaching. Smaller corporate profits, leveling out in some domestic industries, and price rises that outstripped productivity increases were the main reason for this concern. These trends were maintained in the first half of the year as the gross national product rose about 1.7% per quarter, but prospects of a sharply reduced wheat crop cast a shadow on this general condition of stability. By November, the cost-of-living index had risen by 3.8% over the same date in 1966, and the government instituted further anti-inflationary measures in its mini-budget by increasing income taxes and reducing government spending.

Canada's exports reached $10.8 billion in the first nine months of 1967, and imports stood at $11.3 billion for the same period. To a large extent, this narrowing of the export-import gap was due to a surplus of $383 million in the travel and tourist account attributable to the success of Expo, compared with a deficit of $32 million in the same account for 1966.

Canada's labor force grew by 3.6% from November 1966 to September 1967, but the 3.2% unemployment rate of November 1966 had risen to 4.3% by the same month in 1967. Private investment was expected to be only slightly higher than in 1966, a factor reflected in the 10% decline in housing starts in the third quarter of 1967, which intensified the serious housing shortage that existed in major Canadian cities.

An important event of 1967 was the release in February of the report of the Royal Commission on Taxation, headed by Kenneth L. Carter, a Toronto tax accountant. Its main recommendations were for taxation of all forms of income, including capital gains; major reductions in personal income tax rates; taxation of families as units; a flat 50% tax on all corporations; and reduction of present tax advantages enjoyed by insurance companies, cooperatives, and mining corporations. Considerable opposition was expressed to the last recommendation by the groups directly affected and by provincial premiers.

The completion of the Kennedy Round of trade negotiations in June involved few changes in Canada's tariff structure. The agreements affect duties on $4.5 billion of Canadian trade—$2.5 billion worth of imports and $2 billion of exports.

Finance. Budget revenues for the 1967–68 fiscal year were estimated at $9 billion and expenditures at $9.7 billion, with an expected deficit of $740 million. The budget presented on June 1 made no changes in personal or corporation taxes and was generally described as a standpat program. Opposition critics noted that government spending was climbing at a rate of 20%, and called for positive measures to reduce unemployment and stabilize prices. The supplemental budget of November attempted to meet those needs by increasing personal income and other taxes to add $520 million in revenues and reduce the revised deficit to $80 million. Excise taxes were increased on alcoholic beverages and tobacco.

Manufacturing. Manufacturing production in August stood 4.4% above the August 1966 figure. Durable goods accounted for 3.9% of the rise. Iron and steel production fell slightly during the same period, but electricity and gas production rose.

Agriculture. Excessively dry weather in the west and excessive rains in eastern Canada during the spring reduced crop production during 1967. Cash farm income in the first nine months was $1,758,680,000, compared with $1,704,140,000 for the same period in 1966. But by late autumn farmers were talking of withholding their produce as a means of getting public attention and government action on their plight, which resulted from a cost-price squeeze. On May 24 several thousand farmers invaded the Parliament buildings in Ottawa in a noisy demonstration in favor of a $5 per hundredweight minimum for industrial milk.

Canada's important wheat crop was estimated regionally to be from 4% to 30% lower than in 1966, and at the end of October 1967 overseas shipments were almost 100 million bushels behind those for the same period in 1966. Canadian wheat was also encountering increasing competition in world markets, and by autumn prices were being forced down, largely by U. S. sales in traditionally Canadian markets. The one promising development was the Soviet Union's agreement to purchase at least 75 million bushels of Canadian wheat before July 1968.

Mining. At the end of October the Supreme Court of Canada made a major decision affecting the future of the Canadian mining industry when it determined that offshore mineral rights belong to the federal government. A second important development was the incentive to uranium mining at Elliot Lake, Ont., as a result of contracts obtained in September from Japanese electrical utilities groups for delivery of 52 million pounds of uranium concentrates over the next decade. Mining production fluctuated throughout the year but generally showed declines from 1966 production figures.

Transportation. As part of its plan to reduce spending, the government announced in November that the proposed causeway from Prince Edward Island to the mainland is to be postponed once more. In June work was begun on the fifth major rebuilding in the 138-year history of the Welland Ship Canal; it is aimed at doubling the capacity of this vital link in the St. Lawrence-Great Lakes system. (See also CANALS.) In November, Alitalia Airlines announced future direct flights between Toronto and Rome. At the same time the Netherlands government applied pressure on the Canadian government to increase landing rights for KLM flights to Canada.

Communications. The Board of Broadcast Governors' recommendation in June that a Barrie, Ont., television station be allowed to locate its transmitter closer to Toronto aroused public hostility because the move would block out two neighboring U. S. channels. A decision rests with the cabinet, which seems reluctant to adjudicate in an issue with dangerous political potentials. As part of the government's reduced spending program, the foreign service of the Canadian Broadcasting Corporation was merged with the general organization of the CBC for budgetary purposes. This seems to be a compromise with the suggestion that the influential foreign service should be abandoned completely.

University of Toronto

CANADIAN LITERATURE

The Canadian literary scene in 1967 reflected the general celebration of the Centennial of Confederation in a large and varied selection of new books. In addition to much excellent fiction, poetry, and biography, there were numerous volumes on public affairs and history, as well as children's books, humor, and scholarly publications. In special tribute to the Canadian land and people, there were two superb pictorial displays: Roloff Beny's *To Every Thing There is a Season,* with text by Milton Wilson, and *Canada/a Year of the Land,* with color plates by the National Film Board and text by Bruce Hutchison.

Public Affairs. Analyses of Canadian society appeared in many forms. Richard Jones, in his *Community in Crisis,* saw a need for a new federalism. *Political Realignment,* by Premier Ernest C. Manning of Alberta, calls for a reorganized 2-party system in federal government. Robert Arthur John Phillips' *Canada's North* reviews the value and history of the Canadian northland. In *Doctors' Strike,* Robin F. Badgley and Samuel Wolfe blamed the 1962 doctors' strike on poor planning by the Saskatchewan government in presenting the medical care program that was introduced that year. Social phenomena were treated in Simma Holt's *Sex and the Teen-Age Revolution* and in *Man and his Family* by Wilder Penfield. Northrop Frye published his searching and perceptive McMaster University Whidden lectures on progress under the title *The Modern Century.*

History. Among the outstanding historical works of 1967 was Gustave Lanctôt's *Canada and the American Revolution 1774–1883,* which indicates that the American Revolution helped open Canadian minds to political change. *The Canadians 1867–1967,* a series of essays edited by James Maurice Stockford Careless and R. Craig Brown, pictures the country and its changing attitudes. Leslie Frost's semiautobiographical *Fighting Men* is a military history that criticizes military and political leadership in wartime, with special attention to the action of the men from Orillia, a town in southern Ontario, during World War I. The book serves as a reminder that "to remember the old is to add strength and background to the new." Herbert Fairlie Wood's *Vimy!* is a definitive and moving account of the fierce World War I battle at Vimy Ridge, in which Canadian troops captured the German position.

Fiction. Surprisingly, no good historical novel appeared in 1967, a year of great historical significance. Alienation has become the major theme of most Canadian novelists. In Hugh MacLennan's *Return of the Sphinx,* about the new urbanized Quebec with its modernized Roman Catholicism and its movement toward separatism, plot and characters are unfortunately swamped by the obvious and theme-laden dialogue. In Scott Symons' controversial and unconventionally written *Place d' armes* sexual perversion becomes a means of acquiring love for all of mankind. Austin C. Clarke, in *The Meeting Point,* revealed the problems encountered by West Indians adapting to a new way of life in Toronto.

Scratch One Dreamer by David Lewis Stein is the story of an alienated young liberal confronted with the problem of facing himself if he ignores the plight of his fellow man. George Bowering's strong first novel, *Mirror on the Floor,* is the story of the breakdown and disintegration of a teenage beatnik girl. The book unfortunately is marred by technical gimmicks. In *The Newel Post,* Cicely Louise Evans explores the mind of a woman scarred by an alcoholic ex-husband who has left her with a retarded child; she eventually faces love and life at the moment of losing both. Fred Bosworth's haunting novel

The Sparrow's Fall examines the sometimes tragic effects of the introduction of new social mores to northern Indians.

As an antidote to gloom came *Watcha Gonna Do Boy . . . Watcha Gonna Be?*, Peter Taylor's joyful novel about a teenage boy who spends his 17th summer working on a railroad and learning about sex, drink, and life in general.

Poetry. Canadian poets, especially the newer and younger ones, produced a variety of interesting works. Lionel Kearns' *Pointings* reveals his linguistic interest in stress. *Abracadabra,* by John Robert Colombo, contains op, pop, "found," and satiric poems. D. G. Jones' extremely personal *Phrases from Orpheus* is a chiseled assertion of the desirability of change. The detailed lyrical expression in Alfred Prudy's *North of Summer* evokes the vast and lonely Arctic with its friendly Eskimos. The well-known poet Irving Layton shocks, annoys, and still fascinates in *Periods of the Moon.* Raymond Souster, in *As Is,* wrote again on love and its variations and, as usual, satisfies like "the warmed and gentle rain bath of spring!" These poets and many others are included in A. J. M. Smith's *Modern Canadian Verse.*

Biography and Autobiography. The quality of biography and autobiography was uneven. Kathleen Daly Pepper's *James Wilson Morrice,* about one of the first Canadian painters to break with traditional realism, is excellent art criticism but naive biography. *LaSalle,* by E. B. Osler, though introducing new material on the explorer that shows him to have been unreliable, arrogant, and perhaps mentally unbalanced, is less exciting than it might have been. A scholarly and fascinating book is Clara Thomas' *Love and Work Enough,* about Anna Brownell Jameson, the 19th century art and literary critic.

Quite unscholarly but very amusing is *And Now . . . Here's Max,* broadcast reminiscences by Max Ferguson, Canada's leading radio satirist. Another radio personality, Helen Dacey Wilson, pleasantly relives a pleasant past in *More Tales from Barrett's Landing,* about her Nova Scotia family. Two former Royal Canadian Mounted Police officers have written biographies: Clifford W. Harvison's *The Horsemen* reviews the role of the police and is full of interesting anecdotes. Henry A. Larsen recounts some of his experiences in *The Big Ship.* While Harold Horwood's *The Foxes of Beachy Cove* is really a fine natural history, it can also be considered the autobiography of an animal lover and observer.

Humor. There was a paucity of humorous writing in 1967. However, in *Willows Revisited,* Paul Hiebert satirically places a group of would-be poets in a weed-sprouting cemetery to commemorate the demise of Sarah Binks, "the sweet songstress of Saskatchewan," a character Hiebert created in 1947. *Willows Revisited* does not have the *joie* of the earlier *Sarah Binks,* but such characters as Bessie Udderton, Purge Potatok, D. P., and Baalam Bedfellow, Ph. D. might well too become part of the Canadian idiom.

Scholarship. Important works of scholarship included *The Art of Sinclair Lewis,* by D. J. Dooley and Sheila Egoff's *The Republic of Childhood,* "a critical guide to Canadian children's literature in English." W. S. Avis, P. D. Drysdale, R. J. Gregg, and M. H. Scargill, in their senior *Dictionary of Canadian English,* published a valuable justification for Canadian usage, recommending, for example, that the first "c" in Arctic be dropped. A great contribution to Canadian letters was made by Norah Story, whose *Oxford Companion to Canadian History and Literature* is essential for students in both fields.

Juvenile Books. Two of the best children's books centered on historical figures. These are Joseph Schull's *The Nation Makers*' a well-written account of the fathers of Confederation, and Josephine Phelan's *The Ballad of D'Arcy McGee,* about the famous Irish rebel in exile who was shot in Ottawa. Ronald Melzack's *The Day Tuk Became a Hunter* is a delightful collection of Eskimo stories tastefully illustrated by Carol Jones.

GORDON R. ELLIOTT
Simon Fraser University

FRENCH CANADIAN LITERATURE

Several outstanding French Canadian books appeared in 1967. Works of fiction were among the most interesting.

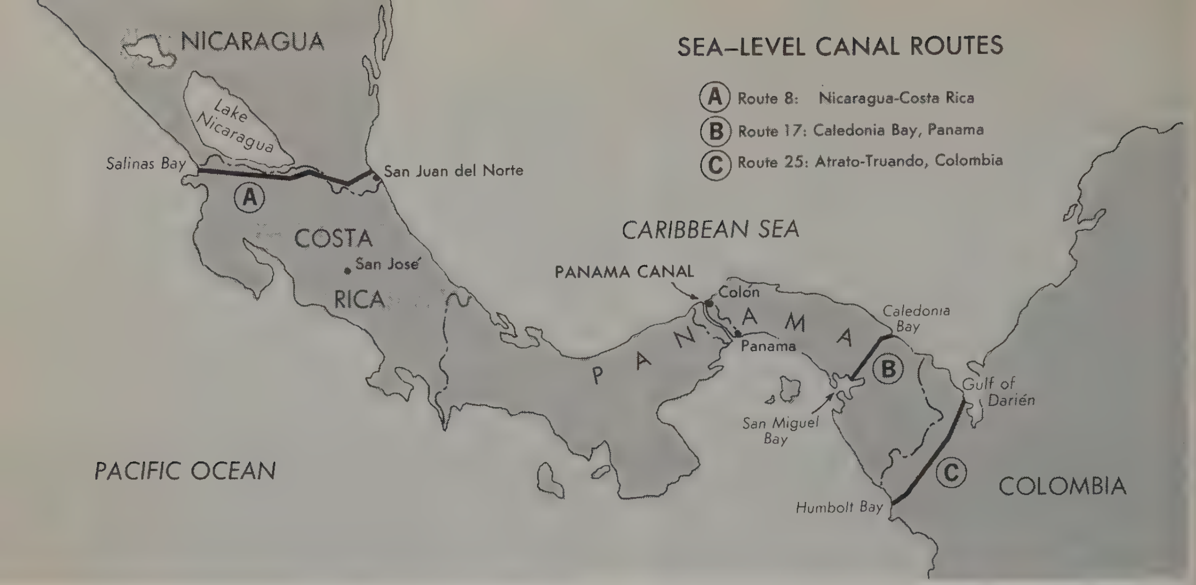
Fiction. The best three novels of the year, all by young authors, were full of humor and good spirits. Jacques Godbout's *Salut, Galarneau!,* his third novel, is the story of a simple man who operates a hot dog stand and who makes the best of a bad job and a miserable life. *Le nez qui vogue,* a second novel by Réjean Ducharme, tells of teenagers who grow sick of life as they discover the depravity of the world around them. While the subject is gloomy, the author's manner is highly poetic and whimsical. In his *Le Grand Khan,* Jean Basile revived the characters of his earlier work *La jument des Mongols. Le Grand Khan* contains many detailed and picturesque descriptions of Montreal, as well as vivid dialogues between four characters who remain friends in spite of ideological and emotional clashes. Other important novels include *Un dos pour la pluie* by Jean Hamelin, *La fugue* by André Berthiaume, and *Les rapides* by Jean Somcynski.

Poetry. By contrast, 1967 was not a particularly good year for poetry. Alfred Desrochers, Gilles Vigneault, and Gérald Godin published new collections of verse, which do not add much to their reputations. Two young poets offered promising first books. Gilles Marsolais wrote *La mort d'un arbre* and Juan Garcia produced *Alchimie du corps.* The only remarkable book of verse of the year was *Le premier mot* by Gatien Lapointe, in which he expresses his quest for truth and happiness and his growing uneasiness as he becomes increasingly aware of the poet's inability to express himself fully.

Nonfiction. The publication of the poet Saint-Denys-Garneau's *Lettres à ses amis* throws much light on his personality and sources of inspiration. In *Notre société et son roman,* the sociologist Jean Charles Falardeau has collected some of his better essays on the social content of numerous Canadian novels. *Présence de la critique,* an anthology of literary criticism compiled by Gilles Marcotte, makes many remarkable essays on the better French Canadian authors readily available. Jean Éthier Blais has collected his highly personal book reviews of recent years in two volumes of *Signets.* Also of interest are the scholarly study *Marcel Proust, critique littéraire* by René de Chantal and the useful *Bibliographie du Québec* by Philippe Garigue.

The origins of Montreal are reviewed in Gustave Lanctôt's *Montréal sous Maisonneuve.* In *Le Canada sans passeporte,* Eugène Cloutier offered a bird's-eye view of the country. *Le Canada français après deux siècles de patience* by Gérard Bergeron dealt with the question of French Canadian separatism.

GUY SYLVESTRE
Associate Parliamentary Librarian, Ottawa



NEW CANAL across the isthmus of Central America may be dug with nuclear explosives. Map shows possible routes. Route 17 (labeled B) is the least expensive one.

CANALS

Canal developments in 1967 were highlighted by bold plans and major improvements for large ship canals and irrigation canals.

Atlantic-Pacific Canal. In June 1967, President Johnson and President Marco A. Robles of Panama announced that U. S. and Panamanian representatives had reached agreement on three proposed new treaties that would provide for: (1) Panamanian sovereignty over the Panama Canal Zone; (2) continuation of U. S. bases for defense of the Panama Canal; and (3) possible construction of a new, sea-level canal or conversion of the Panama Canal from a lock canal to a sea-level canal. Alternative routes for the sea-level canal included one in Panama, one in Colombia, and one along the border between Nicaragua and Costa Rica. The canal route might be excavated by either conventional methods or the use of nuclear explosives.

A new Ceneral American canal was strongly backed by the administration. In August, President Johnson said that a sea-level canal was technically feasible, and he urged Congress to grant the Atlantic-Pacific Interoceanic Canal Study Commission $6.5 million for a 2½-year investigation to determine where and how to build one.

The commission, which has been studying the project since 1965, believes that by 1970 a water bed can be safely blasted with nuclear explosives. It picked the shortest route consistent with safety—a 48-mile (77-km) strip of jungle and mountains in Panama between the present Panama Canal and the Colombian border to the southeast. The estimated cost of nuclear construction along that line would be $750 million, which is about half the amount needed for construction of a route through northern Colombia. According to the commission, a sea-level canal could be completed by 1985, or about 15 years after work begins.

Welland Canal. In June 1967 work was started on a 6-year, $110-million project to modernize the 27-mile (43-km) Welland Canal, which links Lake Ontario and Lake Erie. This Canadian canal, part of the St. Lawrence Seaway, has eight locks for lifting ships 326 feet (99.4 meters) over the Niagara escarpment. The canal was opened in 1932.

The 9-mile (15-km) section of the canal through the industrial area of Welland is a winding water route that is crossed by six bridges. This section, which has been a bottleneck for shipping and for vehicular traffic, will be bypassed by a wider, 8-mile (13-km) long channel. The new section will provide faster passage for the growing number of large ships using the canal, and several tunnels are to be driven underneath it so that it will not be obstructed by bridges. The Welland Canal annually handles about 8,700 ships and 59 million tons (53 million metric tons) of cargo.

California Water Project. An immense water distribution project is now under construction in California. The waters of the Feather River and the Sacramento River in the northern part of the state will be spread like a web into the thirsty agricultural areas of southern California and will be distributed as far south as Los Angeles and San Diego to help supply water for those cities. Nearly 700 miles (1,125 km) of canals, tunnels, pipes, and siphons will traverse the state.

A key structure in this project is the Oroville Dam, scheduled for completion in 1968. This dam is being built on the Feather River near Oroville, about 65 miles (105 km) northeast of Sacramento. Water will run through turbines at the Oroville Dam, and the Feather River will become a controlled stream below Oroville, flowing into the Sacramento River. That river will become the channel for the Feather River water, coursing through orchard and farm country to the Sacramento-San Joaquin delta, 90 miles (145 km) south. There the water will be lifted into the Peripheral Canal, which is to be completed in the mid-1970's. This canal will direct the water around the delta area and will run 43 miles (69 km) to the California Aqueduct. The aqueduct will take the water 62 miles (100 km) to the San Luis Reservoir, east of Monterey Bay, which will store more than 2 million acre-feet of water to meet user needs as they may develop.

KENNETH E. TROMBLEY
Editor, "American Engineer"

CANCER

No fundamental discoveries were recorded in the prevention, diagnosis, control, or treatment of cancer in 1967. The key to improving the outlook of cancer patients remains the early diagnosis and prompt, appropriate, and adequate treatment. By means of conferences, publications, training programs, teaching films, and improved diagnostic aids and treatment facilities, current knowledge is becoming more widely available to physicians and patients throughout the world. According to estimates by the American Cancer Society, 600,000 new cases will be diagnosed in the United States in 1968, and there are now 2 million living patients presumably cured of the disease.

Smoking and Cancer. The incidence of lung cancer in the United States continues to rise, with an all-time high of 52,000 cases diagnosed in 1967. Vigorous efforts are being made by the American Cancer Society to alert the public to the dangers of cigarette smoking, but the consumption of cigarettes continues to rise.

The invention of a revolutionary new cigarette filter by the New Jersey chemist Robert L. Strickman was announced in 1967. This filter was reported to reduce the tar and nicotine content of cigarette smoke to less than one third the levels of conventional filters. This claim, however, was not yet supported by satisfactory scientific evidence, and the report was widely criticized for unjustifiably reassuring smokers that a filter would reduce the hazards of smoking. (See also SMOKING AND HEALTH.)

Cancer Research. The major approaches to cancer research are concerned with the search for viruses that may produce cancer in man, the attempt to identify specific antigenic substances in cancer cells, and the development of immunological methods that may contribute to the cure of cancer. The presence of herpeslike viruses in human leukemia cells grown in tissue culture was described by George E. Moore, director of Roswell Park Memorial Hospital in Buffalo. Similar viruses were also found in normal cells, and this particular virus has not been shown to produce any disease.

Other herpeslike viruses have been found in Burkitt lymphoma cells grown in tissue culture. Burkitt lymphoma, which occurs in Africa, may be due to a widespread endemic virus, although only in a few patients does it express itself by causing cancer. The unique nature of this disease is supported by evidence that about 15% of the patients are cured by anticancer drugs, a far higher cure rate than these drugs produce in related tumors in other parts of the world. There is also evidence that patients with Burkitt lymphoma may produce antibodies against antigens in these cells. Related antibodies have also been found in normal people living in the same region. Despite mounting evidence, however, a cancer-producing virus has not yet been implicated in any human cancer.

The search for specific antigens in cancer cells as a means of early diagnosis or as an approach to therapy has not been rewarding, but intensive research programs in this area are now in progress. The Rand Development Corporation of Cleveland introduced a cancer vaccine for clinical trials without satisfactory evidence to support its use, and an injunction was obtained by the Food and Drug Administration against shipping the drug in interstate commerce.

Cancer Diagnosis. The use of mammography, an X-ray technique for detecting abnormal growths in the breast, when combined with regular physical examinations, has increased the number of early diagnoses of breast cancer. This, in turn, has led to an increase in the cure rate of this type of cancer. The early diagnosis of bone cancer has been aided by a technique involving the administration of the radioisotopes fluorine-18 or strontium-85, and Elliott Osserman of the Columbia University College of Physicians and Surgeons in New York has demonstrated the presence of a high concentration of the enzyme lysozyme in the urine of patients with acute monocytic leukemia.

Incidence of Cancer. Except for lung and pancreatic cancer, the incidence of various forms of cancer in the United States appears to be stable when adjusted for age and population. J. F. Fraumeni and R. W. Miller presented data showing that leukemia, after increasing in incidence for the past 40 years, is declining; this is particularly notable in children, where the incidence decreased about 14% between the 5-year periods 1956–60 and 1961–65.

Cancer Therapy. Recent work at the Wadley Research Institute in Dallas and at the Sloan-Kettering Institute for Cancer Research in New York has shown that the bacterial enzyme L-asparaginase can produce a significant improvement in those leukemia patients whose leukemia cells require the amino acid L-asparagine for their growth. This amino acid is produced by normal cells and is not essential in the diet. If a leukemic cell is unable to produce L-asparagine, it must obtain the amino acid from normal cells. Thus, when L-asparaginase is given to a patient, it destroys the L-asparagine in the blood, causing the destruction of the leukemic cells. In some patients the enzyme can produce a temporary remission of the disease, but the percentage of responsive patients and the duration of the remission are not yet established because of the small quantities of the enzyme available.

In addition to L-asparaginase, other agents, such as methotrexate, produce temporary remissions in acute leukemia. In most patients, however, the leukemic cells become resistant to the drugs.

Support for Cancer Research. The U.S. Public Health Service had allocated $175,700,000 for cancer research in 1967, and this is expected to rise to $183,400,000 in 1968. In 1966–67 the American Cancer Society distributed $17,732,287.

CENTRAL AMERICA. See LATIN AMERICA and the articles on Central American countries.

CENTRAL AFRICAN REPUBLIC

The year 1967 was a quiet one for the Central African Republic. The only political event of note was the reshuffle of the government by President Jean Bedel Bokassa during the early part of the year. In foreign affairs, relations with neighboring Sudan continued to improve.

Political Affairs. President Bokassa made several cabinet changes in January. He personally took over the interior portfolio and gave up the information and justice portfolios, while retaining that of defense. Former Foreign Minister Antoine Guimali was named minister of justice, and Jean Arthur Bandio, former interior minister, became foreign minister.

CENTRAL AFRICAN REPUBLIC • Information Highlights

ASIA
AFRICA

Area: 240,534 square miles (622,984 sq km).
Population: 1,437,000 (1966 midyear est.).
Chief City (1964 census): Bangui, the capital, 111,266.
Government: *President*—Col. Jean Bedel Bokassa (took power in military coup, Jan. 1, 1966); *Parliament*—National Assembly (dissolved Jan. 4, 1966).
Religious Faiths: Tribal religions, 60% of population; Protestant, 15%; Roman Catholic, 14%; others, 11%.
Education: *Total school enrollment* (1964)—124,057 (primary, 119,565; secondary, 3,662; teacher-training 459; technical, 371).
Finance (1966 est.): *Revenues,* $32,200,000; *expenditures,* $34,500,000; *monetary unit,* CFA franc (246.85 francs equal U. S.$1).
Gross National Product (1966 est.): $70,000,000.
Cost of Living Index (1966): 145 (1958=100).
Manufacturing (metric tons; 1965): Meat (1964), 12,000; beer, 9,900; lumber, 43,000 cubic meters.
Crops (metric tons, 1965): Cassava, 1,000,000; peanuts, 99,770; sweet potatoes and yams, 40,000; cottonseed (1966), 30,000; cotton lint (1966), 14,000.
Minerals (1965): Diamonds, 536,000 carats.
Foreign Trade (1966): *Exports,* $31,000,000 (chief exports, 1966: diamonds, $16,438,950; coffee, $7,281,900; raw cotton, $4,411,700; lumber (1965), $528,000); *imports,* $35,000,000 (chief imports, 1965: nonelectrical machinery, 2,837,000; woven cotton fabrics, $2,715,000; trucks and lorries, $2,130,000). *Chief trading partners* (1965): France (took 37% of exports, supplied 60% of imports); Israel (took 21% of exports); U. S. (took 13% of exports, supplied 5% of imports).
Transportation: *Roads* (1965), 11,325 miles (18,222 km); *motor vehicles* (1965), 9,532 (automobiles, 3,638); *principal airport,* Bangui.
Communications: *Telephones* (1966): 2,838; *radios* (1965), 30,000; *newspapers* (1962), 1 (daily circulation, 400).

In the wake of renewed political activity by members of the Mouvement d'Évolution Sociale de l'Afrique Noire (MESAN, the country's only legal party), President Bokassa assumed the post of secretary-general of the party.

Foreign Affairs. Relations with Sudan improved further with the conclusion of successful negotiations for the repatriation of about 37,000 Sudanese refugees in the Central African Republic. At the emergency session of the UN General Assembly on the Middle East crisis, the country followed the lead of many other African states by assuming a position of neutrality between the Arab and Israeli claims.

Economic Affairs. The year saw little improvement in the country's difficult economic situation. The 1967 budget showed a deficit of approximately 100 million CFA francs. This was much less than the originally projected 600 million deficit, but was, nevertheless, an indication of declining government revenues.

In an effort to improve its fiscal position, the government opened a national diamond office to control artisanal diamond mining, much of which had previously remained outside government supervision. With aid from the United Nations, France and the European Economic Community, construction was begun on a textile mill at Bangui, and a timber industry center was opened near Bangui.

CATHOLIC CHURCH. See RELIGION—*Catholicism;* ROMAN CATHOLIC CHURCH.

CEYLON

Ceylon continued its struggle to achieve economic stability and growth amid disadvantageous world market conditions in 1967. Following Britain's devaluation of the pound, Ceylon devalued its currency by 20% on November 21. Prime Minister Dudley Senanayake's United National Party retained a safe majority in Parliament, but by-elections indicated public restlessness in the face of a faltering economy.

Economic Conditions and Policy. Sharp declines in export earnings yielded a trade deficit of $67 million for 1966. The international prices of tea, rubber, and coconuts continued to decline, with the price of tea taking the sharpest drop in 10 years. In spite of the difficulties, Finance Minister U. B. Wanninayake presented Parliament a budget providing for expenditures of 783 million rupees ($164 million), an all-time high for the country.

The government sought desperately to develop

CEYLON • Information Highlights

Area: 25,332 square miles (65,610 sq km).
Population: 11,500,000 (June 30, 1966, est.).
Chief Cities (1963 census): Colombo, the capital, 510,947; Jaffna, 94,248; Moratuwa, 77,632; Kandy, 67,768.
Government: *Governor-General*—William Gopallawa (took office March 2, 1962); *Prime Minister*—Dudley Senanayake (took office March 25, 1965). *Parliament*—House of Representatives (party seating, 1967: United National party, 66; Sri Lanka Freedom party, 41; Tamil Federal party, 14; others, 36); Senate, 30 members.
Religious Faiths: Buddhists, 64% of population; Hindus, 20%; Christians, 9%; Muslims, 7%.
Education: *Literacy rate* (1953), 68% of population aged 15 and over. *Total school enrollment* (1965)—2,598,067 (primary, 1,780,559; secondary, 817,508).
Finance (1966 est.): *Revenues,* $317,226,000; *expenditures,* $410,920,000; *net public debt* (1965), $772,500,000; *monetary unit,* rupee (4.7619 rupees equal U. S.$1; devalued Nov. 21, 1967, to 5.95 rupees equal U. S.$1).
Gross National Product (1966): $1,631,000,000.
National Income (1966): $1,452,300,000; average annual income per person, $127.
Economic Indexes (1965): *Industrial production,* 149 (1958=100); *agricultural production,* 137 (1956–57=100); *cost of living* (1966), 107 (1958=100).
Manufacturing (metric tons, 1965): Cement, 85,850; meat (1964), 18,000; sugar, 8,000; beer, 6,500.
Crops (metric tons, 1965–66 crop year): Tea, 222,015 (ranks 2d among world producers); rice, 1,054,000; cassava, 343,000; natural rubber (1966–67), 131,040.
Minerals (metric tons, 1965): Ilmenite, 49,200; salt, 77,200; graphite (exports), 8,820; glass sand, 7,100.
Foreign Trade (1966): *Exports,* $357,142,000 (chief exports 1965: tea, $253,107,180; rubber, $63,851,760; coconut oil, $29,916,810); *imports,* $426,050,000 (chief imports, 1965: rice, $30,328,620; wheatmeal and flour, $20,628,720; fruit and vegetables, $18,923,310). *Chief trading partners* (1965): Britain (took 25% of exports, supplied 17% of imports); Communist China (took 9% of exports, supplied 7% of imports).
Transportation: *Roads* (1965), 18,000 miles (28,962 km); *motor vehicles* (1965), 117,791 (automobiles, 82,400); *railways* (1965), 927 miles, 1,492 km).
Communications: *Telephones* (1966): 43,000; *radios* (1965), 438,000; *newspapers* (1965), 13 (daily circ. 440,000).

capital for diversified industrialization and to achieve greater self-sufficiency in agricultural production. In furthering long-range economic development, the government reduced by half the subsidized rice ration and imposed new taxes on various imports, especially tobacco. The outlook for increasing rice production appeared good. In 1967 the island's first steel rolling mill was opened, as was a new cement factory and a tire factory. Hardware production for domestic and export sale was in the initial stages, and work was begun on an oil refinery capable of fulfilling the country's requirements. Tourism was actively promoted, and the number of tourists increased by 27% during the first quarter.

Foreign companies continued to apply for investment rights, and among the applications approved by the government were those for a Japanese car assembly firm, and a U. S. company that will assemble and export Jeeps, in association with local investors.

Foreign Aid. Organized by the World Bank, a consortium of Western nations pledged to continue its $50-million-a-year foreign aid through 1967. This aid makes up for a substantial part of the export deficit. In addition, a $7.5 million U. S. loan agreement was signed in April, and the Soviet Union provided economic and technical aid by establishing the new steel and tire plants.

Indian Tamil Minority. In February, Parliament ratified an India-Ceylon Accord, which would grant Ceylonese citizenship to 300,000 of Ceylon's 975,000 Indian residents. Under the agreement, India would repatriate 525,000 of the minority group.

Political Affairs. Former Prime Minister Mrs. Sirimavo Bandaranaike, showing skill as an opposition leader, maintained close relationships with leftist groups. Despite reverses for the government party (UNP) in the by-elections, there seemed no likelihood of a national election before the present government's term expires in 1970.

In February, six persons accused of complicity in the 1966 attempt to overthrow the Senanayake government were released for lack of evidence. The case was continued for other defendants.

A parliamentary committee was established to consider making Ceylon a republic.

In May, U. S. President Lyndon B. Johnson appointed Andrew V. Corry, ambassador to Sierra Leone since 1964, ambassador to Ceylon and the Maldive Islands. Corry replaced Cecil B. Lyon.

University of Miami, Florida

CHAD

In 1967, Chad was again forced to deal with several raids by rebels based in Sudan. By midyear, however, the resulting differences between the two neighboring countries appeared to have been successfully composed.

Internal Affairs. A continuing series of raids into Chadian territory by Sudan-based rebels was climaxed in July by a sharp encounter between government forces and the raiders. During this encounter the rebel leader Ibn Abatcha was killed. The government had held him responsible for the deaths in February of a deputy of the Chadian National Assembly and a prefect.

Finance (1965 est.): *Revenues*, $33,900,000; *expenditures* (1966), $42,500,000; *monetary unit*, CFA franc (246.85 francs equal U. S.$1).
Gross National Product (1966 est.): $245,000,000.
Cost of Living Index (1966): 159 (1958=100).
Crops (metric tons, 1965–66 crop year): Peanuts, 149,655; cottonseed (1966–67), 93,000; cotton lint, 38,000; dates, 18,300.
Minerals (metric tons, 1964): Natron, 6,757.
Foreign Trade (1966): *Exports*, $23,770,000 (chief export, 1965: cotton, $18,265,500); *imports*, $32,321,000 (chief imports, 1965: petroleum products, $6,330,150; textile yarns and fabrics, $3,495,150; nonelectrical machinery, $2,045,250). *Chief trading partners* (1965): France (took 47% of exports, supplied 46% of imports); Nigeria (took 11% of exports, supplied 2% of imports); Yugoslavia (took 12% of exports, supplied .07% of imports).
Transportation: *Roads* (1964), 8,072 miles (12,990 km); *motor vehicles* (1965), 8,663 (automobiles, 3,305); *principal airport*, Fort-Lamy.
Communications: *Telephones* (1966): 3,257; *radios*, 1964, 22,000; *newspapers* (1965), 1 (daily circulation, 1,500).

The ruling Parti Progressiste Tchadien (PPT) held its sixth congress, in January, in Fort-Lamy, the capital. President Hamani Diori of Niger, President Jean Bedel Bokassa of the Central African Republic, and delegations from several African and European states attended as special guests. Chadian President François Tombalbaye was reelected secretary-general of the party by acclamation. The 600 delegates at the congress stressed the theme that the struggle for power between the country's Muslim, Arab-oriented north and its black, Christian south had been reduced to a manageable level.

Foreign Affairs. During 1967, President Hamani Diori of Niger continued his attempts to mediate between Chad and Sudan in the dispute between the two states arising out of incidents along Chad's eastern frontier. In August, President Tombalbaye announced that President Diori's mediation had been successful and that the outstanding issues between the two countries were being resolved.

In May and June, Chad and the Soviet Union concluded a cultural exchange program involving sports and cultural and social activities. The two countries also signed a trade agreement, which provides for the Soviet Union to supply machinery, building materials, and consumer goods in exchange for Chadian cotton, groundnuts, and leather.

Foreign Aid. France, which continued to be Chad's principal foreign-aid donor, provided $959,000 in April for educational facilities. In May the European Development Fund agreed to lend Chad $1.8 million, as well as to make a grant of $900,000, to help stabilize Chadian cotton prices.

DU PONT

NEW DESALTING DEVICE has strands of hollow fibers (*top photo*) inside a sealed pipe. As salt water enters the pipe, the water portion is forced into the tubules and is drawn off at the end marked "permeate." The salt, which does not enter the tubules, is removed at the other end.

CHEMISTRY

Chemical developments in the news in 1967 included a new process for making steel and new processes for coating metals, studies of air and water pollution, new advances in desalting seawater, and new uses for plastics and synthetic rubber.

The Chemical Industries. The size and growth of the chemical process industries in the United States can be shown by estimates of the quantities of basic raw materials used in 1967. The two leading organic products made from these materials were synthetic plastics (7 million tons, 6.3 metric) and synthetic rubbers (2.2 million tons, 2 metric). About two-thirds of all plastics are represented by polyethylene, the styrenes, polyvinyl chloride, and the phenolics. Natural rubber consumption was about one-fifth of the synthetic elastomers.

MATERIALS USED BY U.S. PROCESS INDUSTRIES, 1967
Millions of tons

Raw material	(Short tons)	(Metric tons)
Metals		
Pig iron	100.0	90.0
Aluminum	3.5	3.17
Copper	1.5	1.36
Zinc, lead, manganese	1.1	1.0
Organic Materials		
Ethylene	6.0	5.4
Benzene	3.7	3.4
Propylene	3.4	3.1
Toluene	2.6	2.4
Xylenes	1.6	1.45
Inorganic Materials		
Sulfuric acid	28.7	26.0
Ammonia	12.2	11.1
Caustic soda	8.4	7.6
Chlorine	7.2	6.5
Soda ash	7.1	6.4
Nitric acid	5.9	5.4
Hydrochloric acid	1.7	1.5

Metals. The U. S. steel industry, the world's largest, is watching with great interest a "spray steel-making" process that is being developed in England as a competitor of the basic oxygen furnace, now in very general use in the industry. Following a successful pilot-plant operation, a full-scale furnace, with the addition of one-third molten scrap, has been in operation for a year, and another, using blast furnace material, is being brought up to continuous use. The molten iron is atomized by a ring of oxygen jets to burn out unwanted impurities, and lime and fluxes are added through nozzles. The product runs to a ladle, from which the slag is skimmed. (See also STEEL.)

An electrolytic process, known as metallidizing, that depends on the passing of direct current through molten fluoride salts of as many as 50 different elements has been developed. The process results in the deposition of ions from anode material on the surface of a metal or alloy to the depth of several mils, with the formation of an extremely hard surface resembling that of a carbide. Boron diffused into steel gives the surface a hardness even greater than a carbide; silicon into aluminum produces a material second in hardness only to diamond; and aluminum alloyed into titanium gives the product greater rigidity and oxidation resistance.

Relatively pure and thick coatings of nickel may be applied to brass or steel without the use of an electric current by the inclusion of hydrazine (NH_2NH_2) in the solution. The coating adheres, but requires heat treatment to avoid brittleness. A thickness of .01 inch (.025 centimeters) may be secured with a purity of 90% and these values are not reached by other electroless methods. Corrosion resistance, however, is somewhat inferior to conventional electroless coatings that are more brittle.

Nuclear Materials. Zirconium as a cladding metal for enriched-uranium fuel rods in atomic power units was being produced in 1967 to the extent of 1,250 tons (1,140 metric tons) per year, as compared with half this amount in the preceding year. This metal is much superior to stainless steel for this application because of its high resistance to a steam environment at 600° F (315.5° C) and its low cross-section to thermal neutrons, allowing them to pass through safely, so that no plant using steel is being planned. The high price of zirconium, however, confines its use to atomic power.

By addition of boric acid to the hydrochloric acid commonly used in recovery of uranium from zirconium-clad fuel elements, the danger of an uncontrolled nuclear reaction is removed and the capacity of the recovery process may be increased from 2 to 20 pounds (0.9 kilograms to 9 kilograms) per day. A nuclear power plant in Idaho that uses this process is probably the only one with the recovery of larger-than-critical masses of uranium.

Twenty six central-station nuclear plants, purchased in 1966, represent about one half of all new steam-electric additions for 1967. Fueling with nuclear materials will cost around $75 million, but within five years core materials costs will be about four times as great. Recovery of plutonium and important isotopes will be important sources of revenue for these plants.

Inorganic Chemicals. A combined industry-government effort was required in 1918 to supply 200,000 cu. ft. (about 6,000 cu. meters) of helium for dirigibles during World War I. Although lighter-than-air applications account for only 5%, the present figure for helium sales is of the order of one billion cu. ft. (20 million cu. meters). Only 3% of the supply of this element is in the form of liquid helium. The present space program requires 60% of the helium supply, mainly for pressurizing liquid-fueled rockets. However, helium is also used along with argon in the welding of aluminum, stainless steel, and titanium and it plays an important part in the growing of silicon and germanium crystals. Since helium passes through orifices that will not pass air, it is useful in testing for leaks in pressure equipment. Liquid helium may have much wider applications in superconducting industries, even to the extent of power transmission lines carrying high voltages without loss. The U. S. Bureau of Mines has over 13 billion cu. ft. (370 million cu. meters) of helium in reservoirs that have an ultimate capacity of over 41 billion cu. ft. (1.2 billion cu. meters).

Present yearly capacity of industrial ozone is of the order of 12 million pounds (5,400 metric tons), but this figure is expected to double by 1968. Modern equipment for its production costs about 40% of what it did in 1964 and has a higher efficiency. Many of the applications of ozone in the chemical industries are kept secret, but users operating with vegetable oils have announced the use of ozone in making commercial acids and other chemical intermediates. Although use in water treatment and odor control is less than in chemical industries, ozone consumption is growing rapidly. This is particularly true in reducing odors that are harmless but unpleasant and are associated in the public mind with atmospheric pollutants that actually do constitute a menace to property and health.

Sulfur stocks have been reduced to the lowest point since 1952, and the price has risen sharply. As a result, new production is being greatly stimulated. Two new offshore plants are being built and previously mined sites, both inland and under shallow water, are being reopened. It is thus expected that sulfur production will go ahead of demand by as much as 2 million tons (1.8 million metric tons) by 1968. Sulfur from "sour" natural gas is being imported from Canada by the United States at nearly half that of domestic rates.

Sulfur dioxide from the roasters of a 450-ton (408 metric tons) per day zinc concentrate, together with additional sulfur, is producing 1,200 tons (1,088 metric tons) per day of concentrated sulfuric acid in an Illinois plant. The acid will be used by the same company in the manufacture of diammonium phosphate fertilizer. This is an example of processes that, singly, produce atmospheric pollution, but, in combination, avoid this problem.

Basic oxygen furnaces are now accounting for 25% of steel ingots, and the process is growing rapidly toward a figure of 50%. Most of the gas escaping is carbon monoxide. One steel company is making progress in the recovery of this gas, which is a raw material in the petrochemical industry. If all steel in North America were made by the basic oxygen process, the annual yield of carbon monoxide would provide 15 billion pounds (6,795,000 metric tons) of this petrochemical raw material.

Deposits of trona (sodium sesquicarbonate) in the Green River region of Wyoming, are said to be sufficient to supply the world's needs for soda ash for 300 years. These deposits were laid down around 50 million years ago by the evaporation of a lake, and are now mined at a depth of 1500 feet (450 meters). New plants are being built for processing these deposits, so that they will supply more than one fourth of the market for sodium carbonate. The material is of exceptional purity, particularly with very low concentrations of iron and chlorides.

Air and Water Pollution. Prevention of air pollution is based on partial removal of sulfur from fuels. Contaminants must be prevented from reaching streams in amounts that constitute a hazard to public health. Undesirable compounds, mainly sodium chloride, must be removed from water supplies.

Detergents constitute the main chemical weapon in the removal of crude oil from contaminated beaches. The type used in greatest volume is a kerosene derivative that produces an emulsion that stays in sea water. Wave action prevents effective burning after 40 minutes. The ultimate goal for prevention of water pollution is repeated reuse. While from 75% to 90% of oxygen-consuming and suspended materials are removed from water by municipal treatment, only a small amount of dissolved inorganic compounds are taken out. (See also POLLUTION.)

Desalting Projects. In 1968 the world's largest desalting plant is expected to be completed in Mexico, at Rosarito, Baja California Norte. The capacity of this plant is 7.5 million gallons (28.4 million liters) of fresh water per day. The equipment includes two very large, long-tube, flash evaporators, receiving the exhaust from a neighboring 225-megawatt thermal power plant. The cost of production is estimated to be 65¢ per 1,000 gallons (3,800 liters). This low cost is made possible by the use of a power plant and a continuous scale-control system.

A large chemical firm has announced a "reverse-osmosis" process for removal of salt from sea water. Ordinary osmosis depends on the passage of water through a semipermeable membrane from a dilute to a concentrated solution. By applying high pressure on a saline solution, salt is restrained at the membrane, and pure water passes through. A radically new membrane that shows great promise consists of a large number of very fine plastic tubes held in a sealed pipe immersed in salt water. Fresh water is drawn from the tubes as pressure is applied on the saline solution.

Organic Chemicals. A recent laboratory experiment carried out by the U. S. Bureau of Mines may have future applications in the chemical uses of coal. A 2- to 10-joule laser source, focused on coal, is said to have generated temperatures higher than 1000° F, with immediate release of chemical compounds, and with a vaporization of 60% of the sample. The gas evolved contained 25% acetylene, together with smaller amounts of divinyl acetylene, hydrogen cyanide, ethylene, and ethane.

Cryogenic liquid methane is being proposed as a replacement of kerosene as a fuel for supersonic jet transports, with an improvement of aircraft performance of 31% and a 36% reduction in operating costs. Methane has a higher heat of combustion and greater cooling capacity. Other advantages include elimination of the smoke, coke, and lacquer that cause plugging of fuel systems.

In order that fertilizers may be completely effective in underdeveloped nations, they should be accompanied by weed-killers. A large part of these are organic compounds derived from petroleum. Recent tests with some Chilean crops have shown that the use of herbicides accounted for an increase in crop yields of 25%.

Synthetic Rubbers and Plastics. A recent entry in the synthetic rubber field is known as EPDM (ethylene propylene diene monomer). It is used primarily in mechanical goods, such as hoses, weather stripping, and appliances. It has superior resistance to ozone, age, and chemicals and is relatively cheap. So far it is not comparable in quality with tire rubbers, but it releases them for the tire industry by replacing them in these other uses.

Many rubber-lined reservoirs are now in use to hold brines for salt manufacture or to serve as catch basins to prevent pollution of rivers. Brines from underground caverns are being stored in New Jersey, in the world's largest rubber-lined lake, which has an area of about 17 acres (6.9 hectares) and holds 84 million gallons (318 million liters). An emergency catch basin, connected by a 10-mile (16 km) pipeline to the Atlantic Ocean, has an acreage of 13.5. One square yard of rubber, with a thickness of ⅛ inch, will allow the passage of only 1 pint of water in ten years, as compared with a square yard of concrete, 1 inch thick, and which will pass 70 gallons of water during this same period. (This is roughly equivalent to a square meter of 0.3 centimeter-thick rubber passing half a liter of water while a square meter of concrete, 2.5 centimeters thick, passes about 250 liters.) Rolls of lining rubber are available that are 20 ft. (6.1 meters) wide and 200 ft. (60.8 meters) long. This material operates at ambient temperatures between −66° F (−54° C) and 300° F (150° C).

A new type of acrylonitrile-butadiene-styrene resin permits stamping or cold-drawing without heat, thus putting this material into competition with metals in the food-container, automotive-parts, and appliance industries. Heretofore, thermoforming was required in the fabrication of plastics. Text or decorations may be preprinted before articles are formed. So far, cold-forming has been limited to ¼-inch sheets.

Plastics appear to have a large part in reducing the cost of residential construction, and, particularly in slum rehabilitation. Plastic piping is much lighter than other materials, and has superior properties. Plastics also function in roofs, siding, and floors. New building codes are being based on the use of plastics in construction. A demonstration recently in New York showed an entire section of an old tenement replaced by a new section with vinyl flooring and urethane wallboards. (See also PLASTICS.)

CHICAGO

Civil rights activities, a surprisingly small number of racial disturbances, and violent weather were some of the noteworthy events in 1967 in Chicago (1966 est. city pop., 3,532,652; 1967 est. metropolitan pop., 7,553,300).

Civil Rights. Martin Luther King, Jr., announced plans on March 23 to continue demonstrations in Chicago during the summer. He said that improvement in conditions for the city's Negroes was negligible and that an open housing agreement initiated in 1966 was only "a marvelous agreement on paper." In a speech delivered on April 16, King warned that Chicago could easily explode into racial violence during the summer.

Although there were scattered incidents of violence in 1967, the disturbances never approached the proportions of the previous year's riots on Chicago's West Side. Ten persons were reported injured, and 30 were arrested when police and Negroes clashed on May 21, following a memorial service for the late Black Nationalist leader Malcolm X. Scattered vandalism, fire bombings, and looting broke out on Chicago's South and West sides from July 26 to August 1. Two persons died of bullet wounds in the violence, and at least 120 persons were arrested. At a July 27 news conference Chicago Mayor Richard J. Daley threatened to call in the National Guard. This never became necessary, although certain sections of the city were temporarily sealed off and taverns were closed. There were no major incidents in the city during the remainder of the summer, but some disturbances did break out near Chicago in September. In November, 11 persons were injured and 60 were arrested when racial violence broke out at three city high schools. (See also ILLINOIS.)

Weather. Record snow- and ice-storms accompanied by winds of up to 53 mph hit Chicago on January 26–27. The city was paralyzed by a snowfall of 23 inches in 26 hours, Chicago's worst snowstorm since 1939. Mail deliveries, food shipments, and public services were halted, and the city's schools remained closed for several days. Additional snowstorms reached Chicago on January 29, February 1, and February 5–6, bringing the 12-day total to a record 37 inches.

On April 21 a series of tornadoes swept through the Chicago metropolitan area, killing 55 persons and destroying 484 homes.

Labor Disputes. In January, through mediation conducted by Mayor Daley, contract settlements were reached with the Chicago Teachers Union and the Cook County College Teachers Union, thus averting protracted teacher strikes against Chicago schools and junior colleges. Both unions are affiliates of the American Federation of Teachers.

A strike by a Chicago local of the Milk Wagon Drivers Union was settled on May 3. Chicago area Teamster locals went back to work the next day, after a contract was renegotiated with the International Brotherhood of Teamsters.

Murder Conviction. On April 15, Richard Speck was convicted in Peoria, Ill., of the murder of eight student nurses in Chicago on July 14, 1966. The jury recommended the death penalty. The trial had been transferred from Chicago to Peoria on Dec. 19, 1966, after Speck's attorney claimed that his client could not receive a fair trial in Chicago.

Daley Reelected. Mayor Richard J. Daley, a Democrat, was reelected on April 4 to a fourth term. The

WIDE WORLD

CHICAGO traffic was at a standstill two days after a heavy snowstorm of 23 inches in 26 hours (the city's worst since 1939). The storm began on Jan. 26, 1967.

64-year-old Daley received 72.8% of the vote to defeat Republican John L. Waner, a Polish-American heating contractor, who received 25.5% of the vote, and two write-in candidates.

Chicago's Picasso. A sculpture designed by Pablo Picasso was unveiled on August 15 in the plaza of the Chicago Civic Center before 50,000 people. Picasso made a gift of the design to the people of Chicago after he had been commissioned by the architects of the Civic Center. The $300,000 all-steel structure stands 50 feet high and weighs 163 tons.

Education. James F. Redmond, who took over as school superintendent in 1966, proposed a broad plan for integrating and improving Chicago public schools. Among Redmond's proposals are the busing of Negro children to white schools, the establishment of incentives to bring experienced teachers into the inner-city schools, and the improvement of vocational education. The board of education approved the plan in August, but cost factors have delayed setting a date for implementation.

Economic Statistics. For the first seven months of 1967, investment in Chicago's industrial plants totaled $599,466,000, a 79.8% increase over the same period in 1966. Steel production reached 13,584,000 tons through July 1967, and building permits issued for the same period totaled 7,890.

SAMUEL K. GOVE
University of Illinois

CHICHESTER, Sir Francis. See biographical sketch under BOATING.

RICHARD J. DALEY, mayor of Chicago since 1955, was reelected by a large majority on April 4, 1967. After racial violence on Chicago's West Side had been quelled by the Illinois National Guard in July 1966, Daley met with the Rev. Martin Luther King, Jr. and reached an agreement with him on a 4-point program for improvement of conditions in the city's Negro community. In 1967 he mediated teachers' and truckers' disputes.

Daley was born on May 15, 1902, on the West Side of Chicago, where he sold newspapers as a boy. He obtained his LL.B. degree from De Paul University in 1933 and was admitted to the bar in the same year. An active Democrat, he served in the Illinois House of Representatives (1936–38) and in the state senate (1939–46) and was appointed state director of revenue in 1948. He served as clerk of Cook county from 1950 to 1955.

CHICAGO'S MAYOR Richard J. Daley and his wife are shown at the polls on April 4, the day of his reelection.

CHILD WELFARE

Child welfare activity in the United States in 1967 was marked by a reorganization of the federal Welfare Administration, with added responsibilities for the Children's Bureau; organized protests by many welfare recipients; and limitations on federal funding for aid to families with dependent children. Congressional concern over President Johnson's demand for a tax increase, and the rising costs of the war in Vietnam, brought about a serious challenge to many federal welfare programs.

Federal Child Welfare Services. In Social Security amendments passed by Congress in 1967, federal participation in the Aid to Families with Dependent Children program (AFDC) was limited to the proportion of the child population under age 18 in the state receiving aid because of absence of a parent as of Jan. 1, 1968. After June 30, 1968, federal funds will not be available to the states for any additional number of children requiring financial assistance. Were the number of AFDC applicants of a state to rise in proportion to its total child population, the state either would have to deny benefits to new applicants or pay the total benefits itself, at costs estimated, for some states, at tens of millions of dollars. Although the President signed the Amendments on Jan. 1, 1968, he called the restrictions "severe" and directed the Department of Health, Education, and Welfare to "work with state governments" to protect needy mothers and children.

In a more positive move, Congress increased the authorization for child welfare programs for fiscal 1969 from $55 million to $100 million.

In contrast to the tightening of provisions for eligibility by Congress were organized protests on the part of welfare recipients. The demonstrations spotlighted unrealistic levels of welfare payments and the enormous needs of the dependent families. As of July 1967, 1,212,000 families including 3,745,000 children were receiving funds under Aid to Families with Dependent Children.

At the end of March 1966, 741,400 children were receiving services from public and voluntary child welfare agencies. Many of these children were not living in the homes of their parents or relatives. Approximately 30% were in foster homes, 14% in institutions, and 10% in adoptive homes. Children living with their families accounted for 44% of the total, with 2% listed as "other."

Reorganization. A reorganization affecting services to children was under way during 1967 in the Department of Health, Education, and Welfare. The Welfare Administration, containing the Children's Bureau and the Bureau of Family Services, which includes AFDC, was replaced by the Social and Rehabilitation Service. This new agency includes Vocational Rehabilitation, the Children's Bureau, the Administration on Aging, the Medical Services Administration, and the Assistance Payments Administration.

The Children's Bureau was given extended responsibilities for studies and investigations on the status of children, for federal-state child welfare and maternal and child health programs, for programs for prevention of juvenile delinquency, for support of health services for school children, and for family and child welfare services.

Personnel Training. One of the continuing problems for both public and private agencies offering child welfare services is the shortage of trained personnel. The Children's Bureau provided $5.5 million in child welfare training grants in fiscal 1967 under a program authorized by the 1962 public welfare amendments to the Social Security Act. These grants included 741 graduate study programs leading to a master's degree in social work, scholarships for 47 students doing work beyond the master's level, and teaching grants to 68 schools of social work for the purpose of hiring 171 faculty members. In addition, subsidies were granted to 22 short-term training projects, including seminars and workshops.

State Committees. One type of organization serving children that is a phenomenon of the last 20 years and is still growing in strength is the governor-appointed state committee for children and youth.

Improvements in many areas affecting the welfare of the children of the United States have been made by these state committees. Along with 500 voluntary professional and lay organizations concerned with children and youth, these committees work with the National Committee for Children and Youth, an outgrowth of the 1960 White House Conference on Children and Youth. The state committees have provided continuing statewide leadership in improving services, including programs in day care and control of child abuse, as well as services for mentally retarded or emotionally disturbed children. With planning under way for a 1970 White House

Conference on Children and Youth, the committees were preparing in 1967 for a bold attack on the complex problems that will face the nation's children and youth in the 1970's.

Voluntary Organizations. In spite of the continuing proliferation of government programs, voluntary agencies remained important in 1967. More and more, a complementary relationship has developed, in which government agencies and voluntary organizations work together to accomplish common objectives. Many of the programs financed by the Office of Economic Opportunity have encouraged the involvement of voluntary community organizations. Other federal agencies look to voluntary organizations to develop demonstration programs, design needed research projects, and help the government bring about change in outdated approaches to persistent problems. Government funds allow for experimentation, and the implementation of useful but difficult ideas, which would otherwise be too costly for private agencies to put into effect.

Secretary of Health, Education, and Welfare John W. Gardner discussed the "emergence of these partnerships between the federal government, on the one hand, and the state and local governments and nongovernmental agencies, on the other. The formation and continuing development of these partnerships have profound implications for the way we organize our society and govern ourselves in the years ahead."

Mental Retardation. In its first report, submitted June 30, 1967, the President's Committee on Mental Retardation stated that it had "charted the progress made . . . and identified directions in which that effort must move . . . ." Among the 10 urgent requirements outlined in the committee report were many more available services, extensive manpower recruitment and training for work with the retarded, and more public-private partnerships in program development, services, and research. The committee predicted that "some 2,100 children who are or will become mentally retarded will be born every week in 1968."

UNICEF. At the annual meeting of the executive board of the United Nations Children's Fund, held in June 1967, a major item of business was a review of UNICEF assistance policies. The board agreed that the situation of children in the developing countries should be viewed with an increasing sense of urgency. The aims of UNICEF, claimed the board, could best be furthered by policies and programs that not only contribute to immediate benefits for children but also affect the long-range economic and social development of the countries involved. The board also agreed that aid should have a "multiplier" effect, with UNICEF acting as a catalytic agent to attract additional resources for children, and that the matching-fund principle in financing UNICEF aid must be maintained.

Total allocations for UNICEF programs in 1967 were $41.7 million. The largest share of the allocations, $20 million, went to programs in health services and disease control. Also in the field of health, the board came to a policy decision regarding UNICEF's role in family planning, stating that UNICEF can provide aid in this field as an integral part of its health services for mothers and children.

Nutrition programs received 13% of the 1967 allocations. Over two thirds of these allocations went to projects in applied nutrition for the rural family. Such projects aimed at raising the nutritional level of the diets of mothers and children by combining nutrition education and training with increased local production of healthful foods.

Assistance to programs in education and vocational training, started only in 1961, has become the second largest area of UNICEF aid. The major emphasis in these projects is on teacher training and improved supervision of teaching. Projects also reflect the concern of developing countries for improved science teaching in the elementary schools, practical education, nutrition and health education, and the production of teaching aids and textbooks. An allocation of $3 million went toward assistance in local production of manuals and textbooks.

While supplies and equipment have traditionally been the major form of UNICEF aid, another important area of assistance is in the training of local personnel. Nearly one third of program allocations in 1967 took the form of stipends and other aids for training, indicating the high priority which governments are placing on the improvement of training facilities. By the end of 1966, UNICEF had assisted in the training of over 220,000 workers.

ISABELLA J. JONES
National Committee for Children and Youth

CHILDREN'S LITERATURE

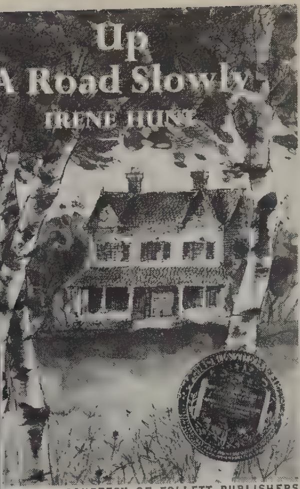
Early estimates placed the number of children's books published in the United States in 1967 at about 2,800, approximately the same amount as in 1966. The presence of federal funds available to schools and libraries under the Elementary and Secondary Education Act, experts agreed, seemed to result in a substantial number of mediocre texts. Paperback publishing continued to expand, with many excellent titles, such as E. B. White's *Stuart Little* and *Charlotte's Web,* appearing in paper covers for the first time.

Prevalent among the types of books published for children in 1967 were works for beginners with themes of peace between men and nations, and works dealing with the history of Russia and its literature, such as *A Harvest of Russian Children's Literature,* edited by Miriam Morton. Also in abundance were facsimile editions and reissues of old classics, volumes of individual Mother Goose rhymes, and books featuring Doctor Dolittle, prompted by the new motion picture *Doctor Dolittle.*

Awards. Among awards presented in 1967 for children's literature published during the previous year, the American Library Association (ALA) John Newbery Medal for the most distinguished contribution to children's literature went to Irene Hunt for her novel *Up a Road Slowly.* The ALA's Randolph Caldecott Medal for the most distinguished picture book went to Evaline Ness, author and illustrator of *Sam, Bangs & Moonshine.* Robert Burch's *Queenie Peavy* received the Child Study Association of America's award as the best book dealing with contemporary problems of young people.

Fiction. The most widely discussed children's book of 1967 was Maurice Sendak's *Higglety Pigglety Pop! or There Must Be More to Life,* a fantasy about a sealyham terrier's quest to star in "The World Mother Goose Theatre." All critics agreed on the excellence of the book and its finely etched illustrations, and the New York *Times* praised Sendak for erasing the barriers between adult and juvenile literature.

There were a number of noteworthy picture books in the 4-to-7 age category published in 1967.



COURTESY OF FOLLETT PUBLISHERS

IRENE HUNT was awarded the Newbery Medal for distinguished children's literature for her *Up a Road Slowly.*

SAM,
BANGS
&
MOONSHINE
WRITTEN AND ILLUSTRATED BY EVALIN
NE

COURTESY OF HOLT, RINEHART AND WINSTON

EVALINE NESS is the author and illustrator of *Sam, Bangs & Moonshine,* which was awarded the 1967 Caldecott Medal.

One Monday Morning, by Uri Shulevitz, is a colorfully illustrated bit of make-believe set against the drab background of tenement life; *Potatoes Potatoes,* by Anita Lobel, tells of two brothers who join opposing armies; and *Seashore Story,* by Taro Yashima, is a beautifully recounted Japanese legend. Among volumes of fantasy were *The World in the Candy Egg,* written by Alvin Tresselt and illustrated by Roger Duvoisin; and *Frederick,* written and illustrated by Leo Lionni.

Poetry for the very young included *To Market! To Market!,* a selection of pastoral rhymes from Mother Goose, and *Drummer Hoff,* an old folk verse, adapted and illustrated by Barbara and Ed Emberley. For slightly older readers—ages 5 to 7—*The Honeybees* has a poetic yet scientific text by Franklin Russell, with illustrations by Colette Portal.

Isaac Bashevis Singer wrote two of the outstanding books for children in the 6-to-9 age category. *Mazel and Shlimazel or The Milk of a Lioness,* illustrated with wit and pageantry by Margot Zemach, concerns man's constant companions, the spirits of good and bad luck, and *The Fearsome Inn,* handsomely illustrated by Nonny Hogrogian, describes the devil's battle for possession of the souls of three travelers. Also worthy are Ellen Raskin's *Silly Songs and Sad* and Jeffrey Baker's *Patterns of Nature.*

Many of the outstanding books for children between the ages of 9 and 12 dealt with the problems and concerns of preadolescents. *Ellen Grae,* by Vera and Bill Cleaver, is a perceptive story of a tomboy battling with her conscience; *My Brother Stevie,* by Eleanor Clymer, tells of a girl's concern for her younger brother; and *How Many Miles to Babylon?,* by Paula Fox, is about a lonely Negro boy. *The Cricket Winter,* by Felice Holman, is a delicate fantasy about a boy and a cricket.

A number of outstanding books in the 10-to-14 age category dealt with various aspects of war. John Tunis' *His Enemy, His Friend* is about a former German soldier in post-World War II France; Erik Christian Haugaard's *The Little Fishes* describes the miseries of war-torn Italy; and Elizabeth Janeway's *Ivanov Seven* tells of a young recruit in the czar's artillery. Russian soldiers are also described in *Fierce and Gentle Warriors,* a trio of stories by the Russian Nobel Prize winner Mikhail Sholokhov. Also noteworthy are Scott O'Dell's *The Black Pearl,* about a pearl diver; Robert Lipsyte's *The Contender,* about a young Harlem school dropout; and Syd Hoff's *Irving and Me,* which tells of an adolescent boy.

In teenage fiction, many of the outstanding volumes contained realistic studies of teenagers. *Too Bad About the Haines Girl,* by Zoa Sherburne, deals with the painful realities faced by a teenage girl who finds herself pregnant and unmarried; *The Outsiders,* by S. E. Hinton, is a teenage author's account of gang rivalry in Oklahoma; and *Haunted Summer,* by Hope Dahle Jordan, tells of a girl's ordeal of guilt and fear after a hit-and-run accident. Other noteworthy volumes were *Earthfasts,* by William Mayne, and the prose anthology *Golden Shore.*

History. The two best volumes of history for children in 1967 were written by Robert Goldston. *The Life and Death of Nazi Germany* is a brilliantly compressed study of the Nazi era, and *The Rise of Red China* is a judicious and intelligent survey of Communist China.

Biography. Outstanding among biographies is *Journey Toward Freedom,* Jacqueline Bernard's book on Sojourner Truth, the former slave who became a crusader for female, and Negro, emancipation.

Poetry. The most distinguished volume of poetry for children published in 1967 was the anthology of modern verse *Reflections on a Gift of Watermelon Pickle,* compiled by Stephen Dunning, Edward Lueders, and Hugh Smith. The book is notable for its crisp, clear imagery and its excellent illustrations.

George A. Woods
Editor, Children's Books
The New York "Times"

CHILE

President Eduardo Frei Montalva of Chile and his governing Christian Democratic party met with a series of embarrassments and defeats in 1967. However, President Frei did manage to put through a long-awaited land reform bill.

Politics. On January 17 the opposition parties of the Chilean Senate combined, in a vote of 23 to 15, to deny President Frei's request to visit, as planned, President Johnson in the United States. Such Senate permission is usually considered a mere formality. After an embarrassing cancellation of his visit, President Frei sought a constitutional amendment permitting him to dissolve Congress and hold new elections. However, this measure, too, was defeated in the Senate.

The opposition to President Frei sprung from many sources. The rightist Nationalist party feared the economic effects of Frei's program of rapid social and economic reform on the privileged status of its wealthy supporters. The Radical party, a moderate group, feared that the Christian Democrats were sapping its strength at the polls. On the left, the Popular Action Front, an alliance of the Socialist and Communist parties, was opposed to Frei because he had defeated its presidential candidate, Salvador Allende (now president of the Senate) in 1964, thereby gaining control of and credit for the social reform issue.

Nationwide elections of 276 municipal councils on April 2, which had been looked to by the Christian Democrats as an indicator of their popularity, yielded disappointing results for the government. Out of 2.4 million votes cast, the ruling party received only 36.5% of the total, compared with 42.3% in 1965. The parties that gained the most in comparison with 1965 were the Socialist and Communist parties, with 14.6% and 15% of the total votes, respectively. However, the Radical party came in second in the balloting, with 16% of the votes. Reasons ascribed for the decline of government popularity in the last two years were resentment by workers of wage controls, by the middle class of higher taxes and living costs, and by landowners of agrarian reform programs.

Frei suffered a further setback on December 17, when a Radical, Alberto Baltra Cortés, won a special election to fill the Senate seat vacated by the death of a Christian Democrat. On Jan. 7, 1968, however, Frei won a vote of confidence from the Christian Democrats and thereby regained party control from a leftist directorate that had ruled since June.

Latin American Solidarity Organization. In an apparent effort to broaden its appeal to the left, the National Council of the Christian Democratic party passed a declaration on July 11 condoning guerrilla warfare against regimes that "ignore the people's rights and offer no electoral solutions." The Council specifically mentioned the Castroite Latin American Solidarity Organization (LASO) as being legal in Chile (as long as it did not revolt against the government). LASO had engaged in subversive activities against several Latin American governments. The proclamation was generally very poorly received, and there were sharp protests from the governments of Colombia, Venezuela, and Guatemala. A censure motion by the Nationalists on July 26 against Salvador Allende, for his double role as Senate president and head of LASO in Chile, was defeated because of Christian Democratic abstention on the vote.

The government's position shifted somewhat after July 27, when arms and police reinforcements were moved into southern Chile as a result of bombing incidents and reports of guerrilla activities. On September 13, Chile officially condemned Cuban intervention in South America, and announced the formation of a committee to block subversion.

Strike. A general labor strike on November 23 caused five deaths and led to arrests of several union leaders. The strike was called by a leftist labor organization to protest a government plan for a national development fund to be built from compulsory deductions from workers' wages.

Economic Affairs. The major accomplishment of President Frei in 1967 was the passage, on July 16, of the Agrarian Reform Law that he had long sought. The law was expected to allow for the distribution of 15 million acres of land to 100,000 landless farm families within a few years. By the midpoint in his 6-year term, Frei had raised per capita income 40%. He had introduced an anti-inflationary plan for a national development fund, and he had plans to build 360,000 new housing units by 1970.

In 1967 the Inter-American Bank made loans of $20 million to Chile, and France agreed to supply Chile with an atomic research reactor.

CHINA

China, the most populous nation in the world, remains divided into two opposing regimes: Communist China (the People's Republic of China), situated on the mainland; and Nationalist China (the Republic of China), on the island of Taiwan.

COMMUNIST CHINA

The Proletarian Cultural Revolution, which was launched in 1966, brought greater turmoil to Communist China in 1967. The Maoists struggled to overthrow "reactionary" elements in power, but met with strong resistance in many provinces. As a result, the struggle in 1967 did not give Mao Tse-tung the firm control of the country that he sought.

Growing isolation marked Peking's foreign relations during the year. A clash between Chinese students and Soviet police in Moscow was followed by violent demonstrations in Communist China against the Soviet Union. Peking suspended diplomatic relations with Indonesia and withdrew its economic aid mission to Burma. Communist Chinese agents organized riots in the British colony of Hong Kong and demonstrated in the Portuguese colony of Macao.

The Cultural Revolution. In 1967 the spearhead of the Cultural Revolution was directed at Liu Shao-ch'i, chairman of the People's Republic of China. Liu was accused of being the "top party person in authority taking the capitalist road." On March 31 the first official attack against him was made, and was followed by massive demonstrations. *Hung Ch'i* (*Red Flag*), the Communist ideological journal, announced his overthrow on July 1, but gave no indication of his being formally removed. Because Liu is chief of state, he can be legally dismissed only by the National People's Congress, which has not met for years.

The Red Guards attacked many top party leaders and administrators. Included in the list were T'ao

Chu, former propaganda chief and vice premier, and Teng Hsiao-p'ing, the party's general secretary. Only Premier Chou En-lai's insistence that government officials not be indiscriminately attacked restrained the militant Red Guards and saved many from molestation. Chou cooperated with the extremists, but sought to curb their excesses. Leaders of the Cultural Revolution who favored thoroughly dislodging their opponents were Chiang Ch'ing, wife of Mao Tse-tung; Defense Minister Lin Piao; and Ch'en Po-ta, editor of *Hung Ch'i* and Mao's former political secretary.

Widespread Conflicts. Mao's opponents were strongly entrenched, and in the attempt to seize power from them, the Red Guards carried the Cultural Revolution to various cities and rural areas, to the factories and mines. The opposition reacted by organizing masses of its own, particularly among the workers and peasants, whose stake in the existing industrial and agricultural system was threatened by Mao's extremism. Moreover, the brutality of the Red Guards drove many who previously had been neutral to the opposition's side. The result was struggle on a massive scale and turmoil throughout the nation.

Clashes between Mao's supporters and his opponents were reported in most of China's provinces, regions, and special municipalities throughout the year. In January a revolt involving thousands of persons broke out in Shanghai. Anti-Maoist workers had struck the city's factories in December 1966 and virtually halted communications and transportation. Anti-Maoist forces there and in other places encouraged workers to go to the capital and present their grievances. As a result, the disturbances spread to Peking in January, and for weeks the city and its suburbs were embroiled in conflict.

Other cities, such as Nanking, were also the scenes of violent upheavals. It was reported that in January, during a 3-day battle between the Red Guards and the Worker Red Corps (an opposition group of 100,000), 54 persons were killed, about 900 wounded, and 6,000 arrested.

Sporadic fighting also disturbed China's border areas in 1967. Disturbances occurred in Sinkiang, Manchuria, and Inner Mongolia. In August hundreds of Tibetans fled to India, escaping Red Guards who were trying to suppress Lamaism and to spread Maoist doctrine in Tibet.

Military Intervention. Because of the extent of the revolts and the strength of the opposition, Mao Tse-tung in January ordered the hitherto neutral army to support the Cultural Revolution. Military intervention enabled the Maoist forces to regain control in a number of places, including the city of Harbin and Anhwei province (in January) and the provinces of Shansi (in February) and Honan (in March). However, the seizure of control seldom resulted in the consolidation of power, and uprisings that had been suppressed often broke out again.

One of the difficulties confronting Mao was that the army did not solidly support him. To gain this support, Mao made Defense Minister Lin Piao his deputy. Lin Piao could command the obedience of most of the army, but he was unable to win the loyalty of units that had never been under his personal command, especially those that were still loyal to Ho Lung and former defense minister P'eng Teh-huai, both under criticism. In one instance, during a revolt in Wuhan in July, local military officials detained Minister of Security Hsieh Fu-chih and Wang Li, an important member of the Central Committee's Cultural Revolution group. They were released only after the personal intervention of Chou En-lai.

A Protracted Struggle. The turmoil and economic disruption brought about by the violence of the Red Guards caused the Peking government to adopt more moderate measures. In February the Red Guards were ordered to suspend their marches and to return home and take part in the Cultural Revolution there. Simultaneously, Peking called for the reopening of secondary schools, which had been closed since June 1966. Several colleges and technical schools resumed classes in July, and more reopened in October. Meanwhile, Peking stressed the importance

Area: 3,691,502 square miles (9,561,000 sq km).

Population: 710,000,000 (mid-1966 UN est.).

Chief Cities (1958 est.): Peking, the capital (1959 est.), 6,800,000; Shanghai, 6,977,000; Tientsin, 3,278,000.

Government: *Chief of State*—Liu Shao-ch'i (took office 1959); *Premier*—Chou En-lai (took office 1949); *Communist party chairman*—Mao Tse-tung (took office 1931). *Parliament*—National People's Congress, 3,040 members.

Religious Faiths: Buddhists, 20% of population; Muslims, 5%; Taoists, 4%.

Education: *Total school enrollment*—100,810,000 (primary, 1959, 90,000,000; secondary, 1958, 8,520,000; teacher-training, 1958, 620,000; technical, 1958, 850,000; higher, 1962, 820,000).

Finance (1960 est.): *Revenues*, $35,010,000,000; *expenditures*, $35,010,000,000; *monetary unit*, yuan (2.46 yuan equal U. S.$1).

National Income (1960): $84,500,000,000; average annual income per person, $123.

Manufacturing (metric tons, 1965): Cement, 11,000,000; crude steel (1964), 9,500,000; sugar (1966), 3,146,000.

Crops (metric tons, 1966): Rice (1960, 85,000,000 (ranks 1st among world producers); soybeans, 10,970,000 (world rank, 2d); cottonseed, 3,047,500 (world rank, 3d).

Minerals (metric tons, 1965): Coal, 300,000,000 (ranks 3d among world producers); magnesite, 1,100,000 (world rank, 3d); iron ore, 39,000,000; salt, 13,000,000; crude petroleum, 10,000,000; pyrite, 1,500,000.

Foreign Trade (1964): *Exports*, $1,500,000,000; *imports*, $1,200,000,000. *Chief trading partners:* Albania (1963; took 28% of exports, supplied 21% of imports); USSR (1964; took 20% of exports, supplied 11% of imports); Hong Kong (1965; took 26% of exports, supplied 1% of imports).

Transportation: *Roads* (1958), 249,000 miles (400,000 km); *motor vehicles* (1965), 246,600 (automobiles, 32,900); *railways* (1965), 19,500 miles (31,381 km); *merchant vessels* (1966), 180 (760,000 gross registered tons).

Communications: *Telephones* (1948), 244,028; *television stations* (1967), 30; *television sets* (1967), 100,000; *radios* (1963), 8,000,000; *newspapers* (1955), 392.

of the three-way alliance of the masses, army, and "revolutionary" local cadres.

By November 1967, provincial revolutionary committees had replaced provincial Communist party committees in Shansi, Shangtung, Heilungkiang, Tsinghai, and Inner Mongolia. Municipal revolutionary committees were established in Peking, Shanghai, Tientsin, Hangchow, and Wuhan. In January 1968, Peking speeded up the program by giving key positions to tested military commanders and Communists, bypassing the younger revolutionaries.

The Maoists did not suceed in seizing power from all opponents, either by armed struggle or by political maneuvering. Of China's 26 administrative districts, pro-Maoists could claim control of about half, and even these were by no means exempt from disturbances and uprisings.

Economic Disruption. The chaos that resulted from the spread of the Cultural Revolution seriously affected the economy in many places. Labor strikes in the cities and violent clashes between Maoists and anti-Maoists disrupted transportation and paralyzed production. In the countryside, peasants deserted their work, refused to meet state grain quotas, and seized food from collective granaries. Peking blamed much of the chaos on the opposition, which, it charged, was sabotaging the government by bribing workers with increased wages and "economic benefits," and permitting the removal of property from factories.

As countermeasures, Peking in March ordered the peasants not to participate in the power struggle during the period of spring cultivation. It also commanded that special centers be established for fostering production in rural areas. Orders were issued for wages to be frozen and for military units to be sent to the mines and factories to "insure peak production."

Nuclear Weapons. On June 17, 1967, it became apparent that political disturbances in China had not affected its nuclear development program. On that day, less than three years after its first nuclear test, Communist China successfully exploded its first hydrogen bomb over Lob Nor, a desert lake in the Sinkiang-Uighur Autonomous Region. The explosion was estimated to have a force of several megatons. In December it was reported that Communist China was building missile-launching submarines in southern Manchuria.

China's rapid progress in nuclear development enhanced the country's position as a world power and underlined the military threat posed by its foreign policy. In a report published on August 2, the U. S. Joint Congressional Committee on Atomic Energy predicted that by about 1970 Communist China would be capable of launching a nuclear missile attack on the United States. Subsequently, the U. S. secretary of defense announced that a limited antiballistic missile system would be constructed in the United States against the possibility of a Communist Chinese attack. (See also ATOMIC ENERGY; MISSILES.)

Vietnam War. Communist China based its policy in Vietnam on the belief that the war would be protracted and that North Vietnam would emerge victorious. Peking, therefore, was opposed to peace talks that were in any way conciliatory.

On several occasions in 1967, U. S. planes striking at Hanoi's rail links and other installations close to the Chinese border accidentally flew over Chinese territory. Two U. S. planes were shot down by the Chinese over the Kwangsi-Chuang Autonomous Region on April 25, another over Hainan Island on June 26, and two over Kwangsi-Chuang on August 21. Peking immediately issued "serious warnings" and called on its armed forces to maintain constant vigilance against "military provocations" by the United States.

Foreign Minister Ch'en Yi stated on May 23 that China would enter the Vietnam War if North Vietnam requested it. However, some U. S. observers believed that Peking was deeply embroiled in its domestic difficulties and was in no position to risk war with the United States. U. S. Secretary of State Dean Rusk told a news conference on September 8 that the administration pursued the war with prudence and did its best to minimize actions that would lead to Chinese intervention. But he went on to say that he could not offer any "gold-plated guarantees" that Peking would not enter the war as a result of U. S. air attacks close to the Chinese border.

Chinese-Soviet Relations. On Jan. 25, 1967, about 70 Chinese students who were visiting Moscow

MAY DAY CELEBRATIONS in 1967 found Mao Tse-tung greeting followers in Peking with Lin Piao (*right*), Chinese defense minister and a Cultural Revolution leader.

clashed with Soviet police. The trouble began when the students started to chant political slogans in Red Square. The police intervened, and in the fray that developed, several students were injured. Peking protested and claimed that as many as 30 had been hurt, but Moscow laid the blame on the Chinese, who, it said, provoked the incident by their disorderly conduct.

In protest, the Chinese held massive anti-Soviet demonstrations and besieged the Soviet embassy in Peking for 18 days. Occupants of the embassy were subjected to round-the-clock denunciations over loudspeakers and other harassments. In return, Soviet workers staged counterdemonstrations outside the Chinese embassy grounds in Moscow, tore down propaganda display cases, and attacked Chinese personnel. Protests and counterprotests between the two governments were couched in such violent language that Chinese-Soviet relations seemed headed toward a break. The two states, however, did not sever relations, and the siege of the Soviet embassy was lifted on February 12.

Incidents continued to occur, however. In August the Soviet freighter *Svirsk* was detained in Dairen. Its captain and three crewmen were seized and taken ashore by Red Guards, who rampaged aboard the vessel for two days. Only after Soviet Premier Kosygin sent a telegram to Chou En-lai threatening to stop trade between the two countries was the ship released.

The Chinese-Soviet rift seriously affected the transportation of Soviet aid to North Vietnam. Moscow complained bitterly of Chinese obstruction. In April an agreement to speed the flow of Soviet military supplies to Hanoi was reported. Under the new arrangement, North Vietnam would claim Soviet materials as soon as they reached the Chinese border. From there the supplies would go by rail across China under North Vietnamese supervision.

Riots in Hong Kong. Riots broke out in the British colony of Hong Kong in May 1967. The disturbances began as minor labor disputes, which were immediately exploited by the Chinese Communists. Under their instigation and with their support, Chinese rioters fought the police and staged massive demonstrations.

Some officials feared that the outbreaks, coming soon after the trouble in Macao (which began at the end of 1966 and resulted in a curtailment of Portuguese authority in the colony), was the first stage in a move by Peking to take control of Hong Kong. However, Communist China profited by its trade with Hong Kong and stood to lose by a takeover. Moreover, the labor movement in the colony was weak. British authorities refused to be intimidated by the terrorist tactics of the Communists, and hundreds of rioters and Communist organizers were arrested.

There were sporadic outbursts throughout the spring, and hostilities began again at Lowu and Mankamto on the China-Hong Kong border in July and August.

Peking condemned the British for alleged "fascist suppression" of Chinese in the colony, and on Au-

LIN PIAO, defense minister of the People's Republic of China, clearly emerged in 1967 as the probable heir to Communist party chairman Mao Tse-tung. He played an important role in Mao's "Great Proletarian Cultural Revolution," begun in 1966, and he is said to have launched the Red Guard student movement, which sought to purge the nation of anti-Maoist influences. At the 18th anniversary celebration of the Chinese People's Republic, in October 1967, Lin was listed as the second-ranking member of the party.

Lin Piao was born Lin Yu-yung in Hupeh province, in central China, about 1907. He joined the Young Socialist League and Sun Yat-sen's Kuomintang party as a student and later received military training at Whampoa Academy under Chiang Kai-shek. After Chiang's break with the Communists in the late 1920's, Lin Piao joined Mao's forces and became known as a brilliant strategist of guerrilla warfare. Following the defeat of the Japanese in World War II, Lin Piao commanded Communist forces in the struggle that resulted in Communist conquest of the Chinese mainland in 1949.

Communications (1967): *Telephones*, 191,532; *television stations*, 4; *television sets*, 100,000; *radios* (1965), 1,270,000; *newspapers* (1963), 32 (daily circulation, 750,000).

gust 20 sent the British government an ultimatum. Peking demanded that the three pro-Communist Chinese newspapers that had been closed be allowed to reopen and that the 19 Chinese journalists under arrest be set free. Britain rejected the demands. Red Guards invaded the British diplomatic compound in Peking on August 22, set fire to the buildings, and beat the British chargé d'affaires and other members of the staff. Sino-British relations, though strained, were not broken, and an accord was reported in November. (See also HONG KONG.)

Relations with Other Countries. Communist China's relations with a number of Asian nations became increasingly strained during 1967. In Burma, Chinese residents were attacked by Burmese mobs after Chinese students defied a government order forbidding them to wear Mao Tse-tung badges. Peking protested vigorously, denounced the Burmese government, and demanded a public apology. On October 31, China announced it would withdraw its economic aid mission from Burma.

Communist China's relations with Indonesia also deteriorated. Anti-Chinese riots broke out in Djakarta in April, and the Indonesian government expelled the Chinese chargé d'affaires. Peking, in turn, expelled the Indonesian representative. Anti-Chinese sentiment mounted, and on August 5 about 500 Indonesian youths stormed the Chinese embassy in Djakarta and set fire to one of the buildings. Three youths and a soldier were shot, and Indonesia expelled two Chinese diplomats. Another attack occurred on October 1, when more than 1,000 Indonesians rioted and destroyed the Chinese embassy's radio-transmitting equipment; 20 staff members were injured. Indonesia recalled its diplomatic aides from Peking, and finally, on October 9, suspended diplomatic relations with Communist China.

Peking's relations with India also were marked by tension. In June two officials of the Indian embassy in Peking were detained by Chinese authorities and charged with espionage. Indian students retaliated by invading the Chinese embassy in New Delhi and assaulting eight Chinese officials with stones and clubs. In return, Chinese Red Guards besieged the Indian embassy in Peking, smashed windows, and burned Indian leaders in effigy.

Fighting broke out on September 11 between Chinese and Indian troops at Natu La Pass between Tibet and the Indian protectorate of Sikkim. More shots were exchanged at Cho La on October 1. Fighting, however, tapered off after India proposed a cease-fire. Both sides apparently had no intention of turning the incidents into a major conflict.

NATIONALIST CHINA

Nationalist China watched the political turmoil in Communist China with some hope, but took no military action toward recovering the mainland. During the year, Taiwan strengthened ties with friendly nations and made substantial progress in economic construction.

Political Affairs. The National Security Council was established in February 1967 to replace the National Defense Council as the supreme organ in charge of all major policies concerning national defense and reconstruction. President Chiang Kai-shek headed the new council, and Huang Shao-ku became the secretary-general.

In a military reshuffle on June 28, Gen. Kao K'uei-yuan became chief of the general staff, and Gen. Ch'en Ta-ch'ing commander in chief of the Chinese Army. The cabinet was shuffled on November 29, and new ministers for finance, justice, and communications were named.

On July 1, Taipei City was made a special municipality under the direct jurisdiction of the Executive Yüan (the cabinet). Its administrative area was expanded to include six more townships and Yangming Hill.

Education and Culture. In June 1967 the Nationalist government decided to extend the 6-year compulsory education period to nine years. Students will be given six years of primary education and three years of junior middle school education. Junior middle schools will teach courses in cultural development as well as vocational training.

On July 28 a committee was organized to foster the Chinese Cultural Renaissance movement. Under the sponsorship of President Chiang the movement was launched to counteract the Cultural Revolution of Mao Tse-tung on the Chinese mainland. Chiang appealed to all Chinese to rise and defend their cul-

CHIANG KAI-SHEK, president of the Republic of China, celebrated his 80th birthday in 1967, secure in his position as head of his Taiwan-based Nationalist regime. He continued to center his policies on the ultimate goal of reconquest of the Communist-controlled Chinese mainland.

Chiang was born on Oct. 31, 1887, in Fenghwan, Chekiang province. He attended Paoting military academy and joined Sun Yat-sen's revolutionary army in 1911. After becoming chairman of the national government at Nanking and generalissimo of all republican forces in 1928, he intensified his campaign against the Communists, now under Mao Tse-tung. Hostilities between Nationalist and Communist forces, suspended during the Chinese-Japanese war (1937–45), resumed after the defeat of the Japanese. Following the Communist conquest of the mainland in 1949, Chiang established the Chinese Nationalist government on Taiwan.

UPI

NATIONALIST CHINESE President Chiang Kai-shek (*right*) talks with children attending a ceremony honoring war dead. Scene was a shrine in Taiwan's capital, Taipei, in March.

tural heritage. He expressed the conviction that Confucian benevolence would triumph over Communist tyranny.

Research. Scientific research was stressed by Taiwan in 1967 in an effort to promote economic development and national defense. The National Science Council was established to coordinate science education, productive construction, and defense research. In September the United States sent a survey mission to Taipei in preparation for further cooperation in science development.

Economy. Taiwan's economy maintained its steady growth in 1967. Official estimates for the January-June period indicated a 19.3% increase in industrial production and a 4.6% increase in agricultural production. Taiwan's economic growth rate ranked first among the rates of the world's developing nations.

Taiwan made great efforts to improve conditions for investment. Measures taken in 1967 included simplification of investment and export procedures, development of industrial areas, and assistance for medium and small enterprises.

Notable among the economic projects was the improvement of the Kaohsiung Export Processing Zone, a 170-acre customs-free industrial enclave in which businesses produce for export only. Other achievements at Kaohsiung included the construction of a large shipyard capable of building 100,000-ton vessels, and the expansion of the airport for international air traffic.

Foreign Relations. Political turmoil in Communist China stirred the Nationalists in Taiwan, but any hope of invading the mainland was dampened by the United States, which gave no indication of willingness to support a military move against Communist China. The U. S. State Department noted that Nationalist China was bound by a pledge not to launch an invasion of the Chinese mainland without the prior approval of the United States. Taiwan maintained that no such approval was necessary, but it would have been difficult, if not impossible, for the Nationalists to undertake any large-scale offensive against the mainland without U. S. support.

Taiwan took active measures to strengthen its friendship with other countries in 1967. At the ministerial conference of the Asian and Pacific Council held in July, Chinese Nationalist delegates stressed the unity of free Asian and Pacific nations in combating external aggression and in developing economic and cultural cooperation.

On May 9, Vice President and Premier Yen Chia-kan arrived in Washington, D. C., at the invitation of President Johnson, for a 19-day official visit. Yen reviewed the political situation in Communist China with U. S. government leaders, but there was no indication that he broached the subject of invading the Chinese mainland. In the joint statement issued on May 10, Yen and Johnson agreed that developments on the Chinese mainland were closely related to the peace and security of Asia. Johnson pledged to continue military aid to Taiwan and reaffirmed U. S. support for the Republic of China's seat in the United Nations.

Japanese Prime Minister Eisaku Sato arrived in Taipei on September 7 for a 3-day visit. In the joint statement of September 9, Premier Yen and Premier Sato agreed to a further strengthening of cooperation and mutual understanding between the two countries. At a press conference in Taipei, Sato declared that Japan would adhere to its policy of not becoming involved politically with Communist China.

Other political leaders visiting Taiwan in 1967 included Premier Thanom Kittikachorn of Thailand in March and Prime Minister Harold Holt of Australia in April. Malaysia established a consulate in Taipei in February. Nationalist China maintained diplomatic relations with 18 African nations, and had 17 agricultural teams and two veterinary teams in Africa in 1967. (See also ASIA.)

CHRISTIAN CHURCHES (DISCIPLES OF CHRIST)

The Christian Churches (Disciples of Christ) reported a worldwide membership of 2,133,245 in 1967. Its largest organized body is the International Convention of Christian Churches (Disciples of Christ), which had 8,147 congregations with 1,903,395 members in the United States and Canada.

In 1967 there were Christian Churches in Australia, England, Ireland, New Zealand, and about 40 other countries. In many mission lands established churches are moving toward autonomy, as in the Democratic Republic of Congo, or toward union with other churches, as in East Asia.

The 1967 Assembly of the International Convention, held in St. Louis, Mo., on October 13–18, was the first delegate assembly, composed of voting representatives. Previous assemblies were mass meetings. The major item of business before the St. Louis assembly had to do with reorganization of the church communion based on a report and recommendation submitted by the Commission on Brotherhood restructure.

The next Assembly of the International Convention is scheduled for Kansas City, Mo., from Sept. 27 to Oct. 2, 1968. This assembly is expected to vote on the adoption of the Provisional Design for reorganization of the Christian Church (Disciples of Christ).

A. Dale Fiers
Executive Secretary, Christian Churches

CHRISTIAN SCIENCE

The church entered its second century in 1967 with special emphasis on spreading its teachings in the community and the world. This theme was stressed at the annual meeting on June 5 of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. About 8,000 members from all parts of the world attended the meeting.

On July 18 work was begun on the foundation for the new administration building, part of the church's projected 15-acre center in Boston's Back Bay district. The entire center is scheduled to be finished by 1970.

About 6,000 college students met at the Boston headquarters on August 24–26 for their international biennial conference. It was the largest youth meeting in the church's history. More than 1,100 colleges and universities in 32 countries were represented.

In September four inspirational conferences were held in South Vietnam for military personnel. Throughout the year a Christian Science wartime minister and 18 Christian Science representatives in Vietnam held regular services and gave spiritual aid. Conferences were also held at military bases in Korea, Hawaii, Japan, Okinawa, Thailand, and the Philippines. European-based servicemen met at Berchtesgaden, Germany, in October for a week of talks, seminars, and individual counseling.

Erwin D. Canham, editor in chief of the *Christian Science Monitor,* completed his term as president of the church and was succeeded by Mrs. Beatrice T. Pittman of Boston.

CHURCH MEMBERSHIP, U. S. See Religion.

CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS

In 1967 the church had 4,022 wards and independent branches in 425 stakes (territorial units) and 2,053 branches in 75 missions. There were about 12,000 full-time missionaries serving in the missions throughout the world and about 5,200 part-time missionaries working in the stakes. Total church membership was 2,480,899, including 68,843 convert baptisms during the year.

The work of the church among the Spanish-speaking people was given new impetus with the organization of new stakes in Mexico City, Guatemala City, and Buenos Aires.

In order to accommodate the increasing number of church members actively engaged in work on genealogies and the performance of marriages for eternity for living persons and their deceased ancestors, and other ordinance work, the presidency of the church announced that plans would begin immediately for the construction of two new temples in Utah, one in Ogden and the other in Provo. This will make a total of 15 temples in active service in the church. There were 888 chapel building projects in the planning and development stages in 1967.

The church enlarged its radio and television holdings with the purchase of stations KMBZ-AM and KMBR-FM in Kansas City, Mo.

The world-famous Tabernacle Choir, which has appeared on a national radio network since 1929, presented 10 sold-out concerts before 90,000 persons on a tour that included Expo 67 in Montreal, Canada; Narragansett Park, Pawtucket, R. I.; Chautauqua and Saratoga Springs, N. Y.; Detroit, Mich.; Tulsa, Okla.; and Omaha, Neb. During July and August tens of thousands of tourists attended the free open-air musical production "Promised Valley," presented nightly in Temple Square in Salt Lake City to commemorate the historic pioneer migration to the valleys of the Rocky Mountains.

Regional priesthood representatives of the Council of the Twelve Apostles were chosen and appointed to serve in a supervisory capacity in the various stake and mission areas throughout the world. David Lawrence McKay was appointed general superintendent of the church's Sunday Schools, succeeding George R. Hill, who had served for 17 years.

Joseph Anderson
Secretary to the First Presidency

CHURCHES OF CHRIST

Overseas missions, "Exodus" movements, in which members move from areas with well-established churches to other parts of the country to found new churches, and campaigns in large cities in the United States and abroad continued to flourish among the Churches of Christ in 1967. Church colleges have grown so much that in 1967 the five 4-year colleges had 10,000 students, and the 14 junior colleges 3,000.

There has been a definite trend within the Churches of Christ toward eliminating racial barriers. Church colleges now accept all races. A rally held in Los Angeles on September 30 to promote interracial and intercongregational fellowship gave evidence of this trend within congregations.

Schools of preaching have come to play a significant role in the training of ministers for the church. The schools are generally operated by a congregation, and an intensive program of Bible study and religion is conducted. Schools are located in Memphis, Tenn., and Lubbock, Texas.

The church has turned its attention toward inner cities in metropolitan areas. Harding College in Searcy, Ark., conducted an Inner City Workshop in the summer of 1967. Northeastern Christian Junior College, Villanova, Pa., is preparing for an extended workshop in the summer of 1968. A Christian service center has been set up in Philadelphia, Pa.

Work on campuses has been given new emphasis by the Campus Evangelism program, under the auspices of the Broadway Church of Christ in Lubbock.

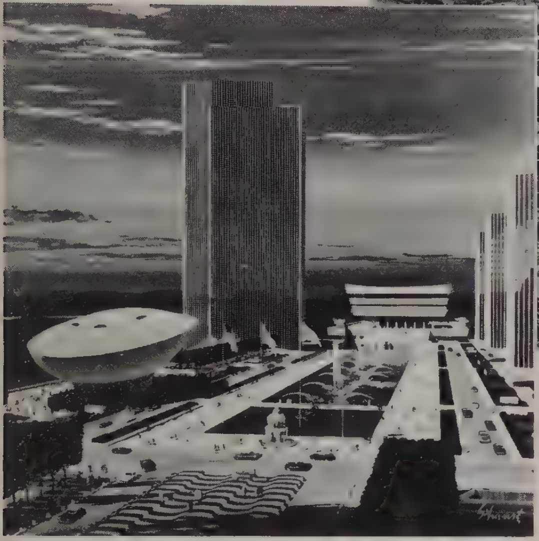
CITIES AND URBAN AFFAIRS



NEW YORK STATE OFFICE OF GENERAL SERVICES

URBAN RENEWAL on a grand scale will transform downtown Albany from a 90-acre substandard district to an institutional complex befitting the capital of New York state. The South Mall project, as it is called, is already under way (*above*) and when finished it will include the structures shown at left—the 43-story office building, the bowl-shaped Meeting Center, and the large ornamental pool in the center.

CITIES AND URBAN AFFAIRS

The 20th century can be justifiably called the "Age of Cities." Urbanization has progressed to the point that in 1960 about 30% of the world's population was living in urban areas; by the end of the century this figure is likely to exceed 60%. The uncontrolled growth of cities has become a worldwide problem of staggering dimensions, and its impact on social life and public health may prove disastrous if measures are not taken to reverse current trends.

The Urban Crisis. In the United States the turning point from a rural to an urban society was reached in the early 1920's. The population was almost equally divided then between town and country, but thereafter the scales shifted overwhelmingly toward urbanization. By the 1960's, more than two thirds of the American people were living in cities, and more than half of the total population was crammed into 213 urban places, collectively occupying less than 1% of the nation's land.

Even these compelling figures fail to convey fully the unbalanced nature of American urbanization and land use. The most rapid rate of urban expansion occurred after World War II. These years were marked by a minimal amount of planning, by an irresponsible disregard for public services, and by a decline in virtually all standards of residential construction. Central areas of major American cities were permitted to deteriorate to an appalling degree. In one city after another, the traditional urban core declined in population, commerce, and cultural activity, turning into a shabby, desolate area or an ugly, rat-infested slum for newly arrived minority groups. Large-scale, poorly built suburban developments appeared outside fixed city limits, eating into potential recreation areas and the surrounding farmlands. On the perimeter of the old core, giant office buildings and superblock apartment houses began to replace many attractive residential buildings, and they increasingly eroded traditional community and neighborhood ties in the city proper. To many families, the city ceased to be a satisfactory arena for daily life.

The problem of working in the city—of traveling from outlying residential areas to inner, highly centralized business districts—became formidable. During rush hours, public transit systems were burdened beyond the carrying power of already inadequate facilities. As commuters and local residents shifted increasingly to motor vehicles, city streets became congested with automobiles and buses, producing serious air pollution problems. By the 1960's, a long-predicted urban crisis had emerged in full bloom, and there was very little prospect that decisive solutions were in the offing.

Urban Renewal. During the immediate postwar period, municipal planners were occupied primarily with new housing programs to meet the needs of World War II veterans and their families. By the 1960's, attention had shifted to the improvement of deteriorating downtown areas, the traditional urban core of large cities.

The emergence of a new Negro militancy has produced a refocusing of programs, but the new focus has yet to achieve clear definition. Planning efforts appeared to be divided among programs for new ghetto housing, the rehabilitation of downtown areas, and middle-income residential construction that is designed to draw suburban families back to the city.

Funds for new housing in slum areas ultimately depend upon congressional action—action that has generally been very slow in coming and very limited in scope. If the refusal of the House of Representatives, on July 20, 1967, to allocate a mere $40 million, spread over two years, for rat control in ghetto areas is indicative of the mood of Congress, it appears likely that future appropriations for the renewal of slum districts will fall far short of existing needs. (The rat-control legislation was enacted later in 1967 by the House, but only after severe criticism in the national press.) A number of large insurance corporations offered to invest a billion dollars in slum housing—reversing a long-standing policy of avoiding low-cost ghetto mortgages—but the extent to which this investment program is carried out depends on the scope of the administration's rent-subsidy program. In any case a billion dollars will not solve the problem of deteriorating slum dwellings in the United States, nor is Congress likely to appropriate adequate funds for rent subsidies. In 1967, Congress provided only $10 million for rent subsidies, even though the Administration asked for a mere $40 million.

In the absence of extensive slum-clearing programs, the attention of many planners has turned to a technique, admittedly limited in scope, known as "instant rehabilitation." In New York City's Lower East Side, for example, three 75-year-old slum dwellings were outfitted with prefabricated kitchen-bathroom units and modernized in only 48 hours. After the residents were removed to temporary shelters, teams of construction workers stripped down each building to its masonry walls, joists, and subflooring, and then totally renovated the interior. The shortcomings of this approach are obvious: dwelling space and exposure to sunlight are still limited by the form and dimensions of the building itself. A modernized interior, moreover, does not alter the harsh reality that its occupants live in an economically depressed and socially neglected neighborhood.

A great deal of effort in 1967 was still being directed toward downtown renewal programs, although on a scale greatly diminished from that of two years earlier. Albany, the capital of New York State, initiated the largest of these programs by starting the construction of the South Mall complex, a collection of largely administrative structures, meeting halls, and institutional buildings. A great slablike office building, 43 stories high, will overlook three meeting halls, a state library, a museum, and several commercial and office buildings. The entire structural ensemble will rest on an immense concrete podium, nearly 700 feet wide and almost 1,500 feet long, softened in appearance by lawns, trees, and pools. The project will require four years to complete at an estimated cost of a half-billion dollars. It will provide office space for 10,000 state employees.

Malls, plazas, and pedestrian walkways have acquired a great deal of popularity in downtown rehabilitation schemes. Shopping malls now exist in Minneapolis, Knoxville, Kalamazoo, Pomona, and other American cities. A mall-like effect was achieved by redecorating a two-block section of F Street in Washington, D. C., with trees, benches, and kiosks. Recently, second-story pedestrian walkways have been constructed in Hartford, Baltimore, and Cincinnati.

The Cincinnati walkway has aroused the greatest interest because it involves the least amount of

THE NEW YORK TIMES

GHETTO BLIGHT, common to many American cities, is typified by this alleyway in New York's Harlem where a periodic clean-up is carried out.

change in existing structures and a minimal investment for a project of its size. The pedestrian walkways, reached by escalators, will extend for 15 blocks off Fountain Square in the heart of Cincinnati's old downtown shopping district. The area was visibly deteriorating over the years as a retailing center, and the walkway project is expected to give it a new and highly remunerative lease on life. Immediate construction plans will take two years to complete at an investment of $6 million. Additional plans have been developed to extend the walkway into other streets.

An increasing amount of planning effort was also directed toward providing housing for middle-income families, the dwindling tax base of many large American cities. In St. Louis, $52 million was invested in the Mansion House project, a complex of high-rise dwellings, stores, and restaurants near Eero Saarinen's Gateway Arch. Cincinnati has been occupied with the creation of middle-class enclaves in the declining Mount Adams district. Similar projects have been planned or are under way in New Haven, New York City, Cleveland, Baltimore, and other large cities. Philadelphia is still rescuing and restoring its colonial legacy of Georgian town houses, although the cost of these renovated dwellings is prohibitive for families in middle-income groups. None of these rehabilitation projects, however, has arrested the flow of middle-class families from central urban districts. The exodus of these families to outlying residential areas has been limited almost exclusively by the cost and availability of suburban housing.

Urban Transportation. The enormous growth of American cities has produced a grave transportation problem in nearly all urban areas—a problem that the automobile has exacerbated rather than relieved. Early postwar attempts to provide adequate roadways for motor vehicles served only to bring more cars into the cities, complicating existing efforts to transport pedestrians from homes to places of work. As automobiles nibbled away at the use of existing rail traffic systems, many railroads restricted or discontinued passenger services. The need to provide new means of public transportation between and within cities became one of the most serious problems facing city planners.

San Francisco took the lead in public transportation by establishing a 75-mile rail system known as the Bay Area Rapid Transit System District (BARTD). BARTD will be fully operating by 1969. Its air-conditioned trains, running at an average speed of 50 mph, will be controlled automatically by scheduling devices, providing trains every two or three minutes during rush hours.

Plans are under way to construct rapid transit systems in Washington, D. C., and Atlanta. A 14-mile rail rapid transit line has been proposed to link downtown Philadelphia with downtown Camden. In Chicago, voters approved a $28 million bond issue for constructing a rapid transit rail line along the Dan Ryan and Kennedy expressways. In New York State, voters approved a $2.5 billion transportation bond issue, half of it for mass transit (mostly New York City subways) and the rest for highways and airports.

(See also TRANSPORTATION.)

Urban Government. Few major planning efforts can be fulfilled without federal financial assistance. The federal government, with its enormous resources, provides the grants and matching funds for many developmental projects, and it plays an increasing role as mediator between conflicting local and state jurisdictions. This new and ever-growing role has had a profound effect on the function of the citizen and municipal government in urban affairs.

"Help!"

Theoretically, the traditional ideal of American government is a federal structure in which political authority is vested in local, decentralized communities. In reality, however, the federal system has yielded increasingly to highly centralized forms of government, with a resulting decline in individual and local autonomy. The traditional role of the citizen is preempted by urban specialists such as city managers and planning boards, and the traditional role of the community is preempted by regional, state, and national agencies.

Recent federal legislation tends to give legal acknowledgement to this trend toward centralization and to reinforce its thrust. In 1965, Congress established a Department of Housing and Urban Development, headed by Secretary Robert C. Weaver. A year later, Congress established a Department of Transportation, headed by Secretary Alan S. Boyd. In addition, Congress passed legislation establishing programs for the beautification of American highways, for demonstration projects ("model cities"), and for "new communities." The Federal Highways Beautification Act is expected to remove many of the eyesores—billboards, junk depots, and waste dumps—that offend motorists. The "model cities" act is expected to throw additional resources behind rehabilitation projects in a number of American cities.

It is doubtful, however, whether the new departments of the recent spate of urban legislation will score decisive advances in overall urban planning. Assuming that any further erosion of local authority is desirable, the authority vested in the Department of Housing and Urban Development and in the Department of Transportation is very limited. The funds allocated to these departments and to the execution of the beautification and "model cities" programs fall pitifully short of existing needs. The "model cities" program affects a small number of communities, and some of its projects have already been sharply criticized as unimaginative and anemic. High-sounding as their names may be, these newly formed departments, given their limitations of scope and resources, can hardly be expected to arrest, much less reverse, the plummeting decline of American cities.

New Towns. More and more city planners are convinced that the revitalization of urban life in the United States depends on radically new concepts of the future city. Perhaps the most popular concept in the theoretical armory of the city planners is called the "new town" or "satellite town." The "new town" concept is not new. Borrowed from England, it projects the carefully planned construction of small communities in a rural setting, fully equipped with recreational facilities and shops, and also supplied with factories and offices to provide local employment. The community, in effect, tends to approximate a decentralized, self-sustaining unit.

Most of the "new towns" built in the United States fall far short of this image. Many of them are simply residential areas; others are simply retirement communities for elderly people. Recently, "new towns" attracted the interest of several large American corporations. Goodyear is building a "new town" in Arizona; Southern California Edison is planning one a few miles outside Los Angeles; Westinghouse expects to start construction on a "new town" in Florida.

Experience with these projects has been very unsatisfactory. Humble Oil's Clear Lake City on the edge of Houston, Texas, for example, exhibits a number of defects that hardly qualify the project as more than a suburb, with most of the characteristics of existing suburban developments. Clear Lake City has been growing piecemeal since 1961 around the NASA Manned Spacecraft Center and a few small private plants. Large areas of the community look like a dreary suburban development.

Westlake Village, a "new town" started 35 miles outside Los Angeles in 1966, consists largely of high-priced homes. Although Westlake's planners believe that some 5,000 jobs eventually will be located in the community, it seems certain that a high proportion of the residents simply will flow into the Los Angeles commuter system.

Crystal Lake City and Westlake Village point up the essential defects of most existing and proposed "new towns" in the United States. A high proportion of the residents—often a majority—work outside the "new town" and commute to a nearby large city. In the absence of restrictions on urban growth (such as "green belts"), the larger city is destined to swallow all the nearby "new towns." In any event, the "new towns" tend to handle only a portion of the excessively high population currently building up in urbanized areas.

Many older "new towns" have not evolved as their planners anticipated. The Sunset/Whitney Ranch project near Sacramento, Calif., has failed to attract an adequate number of commercial and industrial enterprises. Even Reston, Va., a "new town" 18 miles west of Washington, D. C., had sold less than 600 homes in late 1967, probably because of the high price of its town houses. (See also HOUSING.)

The Outlook. In the opinion of an increasing number of city planners, the future of American cities will remain grim until means are worked out to decentralize existing conurbations—aggregations of communities—and urban belts. The problem is not to provide easier access for motor vehicles within cities, but to reduce their use, A rational urban planning program must focus not on providing more housing inside the large cities but on reducing existing urban population densities by means of economically balanced, architecturally attractive, and culturally vital communities in sparsely populated areas. But such programs involve new, entirely revolutionary conceptions of social organization that few people in and out of government are currently prepared to accept.

CRUMBLING WALLS, rats, little furniture—or heat—are not unusual features in the slums of New York, where this mother and child live.

CIVIL RIGHTS

"We have endured a week such as no nation should live through: a time of violence and tragedy . . . . There is a danger that the worst toll of this tragedy will be counted in the hearts of Americans: in hatred, in insecurity, in fear . . . ."

—President Johnson, in a nationwide address on July 27, 1967, during the riots in Detroit.

DETROIT, 1967

UPI

CIVIL RIGHTS

In the last two decades the civil rights movement, sparked and aided by decisions of the U. S. Supreme Court, has led the way in expanding the meaning of freedom and equality within the United States. Two revolutions now are on the way to accomplishment, even if slowly—desegregation in education and "one man, one vote" in the apportionment of state legislatures.

Over the objections of law enforcement officials, court-enforced reforms in state criminal procedure have become the order of the day. Congressional and state legislation has supplemented Supreme Court decisions to make civil rights and equal economic opportunity realities for more Americans. The constitutional right of a minority to dissent and to work for peaceful change has been the basic principle on which the civil rights revolution has been built.

Although a calendar year is an arbitrary unit of time, it is sufficiently long to evidence definite characteristics in an area such as civil rights, and this was true of 1967. The year saw the right of dissent become confused with unlawful civil disobedience focused on a constitutional objective and with riots for the sake of destruction. An example of the peaceful exercise of the right of dissent was the nightly marches of Father James E. Groppi and his adherents in Milwaukee, with the objective of forcing the city council to pass an open-housing ordinance.

The instances of civil disobedience involving unlawful action were legion. Good illustrations were the student sit-ins at colleges aimed at preventing the armed services from recruiting or representatives of the Dow Chemical Company from interviewing prospective applicants for jobs in their concern, a small part of whose output is connected with the Vietnam War effort. Without doubt the most confusing part of the picture, and the one outwardly least connected with the right of dissent and with civil rights in general, were the riots, dominated by Negroes, that spread in various degrees through more than 100 cities during 1967.

Urban Riots. From April through September the cities of the country erupted with racial violence. The statistics were almost as vulnerable as any study of the basic causes. About the only unanimity among the analysts was that the civil rights movement, as such, was only indirectly concerned. By mid-August it was estimated that almost 100 persons were dead, over 2,000 injured, and some 12,000 arrested as a result of the riots.

The greatest violence and the most destruction occurred in July in Detroit and Newark, N. J. For five days and nights Detroit suffered one of the bloodiest and most costly "revolts" in modern American history. One observer likened it to "the Berlin of 1945." It was estimated that over 40 persons

THE NEGRO 'REVOLUTION' OF 1967

During the summer of 1967, disadvantaged areas in dozens of United States cities erupted in violence. The unprecedented wave of destruction caused deepest public concern. A commission set up by President Johnson found no proof of a nationwide conspiracy but promised a report (due to be released in 1968) "uncomfortable to the American people."

NATIONAL GUARDSMEN stand watch over the smoldering ruins of a Negro section of Cambridge, Md., burned to the ground after a speech by Rap Brown.

H(UBERT GEROID) RAP BROWN, who succeeded Stokely Carmichael on May 12, 1967, as chairman of the Student Nonviolent Coordinating Committee (SNCC), has emerged as the most militant of the "black power" advocates. In his fiery speeches he has called on Negroes to wage "guerrilla war" against the white establishment. On August 14 he was indicted in Cambridge, Md., on charges of having incited racial violence there in July.

Brown was born in Baton Rouge, La., on Oct. 4, 1943, the son of an oil company employee. He entered Southern University in his home city in 1960 as a sociology major. As a student, he compiled a good scholastic record and was active in the civil rights movement. He left in 1963 without graduating and went to work for SNCC, taking part in voter registration drives and other projects in Mississippi and Alabama. He was SNCC director for Alabama at the time of his election as national chairman.

MARTIN LUTHER KING, JR., emerged in 1967 as a leading opponent of U. S. military involvement in Vietnam while continuing in his role as a civil rights leader. In July he joined other moderate Negro leaders in condemning the racial violence that had broken out in various cities, and in the following month he called for a nationwide civil disobedience campaign to compel the government to meet Negro demands for better conditions.

Dr. King was born in Atlanta, Ga., on Jan. 15, 1929, and studied at Morehouse College (B. A., 1948), Crozer Theological Seminary (B. D., 1951), and Boston University (Ph. D., 1955). He became a national figure as a result of his leadership of the successful bus boycott in Montgomery, Ala., in 1955–56. In 1957 he helped found the Southern Christian Leadership Conference and became its president. King won the 1964 Nobel Peace Prize for his work on behalf of civil rights.

were killed, 350 injured, and 3,800 arrested, that 5,000 were made homeless due to fire-gutted houses, and that almost 3,000 businesses were sacked and looted. Damage caused by mob action was estimated in the hundreds of millions of dollars. Newark counted 26 dead, over 1,000 injured, 1,400 arrested, and some $50 million in damage.

Whether it was the three nights of rioting in Roxbury (a section of Boston) in June, or the disorders in Tampa, Cincinnati, and Atlanta, or the subsequent disturbances in Buffalo, N. Y., New Brunswick, N. J., Cairo, Ill., Albany, N. Y., or progressive New Haven Conn., the description was that of anarchy, fire, and looting.

To determine any connection with civil rights, the immediate spark must be differentiated from the underlying causes. Can it be said that the progress toward greater freedom and equality for the 22 million Negroes was too agonizingly slow? The torches that started the conflagrations were as varied as the size of the cities.

Boston's explosion began with police action because of a sit-in at the welfare department. Tampa erupted with the shooting of a 19-year-old Negro burglary suspect. In Cincinnati over 100 stores were fire-bombed after the arrest of a Negro demonstrator who was protesting the death sentence of his cousin. A routine police raid on an after-hours club and center of "black power" sparked Detroit's holocaust.

In all of these cases mere incidents released mass actions of destruction for the sake of destroying, an exertion of physical power against the "haves," an example of dissent for the sake of dissent. The underlying causes were legion, but among them was an often unrecognized dissatisfaction with the lack of equality for the Negro in the midst of half-realized promises. The throwing of a rock does not trigger mob action in affluent suburbia.

Public reactions to the riots varied, and there was no consensus as to cures. Congress, however, undoubtedly reflected the views of many constituents when it passed antiriot bills but failed to appropriate the full funds requested by the President for antipoverty programs. And Congress adjourned in December without having passed any of the administration's major civil rights measures, including bills against housing and jury discrimination and for the protection of civil rights workers.

Some Civil Rights Gains. On the positive side of the ledger was the appointment on June 13 of the first Negro, Thurgood Marshall, to the U. S. Supreme Court. This could result in an even higher percentage of decisions in favor of civil rights, since he replaced the more conservative Justice Tom C. Clark. President Johnson also appointed a Negro as chief executive of the city of Washington.

Representing a distinct landmark in the civil liberties movement was the conviction on October 20 of 7 out of 18 white defendants by an all-white Mississippi jury in the federal trial for conspiracy to interfere with the civil rights of three civil rights workers murdered in 1964. The result also reflected a change in the method of selecting Mississippi juries, as well as in the attitude of U. S. District Judge W. Harold Cox.

Desegregation of public schools continued its slow progress, but noteworthy was the April decision of the Fifth Circuit Court of Appeals ordering seven school districts in Louisiana and Alabama to integrate by the fall of 1967.

Elections. The off-year elections in November were important to civil rights not because of personalities but because of issues. In Boston's nonpartisan election for mayor, Mrs. Louise Day Hicks, an ardent opponent of desegregation by busing, was defeated. In Cleveland and Gary, Negroes were elected mayor. Even if issues other than race were present in each instance, the outcome indicated the strength of Negro voters and proved that it was possible for a Negro to be elected.

Supreme Court. It has become almost commonplace in the last decade to think of the U. S. Supreme Court as deciding all cases involving civil rights and liberties in favor of greater freedom. Statistics show, however, that in such cases only about two thirds of the court's decisions favor expanded civil rights.

Both in several judgments with opinion and in refusals to hear appeals from lower courts, the Supreme Court in 1967 showed that it would not approve excesses in civil disturbance. Thus, in *Adderley* v. *Florida,* a bare majority of the court upheld convictions for criminal trespass where 32 students protesting segregation and the arrest of others had continued peacefully to block a jail driveway after a warning to move. Again, in *Walker* v. *City of Birmingham,* by a vote of 5 to 4, the court upheld the contempt conviction of the Negro leader Rev. Martin Luther King, Jr., and seven other Negro ministers who had paraded after being refused a permit and in violation of a state court injunction. By the much more decisive vote of 7 to 2, the disorderly conduct conviction of 17 antiwar demonstrators in New York City was left standing.

In several other instances in 1967, the Supreme Court refused to take appeals from convictions for the sit-in type of disorderly conduct or breach of the peace. It would seem that rioters, as well as college students who "sit in" to prevent governmental and other agencies from conscripting or hiring, must recognize that freedom of speech and assembly does not include interference with the rights of others.

In a broader area than civil disturbance, the Supreme Court continued to expand the meaning of liberty and freedom as protected by the federal Constitution.

As expected, the miscegenation law of the state of Virginia was declared unconstitutional, as was also California's "Proposition 14," which attempted to protect the right of the property owner to sell or lease his property to whomever he pleases. The state may not prevent whites and Negroes from marrying, nor may it, in effect, guarantee the right to discriminate in housing. The section of New York state's education law that was aimed at disqualifying from teaching in public schools and colleges those who would overthrow the government by illegal means was declared unconstitutionally vague.

In several cases the famous freedom of the press decision in *Times* v. *Sullivan* was extended to protect untruthful but not malicious comments about public figures, as well as public officials. Convictions were reversed in three instances of alleged pornographic publications.

Although a bare majority of the court allowed the malapportioned Georgia legislature to follow the state constitution and elect a governor after no candidate had received a majority of the popular vote, the court continued to insist on substantial compliance with "one man, one vote" in legislative apportionments in Florida and Texas.

In the 1966–67 sessions, 33 cases in the Supreme Court concerned criminal proceedings, with 23 resulting in favor of the civil right involved. Especially important were the invalidation of New York's statute that permitted "bugging" of conversations upon an affidavit by a district attorney and order of a court; the holdings that an accused has a right to a lawyer at a police lineup where witnesses are making an identification and at his first appeal; and the decision that the protection of the 1st Amendment of the U. S. Constitution covers juvenile delinquency hearings involving possible commitment to a state institution. (See also LAW.)

CLEVELAND

Political history was made in Cleveland, Ohio's largest city (1967 est. pop.: city, 825,000; metropolitan area, 2,115,000) when Carl B. Stokes, an Ohio state representative, defeated Seth C. Taft, a lawyer, in the November 1967 elections. Stokes, a Democrat, became the first Negro to be elected mayor of a major American city. The victor by a narrow margin over his Republican opponent, he was inaugurated on November 13 for a 2-year term.

There was no racial rioting in Cleveland in 1967 and, although the city administration was the target of much criticism, employment and production were high in the Cleveland area. The city continued its role as a major manufacturing center.

Elections. Stokes' victory in the October Democratic primary over Mayor Ralph S. Locher signaled the end of a political dynasty which began in 1942 when Frank J. Lausche (now U. S. senator) first became Cleveland's mayor. Principal factors contributing to Locher's defeat in the primary were the widespread feeling that his administration had been negligent in renewing older parts of the city; his loss of the editorial support of both of Cleveland's daily papers, the *Plain Dealer* and the *Press;* serious rioting by Negroes in 1964 and 1966; and increased crime in the streets.

In both the primary and the election, Stokes received over 95% of the Negro vote and over 15% of the white vote. Taft, the grandson of President William Howard Taft, made the best showing for a Republican in a Cleveland mayoralty race since 1939.

Construction. Major rebuilding in downtown Cleveland and elsewhere in the city moved forward during the year. A new 32-story federal office building was occupied and a 20-story apartment house neared completion downtown. The Central National Bank began construction of its $20 million, 23-story headquarters, the first major Cleveland bank building to be erected since 1930. An annex to the Cleveland Aquarium that tripled the space of the old building was opened on April 29.

Education. Confederation of two privately supported institutions at University Circle, Case Institute of Technology and Western Reserve University, was completed on July 1. The name of the new institution is Case Western Reserve University. Robert W. Morse, president of Case, became president and John S. Millis, president of Western Reserve, became chancellor.

Cleveland State University began construction of a $30 million complex of classroom, library-faculty, administration, and science buildings near the downtown area. The headquarters of the Cleveland Auto Club nearby was bought for offices and seminar rooms. Cuyahoga County Community College, which has a $35 million building program, commenced construction of three buildings on its metropolitan campus. County voters in the November elections approved a $1 million 5-year levy on real estate to raise $30 million for the community college, with 75% going for operational costs and the rest for new buildings.

Transportation. The last links within Greater Cleveland of Interstate 71, connecting downtown Cleveland and other areas of the city directly with Columbus and Cincinnati, were opened in 1967 or were scheduled to open in 1968.

Economy. Business capital expenditures in Cuyahoga county, at more than $230 million in 1966, were expected to rise by more than 25% in 1967. Cleveland's business index for January–August 1967 stood at 150 (1957–59 = 100).

Finance. Cleveland's operating budget for 1967 was set at $74,008,494, up from $62,624,904 in 1966. The net funded debt, as of Jan. 1, 1967, was $140,234,000, down from $140,872,000 in 1966. The tax rate stood at 5.29% of assessed real estate value.

"The Plain Dealer," Cleveland

CLOTHING INDUSTRY

Shipments of women's and children's clothing by U. S. manufacturers generally increased in number of units and in dollar value in 1967. Dresses, coats, and suits in the higher price ranges gave particularly good accounts of themselves in sales. Women's apparel, as a whole, sold better than men's wear.

One reason for the gain in women's wear sales was that the number of women aged 15 through 34—the most clothes-conscious age bracket—has been increasing more rapidly than those in other age brackets. In addition the number of working women is on the rise. Over 1.2 million more women were employed in 1966 than in 1965, and typically, women who work spend more on clothes than do those who are out of the labor force. Continued fashion innovations also helped to brighten the sales picture.

Records show that consumer purchases of women's and children's clothes advanced 12% between 1965 and 1966, while the total of all consumer expenditures rose only 10%. This continued a trend that has lasted several years.

U.S. APPAREL SHIPMENTS AND PRODUCTION
(in millions)

Kind of Apparel	Net Value of Shipments 1966[1]	1965	Unit Output 1966[1]	1965
Unit-price dresses	$1,577	$1,448	180.9	178.3
Dozen-price dresses	406	347	110.2	103.8
Coats and suits	804	783	36.0	37.2
Blouses	503	489	207.8	216.9
Men's suits	[2]	113.9	20.7	22.4
Men's dress and sport coats	[2]	273.3	13.1	12.5
Men's overcoats and topcoats	[2]	113.3	3.8	4.4

[1] Preliminary figures. [2] Not available.

Production data in the men's field do not include the very substantial quantities of uniforms produced under government contract, which cut into civilian production.

Merger Trend. The trend toward bigger firms through consolidations and mergers has continued. The number of publicly owned women's garment houses has quadrupled from the 22 that existed in 1958. In 1965 there were about 2,600 women's and children's apparel companies in New York, and they accounted for $4.4 billion volume. The trend toward bigness is indicated by the fact that in 1950 more women's firms (4,500) in that market had a lower sales volume ($2.9 billion). However, smaller concerns are still predominant.

Principal Markets. New York City leads all U. S. markets in manufacturers' sales of women's, men's, and children's wear. The New York area's dollar volume of women's and children's wear is 60% of the national total. The women's wear firms in New York City number 2,578—58% of the total. Los Angeles is the next most important center. Philapelphia, Chicago, and Boston account for much smaller sales. The number of men's wear firms in New York City is 821—42% of the national total. Other leading men's wear manufacturing centers are Philadelphia, Chicago, and Los Angeles.

Canada. The factory value of shipped clothing was estimated at $857,060,000 in 1965, compared with an estimated $792,900,000 in 1964. The breakdown (with 1964 figures in parentheses) was as follows: men's clothing, $378,094,000 ($351,300,000); women's clothing, $385,421,000 ($354,200,000); and children's clothing, $93,545,000 ($87,400,000).

Samuel Feinberg
"Women's Wear Daily"

COAL

The U. S. bituminous coal industry completed its sixth consecutive year of growth in 1967. Production totaled 550 million tons, an increase of 18 million tons over 1966. It was the coal industry's best year since 1948, when over 566 million tons were burned. About 535 million tons were consumed in 1967.

Markets for Coal. More than half the coal consumed in 1967 went to the electric power market. The need for coal-produced electricity pushed utility consumption up to 276 million tons during the year.

Peabody Coal Co., the biggest U. S. coal producer, announced in January 1967 that it would open a 275-mile (442.5-km) coal-slurry pipeline to supply 117 million tons of coal annually to the Mohave Power Project in Clark county, Nev. The Mohave plant is part of a power complex under construction in the Southwest. It will send electricity to southern California and the Colorado River basin states by extra-high-voltage power lines and will be the first major use of coal-generated electricity on the West Coast.

In other coal markets, the use of coking coal dropped by 4 million tons in 1967, down to 92 million, and retail deliveries declined 1 million tons to 17 million. Coal consumption in general industrial markets declined slightly to 102 million tons.

International Trade. Coal is a major international trade item, and the United States is the world's leading coal exporter. In 1967 the United States exported 48 million tons. Canada continued to be the largest customer for U. S. coal, importing 15 million tons.

The French *Cetra Columba* (87,000 tons), the world's largest supercollier, made its maiden voyage to the port at Hampton Roads, Va., in January.

U.S. PRODUCTION OF COAL
(In short tons)

State	1964	1965	1966
Alabama	14,435,454	14,831,592	14,218,722

Research Programs. Progress in making coal into gasoline at a competitive price was reported in 1967. Consolidation Coal Co. opened a gasoline-from-coal pilot plant at Cresap, W. Va. At the plant dedication in May 1967, Secretary of the Interior Stewart L. Udall said commercial coal conversion plants using a minimum of 10,000 tons per day could produce at least $63 million worth of high-quality gasoline a year from $15 million worth of bituminous coal.

Scientists are also seeking to produce pipeline-quality gas from coal to supplement declining natural gas reserves. Bituminous Coal Research, Inc., is building a 100-ton-per-hour process- and equipment-development unit at Monroeville, Pa.

THE *POINT HUDSON*, one of 26 82-foot U. S. Coast Guard cutters operating in South Vietnam in 1967, patrols the Saigon River in search of junks carrying supplies to insurgent Communist forces.

U. S. COAST GUARD

COAST GUARD

Leaving the Treasury Department, which had controlled its activities in peacetime since 1790, the U. S. Coast Guard on April 1, 1967, became part of the newly formed Department of Transportation.

Vietnam. At the request of the U. S. Navy, the Coast Guard sent 5 311-foot (94.8-meter) ocean-going cutters to Vietnam in May 1967 to supplement the 26 82-foot (25-meter) cutters already there. They were used to bar sea transit of men and materials from North Vietnam to Vietcong units in the south.

Budget and Strength. Modernization of the Coast Guard continued in 1967. The budget was $544.3 million, compared with $524.5 million in 1966. Military personnel increased by 1,465 to 36,735, and authorized civilian personnel numbered 6,236.

Law Enforcement. Coast Guardsmen in fiscal 1967 boarded 98,704 vessels to examine papers, spent 43,478 hours supervising the loading of explosives, and inspected 14,159 other dangerous cargoes. The service inspected for certification 5,785 vessels, inspected 1,380 foreign vessels, and made dry dock examinations of 5,698 vessels. It also reviewed plans for 36,494 vessels.

Rescues. In fiscal 1967 the Coast Guard answered 29,832 calls for assistance, towed 14,930 vessels, and rescued 2,525 persons. The value of vessels and aircraft aided in fiscal 1967, including cargo, was $2,341,693,000.

Aids to Navigation. As of June 30, 1967, the Coast Guard maintained 43,738 navigation aids in the United States and other areas. They included 57 loran stations, 198 radio beacons, 7,118 day beacons, 11,299 lights (including lightships), 593 fog signals (excluding sound buoys), 3,638 lighted buoys, and 20,809 unlighted buoys. Four ocean stations were maintained in the North Atlantic and two in the Pacific to provide search and rescue, communications and air navigation facilities, and meteorological services. Two Coast Guard icebreakers performed scientific research in the Arctic Ocean. Coast Guard aircraft flew reconnaissance on the International Ice Patrol, watching 440 icebergs in the spring and summer of 1967.

Fleet. The Coast Guard's surface fleet in 1967 numbered 361 floating units, from major cutters to small craft assigned to stations. The year saw the commissioning of the first 378-foot (115.2-meter) cutter, the *Hamilton*. Fixed- and rotary-wing aircraft in operation totaled 162.

Boating Safety. The Coast Guard Auxiliary, a volunteer organization, was active in 913 flotillas. Its 24,981 members gave instruction in safe boating to 144,208 persons, examined 163,028 motorboats, patrolled 5,025 regattas, answered 6,917 calls for help, and saved 181 lives.

WILLARD J. SMITH, *Admiral, USCG*
Commandant, U. S. Coast Guard

COFFEE

World production of coffee totaled 67,335,000 bags (of 132.3 pounds each) in the 1967–68 marketing year, an increase of 5,687,000 bags or nearly 9% from the crop of the previous year. The 1967–68 crop is, however, 17% smaller than the record crop of 1965–66. Coffee for export totaled 50,470,000 bags in 1967–68, about 4,896,000 bags more than in 1966–67.

PRODUCTION OF GREEN COFFEE IN PRINCIPAL COUNTRIES
(Number of bags of 60 kilograms—132.3 pounds—each)

Country	Average 1960–61 to 1964–65	1966–67	Estimate, 1967–68
Brazil	25,840,000	21,000,000	23,000,000
Colombia	7,760,000	7,600,000	7,600,000
Ivory Coast	3,185,000	2,250,000	4,200,000
Angola	2,910,000	3,300,000	3,200,000
Mexico	2,431,000	2,650,000	3,000,000
Uganda	2,429,000	2,400,000	2,550,000
El Salvador	1,812,000	1,950,000	2,100,000
Indonesia	2,016,000	1,900,000	2,100,000
Guatemala	1,704,000	1,670,000	1,900,000
Ethiopia	1,490,000	1,760,000	1,700,000
World total	65,354,000	61,648,000	67,335,000

South America, which accounted for half of the world total, produced 33,491,000 bags in 1967–68, an increase of 2,120,000 bags from a year earlier. About 22,643,000 bags were for export, compared with 21,108,000 bags in 1966–67. Production in Brazil, the world's leading coffee-producing nation, totaled 23,000,000 bags, 9% more than in the previous year. Production in North America totaled 11,398,000 bags, up from 10,129,000 bags in 1966–67.

The African crop totaled 17,724,000 bags in 1967–68, an increase of 2,045,000 bags from a year earlier. A large increase in production in the Ivory Coast offset decreases in Angola and several other African countries. Production in Asia and Oceania increased from 4,469,000 bags in 1966–67 to 4,469,000 bags in 1967–68.

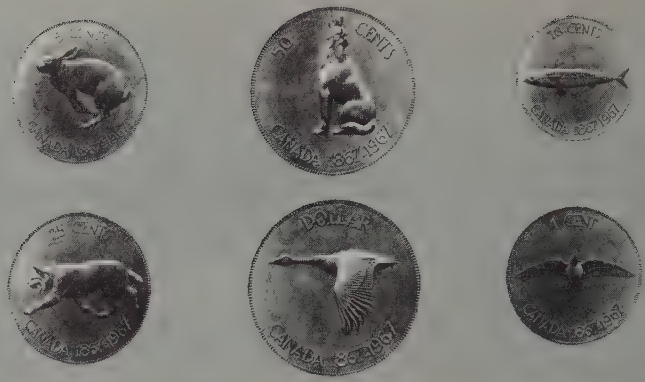
CANADIAN COINS

CANADA issued a series of Centennial coins in 1967, with Queen Elizabeth II shown on the obverse side (*below*) and with six examples of the wildlife of Canada on the reverse sides (*right*). Denominations are from one cent to one dollar.

ELIZABETH II D·G·REGINA



ROYAL CANADIAN MINT PHOTOS

COIN COLLECTING

There were many developments of interest to coin collectors in 1967.

U. S. Mints. On Jan. 1, 1967, the U. S. Treasury Department resumed normal dating procedures for coins struck at the three United States mints. (Philadelphia and Denver are the main production mints. San Francisco, closed in 1955, was reopened to meet the exigencies of the coin shortage. Its use in 1968 is anticipated to be mainly for the issuance of coins for collector's sets.) For several years the Treasury had back-dated coins in an effort to discourage coin hoarding. But coins struck in 1967 were dated 1967, and coins struck in 1968 will be dated 1968.

In April, Eva Adams, director of the mint, announced that a new rolling die machine at the Philadelphia Mint (now under construction) will be able to strike an unprecedented 10,000 one-cent pieces per minute.

Organizations. In June the American Numismatic Association dedicated its new home and headquarters in Colorado Springs, Col. The nonprofit ANA is the world's largest coin collectors' organization. It has about 25,000 members.

The Professional Numismatists Guild, a nationwide dealers' organization, announced plans for an authentication committee to act as a clearinghouse for information concerning counterfeits, forgeries, and other spurious coins.

Lilly Collection. In June it was announced that Josiah K. Lilly of the pharmaceutical firm had collected a group of gold coins during the 16 years immediately preceding his death in 1966. Valued at about $5 million, the collection held such rarities as an 1822 U. S. $5 gold piece and an 1875 U. S. $3 gold piece.

Silver. In July the U. S. Treasury removed the price ceiling on silver of $1.29 an ounce, causing pre-1965 silver coins still in circulation to have an intrinsic value greater than their face value. Silver certificates (currency) climbed in value to the point at which dealers were paying a 40% premium over face value by December 1967. (See also SILVER.)

Liberty Nickel. One of five known 1913 Liberty nickels was sold at auction in August by Dayton's Paramount International Coin Company for an all-time high coin auction price of $46,000.

Thefts. Burglaries continue to be a problem for coin dealers and collectors. In October a $1.5 million coin collection was stolen from Willis H. Du Pont of Miami, Fla. A Brasher doubloon (colonial $16 gold piece), stolen from Yale University in 1965, was recovered in November by an insurance firm.

Proof Sets. The Treasury announced in September that beginning in 1968 the United States would again sell proof sets to collectors. The new price of $5 per set represents an increase over the $2.10 price of the 1950–64 period. (No U. S. proof sets have been issued since 1964.) Proof sets for 1968 will be struck at the San Francisco Mint, and will be identified with "S" mint marks—the first coins with "S" mint marks to be issued since 1955.

After a year's slump due to overspeculation in certain issues, the coin market as a whole showed signs of a recovery by midyear. Dealers reported increased business and a number of top rarities set new auction price records.

Canada. The special 1967 Centennial coins with designs depicting Canadian wildlife went into circulation in January. The Centennial coins will be dated only 1967; later coins will revert to the pre-1967 standard designs.

Canada announced a change to nickel coinage to conserve silver, following the step that the United States had taken earlier. An interim alloy of 50% silver and 50% copper for the dime and quarter-dollar pieces is planned until the vending machine industry is ready to convert to nickel coinage. The interim alloy has about the same electrical properties (necessary for certain types of vending machine slots) as the old silver coinage. The diameters of 50¢ and $1 coins will be reduced.

Britain. Britain announced in November that, in order to discourage hoarding, all coins struck from 1967 until conversion to a decimal coinage system in 1971 will bear the 1967 date. Prices of copper halfpennies, the lowest denomination currently being struck, soared to 10 times face value on the news that this denomination would be discontinued.

The British pound sterling was devalued in November from $2.80 to $2.40. The new $2.40 figure means that for the first time in history the English penny (240 pennies to the pound sterling) was equal in value to the U. S. one-cent piece.

Panama. The republic of Panama issued 12,701 proof sets dated 1966. Orders for 1967 sets climbed to a new record near the 20,000 mark.

COLLEGES AND UNIVERSITIES

Enrollments in institutions of higher learning in the United States continue to increase rapidly. In the fall of 1967, the U. S. Office of Education estimated the total number of degree-credit students to be 6,500,000, an increase of 500,000, or 8.3%, over the previous fall. Publicly controlled colleges and universities had 4,400,000 students, an increase of 300,000 in one year. Privately controlled institutions had 2,100,000 students, up 100,000.

Enrollment Trends. The U. S. Office of Education has predicted that the college population will increase four times as fast as the national population in the next decade. By 1976, when the nation's population will have increased 12%, the rise in college enrollment is expected to be 49%. Colleges and universities are expected to enroll about 9 million degree-seeking students in 1975–76. The gain is expected to result from the higher birthrates in the 1950's and from the increasing proportion of students going to college and graduate school.

Expenditures. Outlays for higher education will reach a record $18.3 billion in 1967–68, the U. S. Office of Education has estimated. Of this sum, $8.5 billion will be spent by publicly controlled institutions for current expense and interest, plus $2.2 billion for capital outlay. Nonpublic institutions will spend $6.4 billion for operation and interest and $1.2 billion for capital outlay.

Higher Education Facilities. In the year ending June 30, 1967, over one third of all U. S. colleges and universities received federal aid to build or remodel classrooms, laboratories, and libraries. Grants and loans totaling $710.7 million were made to 877 institutions under the Higher Education Facilities Act of 1963. This federal aid helped to generate nearly $2 billion worth of construction.

Faculty and Staff Needs. Colleges and universities will have increased their full-time professional staff by more than 50% during a 6-year period ending in the fall of 1969, according to a study made by the U. S. Office of Education. The creation of new institutions of higher education, especially junior colleges, presents problems of staffing. From 1961 through 1965, a total of 179 new institutions were created, 114 of them junior colleges and technical institutes. The study reveals a high percentage of part-time faculty, making up 24.3% of the total professional staff. In administrative fields, part-time staff totals 10.4%; in academic, 26.6%; and in technical and semiprofessional, 36.8%.

College Costs. The cost of attending college continues to rise. A sampling of 1967–68 charges in 99 private institutions reveals an average of $1,500 for tuition and fees, and $1,000 for room and board. The total average major cost of $2,500 represents an increase of $500 since 1963–64.

Charges in 33 public institutions in 1967–68 averaged $350 for tuition and fees, and $850 for room and board. The total major cost of $1,200 is up $150 over the 1963–64 average.

Degrees Conferred. One adult in six is now earning a bachelor's degree, and the ratio is expected to become one in five within the next few years. An estimated 570,000 bachelor's and first professional degrees, 130,000 master's degrees, and 19,000 doctorates were awarded during 1966–1967.

Church-Related Institutions. The Danforth Commission on Church Colleges and Universities has completed a systematic survey of church-sponsored higher education. Its report, published by the American Council on Education, notes that 817 institutions, or more than one third of all U. S. colleges and universities, are church-affiliated. These institutions enroll over one sixth of today's students. They are sponsored by 64 religious bodies. By affiliation about 57% are Protestant, 42% Roman Catholic, and 1% Jewish. The Danforth Commission offered 15 recommendations for strengthening church-affiliated institutions. They included a more experimental approach to education, a clearer definition of purpose, the elimination of haphazard construction of new colleges, and the furnishing of intellectual leadership in the study of issues facing the church.

The CIA and the NSA. In February 1967 it was revealed that the Central Intelligence Agency had been subsidizing the National Student Association, the nation's largest organization of college students. Since 1952, the CIA had channeled some $3 million to the NSA under the cover of grants from obscure private organizations.

In terms of the total CIA expenditures, the amount was not large, and NSA leaders were inclined to discount its importance in the budget of their organization. However, the fact that a federal agency was operating covertly to aid a supposedly free-spirited student group caused widespread repercussions. President Johnson ordered a high-level review of any government policy that would appear to threaten what Nicholas deB. Katzenbach, his undersecretary of state, called "the integrity and independence of the educational community."

NSA leaders had originally sought government aid to expand their overseas program, which included student exchanges and participation in international student conferences. CIA funds helped to underwrite these activities. There appeared to be little if any CIA pressure on the national activities of NSA, which is known as liberal or even left wing. Later in 1967, the NSA convention urged abolition of the military draft, complete student control over university social and disciplinary regulations, and, by a 2-to-1 vote, "the unification of all black people in America for their liberation by any means necessary." (See ESPIONAGE AND INTELLIGENCE.)

Campus Demonstrations. Banner-carrying, shouting students staged numerous campus protests in 1967. Their usual target was the Vietnam War, but the militancy extended to other areas, as when students at City College of New York protested the construction of a temporary building. The war was opposed particularly through attempts to block on-campus recruiting by the military services and defense contractors. Although only a relatively small proportion of the student body was involved in such demonstrations, the effects were disruptive. At the University of Indiana, 37 demonstrators were taken to jail when they tried to block a recruiter from Dow Chemical Company, which makes napalm for the military. At Harvard, 73 students were put on probation for the "forcible obstruction" of a Dow recruiter. Dr. Nathan M. Pusey, president of Harvard, said "objections [to demonstrations] arise only when [students] . . . seek to restrain the freedom of expression or movement of others."

The Governing Council of the American Association of University Professors denounced demonstrations that "disrupt the operations" of institutions and deplored the use of "physical force" by students.

EDWARD ALVEY, JR.
Mary Washington College, University of Virginia

MAJOR COLLEGES AND UNIVERSITIES, U. S. AND CANADA

Note: Symbols and abbreviations that follow the name of each school listed are as follows: *Level of Instruction*—(1) 2-year junior college; (2) senior college granting bachelor's and/or first professional degree; (3) senior college granting master's and/or second professional degree; (4) college or university offering a doctoral program. *Student Body*—(M) men only; (W) women only; (Coed) coeducational; (Coord) separate colleges for men and women. *Control*—(Public) district, municipal, state, or federal; (Private) proprietary, corporation, or church. *Enrollment*—All students of college grade for the academic year 1965–66, excepting correspondence course students.

COLOMBIA

The coalition National Front government of President Carlos Lleras Restrepo officially observed its first anniversary in office on Aug. 1, 1967. The president, in a report to the nation, was guardedly optimistic over his government's accomplishments, which included stabilization of the country's economy, a higher rate of economic growth, and some progress in the continuing struggle with a recalcitrant Congress. President Lleras also reported some success in dealing with the problem of guerrilla violence in rural areas. The major problems of the National Front—creating a climate of economic growth and social reform while simultaneously dealing with the guerrilla movement—remained, but by the end of 1967, Colombia appeared to be much nearer to solving those problems peacefully than it had been in 1966.

On February 9, in Colombia's worst earthquake in 50 years, the Andean village of Guacamayas was destroyed and 100 persons in various parts of the country were killed. On November 25, in the town of Chiquinquirá, 77 persons died and 300 others became seriously ill as a result of eating bread inadvertently contaminated with an insecticide.

Politics. The stalemate between President Lleras and Congress, in which National Front initiatives had been thwarted by the lack of a two-thirds majority necessary for congressional passage of major government legislation, continued throughout the first nine months of 1967. Especially vexing to the president was the failure of the special session of Congress, which ended on July 20, to approve a series of proposed constitutional reforms. These reforms would have virtually eliminated the two-thirds requirement for the passage of legislation, stabilized the number of senators and representatives and made their terms concurrent with that of the president, and allowed the executive additional freedom in financial matters. However, the subsequent unification of the National Front's Liberal faction with the opposition Liberal Revolutionary Movement (MRL) party in August provided the necessary two-thirds majority in Congress for the passage of government-sponsored legislation. The unification of the Liberal factions in a single party, formalized at the Liberal convention on October 20, also provided an extremely strong political base for the Lleras government.

Predictably, the Liberal unification produced similar attempts among the Conservatives, who, under the alternation formula, will provide the next president, in 1968. By late 1967, however, no unification had been agreed upon, although National Front Conservative leader Belisario Betancur was increasingly mentioned as the potential leader of a unified Conservative party. The impact of the Liberal unification on Colombian politics could be seen in the rapid passage by Congress of constitutional reforms presented to it in October.

Economy. Colombia experienced a pronounced depression during the first half of 1967 as a result of balance of payments difficulties and an unsuccessful effort by the government to use monetary and fiscal policy to halt inflation. In March the government resorted to a concealed devaluation in the form of a new monetary exchange law designed to make Colombia's major exports more attractive to the world market. As a result the Colombian economy recovered strongly during the second half of the year. The economy grew at a rate slightly higher than the 1960–65 average annual rate of 4.5%. Tax collections increased by 30% over 1966, and in October the finance ministry reported a surplus of 811 million pesos. The newly instituted gasoline tax brought in about 700 million pesos or more during 1965.

Foreign Affairs. Colombia continued to be in the forefront of the Bogotá group, formed in 1966 and consisting of Colombia, Ecuador, Venezuela, Peru, and Chile. In a meeting in Quito, Ecuador, in July these countries formed the Andean Development Corporation, to serve as coordinator for economic integration efforts and as financing agent for common industries and services. In August the Colombian government called for action by the Organization of American States aimed at stopping Fidel Castro's support of guerrilla movements in other countries.

COLORADO

The 1967 session of the Colorado General Assembly attracted national attention by passing an abortion bill recognized as the most liberal in the 50 states. In signing the controversial bill into law on April 25, Gov. John A. Love promised to keep close watch on its operation.

Economically, 1967 was a good year for Colorado, with new records in tourism, increases in manufacturing plants and jobs, and prospects for increased production of molybdenum, Colorado's biggest money earner among the metals. The area stretching from Denver northward to Fort Collins and southward to Colorado Springs continued to attract research and development firms.

Legislation. The long term of the General Assembly, held in odd-numbered years, convened January 4 and closed May 22. The abortion bill, which modernized a statute dating to Colorado's territorial days, was among the 1,002 pieces of legislation (a record number) introduced during the session. Somewhat fewer than half of these (452) became law.

Major enactments included reapportionment of the Assembly, to become effective at the 1968 general election, and a constitutional amendment proposing that the governor and the lieutenant governor be elected jointly. The latter proposal will be submitted to the voters in 1968. Several bills were passed to strengthen highway safety programs. One bill requires a special motorcycle operators' license, and another permits judges to sentence traffic violators to a drivers' improvement school. Elementary and secondary school relief funds were increased, as were all budgets for higher education. Reorganization of some 130 state agencies into 20 departments, as required by another enactment, is due to be accomplished by mid-1968.

WIDE WORLD

COLORADO'S Governor John A. Love affixes his signature to the state's new and controversial abortion law in April.

COLORADO • Information Highlights

Area: 104,247 square miles (270,000 sq km).
Population: 1,975,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Denver, the capital, 520,000; Pueblo, 98,000; Colorado Springs, 82,000; Aurora, 68,000; Lakewood, 51,000; Boulder, 50,000; Arvada, 37,000.
Government: *Chief Officers*—governor, John A. Love (R); lt. gov., Mark A. Hogan (D); secy. of state, Byron A. Anderson (R); atty. gen., Duke W. Dunbar (R); treas., Virginia Blue; commissioner of education, Byron W. Hansford; chief justice, Robert H. McWilliams. *Legislature*—General Assembly (met Jan. 4, 1967): Senate, 35 members (20 Republicans, 15 Democrats); House of Representatives, 65 members (38 R, 27 D).
Education: *School enrollment* (1965–66)—public elementary, 299,875 pupils (11,425 teachers); public secondary, 204,872 pupils (9,832 teachers); nonpublic schools, 48,600 pupils (1,850 teachers); college and university (fall 1965), 74,285 students. *Public school expenditures* (1965–66)—$240,000,000 ($530 per pupil); average teacher's salary, $6,387.
Public Finance (fiscal year 1967): *Revenues*, $614,153,000 (2% sales tax, $104,899,325; motor fuel tax, $56,640,407; federal funds, $107,633,822). *Expenditures*, $608,637,231 (education, $184,872,799; health, welfare, and safety, $126,718,978; highways, $125,730,434). *State debt*, $129,000,000 (Aug. 1, 1967).
Personal Income (1966): $5,700,000; average annual income per person, $2,916.
Public Assistance (fiscal year 1967): $96,377,339 to 95,467 recipients (aged, $59,982,081; dependent children, $25,283,943).
Labor Force (employed persons, Feb. 1967): *Agricultural*, 46,900; *nonagricultural* (wage and salary earners), 728,800 (13.7% manufacturing, 19.9% trade, 21.3% government). *Unemployed persons* (Feb. 1967)—25,400.
Manufacturing (1965): Value added by manufacture, $1,225,941,000 (printing and publishing, $79,441,000; primary metals, $94,820,000; nonelectrical machinery, $107,531,000; electrical machinery, $64,204,000; fabricated metals, $51,620,000; food and products, $277,762,000).
Agriculture (1966): *Cash farm income*, $888,698,000 (livestock, $618,359,000; crops, $207,869,000; govt. payments, $62,470,000). *Chief crops* (tons)—sugarbeets, 2,322,000 (ranks 2d among the states); hay, 2,862,000; wheat, 1,284,240; potatoes, 573,700; corn for grain, 457,884.
Mining (1966): *Production value*, $366,282,151. *Chief minerals* (tons)—sand and gravel, 22,645,000; crude oil, 6,129,045; coal, 5,227,705; stone, 1,007,307; molybdenum, 28,133.
Fisheries (1965): *Commercial catch*, 153,000 pounds ($9,000).
Transportation: *Roads* (1967), 80,261 miles (129,140 km); *motor vehicles* (1967), 1,371,079; *railroads* (1967), 3,760.79 track miles (6,052 km); *airports with scheduled service* (1967), 11.
Communications (1966): *Telephones*, 1,023,300; *television stations*, 12; *radio stations*, 84; *newspapers* (1967), 26 (daily circulation, 674,555).

Fiscal Measures. The Assembly approved budget appropriations of approximately $350 million for the 1967–68 fiscal year. Of the total, $277 million came from the general fund. The budget included about $74 million for primary and secondary education and $61 million for colleges and universities.

Tourism. The Colorado State Division of Commerce and Development predicted an income in 1967 of $550 million from 7.5 million tourists. Areas in Colorado administered by the National Park Service showed a 5.2% increase in visits. Other attractions with record numbers of visitors included the U. S. Mint in Denver and the highway leading to the summit of Pikes Peak. All indications pointed to another record ski season.

Economy. The Climax Molybdenum Company announced during the year that newly developed ore bodies at its Urad mine, near Empire, will increase the non-Communist world's supply of molybdenum by 5%. From this raw ore, about 7 million pounds of molybdenum will be recovered annually for the next seven years. Colorado is the nation's leading producer of molybdenum.

Manufacturing growth during the year provided approximately 10,000 additional jobs in the state, and 35 new industries were established. Retail sales passed the $1 billion mark.

Ceremonies marking the start of construction of the Pueblo Dam and Pueblo Reservoir (on the Arkansas River) were held at the dam site west of Pueblo on August 26. The dam and reservoir are units of the Fryingpan-Arkansas project—a U. S. Bureau of Reclamation program to divert water from the Fryingpan River and other tributaries of the Roaring Fork (on the western slope of the Rocky Mountains) to the Arkansas River valley (on the populous and water-short eastern slope).

ADEN, key city of South Arabia, is patrolled by British soldiers in gas masks on the lookout for Arab terrorists. All British troops were pulled out of Aden by November 30.

UPI

COMMONWEALTH OF NATIONS

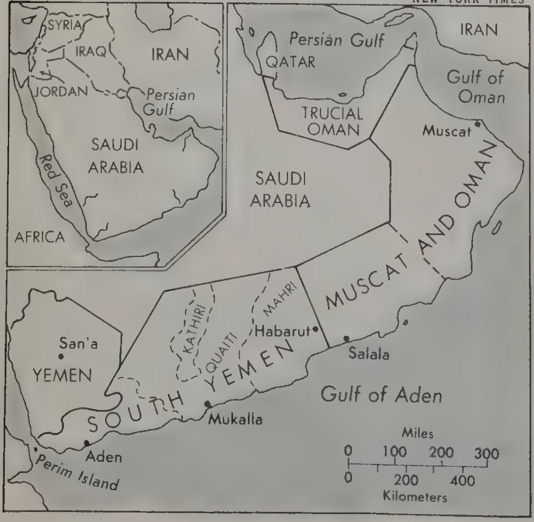
Five territories in the eastern Caribbean area achieved a new, noncolonial status of association with Britain in 1967. The new associated states, and the dates they achieved that status, are: Antigua and St. Kitts-Nevis-Anguilla, February 27; St. Lucia and Dominica, March 1; and Grenada, March 3. Statehood Day for St. Vincent, originally fixed for May 29, was held up by local political uncertainties and postponed indefinitely. The territories gained full control of their internal affairs, while Britain, by agreement, accepted responsibility for their defense and foreign affairs.

Aden and South Arabia became independent on November 30 as the People's Republic of South Yemen.

The Commonwealth of Nations is a voluntary association of sovereign states (some of them republics) and their dependencies, linked by common recognition of Queen Elizabeth II of Britain as the head and symbol of the Commonwealth association.

SOUTH YEMENI LEADERS claim Dhofar, a province in the sultanate of Muscat and Oman, as part of their new republic. Inset shows the sultanate and the Republic of South Yemen in relation to the rest of the Middle Eastern region.

NEW YORK TIMES



Commonwealth Relations. The devaluation of the British pound from $2.80 to $2.40 on November 18 was received sympathetically in the Commonwealth and was followed by the devaluation by varying percentages of currencies of 14 Commonwealth countries. Although no meeting of Commonwealth heads of government was held in 1967, the finance ministers met at Port-of-Spain, Trinidad, on September 20 and 21. Under discussion were aid for the developing countries, prospects for world trade, and international monetary reforms. A Royal Society conference of Commonwealth scientists (the first since 1946) was held at Oxford University, April 7–11, and a conference of senior Commonwealth officials on cooperation in planning, technical assistance, and trade promotion took place at Nairobi, Kenya, from May 24 to June 2.

Protests in Malta over the effect on its economy of the cutback of British forces following Maltese independence resulted in the modification of the British program of military withdrawal from the island. A joint Anglo-Maltese mission was created to make recommendations on the retraining of workers left unemployed by the withdrawal and on the creation of new job opportunities. The mission's report, published on July 18, forms a blueprint for the adjustment of the Maltese economy over the transitional stage. (See also MALTA.)

The Southeast Asia Commonwealth Cable (SEACOM) was officially opened by Queen Elizabeth II on March 30. Financed entirely by Commonwealth countries at a cost of £23.5 million, it is the third and final link in a round-the-world Commonwealth undersea cable begun in 1958 and connects Singapore, Malaysia, Hong Kong, Guam, New Guinea, and Australia.

In June, Kenya, Uganda, and Tanzania signed a treaty of cooperation to strengthen their common services and the East African common market.

Queen Elizabeth and the Duke of Edinburgh visited Canada from June 29 to July 5 to honor the centennial celebrations there. The queen addressed Parliament in both English and French in Ottawa on July 1, the anniversary of confederation.

[1] Includes Northern Ireland, Channel Islands, and Isle of Man. [2] Due to become a sovereign state in March 1968. [3] Rhodesia declared its independence Nov. 11, 1965, but technically retains Commonwealth status. [4] Mid-1967 est. [5] Excludes dependencies. [6] Not an integral part of the Commonwealth. [7] Includes Chagos Archipelago and Aldabra, Farquhar, and Desroches islands. [8] 1964 est. of India—held portion only.

Aden and South Arabia. A major problem facing Britain during 1967 was the question of independence for Aden and South Arabia. In November 1966, Britain requested the help of the United Nations and a month later, the General Assembly authorized a special mission to Aden. When the mission arrived in Aden on April 2, 1967, leaders of the Front for the Liberation of Occupied South Yemen (FLOSY) and the National Liberation Front (NLF), both of which were backed by the United Arab Republic, boycotted the mission and stepped up terrorist activities. Following a week of violent outbreaks, the mission charged the British with lack of cooperation and left Aden.

Sir Humphrey Trevelyan replaced Sir Richard Turnbull as British high commissioner in South Arabia on May 11. He restated Britain's objective of bringing into being an independent state with a broadly based, stable government by means of discussions between all groups, including FLOSY and the NLF.

On June 19, British Foreign Secretary George Brown announced Britain's acceptance of the constitution drafted by the Aden government for an independent South Arabia. The new state, which would include Aden, was to achieve independence on Jan. 9, 1968, under a "caretaker" government, and Britain would provide military protection for six months after independence. British dependents began to withdraw on June 29. Intensified violence and sabotage continued. Reinforcements were sent in on June 28 and 29. British troops began their final withdrawal on August 25.

On September 5, High Commissioner Trevelyan announced the collapse of the federal government in South Arabia and expressed his readiness to discuss formation of an effective government with the nationalist groups. At the invitation of the Arab League, FLOSY and the NLF met in Cairo on September 25 under Egyptian President Nasser's auspices. They agreed to a cease-fire and drew up a joint provisional government. On November 2, having learned that the nationalist forces had reached a tentative agreement on peaceful cooperation, Britain advanced the date for South Arabian indepen-

IN HONG KONG, harassed by Chinese and local Communists, British soldiers guarded the border with China.

UPI

dence and announced its intention of withdrawing entirely from Aden and South Arabia before the end of the month instead of in January 1968. Negotiations over the transfer of power between Britain and the NLF took place in Geneva from November 21 to 29. The last detachments of British troops were withdrawn on November 29 and Aden and South Arabia became officially independent on November 30.

Gibraltar. The question of the future of Gibraltar continued to complicate British relations with Spain in 1967. In accordance with a UN resolution calling on the two countries to negotiate while taking into account the interests of the people of the colony, talks were arranged in April but did not take place because Spain declared a prohibited flying zone in most of the air space around Gibraltar. In June, talks held in Madrid to remove this and other obstacles to negotiations broke down when the Spanish delegation sought prior political concessions from Britain.

Judith Hart, minister of state for Commonwealth affairs, announced on June 14 that a referendum would be held to enable the people of Gibraltar to decide whether they wished to return to Spanish sovereignty or retain their link with Britain. A Commonwealth observer mission arrived in Gibraltar on September 4. The referendum, challenged by both Spain and the United Nations, took place on September 10. The result was overwhelmingly in favor of retaining the British connection (12,138 to 44). The Commonwealth mission reported that the voting had been conducted in a "fair and proper" manner.

Rhodesia. In view of reports that Rhodesia was willing to resume talks on a political settlement with Britain, Prime Minister Harold Wilson announced to the House of Commons in June 1967 that Lord Alport, a former minister of state and British high commissioner in Rhodesia, would visit the country to see whether a basis for such talks existed. Wilson decided after the visit that, although there was some opinion in favor of a negotiated settlement in Rhodesia, there was no conclusive evidence that talks would lead to an acceptable solution. However, Commonwealth Secretary George Thomson had conversations with Sir Humphrey Gibbs, governor of Rhodesia, on November 8 and 9.

Hong Kong. In Hong Kong, demonstrations and riots beginning on May Day (May 1) interrupted the course of daily life and continued for several months. The disturbances included demonstrations in Peking, Shanghai, and Macao, maltreatment of British diplomatic representatives in Peking and Shanghai, Chinese allegations of police brutality, and border incidents. There was little doubt that both Communist China and local Communists were exploiting the situation. Firm action by the Hong Kong government on the scene and by the British government in its dealings with China, however, enabled the colony's normal activities to continue. An accord was reached late in November which eased Communist agitation in the colony after seven months.

Anguilla. In another territorial development, the island of Anguilla seceded in May 1967 from the associated state of St. Kitts-Nevis-Anguilla set up on February 27. The move was prompted by Anguilla's desire to avoid domination by the two other islands. Although an agreement was signed late in July that returned Anguilla to the association, rebel leaders rejected the pact and reaffirmed their independence on August 4.

Cyprus. Trouble flared between Greece and Turkey for two weeks in November following a Cypriot government attack on Turkish Cypriots in two villages on the island of Cyprus. A settlement mediated by the United Nations, the United States, and NATO succeeded in averting further hostilities. (See also CYPRUS).

Elections. Elections were held in several territories throughout the Commonwealth in 1967. Bahamian elections in January put the Progressive Liberal party in office for the first time, with Lynden O. Pindling as prime minister. The new party in power is composed for the most part of people of African descent. The Solomon Islands received a new constitution on March 23 which increased the elected membership of its legislative council. Elections under the new constitution were held from May 15 to early June. In Swaziland, which will become independent by 1970, a new constitution conferring internal self-government went into effect on April 25 following elections on April 19 and 20. Elections took place in Grenada in September, in which the Grenada United Labour party defeated the incumbent Grenada National party.

The Independence party in Mauritius, favoring full independence over some form of association with Britain, was victorious in elections on August 7. At the opening of the new Legislative Assembly August 22, the Assembly voted to seek independence within the Commonwealth. On October 24 the British government announced that the colony of Mauritius would be granted independence on March 12, 1968.

Aid to the Territories. The 14th annual report of the Colombo Plan consultative committee, covering 1965–66, was published in January 1967. It showed that since 1950–51 the total amount of aid provided under the plan by the donor countries (Australia, Britain, Canada, Japan, New Zealand, and the United States) to Southeast Asia was $19.8 billion. Of this, $17 billion was given by the United States.

With the approval of £12.6 million in grants and loans in 1966–67, British aid to the dependent territories under the colonial development and welfare program reached a total of £317 million since 1946, nearly all of it in the form of grants.

British loans to independent Commonwealth countries in 1967 included offers of £3.5 million to Ceylon and £19 million to India and loans of £2.1 million to Pakistan and £4 million to Ghana.

The report of the Commonwealth Development Finance Corporation for 1966–67 showed that the corporation's commitments on March 31, 1967, stood at £36.9 million. The corporation was operating 137 projects with a capital investment of £133 million on Jan. 1, 1967. New investments approved in 1966 totaled £2.5 million.

Commonwealth Foreign Trade. Commonwealth exports in 1966 increased by 9% (equal to the percentage increase in world exports) to £13,824,000,000. Imports increased by 5% to £15,293,000,000, compared with a world rise of 10%. In the first quarter of 1967, exports totaled £3,510,000,000, a drop of £64,000,000 compared with the last quarter of 1966, while imports, at £4,004,000,000, increased by £186,000,000 over the previous quarter.

EASTFOTO

A mass demonstration in Peking attacking Soviet "revisionism" dramatizes the extent of the split between the two leading Communist countries. Rally was held on Feb. 12, 1967.

COMMUNISM

Fifty years after the Bolshevik Revolution in Russia, Communist governments ruled 14 countries that, taken together, possessed one third of the world's population and two fifths of its industry. But these countries were disunited in the anniversary year of 1967. They were pursuing individual policies and often feuding with each other. The Soviet bloc of nations was disintegrating, and the USSR could no longer control Communist parties outside its orbit. World Communist unity had been replaced by polycentrism—many varieties of communism.

Sino-Soviet Dispute. The most bitter quarrel in the Communist world continued to be the 10-year-old Sino-Soviet dispute. As usual, each side accused the other of betraying true communism. According to China, the USSR was collaborating with the United States to monopolize nuclear weapons and divide the world into spheres of influence. The Chinese claimed that the proposed Soviet-American pact to prevent proliferation of nuclear weapons would allow the United States to spend more funds on escalating the Vietnam War. They asserted that Russia was pressuring North Vietnam to make peace. The USSR was accused of abandoning the Arab nations during the 1967 Israeli-Arab conflict and of trying to isolate China from the other Communist parties in the world.

The USSR retorted that China was nationalistic and racist, that it was persecuting Turkic peoples in its Sinkiang province, that it was trying to control the world Communist movement, and that it was urging the Soviet people to overthrow Soviet leaders and put the USSR under the rule of Mao Tse-tung. Soviet leaders charged that China had attempted to force Russia to break diplomatic relations and that it used anti-Sovietism to divert the Chinese people's attention from China's economic troubles and foreign policy failures. China was also accused of hampering Soviet shipments of arms to North Vietnam, selling supplies to the U. S. armed forces fighting the Vietnam War, and, by quarreling with the USSR, enabling the United States to escalate the war.

Some of these mutual recriminations were probably true, others untrue, but all revealed how bitter the Sino-Soviet dispute had become.

During 1967, China antagonized several Communist countries other than the Soviet Union by harassing their embassies and diplomats in Peking. At various times Bulgaria, East Germany, Hungary, Mongolia, Poland, and Yugoslavia protested against such harassment. Czechoslovakia claimed that China was discouraging Hanoi from seeking a cease-fire in the Vietnamese War and asserted that China would enter that war if North Vietnam tried to make peace. Czechoslovakia stated that it would not aid China if China went to war. In February the Jap-

WIDE WORLD

RED GUARDS of China's cultural revolution place dunce caps on "antirevolutionaries" and invite public ridicule.

anese Communist party denounced China for interfering in its affairs. Thus China was becoming increasingly isolated from most other Communist countries and parties.

The vast majority of Communist organizations throughout the world supported Moscow against Peking. However, their support was more verbal than actual. When Moscow appealed for a world Communist conference, to be convened for the purpose of denouncing China, the Communist parties of Bulgaria, Czechoslovakia, Hungary, Poland, Britain, France, Spain, and Argentina were favorable. But the large parties of Cuba, Italy, Rumania, and Yugoslavia refused to participate, believing that an outright break with China would be too severe. Confronted with resistance from some of its own supporters, Moscow did not convene the world conference it desired.

As a partial substitute for a world conference, the USSR convened two meetings of European Communist parties in 1967; at Warsaw in February and at Karlovy Vary (Carlsbad), Czechoslovakia, in April. Both conferences were intended to establish European Communist unity, and both failed. Rumania, Yugoslavia, and several western European Communist parties refused to attend either meeting.

Eastern Europe. Besides boycotting European Communist conferences, Rumania in 1967 displayed its independence in other ways. In February, Rumania became the first Communist-bloc nation in eastern Europe to establish diplomatic relations with West Germany. When East Germany protested, Rumania replied that the East Germans had no right to interfere.

In April, Rumania and Israel signed a commercial treaty increasing annual mutual trade 100%. When the Israeli-Arab conflict erupted in June, the USSR and most of Communist eastern Europe condemned alleged Israeli aggression and broke diplomatic relations with Israel. But Rumanian-Israeli diplomatic relations and trade continued, and Rumania refused Moscow's plea to label Israel an aggressor. In July, Rumania did not attend a Budapest conference of the USSR, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Yugoslavia for planning economic aid to the Arab nations. Although it attended a similar meeting in Belgrade in September, Rumania blocked a Soviet proposal to extend USSR-eastern European joint aid to Arab countries.

Rumania remained in the Warsaw Pact alliance, and Rumanian troops participated in Soviet-Bulgarian joint military maneuvers in southern Bulgaria in August. However, Rumania stayed out of the new military alliances concluded in 1967 among east European Communist nations. These alliances were made by East Germany—with Poland and Czechoslovakia in March, Hungary in May, and Bulgaria in September. Bulgaria also signed an alliance with Poland in the spring. Thus Rumania was being encircled by the pacts of its European neighbors.

A divergence of policy in three Communist countries was revealed when Richard Nixon, the

KEYSTONE

YOUNG COMMUNISTS in Rome, protesting U. S. policies in Vietnam, carry portrait of North Vietnam's Ho Chi Minh.

former U. S. Vice President, visited eastern Europe and Russia in the spring. Poland refused to admit him. The USSR admitted Nixon, but would not let him contact high Soviet officials. Rumanian top officials welcomed him.

Albania remained the only eastern European Communist country taking China's side in the Sino-Soviet dispute. In imitation of the Chinese cultural revolution, Albania formed its own "Red Guards," who, however, were not allowed to behave as violently as China's. Albania complained that the USSR did not jam the Voice of America but did jam the Russian-language broadcasts of Albania's Radio Tiranë. In 1967 the so-called Communist party of Poland, consisting of several Polish Stalinist exiles, used Radio Tiranë to broadcast appeals to Poland's police to overthrow Władysław Gomułka, Poland's moderate leader.

Despite Soviet disapproval, Poland increased its trade with China in 1967, and Yugoslavia did the same with Albania.

Western Europe. In April the British Communist party displayed its independence of Moscow by issuing a statement on domestic policy supporting multiparty Parliaments, free elections, a peaceful, democratic revolution, and freedom of religion, art, music, literature, and scientific research. None of these freedoms existed in the USSR in 1967.

The French Communist party was more in harmony with Moscow. Its 18th party congress, in January, denounced China and criticized French President de Gaulle's opposition to disarmament, but it praised de Gaulle's friendship toward the USSR and his opposition to American involvement in the Vietnam War. In local elections during the year the party cooperated with French Socialists, even to the extent of withdrawing Communist candidates when a Socialist had a better chance of winning. This "united front" policy resulted in some Communist-Socialist election gains in local contests.

Asia and Oceania. China's attempt to gain control of the world Communist movement was badly weakened in 1967 by the Chinese cultural revolution, which caused internal chaos. The cultural revolution, which Moscow described as "counterrevolution," pitted the youthful paramilitary Red Guards against the entrenched bureaucracy of the Chinese government and party and the Young Communist League.

Party Chairman Mao Tse-tung hoped to enforce by violence a purer communism, promoting equality and preventing the rise of a Communist upper and middle class. But unlike any other Communist country, China previously had permitted multiple job-holding by local and regional officials. In a Chinese region the same person might simultaneously be governor, party chief, and military commander. Thus Mao had unintentionally created new, Communist warlords in place of the capitalist warlords he had overthrown. As 1967 ended, the new upper class had not been defeated, and the outcome of the cultural revolution was in doubt.

Meanwhile only the Communist parties of New Zealand and Malaysia remained wholeheartedly pro-Chinese in the Sino-Soviet dispute. The Australian Communist party was rent by internal dissension when part of its membership condemned anti-Semitism in the USSR. Shocked by Chinese border attacks on India during the year, the Indian Communist party lost influence and increasingly turned toward Moscow for guidance. On November 21 the Communist-dominated United Front government of West Bengal was dismissed by the central government and replaced by a regime handpicked by the Congress party.

UPI

ALEKSEI KOSYGIN, Soviet premier, decorates the grave of Karl Marx in London, where Marx lived from 1849 to 1883.

Outlawed and under severe governmental persecution, the once large Indonesian Communist party ceased to be an effective political force.

Latin America. In 1967 the Communists of Latin America were deeply divided over revolutionary tactics and strategy. In 1966 it appeared that Moscow had placed Latin American Communist parties under the control of Cuba, which ordered them to organize poor peasants for guerrilla warfare against the existing capitalist governments. By 1967, however, it was clear that Cuba exerted no such complete control. Some Latin American Communist parties operated mainly in the cities, trying to infiltrate student organizations, labor unions, and intellectual circles. Others obeyed Cuba by creating guerrilla bands in the countryside, particularly in Bolivia, Colombia, Guatemala, Peru, and Venezuela.

Almost all Latin American countries contained Communist splinter groups loyal to China and hostile to both Cuba and the USSR. Meanwhile the USSR was offering trade and technical aid to the very Latin American governments that Communists of all persuasions sought to overthrow. With Communist strategies in such confusion, Latin American Communists achieved little during 1967.

Dissension among the Communist parties of South and Central America was displayed publicly in August at the first conference of the Organization of Latin American Solidarity—a league of Communist parties formed in 1966 by Cuba with Moscow's blessings. Meeting in Havana, the delegates from various countries quickly quarreled. The Communist parties of Brazil and the Dominican Republic advocated guerrilla warfare against established governments, but the parties of Chile and Costa Rica considered such civil war premature and doomed to

crear dos, tres...
muchos vietnam
es la consigna

UPI

CUBAN COMMUNISTS gather in Havana under a sign calling for the creation of more Vietnam-type guerrilla actions.

failure. Delegates from Brazil and the Dominican Republic also openly criticized the USSR for helping Latin American capitalist dictatorships with Soviet trade and aid. (The USSR in 1967 had technical aid agreements with both Argentina and Brazil.) The delegates, however, agreed to a formal condemnation of the Venezuelan Communist party.

An honored guest at the conference was Stokely Carmichael, a militant crusader for Negro civil rights in the United States. In a well-publicized speech, obviously approved by Cuba, he urged American Negroes to wage guerrilla warfare in cities against American whites. Cuba was thus trying to form a united front of Latin American Communist parties and U. S. Negroes to oppose the U. S. government. But the majority of American Negroes appeared to be little interested in Carmichael's appeal.

Bolivia, plagued by Communist guerrilla warfare, outlawed its Communist party in April. By September the Bolivian government displayed photographs to prove that Ernesto (Che) Guevara, former minister of industry in Communist Cuba, was leading rural rebels in Bolivia. Guevara had left Cuba in 1965 after incurring Russian displeasure by demanding that rich Communist countries render free aid to poor Communist ones. On October 8, Guevara was captured by the Bolivian army and apparently was executed the next day. After several days of hesitation, Cuba acknowledged that he was dead.

North America. The Communist party of the United States in 1967 claimed a membership of 13,000. Gus Hall, general secretary, was its principal leader. The party tried to maintain neutrality in the Sino-Soviet dispute by approving both Chinese and Soviet policies. Thus the party could no longer be described as a mere instrument of Moscow. In internal affairs, it urged equality for Negroes and condemned alleged police brutality against them. In foreign affairs, it opposed U. S. participation in the Vietnam War, supported Cuba against the United States, and favored the Arab countries in the Israeli-Arab conflict. Despite attempts to display party unity, the U. S. Communist party was badly divided in 1967 over the question of anti-Semitism in the USSR.

The party won a long legal battle in March when the U. S. Court of Appeals in Washington, D. C., overruled a 1965 federal court ruling that the party had violated the Internal Security Act of 1950 (McCarran Act) by refusing to disclose its membership list and finances to the government. The court held that requiring the party to list its members would expose them to prosecution under the Smith Act, which makes it a crime to belong to an organization advocating violent overthrow of the U. S. government. A month later, the Department of Justice decided not to appeal the verdict to the Supreme Court. Thus the McCarran Act was null and void.

CONGO, Democratic Republic of

President Joseph Mobutu continued efforts in 1967 to centralize power in his hands and to make his country economically independent. The major political event of the year was the approval of a new constitution establishing a strong presidential system. In economic affairs, the government set up a new firm to administer the expropriated assets of the Belgian-controlled Union Minière. It also introduced a new currency system. Despite improved political and economic conditions, however, the Congo was again forced to deal with rebellion by mercenary troops.

Political Changes. A new constitution replacing that of 1964 was approved by 90% of the voters in a June plebiscite. It vested executive power in a president and provided for a 7-year term of office. The post of premier was abolished, and provision was made for a unicameral parliament of 300 members. The old parliament was dissolved in June, and President Mobutu will rule by decree until the election of a new parliament in 1968. No presidential election is to be held before 1970.

UPI

COL. JEAN SCHRAMME (center), Belgian-born leader of the mercenaries occupying Bukavu in the eastern Congo.

In April the president created a nationwide political party, the Mouvement Populaire de la Révolution (MPR). It was generally admitted that the opposition party provided for in the new constitution will have no real significance.

As a further step toward the consolidation of his power, Mobutu in December 1966 reduced the number of provinces from 12 to 8. He named all the provincial governors and converted the provincial assemblies into purely advisory bodies.

Economic Changes. In 1966 the government demanded that concessions granted before independence in 1960 be renegotiated and that foreign companies exploiting the country's resources move their administrative headquarters to the Congo. The Belgian Union Minière du Haut-Katanga, the most powerful and important of the foreign companies, said that such a transfer was impossible. Since efforts at compromise failed, the Congolese government took over the company's assets, and on Jan. 1, 1967, formed a new company, Société Générale Congolaise des Minerais (GECOMIN), to administer its assets. The government held 60% of the shares, and the rest were to be held by private subscribers. After weeks of heated argument, the Belgians and GECOMIN reached an accord on Feb. 17, 1967. Belgians were to supervise the facilities and personnel in Congo operations and to manage marketing abroad. The arrangement is for five years, with provision for the legal settlement of financial claims.

As part of a series of monetary reforms intended to stimulate trade and investment, the government devalued the currency and introduced a new currency system on June 24. The Congolese franc was replaced by a new national currency called the zaire. One zaire is worth 1,000 Congolese francs (0.50 zaire equals U. S.$1).

Mercenary Revolt. A rebellion broke out in the Congo on July 5. Led by two former associates of ex-Premier Moïse Tshombe (Col. Bob Denard, a Frenchman, and Maj. Jean Schramme, a Belgian), some 150 white mercenaries and over 900 former Katangese gendarmes seized the cities of Bukavu and Kisangani. Some observers saw a connection between this rebellion and an effort to rescue Tshombe in case of his extradition to the Congo. Actually, it seems that the uprising was a result of Mobutu's decision to rid his country of all white mercenaries. Denard and Schramme were to be disarmed and demobilized as other commandos had been. But they feared that their disarmament would be followed by trial and execution, and they therefore resisted the order.

The rebels were quickly driven out of the two cities they had taken. On July 10 the United States sent three transport planes to the Congo to provide logistical support for the Mobutu government. In early August, however, Schramme captured Bukavu, which he held for nearly three months. The city was retaken by government forces on November 4. The weakness of the Congolese Army enabled Schramme and his followers to resist capture. Mobutu was also hampered by international demands that the white mercenaries be repatriated and that the Katangese be given refuge in Zambia.

While the International Red Cross was arranging for the evacuation of the rebels, the Congolese forces intensified their efforts to take Bukavu. In this critical situation more mercenaries invaded Katanga from Angola. It was suggested that this invasion was a diversion to enable the rebels in Bukavu to reach neutral Rwanda. Mobutu is seeking the extradition of the white mercenaries from Rwanda to the Congo for trial. The Katangese gendarmes returned to the Congo, where their treatment is unknown.

Tshombe Affair. Although in European exile, Tshombe remained a source of great anxiety to Pres-

ident Mobutu. There were rumors that Tshombe was hiring mercenaries for an early return to the Congo to overthrow Mobutu or to make Katanga independent. To end this threat Mobutu appointed a 3-man military tribunal that tried Tshombe in absentia and on March 13 condemned him to death for treason, sedition, and incitement of rebellion.

On June 30, Tshombe was kidnapped when the private plane in which he was flying was hijacked and forced to land in Algeria. There is no evidence for implicating Algeria in Tshombe's capture, although he was kept in prison there. Mobutu has sought his rival's extradition to the Congo for execution. However, Algerian President Boumedienne did not approve the extradition, to which opposition was expressed by many persons throughout the world.

Foreign Relations. Mobutu and his often undisciplined soldiers blamed Belgians for the troubles in the Congo and charged that Union Minière was engaged in the recovery of lost properties. A number of the Belgians living in the Congo lost their lives, some through brutal treatment by Congolese soldiers. There was pressure on the Belgian government to sever all relations with the Congo and to cease all aid, or at least not to permit the return of teachers and technicians until guarantees for their safety were given by the Congolese government. Some Belgians, however, returned to their work in the Congo, satisfied with the assurances that Mobutu has given.

President Mobutu resumed relations with several African states that had broken with the Congo when Tshombe headed the government. The annual summit conference of the Organization of African Unity was held in Kinshasa from September 11 to 14. The conference was the successful culmination of Mobutu's bid for African recognition of his regime.

HARRY R. RUDIN
Yale University

CONGO, Republic of the (Brazzaville)

Developments in the Congo (Brazzaville) in 1967 were inevitably influenced by the memory of the abortive coup led by dissident segments of the armed forces in June 1966. Political purges and trials continued into 1967, as did efforts by President Alphonse Massamba-Débat and Premier Ambroise Noumazalay to juggle contending forces and mollify powerful parties in the armed services. The trials, propagandizing, and efforts at mollification taken together gave the appearance of political schizophrenia, and this condition extended into the realm of foreign relations.

Foreign Affairs. On the one hand, Massamba-Débat asserted that there were strong feelings of "popular unity" with France; on the other hand, he authorized his minister of interior to declare the new youth wing of the French-dominated Organisation Commune Africaine et Malgache an "instrument of intellectual neo-colonialism." The government also was critical of French activities in the Somaliland referendum in March 1967. Later in the year, however, Massamba-Débat opposed a motion calling for nationalization of foreign-owned or -dominated businesses. Anti-Western "radicals" of the youth branch of the country's single political party were arrested.

In other areas of diplomacy, relations with Nigeria, Ghana, and the Democratic Republic of Congo were normalized in February 1967.

Chief City (1962 est.): Brazzaville, the capital, 135,368.
Government: *President*—Alphonse Massamba-Débat (took office Dec. 19, 1963); *Premier*—Ambroise Noumazalay (took office May 7, 1966). *Parliament*—National Assembly, 55 members (all belonging to the National Revolutionary Movement).
Religious Faiths: Tribal religions, 46% of population; Roman Catholic, 32%; Protestant, 16%; other, 6%.
Education: *Literacy rate* (1961), 20% of population. *Total school enrollment* (1964)—186,087 (primary, 171,528; secondary, 10,973; teacher-training, 274; technical, 2,641; higher, 671).
Finance (1966 est.): *Revenues,* $33,400,000; *expenditures,* $33,400,000; *monetary unit,* CFA franc (246.85 francs equal U.S.$1).
Gross National Product (1966): $142,000,000.
Cost of Living Index (1966): 153 (1958=100).
Manufacturing (metric tons, 1965): Sugar, 30,000; beer, 4,100; lumber, 43,000 cubic meters.
Crops (metric tons): Cassava (1964–65), 700,000; peanuts (1965–66), 11,791; cocoa beans (1966–67), 900.
Minerals (metric tons, 1965): Crude petroleum (1966), 62,040; lead, 2,812; tin, 49; gold, 3,692 troy ounces.
Foreign Trade (1966): *Exports,* $43,133,000 (chief exports: wood, $22,316,000; diamonds, $15,147,000); *imports,* $69,215,000 (chief imports, 1965: nonelectrical machinery, $9,436,500; road motor vehicles, $5,751,000; iron and steel, $3,292,650). *Chief trading partners* (1965): France (took 9% of exports, supplied 61% of imports); Netherlands (took 26% of exports, supplied 3% of imports); West Germany (took 21% of exports, supplied 5% of imports).
Transportation: *Roads* (1964), 6,737 miles (10,839 km); *motor vehicles* (1965), 11,500 (automobiles, 6,300); *railways* (1963), 321 miles (517 km); *principal airport,* Brazzaville.
Communications: *Telephones* (1966): 8,172; *television sets* (1965), 500; *newspapers* (1963), 1 (daily circulation, 400).

Economy. The Congo continued to be plagued by balance of payments problems, but aid was forthcoming. New grants from France in 1967 will finance mineral prospecting in the north and a fishing survey off the coast, and a $3 million grant from the UN Special Fund will underwrite a 5-year prospecting venture in the southwest. The World Bank provided a $3 million loan for financing the potash industry. Other grants and trade agreements arranged during the year with France, the European Economic Community, the Soviet Union, and Communist China will go toward improving transportation, agriculture, and industry.

Boston University

CONGRESS

The United States Congress is made up of the Senate (100 members) and the House of Representatives (435 members). Senators serve for 6-year terms, each third of the Senate being elected at 2-year intervals. Representatives serve 2-year terms. The annual salary of a senator or a representative is $30,000. Democrats won a House seat in a special Rhode Island election in 1967 but lost a seat when Rep. Adam Clayton Powell of New York was denied House membership in March. For a list of congressional members, see pages 197–198. (For 1967 congressional actions, see UNITED STATES.)

NINETIETH CONGRESS OF THE UNITED STATES

(Second Session)

(Membership as of Jan. 15, 1968)

SENATE

(Democrats, 64; Republicans, 36; total, 100)

President: Vice President Hubert H. Humphrey, Minn.
Secretary: Francis R. Valeo

Majority Leader: Mike Mansfield, Mont.
Minority Leader: Everett McKinley Dirksen, Ill.

Letters after senators' names refer to party affiliation—D for Democrat, R for Republican. Single asterisk (*) denotes term expiring in January, 1969; double asterisk (**), term expiring in January, 1971; triple asterisk (***), term expiring in January 1973.

HOUSE OF REPRESENTATIVES

(Democrats, 247; Republicans, 187; vacancies, 1; total, 435)

Speaker: John W. McCormack, Mass.
Clerk: W. Pat Jennings

Majority Leader: Carl Albert, Okla.
Minority Leader: Gerald R. Ford, Mich.

Letters after representatives' names refer to party affiliation—D for Democrat, R for Republican. The abbreviation "At-L." in place of congressional district number means "representative at large." Asterisk (*) before member's name indicates reelection in 1966 (served in 89th Congress); double asterisk (**) before name indicates election in 1967.

CONNECTICUT

The 1967 session of the General Assembly was notable for broad legislative accomplishments as well as for the fact that it was the first regular session since reapportionment and since adoption of a new state constitution in 1965. Reapportionment brought an end to rural domination of the Assembly.

No definite trends emerged from the municipal elections held on November 7. The count of political parties in power remained the same as before, with Republicans in control of 20 municipalities, and Democrats of 13.

Municipal Elections. In winning the mayoralty in Hartford, Miss Antonina P. Uccello became the first Republican to win that office in 20 years and the first woman ever elected mayor of Hartford. At the same time, Democrats gained a seat on Hartford's city council, giving them six seats to the Republicans' three. Republicans retained the mayoralty in normally Democratic Waterbury and New Britain. For the Democrats, the most conspicuous victory was that of Hugh C. Curran, who was reelected mayor of Bridgeport by a vote of 3 to 1. Richard C. Lee, a Democrat, won his eighth term as mayor of New Haven.

Legislation. Democratic Gov. John N. Dempsey, who won a second 4-year term in 1966, had little trouble in carrying out his campaign promise to continue and even expand state services with no increase in taxation. A spending and borrowing program of $1.8 billion was enacted for the 2-year fiscal period ending in June 1969. This included bond issues of $150 million for a cleanup of polluted waters, $30 million for urban renewal, and $18 million for bonuses to veterans of the Vietnam War. Increases were made in the minimum wage (to $1.60 an hour by July 1968), unemployment compensation and workmen's compensation, and state aid for education and for public libraries.

SEN. THOMAS J. DODD of Connecticut, here testifying before the Senate Ethics Committee, was later censured.

CONNECTICUT • Information Highlights

Area: 5,009 square miles (12,973 sq km).
Population: 2,925,000 (July 1, 1967 est.).
Chief Cities (1967 est.): Hartford, the capital, 161,000; Bridgeport, 155,200; New Haven, 148,200; Stamford, 108,400; Waterbury 107,900; New Britain, 86,300.
Government: *Chief Officers—governor,* John N. Dempsey (Democrat); lt. gov., Attilio R. Frassinelli (D); secy. of state, Ella T. Grasso (D); atty. gen., Robert K. Killian (D); treas., Gerald A. Lamb; supt. of pub. instr., William J. Sanders; chief justice, John Hamilton King. *Legislature*—General Assembly (met Jan. 4–June 7, 1967): Senate, 36 members (11 Republicans, 25 Democrats); House of Representatives, 177 members (60 R, 117 D).
Education: *School enrollment* (1966–67)—public elementary, 392,427 pupils (15,428 teachers); public secondary, 204,421 pupils (11,141 teachers); nonpublic schools, 130,000 pupils (5,500 teachers); college and university, 95,700 students. *Public school expenditures* (1966–67)—$360,000,000 ($657 per pupil); average teacher's salary, $7,594.
Public Finance (fiscal year 1967): *Revenues,* $794,072,502 (3.5% sales tax, $146,669,313; motor fuel tax, $59,892,586; federal funds, $140,992,209). *Expenditures,* $809,155,259 (education, $238,527,722; health, welfare, and safety, $212,040,096; highways, $166,733,754). *State debt,* $1,290,117,000 (June 30, 1967).
Personal Income (1966): $12,300,000,000; average annual income per person, $3,786.
Public Assistance (fiscal year 1966): $75,655,600 to 72,800 cases (aged, $5,051,200; dependent children, $31,052,000).
Labor Force (employed persons, Aug. 1967): *Agricultural,* 16,300; *nonagricultural* (wage and salary earners), 1,111,390 (41.8% manufacturing, 17.9% trade, 11.5% government). *Unemployed persons* (July 1967)—52,200.
Manufacturing (1965): Value added by manufacture, $5,296,356,000 (transportation and equipment, $1,088,379,000; primary metals, $441,647,000; nonelectrical machinery, $797,791,000; electrical machinery, $497,598,000; fabricated metals, $504,732,000; food and products, $182,051,000).
Agriculture (1966): *Cash farm income,* $168,884,000 (livestock, $101,264,000; crops, $66,729,000; govt. payments, $891,000). *Chief crops* (tons)—hay, 236,000; potatoes, 70,400; apples, 25,200; tobacco, 5,969; peaches, 4,080.
Mining (1966): *Production value,* $21,346,000. *Chief minerals* (tons)—sand and gravel, 9,561,000; stone, 5,618,000.
Fisheries (1965): *Commercial catch,* 4,927,000 pounds ($1,507,000). *Leading species*—scup or porgy, 958,800 pounds ($107,879); hard clams, 151,600 pounds ($62,823).
Transportation: *Roads* (1967), 17,954 miles (28,894 km); *motor vehicles* (1967), 1,642,112; *railroads* (1966), 1,585.57 track miles; *airports with scheduled services* (1966), 11.
Communications (1967): *Telephones,* 1,720,744; *television stations,* 7; *radio stations,* 47; *newspapers,* 25 (daily circulation, 1966, 888,332).

Other legislation abolished breach of promise and alienation of affection lawsuits, reorganized the probate court system, established state departments of correction and of community affairs, and revised the narcotic drug act. Enactment of a law changing the closing hour of polls from 7 P.M. to 8 P.M. meant that Connecticut will lose its importance as a source of early returns on election night. Revisions of the state's corrrupt practices act were influenced in part by the U. S. Senate's censure of Sen. Thomas J. Dodd (see UNITED STATES).

Connecticut's one-year residency requirement for aid to dependent children was declared unconstitutional by a federal court on June 19. If upheld on appeal, the ruling could affect other states with similar requirements for public assistance.

Economy. Business boomed in 1967, although the volume of corporation taxes fell slightly. Connecticut received $1.9 billion in U. S. defense spending in fiscal 1967, ranking it fifth among the states (after California, Texas, New York, and Missouri).

Civil Disorders. Hartford, New Haven, Bridgeport, Waterbury, and New Britain each experienced racial disorders in 1967. The worst occurred in New Haven on the nights of August 19–21, when looting and fire damage was estimated at more than $1 million. A city administration known for its dedication to urban renewal and antipoverty programs, plus effective police work, brought New Haven through the rioting without loss of life.

Higher Education. In September the University of Connecticut opened a new branch at Groton. Edwin D. Etherington, former president of the American Stock Exchange, assumed the presidency of Wesleyan University, at Middletown, in October.

CONSERVATION

“In Wildness Is the
Preservation of the World”

CONSERVATION

The demands of the Vietnam War and other U. S. defense activities in 1967 resulted in severe cutbacks in domestic programs, including budgets for conservation activities. Although environmental problems continued to grow and there was evidence of increasing public support for conservation, there was little action on new conservation legislation.

Pollution. Air and water pollution problems grew ever more severe in 1967, while federal programs contributing to their abatement were inadequately financed. Several specialized forms of pollution drew attention during the year. Proposals for the development of supersonic commercial jetliners caused alarm about the possible psychological and physical effects of supersonic "booms" and stimulated a general interest in noise abatement. The sinking of the oil tanker *Torrey Canyon,* which dumped thousands of tons of oil on the coasts of England and France, led to calls for stricter control over the discharge of oil at sea and in inland waters.

Air Pollution. The Air Quality Act was passed by Congress and signed into law in November. The bill provides for control of air pollution on a regional basis. Standards and enforcement procedures would be determined by the states in keeping with general criteria established by the secretary of health, education, and welfare. If states fail to take reasonable measures to control air pollution, the federal government would be empowered to act. The bill provides for a 15-member Air Quality Advisory Board to assist the states on control problems.

Water Pollution. Water pollution control received some support through passage of the Public Works and Atomic Energy Commission Appropriations Act, which provided new funds for federal assistance in constructing waste-treatment-control plants. Several other bills were also under consideration, notably the "clean lakes" bill, which would provide for federal pilot programs in the prevention and control of lake pollution. The Water Pollution Control Administration of the Department of the Interior pressed a campaign in 1967 to gain local and industrial cooperation in abating the heavy pollution in Lake Erie.

The Water Quality Act of 1965 moved toward full implementation in 1967 as states submitted their required water-quality standards to the Department of the Interior for approval. These standards establish the goals toward which the states will move in their efforts to restore their waterways to more acceptable levels of purity. The secretary of the interior approved most of the state programs, but some were subject to further negotiations and change. (See also POLLUTION.)

National Parks and Wilderness Areas. During 1967 several additions were made to the nation's wilderness areas, mostly in the Western states. Under consideration by Congress was a proposed 97,000-acre Jefferson Wilderness Area in Oregon and a 680,000-acre Washakie Wilderness Area in the Shoshone National Forest of Wyoming. The Senate passed a bill to establish the Sawtooth National Recreation Area in Idaho. It will include a major wilderness area. In California, a new San Rafael Wilderness Area received the approval of Congress.

JAMES TANNER FROM NATIONAL AUDUBON SOCIETY

THE IVORY-BILLED WOODPECKER, a species thought to be extinct, has been found surviving in small numbers in the Big Thicket, a large forest area in eastern Texas.

A bill passed by the Senate would create a two-unit North Cascade National Park from national forest land in northern Washington. The bill provides for a 303,000-acre northern park and a 200,500-acre southern park, as well as two major national recreation areas in the North Cascades. Also included in the bill is a provision for the establishment of a 520,000-acre Pasayten Wilderness Area and additions to the existing Glacier Peak Wilderness Area.

The Redwood National Park proposals entered their third year of controversy. Efforts to create a redwood park in northwestern California were ham-

pered by conflicting proposals from the Department of the Interior and various private conservation groups, as well as by the unrelenting opposition of the timber industries. In October, efforts to reach a compromise culminated in the introduction of bills to establish a two-unit park. One unit, located on Mill Creek in Del Norte county, would contain the area recommended for a national park by the Department of the Interior. The second unit, located in the Prairie Creek-Redwood Creek region of Humboldt county, would contain much of the area proposed for a national park by the Sierra Club and other conservation groups. This compromise bill passed the Senate and House action was expected in 1968.

(See also FORESTRY AND LUMBERING; NATIONAL PARKS.)

Water and Power Development. Conflicting interests between conservation plans and water and power development created several controversies in 1967.

Efforts to protect the Grand Canyon from the effects of dams included in plans for the Central Arizona Project moved toward success in 1967. Congress deleted the controversial Bridge Canyon and Marble Canyon dams from the legislation before it authorized the Central Arizona Project. Although further efforts to construct these dams were expected, a temporary victory at least was achieved.

The Supreme Court in 1967 required the Federal Power Commission to reconsider licensing applications for a hydroelectric dam in the High Mountain Sheep area of the Snake River. In what was expected to be a highly significant decision, the court ruled that fisheries and wildlife interests had been given inadequate consideration and that the public interest might best be served by seeking alternative methods for power development. Some conservationists felt that the decision might set a precedent that would apply to the continuing effort to prevent construction of a power plant at Storm King Mountain on the Hudson River in New York state.

The Department of the Interior recommended against construction of Rampart Dam on the Yukon River in Alaska. The massive Alaskan dam proposal was still far from final defeat, however, as Alaskan development interests pressed for its construction.

Threats to the conservation of natural resources inherent in massive water development schemes led conservationists in 1967 to take an interest in the proposed North American Water and Power Alliance. This $100 billion project would involve channeling Alaskan and Canadian waters southward into the United States and Mexico. It would include construction of waterways, dams, reservoirs, and power plants on a scale that would dwarf all existing water and power developments.

Estuaries and Islands. There was growing concern for the shorelines and island systems of the United States as the deterioration of these scarce resources quickened under the growing pressure of development. It was estimated that dredging and filling during the past 20 years had already destroyed 7% of the best fish and wildlife habitat areas in the nation's estuaries. Pollution had further damaged the quality of estuarine environments.

An agreement was reached between the Department of the Interior and the Corps of Engineers that provides for consideration of conservation values in issuing permits for dredging and filling in the nation's estuaries. The engineers agreed to withhold permits when the Interior Department recommends against their issuance for the protection of fish and wildlife habitats.

In Florida, however, the right of the Corps of Engineers to withhold permits on such grounds was being tested in the courts. The trend in legislative and judicial action, in Florida and in other states, has been toward increasing public control over estuarine development. Several bills slated for congressional action at the end of the year called for a complete study and inventory of the nation's estuaries by the Department of the Interior.

A study and inventory of the island resources of the United States was being conducted by the

U. S. DEPARTMENT OF THE INTERIOR-NATIONAL PARK SERVICE

THE NORTHERN CASCADES region in the state of Washington is one part of a proposed national park that would also include another section in northern Washington.

Bureau of Outdoor Recreation in 1967. The American Island Survey will help to determine the need for public action to protect these environments. Several other steps were taken at the federal level to protect some of the nation's islands. Plans were approved to purchase St. Vincent's Island, Florida, as part of the federal waterfowl refuge system. Congress also passed a bill to establish a national lakeshore in the Apostle Islands of Wisconsin.

Endangered Species. The Fish and Wildlife Service reported success with programs designed to perpetuate certain rare species in captivity at the Patuxent (Md.) Wildlife Research Station. Sightings of ivory-billed woodpeckers, thought to be extinct, were reported in the Big Thicket in eastern Texas.

Proposed Department of Natural Resources. The long campaign of Sen. Frank Moss of Utah to promote the creation of a federal Department of Natural Resources culminated in a bill, introduced in the Senate in 1967, that would change the present Department of the Interior into a Department of Natural Resources. Under the proposed act certain agencies, such as the Bureau of Indian Affairs and the Office of Territories, would be moved to other departments. The new department would absorb certain agencies within the present Department of the Interior, such as the Forest Service, and would take over the civilian functions of the Corps of Engineers. In practice the new department would have jurisdiction over most of the nation's conservation programs with the exception of those directly related to agriculture. No action was taken on the bill during 1967.

CONSUMER AFFAIRS

STAN WAYMAN FOR LIFE MAGAZINE © TIME, INC.

CONSUMERS keep an eye on conspicuous food costs—and so does their Washington "spokeswoman," Betty Furness.

CONSUMER AFFAIRS

United States families were better off financially in 1967, on the average, than they were in 1950. This was because average personal incomes had risen faster than prices. Slightly over half of the increases in consumer incomes, however, had been eaten up by the price increases.

In the 17-year period ending in 1967, average per capita family income after taxes increased by 99% in current dollars. But after allowance for the deterioration of the dollar because of price rises, the increase in real income was reduced to 45%.

GENERAL PRICE TRENDS

In 1966 and 1967 consumer living costs in the United States rose at an annual rate of 3.2%, slightly above average for the world's developed countries. West Germany, France, and Britain had lower inflation rates, while Italy and Japan had higher rates. The above-average increase marked a change for the United States, which had been experiencing one of the world's lowest inflation rates. As a result the U. S. balance of payments may worsen.

Consumer prices, as measured by a U. S. Bureau of Labor Statistics index for city wage earners and clerical workers, had averaged 113.1 for 1966 (1957–59 = 100). After starting 1967 at 114.7 for January, the index rose each month without interruption, reaching 117.1 in September 1967.

Wholesale prices for all commodities fluctuated in a relatively narrow range in 1967. The index figure stood at 106.2 in January, dropped, rose, and dropped again to 106.2 in September.

For at least four reasons, the prospects are that U. S. living costs will climb even more rapidly in 1968 and possibly beyond. The reasons are:

(1) The American technological explosion coupled with high employment levels is increasing the demand for skilled personnel, who already are in short supply. The country has an overall unemployment rate approximating 4%, but half of that figure includes teen-agers and housewives with few job skills. Unemployment among married men in September 1967 was near 1.8%, about the minimum achievable in light of job changes, illness, etc.

(2) Wages have begun to rise faster than productivity. This causes unit costs to rise. In 1967 the more powerful unions received wage and benefit increases of 6% or more per year, while productivity has been rising by about 3% per year.

(3) Sizable deficits ($8 to $16 billion) in the federal government's budget appear likely, due largely to the Vietnam War.

BETTY FURNESS, former actress and television personality, succeeded Esther Peterson in May 1967 as President Johnson's special assistant for consumer affairs. She also serves as chairman of the President's Committee on Consumer Interests and executive secretary of the Consumer Advisory Council. In her testimony before congressional committees, she made a number of recommendations for measures to protect the interest of the consumer.

Miss Furness was born in New York City on Jan. 3, 1916, and educated at Bennett College in Millbrook, N. Y. From 1932 to 1937 she was a motion picture actress, appearing in some 35 Hollywood films, including *Magnificent Obsession* and *Swing Time*. Among the stage plays in which she has appeared are *Golden Boy, My Sister Eileen,* and *The Doughgirls*. She attained considerable popularity for her Westinghouse television commercials in 1949–60.

(4) After a long period of relative stability, the wholesale price index of nonfarm products began to rise in the last half of 1967. This rise will be reflected in higher consumer prices in 1968 unless the government takes drastic deflationary measures.

AGGREGATE CONSUMER SAVINGS

In 1967, U. S. households saved at the highest rate since 1953, which had seen the previous all-time high. Normally, Americans save about 5% of their disposable income, but the rate averaged nearly 7% in the first three quarters of 1967. Surveys indicated that families were in a cautious spending mood because of uncertainties that included the Vietnam War, prices, and taxes. It appeared, however, that their caution was diminishing, and that they were likely to increase their spending somewhat. This caused serious concern in Washington because any increase in consumer spending rates would only accelerate already existing inflationary tendencies.

Consumer spending of personal income plus accumulated liquid savings had fluctuated between 51.4% (1960) and 49.3% (1966). At the end of 1967 personal income plus accumulated liquid savings reached approximately $1 trillion. With such a large base, even a slight shift in the propensity to spend could have serious consequences for the economy. For example, had consumers spent in 1967 at their 1960 rate, total consumer expenditures would have been about $19 billion greater than they were. This increase, on top of military expenditures for Vietnam, would have created a severe inflationary pressure in 1967. U. S. government officials were fearful that consumers might go on a spending spree in 1968, and they insisted that tax increases are needed to "mop up" some of the excess purchasing power.

The increase in personal savings takes into account the 1967 decrease in consumer indebtedness (because indebtedness is defined as negative savings). The gap between new consumer installment credit extended and consumer installment credit repaid narrowed in 1967. Mortgage indebtedness also decreased in 1967, largely because of the tighter money policy imposed by the Federal Reserve System in its attempt to reduce inflationary tendencies. Consumers were in a good position to increase credit buying if they wished.

TRENDS IN LIVING STANDARDS

The Bureau of Labor Statistics has analyzed living standard trends by simulating a "well-established" family of four persons composed of a 38-year-old employed husband, a wife not employed outside the home, an 8-year-old girl and a 13-year-old boy—all living at levels that were regarded as modest for each of the periods in question. In 1951 that family needed $3,730 of expenditures for an average location in the United States; by 1959 it needed $5,180; by 1967 it needed $9,400.

Only about 40% of the increased money requirements for that family between 1951 and 1967 can be attributed to higher prices, while 50–60% reflects changed buying habits and rising living standards. Many budget adjustments since 1951 reflect changes in educational levels, cultural developments growing out of travel and migration, technological changes, and growth of purchasing power.

Slightly under 80% of the family expenditures are needed for "consumption," which was divided during 1967 as follows: food, 23.3%; housing, 24.1%; transportation, 8.9%; clothing and personal care, 10.6%; medical care, 5.1%; and miscellaneous, 7.8%. The remainder went for taxes, 11.8%; social security, 3.1%; gifts and contributions, 2.8%; insurance, 1.7%; and occupational expenses 0.9%.

The so-called typical "modestly living" family covered in the study had a 1967 income of $11,000. The big changes in the family budget since 1959 were a 25% increase in food expenditures, bigger outlays for health insurance and dental care, increased auto ownership, more casual clothing (but some declines in dress clothes), and more for men's, women's, and girls' personal care.

DIFFERENCES BETWEEN CONSUMERS

More interesting than aggregate consumer trends are the experiences of individual consumer groups.

Union Workers. In 1967 the more powerful unions won pay and fringe benefit increases averaging 6% or higher. (The United Auto Workers, for example, received a new contract calling for increases of 6.5% per year for three years.) Such increases are approximately double the rate at which consumer prices are rising, so the net purchasing power gains of strongly unionized workers will be about 3% per year if past trends continue. Unfortunately, annual wage increases of about 6% are double the national average rate of productivity gains. Critics charge that such a wage-productivity relationship can lead only to accelerated inflation.

Retired Persons. Retired persons experienced a deterioration in their real incomes in 1967. Their incomes remained more or less fixed while consumer prices rose. The problem of recipients of fixed income may be illustrated by supposing that prices continue to rise by an annual rate of 3.1%. The purchasing power of their dollars then would drop to 83 cents within 5 years, to 64 cents within 10 years, and to 42 cents within 15 years. Such a deterioration would be difficult to bear, especially considering that the per capita disposable real personal incomes of younger households promises to be rising over that same period.

Negroes. The unemployment rate of Negroes at the end of 1967 was more than double that of whites. Overall, it was 8.8% for Negroes compared with 3.8% for whites. This higher unemployment rate was attributed to a variety of reasons: the greater incidence of broken families among Negroes, thus forcing a higher proportion of unskilled Negro

HOW INFLATION EATS INTO INCOME

CONSUMER PRICES

Data from U. S. Department of Labor

women than of unskilled white women into the job market; the higher proportion of school dropouts among Negroes than among whites, thus throwing relatively more unskilled Negro than unskilled white teen-agers into the job market; the generally lower education and skill levels of Negroes than of whites, because of their inferior education and migrations from the rural South; and to an unknown extent, racial discrimination. The net result is that Negro consumers participated in the nation's prosperity to a relatively lesser extent than did white consumers.

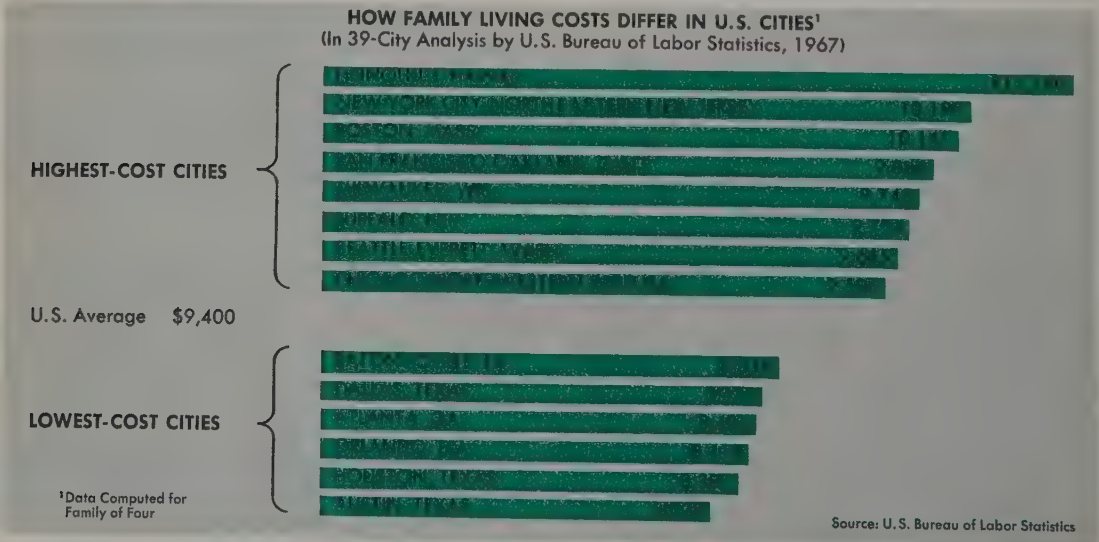
Similar information is not available regarding other minority groups, such as the American Indians, Mexican Americans, and Puerto Ricans. It appears, however, that many among those minority groups fared even worse than did the Negroes.

Regional Differences. Differentials in the national development create regional differences among consumers. In the first quarter of 1967 there was a substantial slowdown of growth in factory payrolls for manufactured consumer durables, and farm incomes declined by 2.5% from the previous quarter. Conversely, wage and salary payments rose for trade, construction, and nondurable manufactures. Because particular industries tend to concentrate within given regions, such changes will have a differential impact on various geographical areas. In the first quarter of 1967 the average income payments within various U. S. regions changed from the preceding quarter as follows:

Rocky Mountain	+4.2%
Mideast	+2.0%
Great Lakes	+1.5%
Far West	+1.5%
Southeast	+1.5%
Southwest	+1.3%
Plains States	+1.0%
New England	+1.0%

City-Rural Differences. Income differences also exist between the larger cities and rural areas. Preliminary analysis under way in 1967 indicated that in 1962 per capita incomes in the nonmetropolitan areas of 24 states averaged only 62% of that in the larger metropolitan areas (the latter are the Bureau of Labor Statistics' "standard metropolitan statistical areas"). When allowance is made for higher living costs in the larger metropolitan areas, the average nonmetropolitan income becomes 70% of the average metropolitan income in real terms. This differential helps explain why unskilled rural people have been migrating to cities in large numbers in recent years. This migration also is causing per capita incomes in the nonmetropolitan areas to rise faster (64% between 1950 and 1962) than in the larger metropolitan areas (56% between 1950 and 1962).

Inequality of Income Distribution. A significant differential among consumers is the growing inequality of income distribution. The technological explosion places a premium on persons with technical and administrative skills, without changing the economic worth of unskilled labor. The result is that the incomes of upper socioeconomic families are rising much faster than those of the lower socioeconomic families. As the upper groups increase their consumption, the lower groups feel a pressure to spend more than their incomes permit. This has resulted in rising bankruptcy rates. In 1965, for example, more than 167,000 families filed bankruptcy petitions, and it was estimated that 20 times that number were experiencing an extremely serious debt squeeze. Bankruptcy threatens to increase as a problem for business credit managers in the next several years.



HOW FAMILY LIVING COSTS DIFFER IN U.S. CITIES¹
(In 39-City Analysis by U.S. Bureau of Labor Statistics, 1967)

¹Data Computed for Family of Four

Source: U.S. Bureau of Labor Statistics

Another manifestation of growing inequality of income distribution is the soaring U. S. relief rolls. In the 10-year period ending in 1964, the numbers of persons on relief increased 42% while the U. S. population increased only 18%. Relief costs over that period increased 90%. To a certain extent the increases reflect greater liberality in granting relief; even more, they result from the mass migrations of unskilled people from Southern rural areas to Northern cities where unskilled jobs are scarce because of technological advances.

The nation's poor often pay higher prices than the affluent do. In 1967 the Bureau of Labor Statistics conducted surveys in both the high-income and the low-income areas of six communities: Atlanta, Chicago, Houston, Los Angeles, New York, and Washington. The bureau found that on the average the poor in those cities had to pay higher prices for equivalent food, rent, and household appliances than did the well-off. The major reason was the predominance of small "mama and papa" stores in the poor neighborhoods, while large supermarkets and department stores tend to dominate the affluent neighborhoods. The latter stores typically have lower margins per unit because of volume sales and low credit losses. The relatively high rent paid by the poor, however, has not been adequately explained.

Regional Living Cost Differences. Living costs differ substantially between areas because of differences in climate, food preferences, state and local taxes, and prices. The Bureau of Labor Statistics has calculated what a 4-person family would have to spend to maintain itself modestly in each of 39 cities in 1967.

The federal figures showed that in 1967 it would have cost a family of four persons $2,167 more per year to live modestly in New York City than in Austin, Texas. That is, living costs for such a family were 27% higher in New York than in Austin—$10,195 vs. $8,028. Obviously, a person should not look only at income when weighing the economic advantages of moving; comparative living costs also should be considered.

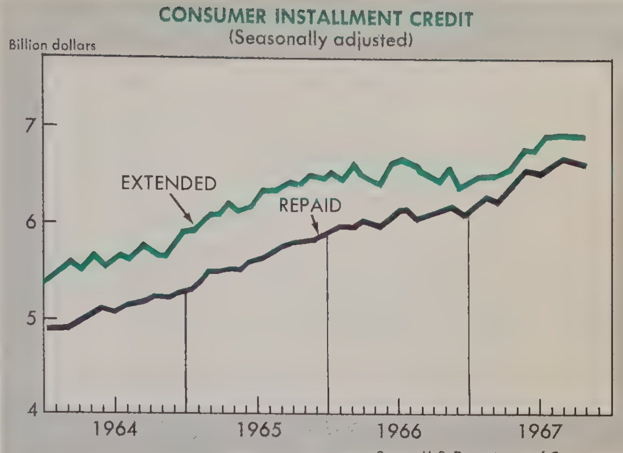
CONSUMER REACTIONS

In 1967, U. S. housewives failed to repeat their picketing and buyers' strikes of 1966. The reason is not completely clear, but a plausible explanation is that food prices rose during 1966 and then declined slightly in 1967 even though most nonfood prices increased.

Food is one of the few big items in the family budget that is bought with sufficient frequency for price changes to be clearly noticeable. Clothing, for example, is purchased seasonally, and price changes are obscured by style changes; automobiles are bought over several-year intervals during which changes occur in size, style, and engineering.

It appears logical that housewives might use food prices as a kind of indicator of general living costs over the short run. Arthur M. Ross, commissioner of labor statistics, has noted that housewives are sensitive about meat prices—especially about bacon prices. A great deal of "hate mail" reaches Washington whenever the price of bacon rises. This does not mean that housewives fail to notice other price rises; rather, their emotional reactions are tied especially closely to food price increases. In late 1967 quiet efforts were being undertaken to organize all consumer groups within the United States into a single consumer federation, but no dramatic actions were attempted.

CONSUMER INSTALLMENT CREDIT
(Seasonally adjusted)



Souce: U. S. Department of Commerce

Consumer organizations tend to focus on prices rather than on family income, but labor unions are concerned with income rather than prices. Logically, both groups should be concerned with what they can buy rather than income alone or prices alone.

Perhaps there is a tendency toward a division of labor within families: husbands concentrate on earning the income and wives concentrate on spending it. Housewives, then, would be the backbone of any consumer movement. The possibility is raised that as more and more married women enter the country's labor force their concern with prices will tend to weaken.

The social desirability of a consumer movement for price stability depends on the importance of maintaining price stability. Certain Latin American economists argue that economic development can be facilitated by mild inflation. Most United States economists, however, seem to prefer price stability. The latter goal seemingly could be promoted by a consumer movement organized as a countervailing force against both excessive wage demands by labor unions and excessive profit demands by stockholders. Some kind of a balance among wages, profits, and prices appears needed, but it is unclear how this could be achieved by the market mechanism in an era of large corporations and strong unions. The alternative to an effective consumer organization might have to be some kind of governmental controls.

To a certain extent the so-called race riots of 1966–67 would appear to be a consumer reaction of disadvantaged groups against the growing inequality of income distribution. The technology of our time has reduced the economic value of unskilled labor to a very low level. For this reason the poor cannot exert much economic pressure through strikes to increase their well-being, and they are too few numerically to exercise much pressure at the polls. One of the few bargaining weapons available to them is to threaten to disrupt and to destroy whatever the affluent have until their aspirations are met. The affluent regard this as a form of gangsterism. It is very possible that increasingly violent means will be used by the underprivileged over the next decade to check the inequality of income distribution.

COPPER

World production of mined copper in 1966 rose to a record 5,855,000 short tons, almost 5% higher than the 1965 total of 5,590,000 tons, according to the U. S. Bureau of Mines. The United States provided 24.4% of the world's mined copper in 1966; the USSR, an estimated 15.1%; Chile, 12.4%; Zambia, 11.7%; Canada, 8.7%; and the Democratic Republic of Congo, 5.9%. In all of these countries, except Zambia, 1966 production exceeded that of 1965.

World output of smelter copper rose to a record 6,440,000 short tons, or 5.5% higher than the 1965 total of 6,100,000 tons.

U. S. Production. Domestic output of mined copper increased 5.7% to a record 1,429,152 short tons in 1966. Arizona mined 52% of the national total. Production of smelter copper from domestic and foreign ores (exclusive of scrap) rose from 1,434,050 tons in 1965 to 1,581,107 tons in 1966.

In the first eight months of 1967, the U. S. output of mined, recoverable copper totaled 858,347 short tons—an 8.6% decrease from the 938,429 tons mined in the first eight months of 1966. A strike against about 90% of the U. S. copper industry began on July 15, 1967, and its effects were reflected in the production figures. In the January-to-July period smelter output decreased to 848,736 tons in 1967 from 849,889 tons in 1966.

U. S. MINE PRODUCTION OF COPPER
(In short tons)

State	1963	1964	1965	1966
Arizona	660,977	690,988	703,377	739,569
California	916	1,035	1,165	1,078
Colorado	4,169	4,653	3,828	4,237
Idaho	4,172	4,666	5,140	4,961
Michigan	75,262	69,040	71,749	73,449

Others	4,505	3,680	4,704	5,757
Total	1,213,166	1,246,780	1,351,734	1,429,152

Source: U. S. Bureau of Mines.

U. S. Consumption. Consumption of new copper in the United States in 1966 was the largest since 1942. Consumption of refined copper in 1966 was 2,335,848 short tons. The highest U. S. output on record failed to meet the increased demands of an expanding economy and defense needs, but some of the deficit was offset by releases from government stockpiles.

U. S. Trade. U. S. imports of copper ore and concentrates in 1966 increased by 14.1%, with the Philippines supplying 51% of the total, followed by Canada and Peru. There was a 5.2% increase in imports of blister copper. Imports of refined copper increased 18.3%, with Canada supplying 53%. Imports of scrap rose 79%.

U. S. exports of refined copper in 1966 decreased 16% from 1965; Italy, Brazil, the United Kingdom, and France were the major importers. West Germany and Japan also took substantial shipments. Japan received 35% of the copper scrap, West Germany 15%, and Spain 14%.

COSTA E SILVA, Artur. See biographical sketch under BRAZIL.

COSTA RICA

Costa Rica maintained its customary liberal outlook in foreign affairs in 1967, while political and economic bickering dominated the domestic scene.

Domestic Affairs. Despite having the highest per capita level of gross national product in all Central America, Costa Rica began the year with fiscal headaches. Because of a dip in earnings from coffee, which usually approximates 41% of exports, and because of increased need for dollar reserves, the colón was devalued on January 2 from 6.625 to 6.65 to the U. S. dollar. A month later free exchange put the colón at 8 to the dollar.

President José Joaquín Trejos Fernández, backed by a minority in the unicameral legislature, continued to struggle for support of his economic measures. The opposition joined Trejos in feeling concern over the economic and fiscal plight of the nation. But several factions within the ruling coalition, tempering national need with political desire, were loath to strengthen the political position of Trejos by supporting his demand for higher taxes and fiscal austerity.

Early in 1967 the president had to withdraw certain fiscal measures from consideration by the Legislative Assembly because of widespread opposition to them. While citizens protested the rising cost of living during a period of frozen wages, many public servants raged at the threatened cuts in their salaries. On April 21 a bomb blast injured 20 persons at an outdoor political rally in Parque Morazan, San José.

The economic problems focused attention on the Instituto Costarricense de Electricidad (ICE). Founded in the 1950's during the regime of President José Figueres Ferrer and dedicated to increased production of electrical energy, improved communications, and the conservation of hydraulic resources, it had had notable success. Now, however, construction of the giant Cachí plant had been hit by delays and mounting costs, the latter 50% above original estimates.

Foreign Affairs. In January, Clarence A. Boonstra was named and confirmed as the new U. S. ambassador to Costa Rica. On February 14, in Mexico City, Costa Rica signed the treaty that aims to establish Latin America as a nuclear-free zone. At the Organization of American States (OAS) meeting of foreign ministers in Buenos Aires, February 15–26, and at the OAS summit meeting at Punta del Este, April 12–14, Costa Rica favored arms-reduction programs. At another meeting of the OAS held in Washington, D. C., in September, Costa Rica voted with the majority to condemn Cuba for subversive activities in Venezuela and Bolivia.

During the Israeli-Arab conflict, Costa Rica uniformly backed the position and proposals of the United Nations. At midyear the Inter-American Development Bank announced a loan of $1,370,000 to the University of Costa Rica to help improve investigative techniques and technology, in support of the program of the Alliance for Progress.

President Trejos and a party of 34 officials were were guests of Mexico on June 5–8. Returning the visit to Costa Rica made by Mexican President Gustavo Díaz Ordaz early in 1966, they strengthened the friendly ties between the two nations and looked forward to increased trade, areas of joint investment, and improved communications and transportation. Economic matters dominated the official discussions.

COSTA RICA • Information Highlights

SOUTH AMERICA

Area: 19,575 square miles (50,700 sq km).
Population: 1,510,000 (Jan. 1, 1967 prelim. est.).
Chief Cities (1963 census): San José (1964 est.), the capital, 173,725; San Sebastián, 23,166; Guadalupe, 21,413.
Government: *President*—José Joaquín Trejos Fernández (took office May 8, 1966). *Parliament*—Legislative Assembly, 57 members (party seating, 1967: National Liberation party, 29; Unification party, 26; others, 2).
Religious Faiths: Roman Catholics, 75.9% of population.
Education: *Literacy rate* (1963), 84% of population aged 15 and over. *Total school enrollment* (1964)—310,559 (primary, 263,702; secondary, 36,530; teacher-training, 2,332; technical, 2,862; University of Costa Rica, 5,133).
Finance (1966 est.): *Revenues,* $82,300,000; *expenditures,* $94,300,000; *public debt* (1965), $142,800,000; *monetary unit,* colón (6.65 colónes equal U. S.$1).
Gross National Product (1966): $635,000,000.
National Income (1966): $538,500,000; average annual income per person, $369.
Cost of Living (1966): 114 (1958=100).
Manufacturing (metric tons): Sugar (1966), 113,000; cement (1965), 118,900; beer (1963), 8,600.
Crops (metric tons, 1966–67 crop year): Bananas (1964–65), 486,000; coffee, 76,800; dry beans, 14,000.
Minerals (metric tons, 1965): Limestone (1964), 126,200.
Foreign Trade (1966): *Exports,* $138,740,000 (chief exports: coffee, $52,660,000; bananas, $33,290,000; cacao, 3,140,000); *imports,* $178,570,000 (chief imports, 1965), electrical machinery, $15,633,000; textile yarn fabrics, $15,623,000; road motor vehicles, $12,756,000). *Chief trading partners* (1965): U.S. (took 51% of exports, supplied 42% of imports); West Germany (took 11% of exports, supplied 10% of imports).
Transportation: *Roads* (1964), 11,931 miles (19,201 km); *motor vehicles* (1965) 36,132 (automobiles, 22,946); *railways* (1965), 437 miles (703 km).
Communications: *Telephones* (1966): 21,805; *television stations* (1965), 3; *television sets* (1965), 50,000; *radios* (1965), 130,000; *newspapers* (1964), 6 (daily circulation, 107,000).

In July a preparatory session of Central American planners in San José looked forward to linking the Central American Common Market to Mexico and certain Caribbean areas to form a larger economic bloc. This was a first step toward economic integration as advocated at the Punta del Este summit meeting.

COTTON

The U. S. cotton crop totaled an estimated 7,618,000 bales of 500 pounds gross weight in 1967—the smallest crop since 1895. It was down 20% from the 9,575,000 bales produced in 1966 and 49% from the 1961–65 annual average of 14,935,000 bales.

COTTON PRODUCTION BY LEADING STATES[1]

State	Average 1961–65 (bales)	1966 (bales)	1967 (bales)
Texas	4,544,000	3,182,000	2,830,000
Mississippi	1,942,000	1,353,000	1,100,000
California	1,753,000	1,228,000	1,035,000
Arkansas	1,483,000	756,000	520,000
Arizona	839,000	515,000	460,000
Louisiana	572,000	449,000	430,000
Georgia	566,000	316,000	230,000
Alabama	788,000	461,000	200,000
Oklahoma	334,000	214,000	200,000
South Carolina	474,000	282,000	180,000
New Mexico	266,000	181,000	160,000
Tennessee	614,000	363,000	155,000
Missouri	419,000	162,000	60,000
North Carolina	300,000	94,000	45,000
Other states	41,000	19,000	13,000
U. S. total	14,935,000	9,575,000	7,618,000

[1] In 500-pound gross-weight bales containing about 480 pounds of lint. (Source: Statistical Reporting Service, U. S. Department of Agriculture.)

Production dropped because growers diverted more acres from production in 1967 than in 1966, and the planting season was the worst of record in many areas. Growers planted only 9,502,000 acres in cotton—847,000 acres less than in 1966 and 5,840,000 acres below the five-year average. Almost 15% of the planted acreage was abandoned because of weather damage; this was the highest abandonment of record, except for the heavy plow-up in 1933.

An additional 68,500 acres were planted in American Egyptian cotton, and yielded 63,600 bales.

The yield per acre for 1967 was a national average of 452 pounds of lint (unginned cotton) per harvested acre—the first time since 1962 that yield had fallen below a bale per acre. It was 28 pounds per acre below the 1966 yield and 39 pounds below the five-year average. Arizona—with 901 pounds per acre—had the highest yield among the states.

U. S. Stocks. Cotton stocks carried over into the 1967–68 marketing year totaled 12,433,300 running bales, or 4,429,200 less than a year earlier. With the smallest carry-over since 1964, the 1967–68 total cotton supply, including imports, was estimated at 20,185,000 bales. The total fell short of the 1966-67 supply by 6,641,000 bales.

World Production. Total cotton output of all countries in the crop year 1967 was estimated at 47,400,000 bales, about the same as the previous season but 10% below the record 1965–66 production of 53,000,000 bales and nearly a million bales below the 1960–64 average. Production outside the United States amounted to 39,353,000 bales, compared with the 1966 crop-year output of 37,796,000 bales and the 1960–64 average of 33,481,000 bales. World acreage was down 463,000 acres, while yields, averaging 304 pounds, were 2 pounds per acre more than during the previous season.

COTTON PRODUCTION BY LEADING COUNTRIES[1]

Country	Average 1960–64 (bales)	1966 (bales)	1967 (bales)
USSR	7,370,000	9,300,000	9,400,000
United States	14,860,000	9,575,000	8,089,000
China, Communist	4,940,000	5,700,000	6,000,000
India	4,741,000	4,600,000	5,300,000
Pakistan	1,656,000	2,100,000	2,300,000
Brazil	2,235,000	2,000,000	2,300,000
Mexico	2,206,000	2,250,000	2,200,000
United Arab Republic	2,037,000	2,090,000	...
Turkey	1,091,000	1,750,000	1,750,000
Iran	494,000	519,000	600,000
Nicaragua	343,000	525,000	500,000
Peru	632,000	475,000	450,000
Colombia	335,000	400,000	450,000
Greece	377,000	404,000	430,000
Uganda	288,000	335,000	365,000

[1] All production, other than U. S., is in bales of 480 pounds net. U. S. production is in 500-pound gross-weight bales which, however, contain about 480 pounds of lint. Years shown refer to crop years beginning August 1. (Source: Foreign Agricultural Service, U. S. Department of Agriculture.)

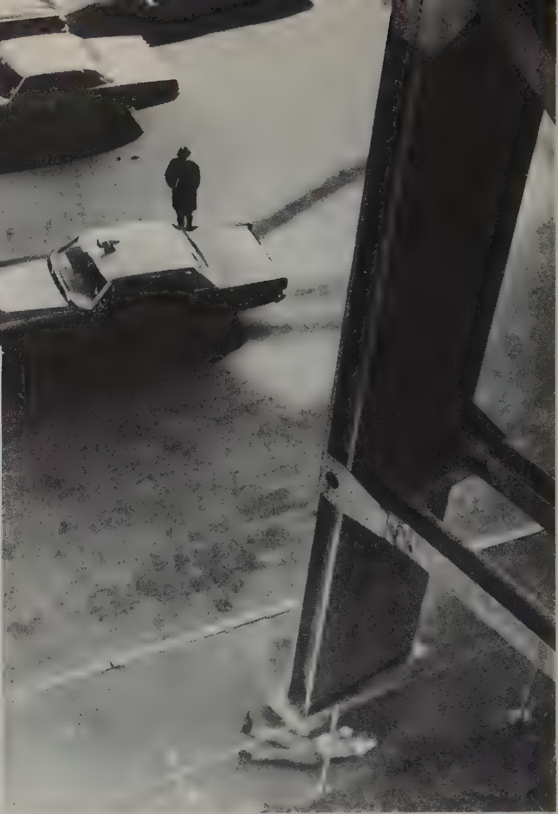
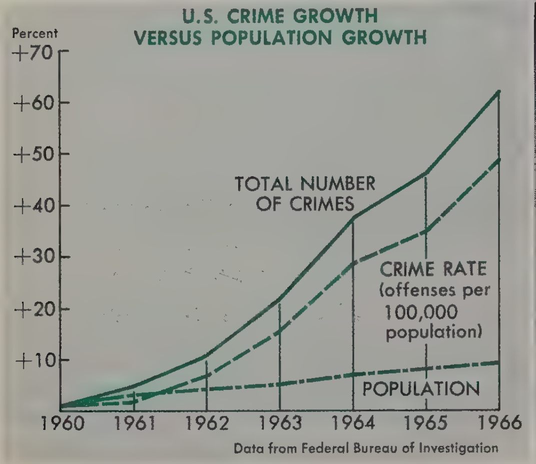
CRIME

GROWING CRIME RATES include gangland slayings, in which the victim's body (*bottom of photo*) is often left in an area far from the actual scene of the crime.



OLIVER NOONAN FOR BOSTON HERALD-TRAVELER



Data from Federal Bureau of Investigation

CRIME

Violent crime remained a major concern to the citizens of the United States in 1967. Although property crimes continued to increase far more rapidly than crimes against the person, it was the latter category—murder, manslaughter, assault, armed robbery, and rape—that was creating public havoc, particularly in metropolitan areas. The increasingly discomforting profile of criminal activity in the United States caused President Johnson, in 1965, to form the President's Commission on Law Enforcement and Administration of Justice. This group, more commonly referred to as the Crime Commission, submitted its final report in 1967.

The President's Commission. The Crime Commission's report was the most sophisticated and thoroughgoing review of criminal behavior ever made in the United States. The commission offered more than 200 specific recommendations for action to reduce crime through more efficient policing, more effective administration of the system of criminal justice, and better correctional practices. Among other things, it called for a revision of welfare regulations so that they would better contribute to keeping families intact, for employment of young persons as subprofessional assistants, and for a narrowing of juvenile court jurisdiction over noncriminal matters. The commission also urged the establishment of three different entry levels for police careers in place of the usual procedure of having men begin as patrolmen and then work their way up to higher positions.

The commission declared itself in favor of programs of compensation to victims of violent crime. Compensation programs were inaugurated in California in 1966 and in New York in 1967, and were being considered by the federal Congress and 11 state legislatures.

The Crime Commission called special attention as well to "white-collar" crimes, defined as occupational crimes committed in the course of their work by persons of high status and social repute. Such offenses, it was noted, often involve a serious erosion of morals in society. "If businessmen who are respected as leaders of the community can do such things as break the antitrust laws or rent dilapidated houses to the poor at high rents," the commission said, "it is hard to convince the young that they should be honest."

Cost of Crime. The President's Commission pointed out that the picture of crime as seen through cost information is considerably different from that shown by statistics portraying the number of offenses known to the police or the number of arrests. Organized criminals, who rarely appear in arrest statistics, are believed to acquire nearly twice as much income from gambling and other illegal goods and services as regular criminals derive from all other kinds of criminal activity combined. Unreported commercial theft losses, including employee theft and shoplifting, are estimated to be more than double all reported private and commercial thefts.

The greatest single source of income to the criminal element in the United States is the profit from illegal gambling. The commission estimated that the annual income from gambling is between $6 and $7 billion. The commission also made the following estimates of the cost to society of crime:

Driving under the influence of alcohol and/or narcotics	$1,800,000,000
Narcotics	350,000,000
Burglary	251,000,000
Embezzlement	200,000,000
Larceny	196,000,000
Automobile theft	140,000,000
Forgery	64,000,000
Robbery	27,000,000

Public Uneasiness. The intensity of public concern appears in the results of a two-city survey which found that, because of their fear of crime, 43% of the respondents said they stay off the streets at night, 35% said they no longer speak to strangers, and 20% said they would like to move to another neighborhood.

The public's concern with criminal violence has been increased by the riots that are becoming a chronic summer phenomenon in the United States, striking unpredictably in city after city. The growing militancy of groups that have been traditionally passive, such as schoolteachers and nurses, has caused uneasiness regarding force and threats of force to achieve professional ends. Controversy regarding U. S. policy in Vietnam has further splintered American society, creating unrest, distrust, and frustration that often seek an outlet through violence and through explosive campaigns of reaction against violence.

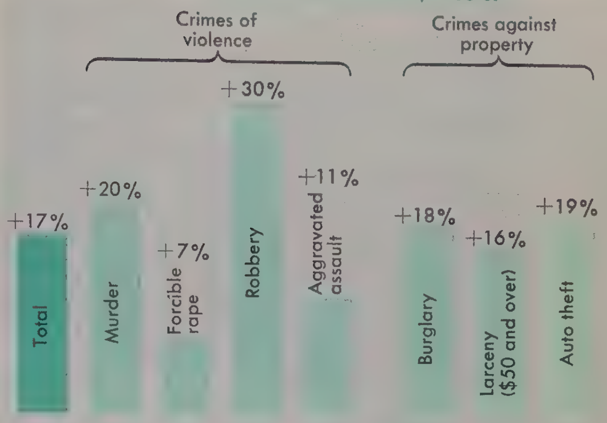
Political Repercussions. Public concern has made criminal violence a political issue, with candidates for office now finding it mandatory to put forward programs for crime control. At the national level, President Johnson presented a $350 million crime bill to Congress in February. The House revised the bill before passing it in August. Revisions gave the chief control of funds to state governors and added riot curbs. The President also sought to have gun control legislation enacted despite opposition from groups such as the National Rifle Association.

In Detroit, Mayor Jerome P. Cavanagh, faced with a recall vote, was forced to defend himself against the charge that he was lax in waging war against crime. Gov. Ronald Reagan of California claimed that he had made life safer in his state by increasing penalties for armed robbery and rape.

Crime Statistics and Trends. The concern of the public found ready support in the annual crime statistics supplied by the Federal Bureau of Investigation (FBI) in its *Uniform Crime Reports*. For 1966, the FBI reported a total of 3.3 million serious crimes, an increase of 11% over 1965. Police solutions of such crimes decreased by 8% during the interval, a situation that was presumed by the FBI to be traceable in considerable measure to Supreme Court rulings providing further constitutional protection for suspects and accused persons. Perhaps the clearest indicator of the sharp rise in criminal behavior appears in the FBI's figures on daytime residence burglaries, which show a rise of 140% between 1960 and 1966. (See also FEDERAL BUREAU OF INVESTIGATION.)

Nonetheless, despite the alarming rise in reported crime, there is growing suspicion that published figures fail to reflect accurately the true nature of criminal behavior in the United States. In its 11-volume final report issued in June 1967, the President's Commission on Law Enforcement and Administration of Justice, after a careful review of the *Uniform Crime Reports*, wondered whether "the yardstick at the present time is too changeable to allow significant [crime] trend comparisons to be made at the national level." Reviewing reported rates of robbery in Chicago and New York City during the past 30 years, the commission concluded that they were so erratic as to defy belief. It was suggested that current public concern with crimes of violence may in considerable measure represent a growing unwillingness on the part of the public to tolerate events that in earlier days were regarded as unalterable aspects of urban life. The commission also pointed out that a steadily improving system of crime reporting has made criminal activity more apparent in recent years.

U.S. CRIME INDEX TRENDS, 1966-67[1]



[1] Increases in major categories of crime in the first six months of 1967 over the same period in 1966.

Data from Federal Bureau of Investigation

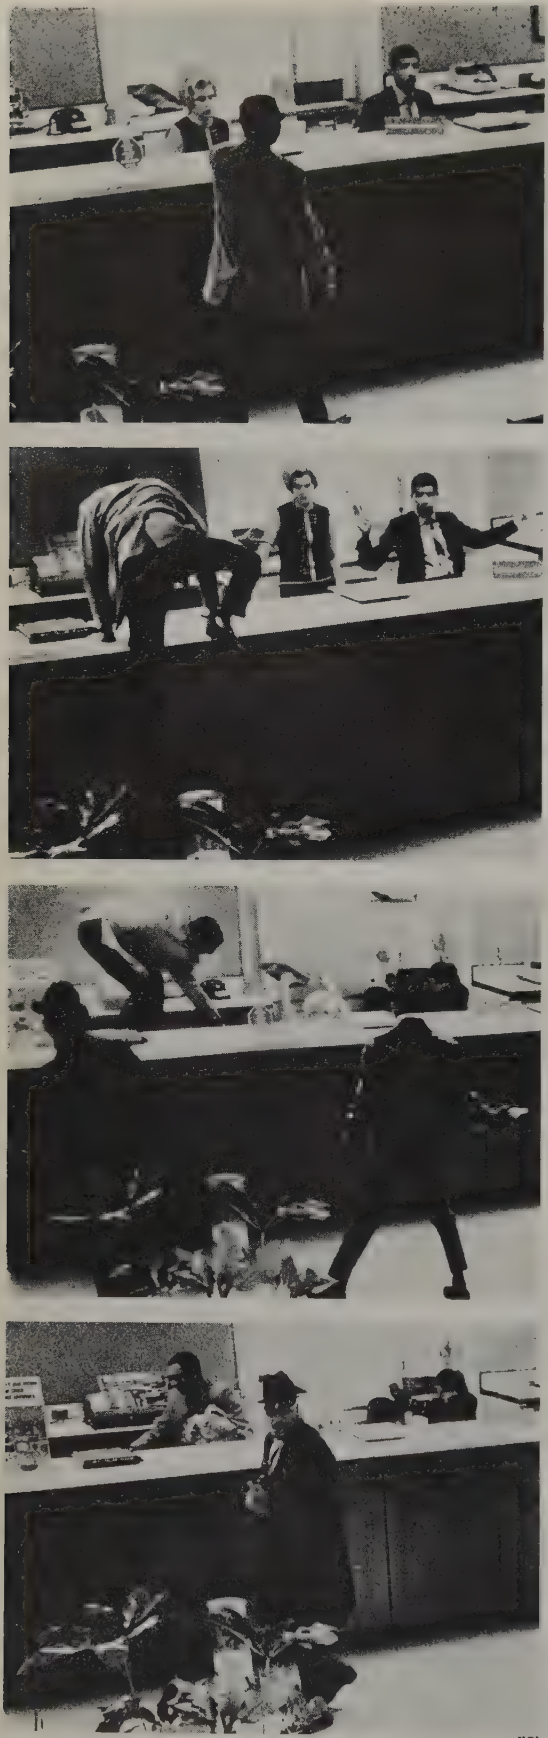
A similar note of skepticism regarding alleged increases in criminal violence was present in the March 1966 issue of the *Annals* of the American Academy of Political and Social Science. Various authors examined violence on the American labor scene, in politics, among city juvenile gangs, in prisons, and in organized crime. Their views, summarized by Marvin E. Wolfgang of the sociology department at the University of Pennsylvania, were strikingly similar: "Contrary to the rise in public fear," Wolfgang noted, "crimes of violence are not significantly increasing."

Juvenile Delinquency. Estimates from the Children's Bureau indicate that one out of every nine youths—and one out of every six male youths—will be referred to juvenile court in connection with a delinquent act (excluding traffic offenses) before his 18th birthday. In 1966 the FBI reported that about 34% of all persons arrested were under 21 years of age, and about 22% were under 18. The situation looks even bleaker if attention is paid to certain relatively serious property crimes—burglary, larceny, and motor vehicle theft. The 11-to-17-year-old age group, representing 13.2% of the population, was responsible for half of the arrests for these offenses in 1965.

Arrests for delinquency continued to rise sharply. Between 1960 and 1966, arrests of persons under 18 jumped 59% for willful homicide, rape, robbery, aggravated assault, and motor vehicle theft. During the same period, arrests of persons 18 and over for these offenses rose only 20%. Part of the increase must, however, be attributed to the disproportionate increase in the population under 18, and particularly in the 11-to-17-year age group.

The most far-reaching change in the juvenile court movement in its 68-year history was brought about with the U. S. Supreme Court decision in *In re Gault,* handed down on May 15, 1967. The Gault decision called for stricter adherence to constitutional rules in juvenile court hearings, including provision of a lawyer for the accused. (See LAW.)

Correctional Programs. The President's Commission provided the first comprehensive survey of persons under correctional supervision in the United States. The nationwide count found 2.5 million admissions in the course of a year, and 1.3 million offenders



UPI

A BANK ROBBERY in New York City was photographed in sequence (*from top to bottom*) by a hidden camera that was activated when the tellers pushed buttons hidden under the counter. The first three pictures show one of the robbers (later identified) in the act of climbing over the counter. The final picture shows a confederate facing the camera.

involved in correctional programs on an average day. Correctional budgets were found to total more than $1 billion annually. Of the offenders, 95% were males, most of them young, with juveniles making up nearly a third of all inmates under correctional supervision. More than half of the adult felon inmates had not gone as far as high school, and almost all prisoners were unskilled laborers.

Capital Punishment. The growing tendency to stress rehabilitative elements in correctional programs is reflected in the striking decrease in the use of capital punishment. During 1966 only one person was executed in the United States. Available evidence indicates that judges, juries, and governors are becoming increasingly reluctant to authorize the death sentence. Only 67 persons were sentenced to death by the courts in 1966, a decline of 31% from the previous year, and 62 prisoners were reprieved from their death sentences.

Crimes in the News. Albert H. DeSalvo, confessed "Boston Strangler," was convicted on Jan. 18, 1967, in Cambridge, Mass., of robbery, assault, and sex offenses unrelated to the notorious Boston slayings. DeSalvo confessed to the 13 unsolved murders while in prison. He pleaded insanity at his trial and was sentenced to life imprisonment. DeSalvo escaped on February 24, but was apprehended the next day.

Richard Speck, the 25-year-old seaman charged with the 1966 mass murder of eight Chicago nurses, was judged guilty on April 15, by a jury in Peoria, Ill., which recommended the death penalty.

The trial of 19-year-old Robert Benjamin Smith for the 1966 killing of four women and one child in a beauty parlor ended with a verdict of first-degree murder. In Arizona, where Smith was tried, this conviction carries a mandatory death sentence.

The slayings on Oct. 8, 1967, of Linda Rae Fitzpatrick and James H. (Groovy) Hutchinson on New York City's Lower East Side gained much public attention because of the sociological implications of the case. Miss Fitzpatrick, the daughter of an affluent Greenwich, Conn., businessman, and Hutchinson, a familiar figure on the New York hippie scene, were found brutally beaten to death in the basement of a tenement building. Much comment was provoked by the victims' involvement with drugs, their disparate backgrounds, and the dangers faced by alienated youths in urban slums. Two men were charged with the murders, and a third was sought by police.

Leo Held, described by his neighbors as a "quiet, peaceful man," went on a killing rampage in central Pennsylvania on October 23. In a few hours Held shot 12 persons, killing six of them. Finally trapped by the police near his Loganton home, he was fatally wounded and died without regaining consciousness on October 25.

NORTH AMERICA
SOUTH AMERICA

Area: 44,218 square miles (114,524 sq km).

Population: 8,033,000 (June 30, 1966 est.).

Chief Cities (1965 est.): Havana, the capital, 982,900; Marianao, 230,000 (1960 est.); Santiago de Cuba, 240,600.

Government: *President*—Osvaldo Dorticós Torrado (took office July 18, 1959); *Premier*—Fidel Castro (took office Jan. 1, 1959). Government is controlled by a single party, the Partido Communista de Cuba (Communist party).

Religious Faiths: Roman Catholics, 84% of population.

Education: *Literacy rate* (1953), 78% of population aged 15 and over. *Total school enrollment* (1964)—1,444,923 (primary, 1,205,566; secondary, 135,745; teacher-training, 26,977; technical, 53,351; higher, 23,284).

Finance (1965 est.): *Revenues*, $2,535,000,000; *expenditures*, $2,535,000,000; *monetary unit*, peso (1 peso equal U. S.$1).

Gross Material Product (1965): $4,284,000.

Manufacturing (metric tons, 1965): Sugar (1966), 6,000,000; gasoline, 810,000; cement, 801,000.

Crops (metric tons, 1965): Rice (1964), 160,000; citrus fruits, 116,000; tobacco, 76,000; coffee (1966), 27,000.

Minerals (metric tons, 1965): Manganese ore, 75,281; chromite, 51,000; pyrites, 30,480; gypsum (1963), 24,000; nickel, 17,850; crude petroleum, 37,000; copper, 5,900.

Foreign Trade (1965): *Exports*, $686,000,000 (chief exports, 1963: Sugar, $117,320,000; tobacco, $32,620,000; inorganic chemicals, $25,280,000); *imports*, $865,000,000 (chief imports, 1963: nonelectrical machinery, $173,310,000; cereals, $83,800,000; transport equipment, $83,580,000). *Chief trading partners* (1964): USSR (took 47% of exports, supplied 41% of imports); Communist China (took 14% of exports, supplied 10% of imports); Czechslovakia (took 7% of exports, supplied 7% of imports).

Transportation: *Roads* (1964), 8,300 miles (13,357 km); *motor vehicles* (1964), 129,500 (automobiles, 88,000); *railways* (1965), 3,562 miles (5,732 km); *merchant vessels* (1966), 40 (229,000 gross registered tons); *state airline*, Cubana; *principal airport*, Havana.

Communications: *Telephones* (1965): 231,000; *television stations* (1965), 25; *television sets* (1965), 550,000; *radios* (1964), 1,345,000; *newspapers* (1961), 10.

CUBA

In 1967, during his ninth year in power, Premier Fidel Castro worked to further an independent international position for Cuba and improve the economy, especially in the area of agriculture.

International Relations. In spite of Cuba's continued dependence on Soviet economic and military aid, the year was marked by determined and at least initially successful efforts to establish Havana as a new center of world revolutionary activity, ideologically and organizationally independent of both Moscow and Peking.

In foreign policy, the main emphasis was on Cuba's close friendship with North Vietnam—1967 was officially proclaimed "the Year of Heroic Vietnam"— and North Korea, rather than with the USSR or China. In the Middle East crisis, Cuba backed the Arabs, and after their military defeat it supported the stand of the two most intransigent Arab states, Algeria and Syria. Havana also established links with several personalities of the extremist wing of the Negro movement in the United States.

Efforts to foment guerrilla warfare in Latin America were stepped up. Cuban personnel appeared among the guerillas in at least two countries, Bolivia and Venezuela. Relations with the pro-Soviet Communist parties of Latin America, which refused to participate in guerrilla activities, were strained to the breaking point. The Soviet Union itself was the target of Cuban criticism for failing to give adequate military protection to North Vietnam and the Arab states, as well as for extending commercial credit to Latin American governments hostile to Castro. Relations with Communist China remained cold.

FIDEL CASTRO has been premier of Cuba since 1959. In 1967, having previously rebuked Communist China, he also criticized the eastern European Communist nations for trading with "oligarchic regimes" in Latin America and declared that Cuba would stand alone against the "North American imperialists." Differences between the Soviet-oriented Latin American Communist parties and Cuban-supported insurgent movements appeared evident at the first conference of the Organization of Latin American Solidarity, in Havana in 1967.

Castro was born in Mayarí, Oriente province, on Aug. 13, 1927. He began his antigovernment activities as a law student at the University of Havana in the late 1940's. On July 26, 1953, he began to lead guerrilla attacks against the Batista regime, which he succeeded in overthrowing on Jan. 1, 1959. Soon after becoming premier, Castro broke with the United States and aligned Cuba with the Communist bloc.

Debray and Guevara. In January, Havana issued a major ideological statement asserting Cuba's claim to the leadership of the Latin American revolution. It was the French writer Régis Debray's book *Revolution in the Revolution?* Its Cuban publishers claimed that it was based on extensive conversations with Castro and reflected his views.

The book stated that the political leadership of the revolution must be in the hands of the guerrilla chieftain, not in those of the Communist party. It explicitly denied the revolutionary character of both the pro-Soviet Communist parties and the pro-Chinese splinter groups operating in Latin America, and maintained that the revolutionary party itself would come into being only in the course of the guerrilla war or even after its victorious conclusion.

On April 16, Havana released the text of a message by Ernesto (Che) Guevara calling for guerrilla warfare on a continental scale in support of "heroic Vietnam." Guevara, former Cuban minister of industry, had disappeared from Cuba two years earlier and was rumored dead. His message was dated from "somewhere in the world"; it was not known at the time that he was in southeastern Bolivia, where guerrilla fighting had broken out in March. Also in April, the Bolivian government announced the capture of Régis Debray.

In October, the Castroite guerrillas in Bolivia were decisively defeated, and the Bolivian government announced the death of their leader, Guevara. On October 15, Castro confirmed that Guevara had been killed. The Cuban government honored his memory by a month of mourning, during which the national flag remained at half-mast. (See also BOLIVIA.)

Solidarity Conference. July 31 saw the opening in Havana of the first conference of the Latin American Solidarity Organization, which was attended by delegates of extreme leftist groups from all the Latin American states. Such issues as the possibilities and prospects of guerrilla warfare and the permissibility of eastern European Communist bloc economic aid to Latin American governments hostile to Cuba were hotly debated between the Castroites and pro-Soviet Communists.

The published resolutions of the conference reflected a compromise; a resolution condemning eastern European aid to the Latin American countries remained unpublished, though passed by a majority vote. But in summing up the results of the conference in a final speech on August 10, Castro remained intransigent. He declared that "nobody should harbor the illusion that power can be conquered by peaceful means in any country of this continent," and that "the least we can expect of any socialist country is that no financial or technical aid be given to those governments that suppress revolutionary movements."

Castro denounced the leaders of the Communist party of Venezuela as "a reactionary Mafia inserted into the Latin American revolutionary movement by Yankee imperialism." He also called on revolutionaries of all countries to "give maximum aid" to the U. S. Negro leader Stokely Carmichael, who had played a prominent role at the conference.

Relations with the USSR. On June 26, Soviet Premier Aleksei Kosygin arrived in Havana. The nature of his talks with Castro was not made public, but one month later, Castro, in a speech commemorating the abortive rising of July 26, 1953, warned the Cubans that in the event of U. S. attack on the island "we must be accustomed to the idea of fighting alone."

In November, Castro again demonstrated his dissatisfaction with Soviet policies by delegating a junior cabinet member, the minister of education, as his representative to the Moscow celebration of the 50th anniversary of the Russian Revolution.

Relations with the United States. Throughout the year Cuban propaganda continued to denounce the United States as the main enemy of the Latin Americans and of the entire human race. Castro's demonstrative support of Stokely Carmichael and the most radical wing of the Negro movement in the United States gave Washington reason for concern.

In December there was, however, some slight indication of a Cuban desire to lessen tension. The Cuban government permitted repatriation of U. S. citizens who had hitherto been held in Cuba against their will. The Havana-Miami airlift for Cubans wanting to leave the island continued in daily operation throughout the year. By Dec. 1, 1967, the total number of refugees from the Castro regime who had left their country by this airlift since its initiation on Dec. 1, 1965, stood at 89,549.

Domestic Policies. A "campaign against bureaucracy" initiated in January resulted in a drastic reduction of personnel in a number of ministries. Severe sanctions were applied against heads of enterprises and administrative bodies accused of hiring superfluous personnel. The campaign had ideological overtones. An editorial in the official newspaper *Granma* on February 28 stated that there was the danger in socialist countries of "bureaucratic positions becoming seats of accommodation, stagnation, or privilege."

The regime stepped up the organization of boarding schools on the primary and secondary levels. In a speech on January 29, Castro explained that the aim was "to organize the entire life of the children around the school. Thus they will not have time to acquire bad habits and will be mentally, physically, and socially well educated."

The organization of the Communist party of Cuba, which had hitherto been proceeding at a sluggish pace, made considerable progress during 1967. Thus in June, a party group was finally set up in the key ministry of the interior. The party now appears to be well on its way to becoming Castro's main instrument of rule. Provincial party organizations assumed public responsibility for bringing in the vitally important sugar harvest. At the end of 1967 about 40 "old guard" pro-Soviet Communists were purged from the party for opposing Castro's policies.

Economic Policy. In 1967, as in the four preceding years, emphasis in economic planning was on the development of agriculture instead of industry. The sugar crop of over 6 million tons was satisfactory, though still far from the target of 10 million tons set for 1970. The area of coffee cultivation was greatly expanded, and self-sufficiency in rice production was announced as within reach. Economic incentive (exemption from all taxation) was used in a major effort to reverse the population flow from the countryside to the cities.

On Jan. 2, 1968, Castro announced that petroleum—which is supplied by the Soviet Union—would be rationed in Cuba.

CYPRUS

The threat of a war with Turkey dominated events on Cyprus in 1967.

The Question of Enosis. Among the Greek Cypriots, representing 80% of the population, there continued in 1967 to be a marked feeling for enosis (union) with Greece. This was vigorously opposed by the Turkish Cypriote minority, which received strong backing from the Turkish government. Early in the year, Archbishop Makarios III, president of Cyprus, reiterated that he was still in favor of enosis as the ultimate solution for Cyprus.

Following a military take-over of the Greek government on April 21, rumors circulated that Greece was planning a coup to overthrow Makarios. This was repudiated as defamatory by the Greek foreign minister. But rumors still persisted abroad that Makarios was heading for a rift with the Greek government and that an antiunionist group was developing among the Greek Cypriotes.

Obviously as a reaction to these reports, the Cypriote House of Representatives, composed entirely of Greek Cypriotes, voted unanimously that enosis was the wish of the Cypriotes. The desirability of union was also stressed by prominent Greeks who visited Cyprus. In August, Col. George Papadopoulos, one of the leaders of the April coup in Greece, stated on the island that the Greek government wanted full union without any limitations. The next month, Archbishop Ieronymos of Athens, primate of Greece, asserted in Nicosia that enosis was certain in the future. In October, Gen. Gregory Spandidakis, another of the Greek coup leaders, appeared on Cyprus and made clear his unionist sentiments. In addition, Gen. George Grivas, the defense chief of Cyprus, who was appointed by the Greek government, was strongly in favor of enosis.

Military Forces. Grivas controlled both the 10,000-man Cypriote National Guard and the Greek troops stationed on the island. These, according to agreements reached before Cyprus became independent in 1960, were to be limited to 950 men. Since 1963, however, when bitter fighting had broken out between Greek and Turkish Cypriotes, the number of Greek troops had been steadily increased until it was reported to stand somewhere between 6,000 and 10,000.

The Turkish government, which by the preindependence agreements was entitled to 650 troops on the island, had increased its forces to a strength estimated variously from 1,200 to 4,000. In addition, the United Nations maintained 4,500 troops and 150 policemen on Cyprus. The function of the UN personnel was to maintain neutral areas between the Greek and Turkish Cypriotes to prevent clashes.

Crisis and Negotiations. The Cyprus situation was the subject of personal meetings held by the Greek and Turkish premiers in September, but no accord was reached. Shortly thereafter the premier of Turkey, Süleyman Demirel, said that he did not foresee an early settlement for Cyprus, and he vehemently criticized Archbishop Makarios as irresponsible.

On November 15 and 16, 26 Turkish Cypriotes were killed at the villages of Ayios Theodoros and Kophinou while fighting against the Greek Cypriote National Guard, under Greek officers from Greece. The clash precipitated a Turkish threat of invasion against Cyprus, which would have undoubtedly led to a Greek-Turkish war. To calm the situation the Greek government recalled Grivas to Athens on November 18, but the Turkish government demanded more concessions.

On November 22, U. S. President Johnson sent a special envoy, Cyrus R. Vance, to Athens, Ankara, and Nicosia to help find an agreement between the Turks and the Greeks. Manlio Brosio, secretary general of the North Atlantic Treaty Organization, to which both Greece and Turkey belong, visited Athens and Ankara for the same purpose. UN Secretary General U Thant appealed for calm and sent his special representative, José Rolz-Bennett, to Nicosia, as well as to Athens and Ankara. The U. S. Department of State described the situation as very tense. Archbishop Makarios told the Greek Cypriotes to expect that Turkey might war on them.

WIDE WORLD

CYRUS VANCE (*center*), U. S. envoy, talks with President Makarios of Cyprus on Dec. 3, 1967. To help prevent a war over Cyprus, Vance also met with Greek and Turkish leaders.

After two weeks of intense negotiations, the Greek and Turkish governments announced that they would remove from Cyprus all their troops, except for those allowed by the preindependence agreements, and on December 8 the first contingent of Greek troops left Cyprus. They also agreed that the functions of the United Nations on the island should be increased. President Makarios seemed reluctant to give his approval to these terms, and although the war crisis had passed, the basic issue of political stability on the island had not been resolved.

Economy. Following Britain's lead in November, Cyprus devalued its currency 14.3%. The threat of war curtailed tourism, and the Turkish Cypriote areas were subject to a partial economic blockade so that they could not build up their military strength against the government.

CZECHOSLOVAKIA

The attention of Czechoslovakia's Communist regime was centered chiefly on two main issues in 1967: (1) the ever-widening differences between the Communist leadership and Czech writers, which ended in a head-on collision at midyear; and (2) the mounting difficulties encountered in gradually implementing the state's New Economic Model.

The Writer's Rebellion. After several years of recurrent feuding between Czech writers and the government over the issue of creative freedom, the writers used the occasion of their fourth congress on June 27–29, 1967, to unleash their most forceful attack to date on the regime's restrictive policies. They were especially concerned about the new Press Law, which had gone into effect on January 1, placing the press under direct government control and setting up a new Central Administration for Publications. In daring speeches and in the final resolution of the congress they denounced party censorship and other Communist-imposed restrictions in the fields of literature, culture, and even politics.

Shocked by the intensity of the writers' rebellion and fearful of the threat it posed to their monopoly of power, the party leaders moved quickly against the recalcitrants. On June 30, Czechoslovakia's president and top party leader, Antonín Novotný, condemned the rebellious writers for "preaching capitalist morals and bourgeois ideology." The most outspoken critics were expelled from the party. *Literární noviny*, the journal which served as the leading platform for liberal views, was taken away from the Writers' Union and placed under direct control of the ministry of culture and information.

Economy. On Jan. 1, 1967, Czechoslovakia's New Economic Model, conceived to make the nation's economy more efficient, went into operation. While some difficulties were expected to accompany the reforms, they proved greater than anticipated. The rate of economic growth—which registered, in 1966, an impressive 7.4% for industry, 10% for agriculture, and over 7% for national income—slowed down. In 1967, industrial production increased by only 6.1%, agriculture by 3.5%, and national income by 6–7%. But more serious were certain negative "tendencies" adversely affecting the basic purpose of the reform. These included lagging labor productivity coupled with economically unwarranted wage increases, and the poor quality and inadequate assortment of products, causing shortages of many items, excessive accumulation of unsalable merchandise, and a decline in exports to the West.

Other adverse factors were inflationary pressures due to insufficient supply and to attempts of certain enterprises to exploit their monopolistic positions; the extreme slowness in carrying out the highly desirable salary differentiation system set up to reward good workers and penalize incompetent ones; and slow progress in the replacement of unsatisfactory but politically loyal managers by persons with better economic ability.

Foreign Relations. As in previous years, Czechoslovakia persisted in 1967 in obediently following Soviet leadership in international affairs. At Soviet behest, the nation concluded treaties of friendship, cooperation, and mutual assistance with East Germany and Poland in March. The treaties were meant primarily to enhance East Germany's status. After the outbreak of the Israeli-Arab war, the Czechoslovak regime denounced Israel as the aggressor and broke off diplomatic relations.

On Aug. 4, 1967, Czechoslovakia took a significant step toward a normalization of Czechoslovak-German relations by concluding a 2-year trade and payments pact with West Germany and by exchanging permanent trade missions. On the other hand, Czechoslovakia's relations with Austria were strained in the summer of 1967 because of several violations of Austrian sovereignty by Czechoslovak frontier guards pursuing escapees from Czechoslovakia.

Party and Government. Nothing of significance occurred in 1967 in the Communist party. A minor reshuffle took place in the cabinet. The National Assembly adopted three major laws on national committees, commissions of people's control, and administrative procedure.

A power struggle within the party ended on Jan. 5, 1968, with the ouster of Novotný as party chief. He was succeeded by Alexander Dubček, a Slovak.

DAHOMEY

Political unrest in Dahomey throughout 1967 culminated in a coup by army officers in December.

Politics. On December 17, young army officers, headed by Maj. Maurice Kouandété, overthrew the government of President Christophe Soglo in a bloodless coup. The officers were reinforced by the presence of key units of Dahomey's armed forces, which had been pulled into Cotonou and the nearby official capital of Porto-Novo to control a general work strike. On December 18, Major Kouandété formed a provisional government with himself as head of state and minister of defense. The government planned to hold elections in about six months.

Probably the primary cause of the coup was the existence in the army of traditional tensions between northerners and southerners. These tensions increased shortly before the coup, when Soglo, a southerner and former army commander, made tentative moves under pressure from army factions to reduce the power of Commander in Chief Alphonse Alley, a northerner. The leaders of the coup and most of the members of the new cabinet, including Kouandété, were northerners. Alley, however, remained loyal to Soglo, and was placed under detention.

Economy. General dissatisfaction with General Soglo's government stemmed from his failure to improve Dahomey's economy, which relies largely on direct French subsidy. In order to balance his budget, Soglo, in October 1966, imposed a 25% cut in workers' wages. Resentment at this and at a decree of Dec. 8, forbidding all union activities, led to a 5-day work stoppage during the week of December 11. The new government met with union leaders on December 20, and reached several agreements, including the decision to set up a commission to study ways of restoring the 25% wage reduction.

Heavy trade deficits and mediocre harvests further weakened Dahomey's economic condition in 1967. Aid agreements, besides the major ones with France, were reached with the U. S. Agency for International Development, Italy, and the United Nations.

Foreign Affairs. In 1967, Dahomey retained particularly close ties with France and the other Entente countries—Ivory Coast, Niger, and Upper Volta. In an economy measure, Dahomean embassies were closed in Nigeria, Ghana, and Congo (Kinshasa).

AFRICA

Area: 43,483 square miles (112,622 sq km).
Population: 2,462,000 (Dec. 31, 1966 est.).
Chief Cities: Porto-Novo (1964 est.), the capital, 69,500; Cotonou (1964 municipal census), 109,328.
Government: Maurice Kouandété became head of government, Dec. 18, 1967. National Assembly (dissolved).
Religious Faiths: Tribal religions, 68% of population; Muslim, 15%; Roman Catholic, 14%; other, 3%.
Education: *Total school enrollment* (1964)—136,390 (primary 125,231; secondary, 10,083; teacher-training 354; technical, 683; higher, 39).
Finance (1967 est.): *Revenues*, $30,000,000; *expenditures*, $30,831,000; *monetary unit*, CFA franc (246.85 francs equal U. S.$1).
Manufacturing (1965): Lumber, 9,000 cubic meters; palm oil, 43,000 metric tons.
Crops (metric tons, 1964–65 crop year): Cassava, 1,052,000; sweet potatoes and yams, 574,000.
Foreign Trade (1966): *Exports*, $10,490,000 (chief exports, 1965: palm kernel oil, $3,988,000; palm oil, $3,003,000); *imports*, $33,453,000 (chief imports, 1965: woven cotton fabrics, $6,071,000; motor vehicles, $2,492,000; petroleum products, $1,856,000). *Chief trading partners* (1965): France (took 55% of exports, supplied 55% of imports); Netherlands (took 11% of exports, supplied 5% of imports).
Transportation: *Roads* (1965), 3,828 miles (6,160 km); *motor vehicles* (1965), 10,090 (automobiles, 5,946); *railways* (1964), 360 miles (579 km); *principal airport*, Cotonou.
Communications: *Telephones* (1966): 3,500; *radios* (1965), 35,000; *newspapers* (1964), 3 (daily circulation, 2,000).

DAIRY PRODUCTS

Dairy farmers in the United States produced about 120 billion pounds of milk in 1967, slightly less than they produced in 1966, according to preliminary estimates of the U. S. Department of Agriculture. The total is well below the record output of 127 billion in 1964.

Output per cow, which has been gaining annually since World War II, continued to increase in 1967. The average was estimated at 8,810 pounds, up about 3½% from the 1966 average (the previous high). Production per cow was nearly 66% larger than the 5,314 pounds of 1955. The 1967 increase per cow of 297 pounds was up from the previous year's gain of 209 pounds and above the 1957–66 average annual increase of 221 pounds.

The downward trend in the number of milk cows on farms, begun in 1945, continued in 1967, when the number of cows averaged about 13.6 million, or 4% below 1966. The milk cow population declined nearly 31% from 1957 to 1967.

Use of milk in commercial markets decreased by nearly 5 billion pounds in 1967 from 1966. The main reason for the decrease was record high prices received by farmers for their milk. Manufacturers sought milk substitutes such as coffee whiteners, imitation milk, mellorine, and margarine. Because consumption shrank while production declined only slightly, the Commodity Credit Corporation's purchases for price support were expected to rise to more than 7 billion pounds in 1967. This was up sharply from the 600 million pounds purchased in 1966, but still substantially below 1962's record purchases of 10.8 billion pounds.

Dairy products in commercial and government stocks swelled to more than 8 billion pounds of milk equivalent in 1967, up considerably from 4.8 billion pounds a year earlier. Civilian use of milk in 1967 was estimated to be about 2.5 billion pounds less than the 119.4 billion pounds consumed in 1966.

Use of milk per capita in all forms fell 20 pounds to 584 pounds. Consumption per person in the United States has declined almost every year since 1955.

World Production. According to preliminary estimates, milk production in the 35 countries that normally produce about 85% of the world's supply of milk increased about 2% in 1967. Output in these countries was estimated at 689 billion pounds, up

MILK PRODUCTION IN PRINCIPAL COUNTRIES
(In millions of pounds)

Country	Average 1956–60	1966	Preliminary 1967
Argentina	10,187	11,030	9,921
Australia	14,005	16,634	16,650
Austria	6,048	7,090	7,143

Switzerland	6,451	6,902	7,385
USSR	107,099	147,990	154,322
United States	123,500	120,230	120,200

from 676 billion pounds in 1966. The 1967 output was nearly 21% above the 1956–60 average of 570 billion pounds.

Milk production increased in nearly every country except Denmark, Italy, Finland, and Sweden. In France, Western Europe's largest milk producer, output rose 3%, resulting in large surpluses. South American output was about the same as in 1966.

DALEY, Richard J. See biographical sketch under CHICAGO.

DALLAS

Dallas, county seat and second largest city in Texas (1967 est. pop., 835,000), completed the final step in a program to integrate its public schools in the fall of 1967. Dallas voters approved a $175 million bond issue for an extensive capital improvements program, and the city's official metropolitan area was extended to include two additional counties.

Education. All senior high schools of the Dallas Independent School district became integrated (both faculty and students) in 1967, completing a district-wide all-school integration program begun in 1962 as a stair-step, grade-a-year plan. The program was accelerated in 1965 by orders of the U. S. Circuit Court of Appeals, which reduced the time limit for integration from 12 to 5 years.

Improvements and Expansion. On Aug. 8, 1967, the city voted in favor of a $175 million bond issue (the largest in the city's history) to finance a capital improvements program. It provides for construction of new municipal services buildings, expansion of the auditorium and convention center, regional airport land acquisition, public park and street improvements, and library construction.

In 1967 the U. S. Bureau of the Budget redefined the Dallas Standard Metropolitan Statistical Area to include two additional and adjacent counties, Kaufman and Rockwall, now considered within the urbanizing influence of the central city. Dallas is the economic center of what is now a six-county metropolitan area (4,637 sq mi; 1967 est. pop., 1,386,000).

New Construction. Major projects under construction in 1967 were the Army and Air Force Exchange Service Center; the long-delayed $26 million, 16-story federal office building; the $34 million North Toll road; and the 230-acre Southpark Shopping Center, which is to contain 3 million square feet and cost $65 million. Projects announced included a new $30 million post office center and a 200-bed, 8-story hospital in the Baylor University Medical Center. Extensive additions and improvements to Dallas' Love Field will be completed in 1968. The $25 million program is designed to serve air transportation needs until construction of the projected Dallas-Fort Worth regional airport.

Jack Ruby Case. Jack Ruby, who was awaiting retrial for the slaying of Lee Harvey Oswald (alleged assassin of President Kennedy), died in a Dallas hospital on Jan. 3, 1967.

Economy. Dallas leads the South in wholesale trade, is a major insurance and finance center, and is an international spot cotton market. Clothing manufacture, aircraft factories, automobile assemblies, and electronics and oil-well equipment plants are the principal industries. Manufacturing accounts for about one fourth of the employment in the metropolitan area, which totaled 622,600 in 1967. Unemployment averaged about 2.5% during the year, well below the national average. Dollar volume of residential construction authorized in 1967 was $159 million, or 49% above 1966; nonresidential construction authorized was $119 million, 1% below 1966.

Finance and Government. Finances for the fiscal year 1967–68 included a record city budget of $113,037,129 and a record school budget of $88,558,132; net debt: city, $259,884,000; schools, $103,901,188; assessed valuation for tax purposes: city, $3,315,265,313; schools, $3,101,507,394; tax rates per $100 of assessed valuation: city, $1.79; schools, $1.63. The city has a council-mayor government.

CALIFORNIA STATE DEPARTMENT OF WATER RESOURCES

OROVILLE DAM, on the Feather River north of Sacramento, Calif., was topped out in 1967. The 770-foot-high dam is the world's highest earth- and rock-fill embankment.

DAMS

The 1967 supplement to the World Register of Dams, prepared by the International Commission on Large Dams, showed that there were 757 new dams over 50 feet (15 meters) high. The United States, with 298 of the total, led the world in building new dams. Japan was in second place with 91 dams, and India and South Africa tied for third with 32 dams each. The United States also led the world in the total volume of its new dams—484 million cubic yards (369 million cubic meters). Canada was second with a total volume of 149 million cubic yards (114 million cubic meters), and the Soviet Union was third with a total volume of 144 million cubic yards (110 million cubic meters).

Oroville Dam. The 770-foot-high (235 meters) Oroville Dam, north of Sacramento, Calif., the world's highest earth- and rock-fill embankment, was topped out in 1967, climaxing a 5-year construction effort that included around-the-clock work. The building of this dam entailed one of the greatest and fastest earthmoving projects in history. A total of 80.6 million cubic yards (61.6 million cubic meters) of fill was transported 12 miles to the dam site. There, the dam builders added 2.5 tons of fill material to the dam every second.

The $134 million dam, which is on the Feather River, is one of the most important elements in California's $2.8 billion State Water Project. It will create a reservoir with a capacity of 3.5 million acre-feet (4.5 billion cubic meters); water from the reservoir will be delivered to ever-thirsty southern California areas as far as 650 miles away.

Mossyrock Dam. With the completion of placing concrete in 1967, Tacoma City Light's new 605-foot-high (184 meters) dam on the Cowlitz River near Mossyrock, Wash., became the fifth highest dam in the United States and the 17th highest in the world. Construction of the spectacular double-curvature, thin-arch structure took less than three years. The project consumed 1.3 million cubic yards (1 million cubic meters) of concrete.

Boundary Dam. Workmen poured the last bucket of concrete into the 385-foot-high (117 meters) thin-arch Boundary Dam in 1967, thus topping out the dam on schedule. This structure is located on the Pend Oreille River in northeastern Washington.

Swift Dam. The Swift Dam, which was built to replace a dam destroyed by floods in 1964, was topped out in 1967. This dam in north-central Montana is the first nonsymmetrical, double-curvature, thin-arch concrete dam ever built by the Bureau of Reclamation. The Morrow Point Dam, a larger dam of similar design, is being constructed by the Bureau on the Gunnison River in Colorado.

Hells Canyon Dam. The Hells Canyon Dam, located on the Snake River between Idaho and Oregon, was also topped out in 1967. The dam was placed in a nearly 1-mile-deep (1.6 km) gorge, one of the steepest and deepest gorges in the United States. Because the temperature in the canyon reaches 110°F (43°C) in the summer, careful temperature control of the concrete was required both during and after placement.

Auburn Dam. During the summer, the Bureau of Reclamation announced the final plans for the world's largest single-arch dam—the $150 million Auburn Dam to be built on the American River in northern California. When completed in 1971, the structure, with a height of about 720 feet (220 meters), will be the fourth highest dam in the United States. Its crest length will be 3,500 feet (1,067 meters).

Portage Mountain Dam. In 1967 excavation was completed on the powerhouse cavern and the 10 penstocks of the Portage Mountain Dam, located on the Peace River in British Columbia. Toward the end of the construction season when the Canadian north turns bitterly cold, workers were on an around-the-clock schedule, seven days a week, racing to add the fill to raise the dam to its final height of 600 feet (183 meters).

Mica Dam. Construction began in 1967 on the 800-foot-high (244 meters), 2,600-foot-long (792 meters) earth-fill Mica Dam, located on the Columbia River in British Columbia. When completed in 1973, Mica Dam will be the 5th highest in the world and 18th largest in terms of volume.

Cahora Bassa Dam. After nine years of extensive surveys, the Portuguese began construction in 1967 of access roads and a bridge leading to the Cahora Bassa Dam site on the Zambezi River in Mozambique, an overseas province of Portugal located on the southeastern coast of Africa. Construction of the dam will cost $243 million; the plans also called for a powerhouse that will be able to produce 17 billion kilowatt-hours of electricity per year. The Cahora Bassa project is the biggest hydroelectric development in Africa and among the most important in the world. The dam, which has been nicknamed Narrow Dam because of its location within a steep gorge, is to be the cornerstone of economic development in Mozambique as well as the first step toward a common market power grid for southern Africa.

In erecting the Cahora Bassa Dam, the most trying task will be the race against the rains. Construction of the dry walls, the diversion galleries, and nearly half the 500-foot-high (152 meters) dam must be completed within six months; otherwise, the work will be washed away during the torrential rainy season and must be redone the following year. Construction of the dam project may begin at the close of the rainy season in May 1968.

Aswan High Dam. The Aswan High Dam, untouched by Israel in its swift military victory against Egypt in 1967, was more than 80% completed. The $1 billion dam is expected to be topped out before the Nile flood season in August 1968. The first of 12 hydroelectric turbines began to produce inexpensive power for Egypt toward the end of 1967, almost eight years after construction of the dam had commenced. Now far ahead of schedule, the dam had originally been planned for completion in 1970.

For a distance from either bank, the dam is as high as it will go—360 feet (110 meters) above the river bed; its crest is 2.5 miles (4 km) long and 0.5 mile (0.8 km) wide. When completed, this modern colossus of the Nile will have the bulk of 17 pyramids the size of Cheops at Giza.

Mangla Dam. United States contractors building Pakistan's huge Mangla Dam maintained their one-year lead over the original time schedule during 1967; the $400 million project is more than 95% complete. The dam, located on the Jhelum River, is a major element of the Indus River Basin project for redistributing the waters of the Indus River and its five major tributaries between Pakistan and India. The dam, an earth-fill type 380 feet (116 meters) high, has a crest length of more than 2 miles (3.2 km).

Tarbela Dam. Bids were invited in 1967 for the construction of another dam in the Indus Basin Development project, the $546 million Tarbela Dam. The earth- and rock-fill structure will stand 485 feet (781 km) high and will be 9,000 feet (14,484 km) long. When completed in eight years, it will be the world's largest embankment dam, with a total volume of 160 million cubic yards (122 million cubic meters).

Soviet Union. Dams were even part of the Soviet Union's 1967 jubilee marking the 50th anniversary of the Russian Revolution. At the $500 million Krasnoyarsk Dam on the Yenisei River in Siberia, the world's largest hydroelectric generator began producing power in November for the first time, an event timed to spotlight the country's technological advances since 1917. Also in November 1967, the world's first large and almost totally precast concrete dam, the Saratov Dam on the Volga River, began producing electric power in observance of the 50th anniversary.

STANLEY KLEIN
Regional Editor, "Machine Design"

NOVOSTI, FROM SOVFOTO

FLOOD WATERS surge through vents in the Krasnoyarsk Dam on the Yenisei River in Siberia. Floods caused by heavy June rains temporarily halted work on the dam, which was nevertheless able to begin producing hydroelectric power for the Soviet Union in November.

FRED FEHL

JEWELS highlighted the New York City Ballet's spring 1967 season. (*Left to right*) Francisco Moncion, Mimi Paul, Violette Verdy, and Conrad Ludlow in "Emeralds."

DANCE

Ballet, which has been capturing more public interest every year, was being challenged in 1967 by nontraditional forms of dance in a rivalry for new horizons and new audiences. Provocative titles and theatrical innovations helped to pique audience curiosity.

Nontraditional Dance. Many avant-garde choreographers gave their new works unusual titles, a hint of novelties to follow. For example, dancer-choreographer Kenneth King named one of his 1967 offerings *Print-Out, Cele(cere)brations: PROBELems & SOULutions fir the dyEYEing: KING.* Another was called *m-o-o-n-b-r-a-i-n with Super Lecture.* Other choreographers in avant-garde centers, such as the Judson Dance Theater, the Bridge Theater, and the Dance Theater Workshop (all in New York City), came up with *God Save our Tis of Thee* (Deborah Jowitt), *Parsley All Over the World* (Jack Moore), *Take Your Alligator With You* (Rudy Perez), *17 Millimeter Earrings* and *Duet with Cat's Scream and Locomotive* (both by Meredith Monk), and *Up to 7 Juxtaposed, And* (Carol Ritter).

"RUBIES," another part of George Balanchine's new ballet *Jewels,* featured Patricia McBride and Edward Villella.

FRED FEHL

BALANCHINE'S *JEWELS* also included "Diamonds," here danced by Suzanne Farrell and Jacques d'Amboise.

FRED FEHL

UPI

PARADISE LOST, a new ballet by Roland Petit, was performed during the 1967 American tour of England's Royal Ballet. Dame Margot Fonteyn and Rudolf Nureyev, shown in a practice session, danced the leading roles.

Some general tendencies among works of this genre were extensive use of specially made film sequences and electronic sound; long stretches in which performers simply stood or sat and stared at the audience; the use of childlike props (crumpled crepe paper, toy balloons, colored streamers), some of which were shared with or tossed at the audience; and a fair amount of disrobing. The trend seemed to be away from dancing, if one thinks of dancing as ordered rhythmic movement through space.

Disrobing took its most intricately staged form in *Parades and Changes*, created for the Dancers' Workshop of San Francisco by its director, Ann Halprin. The company's New York debut caused the local police to refuse them reentry. However, the "evidence" against the company, merely one section of a long, intensely performed work, was more cathartic than narcissistic in motivation.

New Ballets. A fresh choreographic talent is always eagerly awaited. In the spring, Eliot Feld, a dancer with The American Ballet Theatre, premiered *Harbinger* (with music by Sergei Prokofiev), a fluent, youthfully playful work that prompted one reviewer to comment, "It is not just a good first ballet. It is a good ballet—period."

In the autumn, Feld came up with his second ballet, *At Midnight*, danced to a series of Mahler songs. The sequence of the songs was tastefully rearranged to suit the theme—hopelessness gradually giving way to hope. *At Midnight* indicated that Feld, whether serious or playful, can make each dance phrase flow naturally out of what preceded. The ballet was a triumph, thus giving the United States its first new choreographer of major stature since Jerome Robbins.

Several other ballets of lasting significance poked their heads through the practical concerns that beset the dance world, like flowers through cracks in the pavement. The most modest, and perhaps the most endearing, was Sir Frederick Ashton's *Monotones* (to music of Eric Satie) seen during the Royal Ballet's spring tour. The simply clad work had a philosophic mellowness that again showed Ashton to be one of the finest lyric choreographers of our time. Another new offering brought to the United States by the Royal Ballet was French choreographer Roland Petit's *Paradise Lost*. Dame Margot Fonteyn and Rudolf Nureyev brought their own brand of depth and intimacy to the pop art antics of this flashy, yet strangely provocative, version of the Adam and Eve story.

George Balanchine, the New York City Ballet's artistic director, proved once more that he has trained his audiences to follow him wherever he wishes to go. For the company's spring season he produced an evening-long, nonthematic ballet called *Jewels*. With emeralds, rubies, and diamonds as his inspiration, Balanchine seemed to probe to the core of each gem and to find the perfect evocation of its individuality. So well received was the ballet that when it was announced for the company's fall season, all performances were promptly sold out.

Harkness Ballet. The 3-year-old Harkness Ballet, after many changes in managerial personnel, selected Canadian choreographer Brian Macdonald as its artistic director. An intense warm-up period at Clewes Hall in Indianapolis preceded the company's New York debut in November. Although its home and school are in New York, the company had never performed there. It presented an ambitious repertory of 18 ballets by contemporary choreographers, but in most cases the dancers proved more interesting than their material. The principal choreographers were John Butler (*After Eden, Landscape for Lovers, Sebastian,* and *A Season in Hell*) and Macdonald (*Tchaikovsky, Firebird, Time out of Mind, Zealous Variations,* and *Canto Indo*). The most deeply felt, and the most warmly received ballet, was *Monument for a Dead Boy*, by the Dutch choreographer Rudi Van Dantzig.

No expense was spared in mounting the ballets; Macdonald's *Firebird* reputedly cost $100,000 for the gilded and bejeweled sets and costumes by Rouben Ter-Arutunian. The company's benefactress, Rebekah Harkness, also subsidized the 6-performance subscription season of contemporary dance at the Hunter College Playhouse and the free summer dance series in Central Park.

Awards, Grants, and Fund Raising. It was another year of concern with financial problems, grants, and fund raising for most dance companies.

Modest, but sometimes very pervasive in their community effect, were the grants made by the National Endowment for the Arts and Humanities. The most substantial grant ($21,000) went to veteran dancer-choreographer Martha Graham to stage a new work and to revive three others. Small grants of $5,000 or less went to the Atlanta Civic Ballet, the Dayton Civic Ballet, the Ballet Guild of Cleveland, the San Diego Ballet, the Pennsylvania Ballet, the National Ballet of Washington, D.C., the Laguna Beach Civic Ballet, the Sacramento Ballet, the Garden State Ballet of Newark, N. J., and the State Ballet of Rhode Island. In general, these grants were intended to help the companies commission new works, to expand their performing schedules, and enhance their local prestige (and consequently their fund-raising potential).

One of the most imaginative examples of private financing of ballet was seen in Boston, where the Wasemequia Charitable Trust sponsored a summer Vestris Prize Contest for young choreographers. The dancers of the Boston Ballet performed the works of the semifinalists who were chosen in the preliminary round of judging. From these performances three winners were selected, with first prize going to Gyles Fontaine of Washington, D. C. The project was so successful that a second contest was planned for 1968.

State funds were used to aid the dance in Louisiana, Oklahoma, and North Carolina. In Louisiana the state arts council sponsored a summer conference, for which Birmingham choreographer Richard Englund was invited to stage a new ballet simultaneously for five Louisiana groups, who then had the privilege of performing it in their own communities during the year. In Oklahoma the state arts council contributed a substantial sum to an Indian Ballerina Festival. Two performances, one in Tulsa and one in Oklahoma City, were given. Marjorie Tallchief (Osage), Rosella Hightower (Choctaw), Moscelyne Larkin (Shawnee), and Yvonne Chouteau (Cherokee) danced *The Four Moons* to a specially commissioned score by Indian composer Louis Ballard. The North Carolina Arts Council sponsored a week-long tour of public schools by the dance students of the North Carolina School of the Arts. The reaction was so positive that additional funds were promptly allocated for a second tour.

Summer Festivals. Dance teaching around the country was improving. The positive effects were apparent in the two major dance schools at Connecticut College and at Jacob's Pillow in Lee, Massachusetts. But the summer festivals of professional dance held at both places were less impressive. It was the 20th anniversary of the Connecticut College American Dance Festival, and there were new works by José Limón, Ruth Currier, Lucas Hoving, and Merce Cunningham. Only Cunningham's *Scramble,* with its sprightly exterior and serene interior, gave one the feeling that a 20th anniversary could be made of more than nostalgia.

Broadway. It was a lean year in the mass media, although Gillian Lynne's dances for *Half a Sixpence* and Herbert Ross' for *Funny Girl* and *Dr. Dolittle* promised much for dance in films to be released at year's end.

Doris Hering
Associate Editor, "Dance Magazine"

DEATH RATES

The death rate in the United States, which had remained virtually level throughout 1964 and 1965, moved upward slightly in 1966. There were about 954 deaths per 100,000 population in 1966, an increase of 11 per 100,000 over the preceding year. Total deaths in the nation in 1966 were estimated at 1,869,000, or 41,000 more than in the preceding year.

Main Causes of Death. Diseases of the heart accounted for 39.3% of the deaths in the United States in 1966. The other leading causes were cancer (16.2%), strokes (11%), and accidents (6%).

Rates for the four leading causes have not changed greatly in the last decade, but some of their components have changed considerably. Arteriosclerotic heart disease, including coronary disease—which accounts for over three fourths of all deaths from diseases of the heart—has increased by more than 10% in this period.

The death rate from cancer of the respiratory system has increased by nearly 40%. Since 1961 the death rate from motor vehicle accidents has increased by about 30%, while the rate for other accidental deaths has remained about the same

LEADING CAUSES OF DEATH IN U.S., 1966

Rank	Cause of death	Number (estimated)	Death rate per 100,000 population[1]
1	Diseases of heart	734,710	375.1
2	Cancer (malignant neoplasms, including neoplasms of lymphatic and hematopoietic tissues)	303,300	154.8
3	Strokes (vascular lesions affecting central nervous system	204,810	104.6
4	Accidents	112,300	57.3
	Motor vehicle accidents	53,280	27.2
	Other accidents	59,020	30.1
5	Influenza and pneumonia, except pneumonia of newborn	64,230	32.8
6	Diseases of early infancy	51,170	26.1
7	General arteriosclerosis	38,280	19.5
8	Diabetes mellitus	35,380	18.1
9	Other bronchopulmonic diseases	28,740	14.7
10	Other diseases of circulatory system	28,280	14.4
	All other causes	268,100	136.7
	All causes	1,869,000	954.2

[1] Estimated death rates are based on a 10% sample of deaths. Causes of death are ranked on the basis of the U.S. Public Health Service list of 60 selected causes.

Motor Vehicle Deaths. The death rate for motor vehicle accidents rose in 1966 for the fifth year in a row. The rate was 27.2 motor fatalities per 100,000 population, compared with the 1965 rate of 25.2. The all-time peak in death rates from motor accidents, however, was reached in 1941, when the rate was 30 deaths per 100,000. (See also Accidents and Disasters.)

Infant Deaths. Infant deaths have made up a steadily dwindling percentage of total deaths since the country's peak fertility year of 1957. Infant deaths constituted 6.9% of all U. S. deaths in 1957, but they decreased to 4.5% of the total mortality in 1966. The number of infant deaths per 1,000 live births has declined sharply—from 26.3 in 1957 to 23.4 in 1966.

Average Remaining Lifetime. Statisticians calculate that an American child in his first year of life has an average remaining lifetime of 70.1 years. For a person who has reached the 70-to-75 age bracket, the average remaining lifetime is calculated at 11.6 years. And it is expected that a person 85 years old will live, on the average, 4.7 more years.

A. F. P., FROM PICTORIAL

DE GAULLE, addressing the Polish Parliament on September 11, stressed Franco-Polish ties and reaffirmed French recognition of Poland's claim to its present German border.

DE GAULLE, Charles

President of France: b. Lille, France, Nov. 22, 1890.

President de Gaulle told the French people that the Fifth Republic was at stake in the elections to the National Assembly, March 5 and 12, 1967. What he needed, and barely got, was continued majority support for his government. Denouncing his opponents as desiring totalitarianism (the Communists) or parliamentary omnipotence (the non-Communist left and other non-Gaullists), he derided "Moscow's devotees" and "those nostalgic for Washington." The uncertain Gaullist coalition narrowly defeated "the supporters of the old regime."

Domestic Program. Reshaping the cabinet, again headed by Premier Georges Pompidou, the president shifted portfolios, dropped some who had not performed well, and brought in new men or former ministers. But he retained some (such as Maurice Couve de Murville, minister of foreign affairs, and Pierre Messmer, Armed Forces minister) who, though defeated at the polls, were skillful defenders and executants of his policies. Despite a weak parliamentary situation, political protest, and massive strikes across the nation, he got special powers from the Assembly in June (provided for in the constitution) to deal with economic, financial, and social legislation free from parliamentary interference for six months. With an economy still slowed and business and working classes critical of the regime, de Gaulle, without denying the obstacles, predicted the coming of the good society.

Foreign Policy. The inspiration of de Gaulle's foreign policy was an intense desire to curtail the power of the United States. Before the April 1, 1967, deadline he had set in 1966, NATO's forces departed French soil, and he announced recovery of France's "independence." He continued to oppose discussion of Britain's application for membership in the Common Market, and he deplored the role of U. S. industry and money in Europe. He effected closer relations with the Bonn Republic, favored German reunification, provided for eventual Franco-German defense coordination, and simultaneously wooed the Poles (unsuccessfully) by recognizing the Oder-Neisse frontier.

De Gaulle's relations with Washington continued to be icy. His words with President Johnson at Konrad Adenauer's funeral in Bonn on April 25 were brief, and his condemnation of American action in Vietnam was uncompromising. By contrast, in the spring he took pains to talk twice with Premier Kosygin, who was passing through Paris to and from New York.

De Gaulle's grand design was, as before, to unite Europe loosely and free it of both Russian and American hegemony. In addition, he sought to play the honest broker in the Middle East, denying special friendship to Israel and refusing to recognize its territorial gains in the Israeli-Arab war in June.

Travels. In his most spectacular international move of the year, de Gaulle visited Quebec in July, hailed "New France," and, amidst great adulation, shouted extremist French-Canadian separatist slogans in his public addresses. The Canadian government reprimanded him, whereupon he abruptly returned to Paris, reasserted his position, and promised assistance to "emerging" Quebec.

Touring the cities and provinces of Poland in

September, de Gaulle stressed historic Franco-Polish ties. He urged his hosts to be freer of Soviet influence, but the Polish government publicly rejected the idea before de Gaulle left Warsaw.

Background. De Gaulle had a traditional, if distinguished, military career from 1912 to 1940, marked by appeals for a professional army and mechanized forces. Shortly before the collapse of France in World War II, Premier Reynaud brought him into the government. Refusing to accept Marshal Pétain's decision to seek an armistice, de Gaulle established himself in London as leader of the Free French forces. He returned to France and to supreme authority in 1944, but abandoned office in January 1946 rather than accept the reviving political system.

During the grave military and political crisis over Algeria in 1958, de Gaulle was recalled to power. Imposing a new constitution by referendum, he was elected first president of the Fifth Republic later that year. He succeeded in settling the war raging in Algeria by the summer of 1962. He transformed France's remaining colonial empire into a loosely associated community, and in 1962 he revised the constitution to make the presidential office popularly elected.

DELAWARE

Reapportionment of the state legislative districts and an open housing bill were major questions facing the 1967 session of Delaware's General Assembly. Proposals for reorganizing the public school system were a major concern of local communities.

Legislation. The apportionment scheme used in the 1966 elections to Delaware's Senate and House of Representatives was overturned in January by a U. S. district court ruling. In those races the Democrats lost control of the House and won only half of the Senate seats. A long legislative struggle in 1967 produced an agreement to use special federal census data for a new apportionment before 1968, when all seats will again be up for election.

An open housing bill passed the House but was defeated in June by a closely divided Senate. The bill was so mild that it was opposed by the NAACP (National Association for the Advancement of Colored People).

Democratic Reorganization. Following disastrous reversals in 1966, upstate Democrats have established a permanent staff, an advisory council, and a discussion forum under new state and county chairmen. The officers are Alexis du Pont Bayard, a former lieutenant governor, and Harold Bockman, a former speaker of the state House of Representatives.

New Castle County Government. New Castle, the most populous by far of Delaware's three counties, made progress under the new form of government (county executive and county council) adopted for it by the General Assembly in 1965. The executive and the council members elected in 1966 have been installed, as have directors of budget, personnel, police, and public works. A merit system covering most employees has gone into effect. Matters of zoning, drainage, sewage, and garbage disposal were under consideration in 1967.

DELAWARE • Information Highlights

Area: 2,057 square miles (5,328 sq km).
Population: 523,000 (July 1, 1967 est.).

Government: *Chief Officers*—governor, Charles L. Terry, Jr. (Democrat); lt. gov., Sherman W. Tribbitt (D); secy. of state, Elisha C. Dukes (D); atty. gen., David P. Buckson (R); treas., Daniel J. Ross; supt. of pub. instr., George Madden; chief justice, Daniel F. Wolcott. *Legislature*—General Assembly (convened Jan. 3, 1967): Senate, 18 members (9 Republicans, 9 Democrats); House of Representatives, 35 members (23 R, 12 D).
Education: *School enrollment* (1965–66)—public elementary, 65,000 pupils (2,420 teachers); public secondary, 49,000 pupils (2,300 teachers); nonpublic schools, 21,400 pupils (770 teachers); college and university (fall 1965), 13,167 students. *Public school expenditures* (1965–66)—$56,000,000 ($548 per pupil); average teacher's salary, $7,082.
Public Finance (fiscal year 1967): *Revenues*, $314,907,526 (personal, corporation income, and all other, $126,182,847; motor fuel tax, $15,581,031; federal funds, $130,637,867). *Expenditures*, $311,281,529 (education, $115,834,238; health, welfare, and safety, $29,941,485; highways, $39,943,363). *State debt*, $270,239,442 (June 30, 1967).
Personal Income (1966): $1,811,000,000; average annual income per person, $3,529.
Public Assistance (fiscal year 1967): $7,968,768 to 18,627 recipients (aged, $1,271,621; dependent children, $5,014,801).
Labor Force (employed persons, Aug. 16, 1967): *Agricultural*, 13,500; *nonagricultural* (wage and salary earners), 217,900 (32.4% manufacturing, 17.9% trade, 12.3% government). *Unemployed persons* (Aug. 16, 1967)—10,600.
Manufacturing (1965): Value added by manufacture, $889,614,000 (textile mill products, $12,749,000; primary metals, $22,273,000; nonelectrical machinery, $14,624,000; electrical machinery, $8,629,000; fabricated metals (1963), $20,768,000; food and products, $130,617,000).
Agriculture (1966): *Cash farm income*, $129,993,000 (livestock, $90,868,000; crops, $37,320,000; govt. payments, $1,805,000). *Chief crops* (tons)—corn for grain, 222,376; potatoes, 79,550; hay, 63,000; soybeans, 47,712; wheat, 21,000; barley, 17,952; rye, 5,544.
Mining (1966): *Production value*, $1,980,000. *Chief minerals* (tons)—sand and gravel, 1,610,000; stone, 210,000; clays, 11,000.
Fisheries (1965): *Commercial catch*, 48,049,000 pounds ($909,000). *Leading species*—menhaden, 46,497,400 pounds ($579,213); hard blue crabs, 545,600 pounds ($42,436); clams, 363,400 pounds ($184,397); shad, 109,900 pounds ($16,042).
Transportation: *Roads* (1967), 4,338.9 miles (6,983 km); *motor vehicles* (1967), 254,000; *railroads* (1967), 340 track miles (547 km); *airports with scheduled service* (1967), 1.
Communications (1967): *Telephones* (1966), 281,100; *television stations*, 1; *radio stations*, 12; *newspapers*, 3 (daily circulation, 147,988).

Civil Disorders. Disorders broke out in a Negro section of Wilmington on July 28. There was little property damage, but some 170 policemen, with 1,500 National Guardsmen standing by, made 250 arrests for disorderly conduct, looting, and curfew and rioting violations. Seven injuries from gunshot were reported. State and city officials passed strict riot-control measures, and order was restored by August 8. A governor's committee, meeting six weeks later, made almost 100 recommendations involving job opportunities, housing, recreational and educational facilities, sanitation, and police pressure.

Public Education. During the year a governor's committee, chaired by Chief Justice Daniel F. Wolcott, held well-attended hearings around the state on controversial proposals to consolidate 48 school districts into 11. Following these hearings, an advisory committee of the state board of education proposed an $8 million, 22-district plan to be implemented through the board. Wilmington responded with a study recommending the closing of two traditionally all-Negro schools and the formation of an integrated school system for all of New Castle County.

A public junior college, Delaware Technical and Community College, opened at Georgetown in the fall.

DEMOCRATIC PARTY. See POLITICAL PARTIES.

PRINCESS MARGRETHE and Count Henri de Monpezat appeared on the balcony of the palace in Copenhagen after their wedding, June 10.

PICTORIAL PARADE

DENMARK

The marriage of Crown Princess Margrethe was celebrated on June 10, 1967, with festivities that also honored the 800th anniversary of the founding of Copenhagen. Other major events of the year were the enactment of tax-reform measures, the application for membership in the European Economic Community (Common Market), the labor agreement, and the fall on December 15 of Prime Minister Krag's Social Democratic minority government as a consequence of devaluation of the British pound and the Danish krone.

Politics and Legislation. The elections to the Folketing (parliament) in November 1966, which were called suddenly by Prime Minister Jens Otto Krag after he had met strong opposition over proposed tax reforms, resulted in a socialistic majority and several changes in the cabinet. In the first change, made soon after the election, Prime Minister Krag assumed the foreign ministry from Per Haekkerup and assigned Haekkerup to lead the Social Democrats in the Folketing. The most significant of the other changes were the naming of Hans Tabor, formerly Danish permanent ambassador to the United Nations, as foreign minister, effective October 2, and the ouster of Tyge Dahlgaard as minister for foreign trade because of his conflict with Krag on trade problems. Otto R. Borch succeeded Tabor at the UN.

An agreement with the Socialist People's party on several issues led to easy passage of the budget and of the tax reforms, which created a new tax system with increases in the sales tax and profits tax and adoption of a process tax. Pressures from the left wing in the Folketing resulted in increases in the lower limits on incomes for tax purposes and in the minimum child-care payments.

Economy. The persistence of inflation and the slow growth in production presented difficulties for the Danish economy, but the labor agreement of March, which included a wage increase to become effective on Jan. 1, 1968, seemed to guarantee industrial peace for another three years. Then, on November 18, came the announcement of the 14.3% devaluation of the British pound. To protect its chief exports—agricultural products, half of which

Gross National Product (1966): $11,087,000,000.
Economic Indexes (1966): *Industrial production*, 173 (1958=100); *agricultural production*, 119 (1956–57=100); *cost of living* 142 (1958=100).
Manufacturing (metric tons, 1966): cement, 2,028,000; meat, 1,050,000; gasoline (1965), 852,000; beer (1964), 505,700.
Crops (metric tons, 1966–67 crop year): barley, 4,141,000; sugar beets, 2,300,000; potatoes, 930,000.
Minerals (metric tons, 1965): coal, 1,400,000; lime, 570,000; diatomaceous materials, 200,000; iron ore, 65,000.
Foreign Trade (1966): *Exports*, $2,456,000,000 (chief exports, manufactured goods, $958,000,000; bacon, $262,020,000); *imports*, $3,005,000,000 (chief imports, 1965: nonelectrical machinery, $293,000,000; transport equipment, $262,000,000). *Chief trading partners* (1965): West Germany (took 16% of exports, supplied 21% of imports); Britain (took 21% of exports, supplied 13% of imports).
Transportation: *Roads* (1964), 37,344 miles (60,098 km); *motor vehicles* (1965), 981,084 (automobiles, 744,416); *railways* (1965), 2,476 miles (3,984 km); *merchant vessels* (1966), 342 (2,641,000 gross registered tons); *national airline*, Scandinavian Airline System (SAS).
Communications: *Telephones* (1966), 1,363.988; *television stations* (1965), 17; *television sets* (1965), 1,084,000; *radios* (1965), 1,587,000; *newspapers* (1965), 67.

go to Britain—Denmark was forced on November 21 to devalue the krone by 7.9%. And to safeguard the benefits of devaluation, Prime Minister Krag called for legislation blocking the wage increase. When the bill was rejected on December 15 by a vote of 92 to 85, Krag resigned immediately and called for new elections on Jan. 23, 1968. In those elections the Social Democrats were defeated by a coalition of three non-Socialist parties. Hilmar Baunsgaard, leader of the Radical Liberals, was named prime minister on February 1.

Denmark's foreign trade in the first half of 1967 showed a deficit, but slightly less than that of 1966. The gross national product declined in the first half of the year, but economic activity showed an upswing during the summer.

Foreign Policy. The major Danish concern in 1967 was membership in the European Economic Community, for which application was made in May. The final spring session of the Folketing argued this move fully. It also discussed at length demands for sanctions against the military regime in Greece and against Rhodesia, and a resolution on the Vietnam War. When war broke out between Israel and the United Arab Republic in June, the cabinet and foreign policy committee met in a special session to define Denmark's stand.

Royal Family Weddings. The marriage of Crown Princess Margrethe to Count Henri de Monpezat of France, who became Prince Henrik of Denmark, was celebrated on June 10 with great pomp, to the ovations of a pleased Danish people. Announcement on June 4 of the engagement of Princess Benedikte to Prince Richard Casimir zu Sayn-Wittgenstein was also received with pleasure. The marriage was held on Feb. 3, 1968.

Uppsala, Sweden

DENTISTRY

In addition to developing new diagnostic and treatment procedures during 1967, the dental profession continued to devote its attention to the rising demand for dental care, the professional resources available to meet this demand, and the costs of dental care.

Manpower. There are about 100,000 professionally active dentists in the United States today, about 1 dentist per 2,000 people. Estimates of population growth for the period from 1967 to 1975 indicate that this ratio will remain the same at least until 1975, despite the efforts of universities to build new dental schools and to enlarge existing ones. This prediction is not at all a favorable one, especially since the demand for dental care is continuing to rise rapidly.

To be able to provide the dental services needed in the years ahead, the dental profession took further measures to expand the functions of dental hygienists and dental assistants, thus increasing the output of the dentist. Various research studies indicate that dental auxiliaries can be trained to perform many of the duties now done by the dentist, including the insertion of filling material into a cavity and the changing of a surgical dressing.

Detection of Oral Cancer. Each year about 25,000 persons develop cancer of the mouth or lips, and about 7,000 die from the disease. In 1967 the American Dental Association, in cooperation with the American Cancer Society, increased its efforts to promote early diagnosis and treatment of oral cancer. One of the diagnostic techniques that gained increased acceptance by dentists during 1967 is the oral cytological smear that is treated with the Papanicolaou stain to reveal cancerous or precancerous cells. This smear technique is identical to that used by physicians for the early detection of cancer of the uterine cervix.

Dental Decay. In 1967 more than 72 million persons were served by fluoridated water supplies, an increase of about 26 million since 1957. Although water fluoridation continues to be the single most effective means of preventing dental caries in children, several research groups have reported other promising developments. Joseph C. Muhler and his coworkers at the University of Indiana reported that the enrichment of dry breakfast cereals with 1% sodium dihydrogen phosphate reduced the incidence of dental caries from 20% to 40% in children who regularly consumed the cereals over a 2-year period. Sidney B. Finn and Homer C. Jamison of the University of Alabama announced that dicalcium phosphate, when added to ordinary chewing gum, also helps prevent dental caries. At the National Institute for Dental Research, Harold England and his colleagues demonstrated the decay-preventing effects of fluoride gels when applied daily to the teeth of schoolchildren.

For years researchers have sought a chemical agent that would coat the teeth and make them impervious to the microbial by-products that cause dental caries. Michael Buonocore of the Eastman Dental Center came closest to this goal in 1967. Working with E. I. Cueto, he treated the pits and fissures of the teeth of 269 elementary and high school children with an adhesive resin and found a striking 86% reduction of dental caries over a period of 21 months.

LELAND HENDERSHOT
Editor-in-Chief, American Dental Association

DERMATOLOGY

Many exciting new developments were reported in dermatology in 1967. These included the explanation of why ovulatory-regulating hormones and tetracyclines benefit acne, and the discovery of new treatments for Reiter's syndrome and porphyria.

Acne. The antibiotic tetracycline has often been used in treating acne, but not until 1967 was the effectiveness of the drug elucidated. P. L. Rashleigh found that even small doses taken orally reach the skin surface in measurable amounts. He suggested that the fat-soluble molecules of the antibiotic reach the skin surface as part of the sebum, the oily secretion of the sebaceous glands.

The use of drugs containing estrogen and progestin for treating acne has been a controversial topic for several years. Now it has been discovered that the beneficial effect of this therapy is due to the estrogen component alone. According to John M. Knox and Donald W. Owens, the estrogen suppresses the activity of the sebaceous glands.

A new method of smoothing acne scars was found by J. A. Leeming, who injected the drug triamcinolone directly into the scar tissue.

Drug Reactions. In 70 patients studied by J. Kinross-Wright, it was found that the tranquilizer chlorpromazine combined with the skin pigment melanin to produce a deep purple coloration. In a study of radioactive chlorpromazine, it was found that the drug became attached to melanomas (skin tumors) when it was injected into mice. This discovery by S. Blois provides a means of treating human melanomas with internal irradiation.

Fungus Infections. It has been known that pregnancy, diabetes mellitus, and some antibiotics predispose women to vaginal *Candida albicans* infections. R. D. Catterall proved that oral contraceptives may also lead to this type of infection.

Hormone Therapy. Systemic adrenal corticosteroid hormones remain the best treatment for many skin diseases, and C. L. Cope found that their use does not subject a patient to a significant risk of adrenal gland failure during stress, as was previously believed. In another study, J. Alma and F. L. Iber found that the oral administration of methandrostenalone relieved intractable pruritus (itching).

Spider Bites. The bite of the brown recluse (*Loxosceles reclusa*), a spider that lives in dark recesses inside houses and other buildings, produces a gangrenous sore that may take a long time to heal. C. J. Dillaha found that large doses of adrenocorticosteroid hormones prevents protracted convalescence.

Reiter's Syndrome. This unusual and sometimes crippling condition is characterized by arthritis, conjunctivitis, urethritis, and skin lesions. For years no treatment was known, but J. F. Mullins and his colleagues cured several cases with amethopterin.

Porphyria. In porphyria cutanea tarda, exposure to sunlight produces stinging blisters that leave mutilating scars when they heal. The treatment of this disease was unsatisfactory until A. G. Redecker helped several patients by giving them large doses of the antimalarial drug chloroquine.

Syphilis. Specific laboratory tests for diagnosing syphilis were unsatisfactory until W. E. Deacon, J. B. Lucas, and E. V. Price perfected an accurate and inexpensive test known as the fluorescent treponemal antibody absorption test (FTA-ABS).

Other Developments. Erythema multiforme was evoked by W. B. Shelley by injecting herpes simplex (cold sore) viruses into a patient, suggesting that this virus may be the cause of many erythema multiforme cases. In studying the rare skin disease elastasis perforans serpinginosa, H. B. Christianson found that 30 of 68 patients had associated congenital abnormalities, such as mongolism.

DAVID R. WEAKLEY
Southwestern Medical School, Dallas

DETROIT

The nation's worst urban riot in recent history, passage of the city's first open-housing bill, strikes, and a recall campaign against Mayor Jerome P. Cavanagh dominated the news in Detroit in 1967.

The Riot. During one week in July, 43 persons died in Detroit in the nation's bloodiest race riot. The rioting, touched off on July 23 by a police raid on an after-hours drinking spot in Detroit's Negro ghetto, was marked by sniper activity, looting and fire-bombing that destroyed entire city blocks. Property damage was estimated at $150 million. Michigan Gov. George Romney quickly ordered 1,500 National Guardsmen into the city, declared martial law, banned liquor and gasoline sales, and imposed a dusk-to-dawn curfew. On July 25, 4,700 federal troops moved into the city at Romney's request to aid city and state police and National Guardsmen, but not until July 30 was order fully restored.

A 37-member citizens' group was set up in August by Governor Romney and Mayor Cavanagh to plan reconstruction of the city's riot-torn areas. Among its recommendations was a state open-housing law, later placed before the legislature. The committee found jobs for 10,000 unemployed persons. The Ford Motor Company hired 5,000 poverty-stricken persons from inner city areas. (See also CIVIL RIGHTS.)

Open-Housing Ordinance. On November 28 an open-housing bill prohibiting discrimination by race, religion, or national origin in the selling and renting of housing was passed by Detroit's common council. It was the first such measure to be approved in the city's history.

Strikes. The Ford Motor Company was shut down for 61 days at the beginning of 1968-model-car production by a nationwide strike of 160,000 members of the United Automobile Workers (UAW). The bulk of Michigan's 80,000 auto workers are in Detroit. The strike, which began in early September, finally was settled with ratification of a 3-year contract.

A contract agreement similar to the one at Ford averted a strike against the Chrysler Corporation hours before a strike deadline. A contract agreement was reached at the General Motors Corporation without the setting of a strike deadline. (See also AUTOMOBILES; LABOR.)

The opening of Detroit's public schools was de-

RIOTING on 12th Street in Detroit, July 23, is shown in this award-winning photograph.

WIDE WORLD

layed nine school days in September when 11,000 members of the Detroit Federation of Teachers, an affiliate of the American Federation of Teachers, refused to work without a contract. Under the settlement, the teachers went back to the schools with pay increases of $1,700 over a 2-year period.

Detroit's two daily newspapers, the *News* and the *Free Press*, were shut down in November when Teamsters Union members seeking higher wages struck the *News* and the *Free Press* stopped publication under a publishers' agreement. The strike was settled in February 1968.

Police Slowdown. Police demands for higher pay resulted in a bitter struggle with the city administration in 1967. Police began a slowdown in the writing of traffic tickets on May 16. Countermeasures by the city led to the so-called "blue-flu epidemic," and by June 20 more than a third of the city's force reported themselves "too sick to work." Finally a citizens' committee worked out a truce between the city and police. Police officers returned to work on June 24 while the committee agreed to mediate the dispute.

Grand Jury Probe. On August 31, Judge George E. Bowles of the Wayne county circuit court ended a year's inquiry into crime in the county. The investigation produced no substantive criminal charges.

Finance. The 1967–68 budget provided for the spending of $417 million on city services.

DISTILLING INDUSTRY

Production of distilled spirits in the United States during the fiscal year 1967 decreased by 16,377,746 tax gallons from that of 1966. Production had been on a steady rise since 1963.

U.S. DISTILLED SPIRITS PRODUCTION
(in tax gallons[1])

	Fiscal 1967	Fiscal 1966
Whiskey	132,192,223	140,186,790
Brandy	18,024,374	17,857,662
Rum	1,674,911	2,637,380
Gin	27,796,758	27,030,847
Vodka	14,028,121	14,352,676
Alcohol and spirits:		
190° and over	641,238,623	642,997,951
Under 190°	38,019,188	44,288,638
Total	872,974,198	889,351,944

[1] A tax or proof gallon is a standard U.S. gallon of 231 cu. in. containing 50% ethyl alcohol by volume; a wine gallon is a standard U.S. gallon regardless of proof.

Rectified Spirits. In the fiscal year 1967, rectifying plants used 102,609,645 proof gallons (98,577,950 proof gallons in the fiscal year 1966) of domestic and imported liquors, and production by rectification amounted to 103,240,672 proof gallons (98,842,837 in 1966). Whiskey accounted for more than two thirds of the total production by rectification.

Output for Consumption. During the calendar year 1966 the bottled output of domestic and imported distilled spirits was 271,229,474 wine gallons, an increase of 7.3% over 1965. Whiskey bottled during 1966 amounted to 173,206,259 wine gallons for 63.9% of all distilled spirits bottled.

The remainder of the bottled output consisted of gin, 31,687,376 gallons; vodka, 34,667,111; rum (not including rum imported from Puerto Rico), 1,704,899; brandy, 9,265,833; cordials, liqueurs, and similar products, 16,213,541; and miscellaneous (including products bottled for exportation), 4,484,455.

U.S. DISTILLED SPIRITS WITHDRAWALS

	Fiscal Year 1967 (Tax gallons)	Fiscal Year 1966 (Tax gallons)
Taxable Withdrawals:		
Whiskey, bottled-in-bond[1]	7,316,170	7,813,661
Whiskey, total	94,821,404	93,050,949
Brandy	8,947,494	8,387,257
Rum	430,673	408,802
Gin	27,276,223	26,910,719
Vodka	13,698,198	13,962,533
Alcohol and spirits:		
190° and over	51,670,429	47,426,366
Under 190°	24,396,068	25,112,927
Total taxable withdrawals	221,240,489	215,259,553
Tax-free Withdrawals:		
For addition to wines:		
Brandy	988,298	555,044
Spirits	34,421,740	43,749,982
For export:		
Whiskey only	1,954,468	1,742,254
Other distilled spirits	1,950,128	1,496,844
Transfers to customs manufacturing bonded warehouses		
Whiskey only	713,002	556,342
Other distilled spirits	345,224	426,081
For vessels and aircraft	3,960	2,986
For use of U.S. government	1,266,070	1,315,386
Alcohol for hospital, scientific, and educational uses	3,058,171	3,028,252
Alcohol for medicinal, beverage, and other uses in Puerto Rico	130,134	142,012
Used for denaturation		
Alcohol	564,515,545	576,357,201
Rum	1,023,822	1,518,763
Total tax-free withdrawals	610,391,009	630,921,066

[1] Included in total whiskey.

Apparent Consumption. The apparent consumption of distilled spirits in the United States during the calendar year 1966 rose 5.0% over 1965 to 308,916,913 wine gallons. This figure is based on actual wholesale and retail sales in the control states, and on tax collections or shipments to wholesalers in the license states.

Revenues. Revenues accruing to the federal government from distilled spirits during 1966 amounted to $2,913,139,139, an increase of 1.9% over 1965. This accounted for 73.6% of federal collections for alcoholic beverages, which totaled $3,957,973,352. Taxes on beer accounted for 23.2% of the total alcoholic beverage receipts, and wine accounted for 3.2%. The federal excise tax rate on distilled spirits was $10.50 per proof gallon.

Imports and Exports. Dutiable imports of distilled spirits into the United States in 1966 amounted to 60,449,880 tax gallons, with whiskey comprising 87.5% of the total. Exports of distilled spirits amounted to 2,160,395 proof gallons.

Distillers' Dried Grains. Production of distillers' dried grains at all distilled spirits plants during 1966 consisted of 363,000 tons of dark grains, 28,000 tons of light grains, and 20,800 tons of dried solubles, for a total of 411,800 tons.

DOMINICAN REPUBLIC

The year 1967 was officially designated the "Year of Development" in the Dominican Republic. The government of President Joaquín Balaguer, with the help of an enormous aid and technical assistance program on the part of the United States, sought to increase growth in nearly all sectors of the Dominican economy and society, and through this to bring the country out of its long stagnation.

Background. Much attention was focused on the success or failure of Balaguer's development plans. For the Dominican Republic had, in recent years, achieved an importance far out of proportion to its size or population. After 31 years of the extremely oppressive dictatorship of Generalissimo Rafael Leonidas Trujillo Molina, and the years of upheaval and instability following Trujillo's fall from power in 1961, the country exploded in 1965 in revolution and civil war which culminated in the use of U. S. troops. These events, particularly the American intervention, focused worldwide interest on this Caribbean nation.

Following a stormy postrevolution interim, Balaguer, a former puppet president under Trujillo, was elected president in 1966 on a platform of peace, national unity, and national reconstruction. His Year of Development plan was aimed at realizing these goals. Because U. S. policy—with regard not only to the Dominican Republic but also to other developing nations—was at stake, the attempt of Balaguer to bring his country out of the ravages of the destructive revolution into an era of growth and modernization was closely scrutinized by the nations of the rest of the world.

Economic Affairs. As the government's Year of Development projects were revealed, it became clear that concern would be almost exclusively directed toward economic growth, rather than political reform. Balaguer's administration, with the strong backing of the United States, initiated widespread and potentially far-reaching programs intended to modernize the nation's inefficient and often backward system of agriculture, diversify the sugar-growing-dominated economy, supply low-cost housing, increase exports, reduce corruption and waste, develop educational facilities, spur industrialization, provide water and electricity to isolated rural areas, and build aqueducts and farm-to-market roads.

At the same time, the budget was balanced, and the uneconomical government-owned sugar corporation was reorganized. A variety of public works projects provided more jobs for a labor force in which unemployment reached 40%, and a strict austerity program that froze wages and curbed the importation of numerous manufactured goods was put into effect. The cutback was aimed at relieving the chronic balance-of-payments deficit.

The programs launched in 1967 made some progress toward solving a few of the more crucial problems faced by the Dominican government. However, despite all these efforts, the economic decline seemed to continue. The situation was further aggravated in 1967 by the worst drought the country had suffered in 20 years.

Politics. While most of Balaguer's economic programs were forward-looking and long overdue, the political problems of the country, as yet not decisively confronted, were even more crucial. Early in 1967 the killing of a young leftist initiated a new wave of violence and bitter hatred. There was an attempted assassination of Gen. Antonio Imbert, who had himself been involved in the assassination of Trujillo and who had led the more conservative forces in the 1965 civil strife. The government also uncovered, on January 23, a plot to overthrow President Balaguer, and many leaders of the left-of-center opposition were terrorized by right-wing extremists—some were ambushed, others were detained in jail, and a few "disappeared." The armed forces, independent of civilian control and always a crucial element in Dominican politics continue to meddle in government and to oppress the non-Communist left. Several members of the hated Trujillo family were permitted to return from exile, while other *trujillistas* secured important posts in the government, which raised for many Dominicans the spectre of renewed dictatorship.

Suspicion, fear, and terror were prevalent throughout the year. The principal opposition group, the Dominican Revolutionary Party (PRD), was racked by internal dissension and missed the charis-

NORTH AMERICA
SOUTH AMERICA

Area: 18,816 square miles (48,734 sq km).
Population: 3,750,000 (July 1, 1966, est.).
Chief Cities (1965 est.): Santo Domingo, the capital, 435,155; Santiago, 99,020; San Francisco de Macorís, 30,824; La Romana, 28,521.
Government: *President*—Joaquín Balaguer (took office July 1, 1966 for a 4-year term). *Parliament* (National Congress)—Senate, 27 members (party seating, 1967: Reformists, 22; Dominican Revolutionary Party (PRD), 5); Chamber of Deputies, 74 members (party seating, 1967: Reformists, 48; PRD, 26).
Religious Faiths: Roman Catholics, 97% of population; Protestants, 1%; others, 2%.
Education: *Literacy rate* (1964), 35% of population. *Total school enrollment* (1962)—550,443 (primary, 479,084; secondary, 40,419; teacher-training, 346; technical, 25,272; higher, 5,322).
Finance (1966 est.): *Revenues*, $162,600,000; *expenditures*, $193,800,000; *monetary unit*, peso (1 peso equal U. S.$1).
Gross National Product (1965): $1,000,000,000.
National Income (1964): $674,000,000; average annual income per person, $193.
Cost of Living Index (1966): 119 (1958=100).
Manufacturing (metric tons): Sugar (1966), 793,000; cement (1965), 212,000; beer (1964), 30,200.
Crops (metric tons, 1966–67 crop year): Bananas (1963–64), 447,000; cassava (1962–63), 148,000; rice, 150,000; sweet potatoes and yams (1962–63), 76,000; coffee, 42,000.
Minerals (metric tons, 1965): Bauxite, 892,800; limestone, (1964), 400,000; gypsum, 90,000; salt, 11,000.
Foreign Trade (1966): *Exports*, $137,400,000 (chief exports: sugar, 76,700,000; coffee, $21,000,000; cacao, $11,200,000; tobacco, $6,600,000); *imports*, $160,000,000 (chief imports, 1964: chemical and pharmaceutical products, $15,140,000, automobiles, $8,750,000; cotton piece goods, $7,760,000). *Chief trading partners* (1964): U. S. (took 65% of exports, supplied 52% of imports); West Germany (took 2% of exports, supplied 6% of imports).
Transportation: *Roads* (1964), 5,794 miles (9,324 km); *motor vehicles* (1965), 41,500 (automobiles, 29,200); *railways* (1965), 137 miles (220 km); *airlines*, 4 international; *principal airport*, Santo Domingo.
Communications: *Telephones* (1966): 31,290; *TV stations* (1965), 4; *TV sets* (1965), 50,000; *radios* (1963), 139,000; *newspapers* (1965), 7 (daily circ., 98,000).

matic leadership of ex-President Juan Bosch, who had left for voluntary exile in Spain. Despite the talk of a dialogue between the government and the opposition, the PRD became impatient and fell more under the control of its radical wing. On May 7, PRD members walked out of the National Congress in protest against an alleged bomb attack on one of its senators, Rafael Casimiro Castro. Shortly afterward, the politically volatile national university was closed. The several Communist parties remained weak and divided, but the possibility of renewed guerrilla warfare was always present. On September 8, in an attempt to bolster his own authority, Balaguer juggled the military and police commands. Late in 1967, the extreme right-wing followers of General Elías Wessin y Wessin formed the Quisqueyano Party. The country seemed to be polarizing in the way it had before the start of the 1965 revolution.

All this did not augur well for the success of the Balaguer government. The president had been able to achieve some measure of national economic reconstruction, but the goals of peace and unity remained elusive. No one doubted the personal honesty and sincerity of Balaguer himself, who lived frugally and was clearly well-intentioned. But the question of whether he was strong enough to hold the seething country together remained unsettled. In the series of crises that occurred throughout the year, Balaguer proved himself a politician skilled enough to slide through difficulties and able to mollify or conciliate divergent, conflicting interests. But he was not a decisive leader, and he failed to deal with most of the larger political questions facing the country. He tended to act only on small issues, while the major problems remained unsolved and the country continued to drift.

Few Dominicans or foreign observers are as yet willing to predict whether Balaguer will last out his four-year term. The quiet that sometimes exists in the Dominican Republic is an uneasy one, and the country remains perhaps subdued but hardly serene. Deep divisions between social and political groups still fragment the nation, and widespread tensions and bitterness are always present beneath the surface.

On the other hand, by the end of 1967, President Balaguer's administration had survived longer in the quicksands of Dominican politics than any of the other close to a dozen governments of the country's post-Trujillo era. The nation's position remained ambivalent at year-end: most Dominicans in 1967 seemed to have tired of revolution and upheaval; however, the situation could easily flare up again.

DRAMA. See THEATER.

DRUGS

The 100,000 practicing pharmacists in the United States are now dispensing more than 1 billion prescription orders annually. They first passed the billion mark in 1966. The average prescription charge in 1966 was $3.56.

Total transactions in the 52,000 community pharmacies in 1966 amounted to more than $10 billion, a record, of which all drugs and health aids accounted for $5.2 billion. These sales included $3.3 billion for prescription medication and $1.4 billion for packaged medication.

Pharmaceutical Manufacturers. U. S. manufacturers' prescription drug sales reached $4.7 billion in 1966, a 10.5% increase over the previous year. Foreign sales rose nearly 17%, compared with a domestic rise of 8%. A survey by the Pharmaceutical Manufacturers Association (PMA) reported that the prescription drug industry's sales to government totaled $302 million, and that sales to federal hospitals alone rose 36%. The industry's domestic tax bill was $506 million, and its employees numbered more than 200,000.

Fewer new medicines were introduced in the United States in 1966 than in any of the previous 18 years for which accurate records are available, the Paul de Haen, Inc., Drug Information Services reported. New prescription drug products—single chemical agents, duplicates, combinations, and new dosage forms—dropped from 112 to 80, continuing a 10-year downtrend. The sharpest decline was in single new chemical agents, which reached a new low of 12 in contrast to a high of 63 in 1959.

Research and development expenditures by PMA members totaled $374.4 million for human research and $27.7 million for veterinary research. Government-financed research through the firms cost $14 million, raising the grand total to $416.1 million.

Government. Government involvement in drug matters continued to increase in 1967. The Food and Drug Administration expanded control of stimulant and depressant drug products. The nursing home provisions of Medicare, effective on Jan. 1, 1967, included drug benefits, as did Medicare for military dependents and the federal-state Medicaid programs.

In Congress, two dozen bills would have provided prescription medications for Medicare recipients not in institutions. The leading bill in that category was by Sen. Joseph M. Montoya of New Mexico, who also unsuccessfully introduced it as an amendment to Social Security law changes. A successful amendment was that by Sen. Russell B. Long of Louisiana to add to Social Security a federal formulary for welfare drug use and expenditures. Sen. Gaylord Nelson of Wisconsin conducted hearings on a wide range of drug topics.

The Administration sponsored in Washington a two-day National Conference on Medical Costs that included panel discussion of the cost of pharmaceutical services. At the request of President Johnson, Health, Education, and Welfare Secretary John W. Gardner established a Task Force on Prescription Drugs to study outpatient drug coverage under Medicare, and to report by Jan. 1, 1968.

Congressional hearings were also held on drug distribution (under Rep. J.D. Dingell of Michigan), and on physician ownership of pharmacies (under Sen. Philip A. Hart of Michigan). Congressional interest also focused on drug benefits for veterans, drug patents, medicine cabinet locks, family-planning drugs, mind-altering drugs, and drug samples.

Meetings and Observances. More than 4,300 pharmacists and guests attended the annual meeting of the American Pharmaceutical Association, in Las Vegas in April. In Toronto, in August, more than a score of U. S. pharmacists joined colleagues from Europe, Asia, and Latin America in commemorating the 60th anniversary of the Canadian Pharmaceutical Association.

American Pharmaceutical Association

CAMERA PRESS-PIX

RESCUE WORKERS lift the stairs of a wrecked building in order to remove a victim of the earthquake that struck an area of Caracas, Venezuela, on July 29.

EARTHQUAKES

Earthquake activity in 1967 was somewhat greater than in recent years. The most destructive quakes took place in July, when about 500 persons were killed and more than $100 million damage was done to property. No serious earthquake struck the United States in 1967, however. The United States has constructed a worldwide network of earthquake recording stations to provide instant standard seismographic reporting around the world.

Europe. The first severe earthquake of 1967 occurred on January 4 in central Greece, but no one was killed. Greece was again struck on March 4 by a quake that was also felt in Turkey and Bulgaria. The shock had a magnitude on the Richter scale of nearly 7, but only 40 houses were damaged, mostly on Skyros Island in the Aegean Sea. In contrast, a quake of magnitude 6 in Greece on May 1 killed nine persons and left 22,000 homeless.

Southern France was shaken by an earthquake of magnitude 5.3 that injured many persons but killed only one. A more serious quake of magnitude 6.5 occurred on November 30 along the Yugoslavian-Albanian border; at least 18 persons were killed and 174 were injured. Most of the houses in the village of Debar, Albania, were reduced to rubble.

Turkey. A sharp earthquake struck northern Turkey on July 22, killing 97 persons and destroying 1,500 houses in northern Anatolia. The quake occurred in the western end of the Anatolian Fault. In Adapazari, east of Istanbul, over 1,000 buildings were destroyed. On July 26 another earthquake took place, this time in the eastern end of the Anatolian Fault. It destroyed 20,000 buildings in villages of the provinces of Tunceli and Erzincan and killed at least 112 persons. On July 30 the Adapazari region was again shaken, but although many structures collapsed only two persons were killed.

South America. An earthquake of magnitude 6.75 caused widespread destruction in Colombia on February 9. About 100 persons were killed and many more were injured; the Magdalena Valley was most seriously hit. Colombia felt a second shock on May 8, but only two persons were killed and property damage was slight. On July 29 a quake of magnitude 6.5 hit Colombia, 150 miles (240 km) north of Bogota. Ten persons were killed, and there was extensive damage in Betulia.

Venezuela itself experienced an earthquake on July 29. The quake, of magnitude 6.5, struck west of Caracas. It killed 277 persons and caused over $100 million worth of property damage. In the Los Palos Grandes section of Caracas four apartment buildings ranging from 10 to 12 floors high collapsed. In Maracay, west of Caracas, five persons were killed and much damage was reported.

Asia. The strongest earthquake of the year, with a magnitude of 7.25, struck Mongolia on January 5. It did no damage, however, because it occurred in an uninhabited area. On the other hand, more than 190 persons were killed and more than 1,000 injured as a result of tremors that struck the west coast of India from Bombay to Bangalore on December 11. The most severely damaged town was Koyna, about 150 miles southeast of Bombay.

On February 19, Indonesia experienced a quake of magnitued 6.75 that killed 54 persons and destroyed about 2,000 homes in Malang, east of the capital city of Jakarta. On April 11 a quake in southern Celebes caused 37 deaths and created considerable property damage.

Other Areas. Veracruz, Mexico, suffered extensive damage from an earthquake on March 4, but no lives were reported lost. A severe tremor was felt in northwestern Algeria on July 13. The quake killed ten persons in M'Kalif, southeast of Oran, and destroyed about 40 houses.

Seismology. One of the most interesting events in earthquake investigation in 1967 was the meeting in Switzerland of the International Union of Geodesy and Geophysics. Possibilities of earthquake prediction through study of minute local variations in the earth's magnetic field were among the topics discussed at the seismic meetings, held in Zurich.

The most important topic discussed at these meetings was the world's rift system. A ridge that runs down the mid-Atlantic Ocean and that is a mild source of earthquakes has been known for some years. Evidence was presented at the sessions that similar ridges run down the middle of the Pacific and Indian oceans and that they also extend under the continents—notably under the western United States and the Rhine Valley in Europe. It has been suggested that these ridges are caused by hot rocks pushing up from the mantle and splitting the crust, forming a rift bounded by ridges, and causing the ocean floor to spread. (See GEOLOGY.)

ECONOMIC REVIEW

The American economy ran into a bit of turbulence in 1967. It encountered a brief downdraft, and it also was buffeted by international monetary adjustments. For the year as a whole, however, the overall trend continued upward, and the United States extended the longest sustained period of prosperity in its history, beginning in March 1961.

Among the problems confronting the economy were the continuing struggle in Vietnam and its accompanying threat of inflation, social unrest at home, and strikes. Fear of inflation brought a request by the administration in Washington for a 10% surcharge on the income tax. The requested surtax was intended to dampen consumer enthusiasm and to help offset a mounting federal government deficit spurred on by the cost of the Vietnam conflict. Ironically, though, a slowdown in the rate of growth in the economy dampened legislative enthusiasm for increasing taxes—Congress refused to enact the tax hike in 1967—and the divisive outlook added an air of confusion to an otherwise basically sound economic performance.

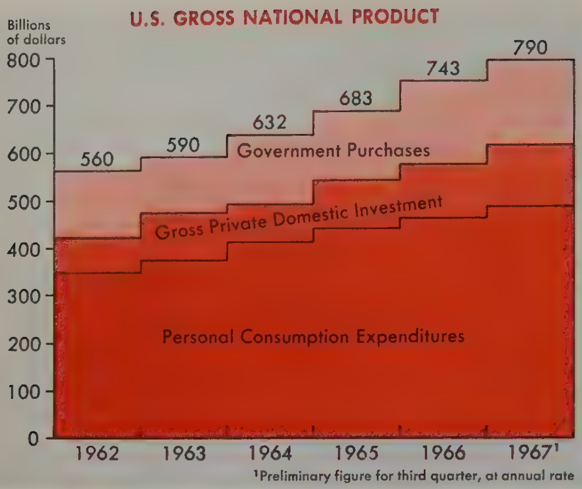
The economy was performing with strength as it entered 1967, but bad weather, strikes, and an unsustainable high level of performance in some economic areas combined to slow activity in the first half of the year. But in the last half of the year business picked up in most areas. The gains developed effectively enough and soon enough to prevent the slowdown from becoming a recession. Early in the year Congress restored the 7% investment tax credit and an accelerated depreciation allowance as an encouragement to business. Reflecting fears of a general slowdown, this prompt action appeared to have produced the desired result.

WIDE WORLD

ADAPAZARI, in Anatolia, Turkey, was heavily damaged in the violent earthquake that struck the area on July 22.

Measuring the Economy. By the most comprehensive measure of economic performance—the gross national product (GNP)—the U. S. economy paused as it entered 1967. GNP on an annual rate basis barely advanced in the first quarter of the year, rising only a little over $4 billion from the fourth quarter of 1966. On a constant-dollar basis (in which the inflation of current dollars is taken into account), GNP in the first quarter retreated slightly, indicating that any advance recorded was in price increases and not in real product. But on an annual rate basis, GNP improved as the year wore on, rising from $766 billion in the first quarter to $775 billion in the second quarter and on to $790 billion in the third quarter. Closing out 1967, GNP was in the range of $785 billion for the year as a whole, or about 5.6% ahead of the preceding year. This was a record high and was generally regarded as a gratifying performance. But it represented a slowing pace from the 8.6% rise in 1966 over 1965, and many observers noted that nearly half of the 1967 increase consisted of price advances.

Government spending at the federal, state, and local levels continued to rise in 1967. Early in the year federal defense spending advanced sharply, putting upward pressure on prices and raising the possibility of a substantial federal deficit. These developments appeared to underscore both the demands for increases in tax rates and for reductions in federal spending. A dilemma arose, however, as the private sector of the economy paused in the first half. The situation was aggravated by domestic unrest, which lent support to proposed spending on the antipoverty programs, and by existing commitments to the Vietnam War. The rise in federal



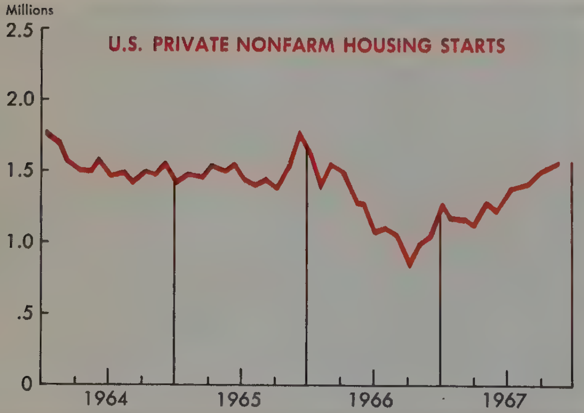
spending showed in the last half of the year, however, and further reductions were proposed to entice additional support for the proposed tax-rate increase.

The hesitation that the private sector of the economy experienced during 1967 was visible in the movement of the Federal Reserve Board's index of industrial production. The index (1957–59=100) had advanced markedly through 1966, gaining almost 9 points and closing out the year at 159, a record high. But in 1967 the index declined—even though it remained near the record high. The index fluctuated in the range of 156 to 158 during most of 1967, showing that the economy was performing at high levels even if unable to push higher. (See also INDUSTRIAL PRODUCTION.)

Steel and Automobile Industries. Two major industries affecting the overall industrial production performance, steel and auto manufacturing, failed to contribute any zip to the economy in 1967. Toward the end of 1967, steel orders were picking up. Strikes affected auto production, and it became obvious that the output levels achieved in 1966 would not be reached in 1967. (See also AUTOMOBILES; STEEL.)

Business Spending. Business was generally taking a more cautious outlook on its prospects than it had earlier in the 1960's. Anticipated business spending for new plant and equipment was scaled down during 1967, reflecting the more guarded view of future sales prospects. For the year as a whole, new capital spending was expected to total about $62 billion, a moderate advance of $1.6 billion over 1966. This increase would amount to a gain of about 2.3%, in contrast to the sharp advance of 16.5% in 1966 over 1965. Manufacturing industries, particularly in durable goods, lowered their investment sights as the year proceeded. Some moderate raising of capital outlays was anticipated by public utilities, railroads, and airlines.

Business profits were generally not as favorable in 1967 as they had been earlier, and this tended to discourage plans for expansion. There was some hope for the general improvement of business profits toward the end of 1967, but available data were spotty and difficult to interpret because of several large labor strikes. Certainly, inventory accumulation in 1967 was not as brisk as in 1966, and this held out some hope that there was room for sales expansion to meet these needs in the future. Corporate profits after taxes declined in 1967 from the record high achieved about mid-1966.



Data from U.S. Department of Commerce

Consumer Spending. Retail sales during the year ran at high levels and posted records as the year proceeded. As in other areas of the economy, the gains were relatively modest and did not reflect the strength experienced earlier. On the one hand, consumers were undoubtedly encouraged by rising personal income that gained steadily over the year. On the other hand, some consumption was undoubtedly discouraged by rising unemployment rates. Unemployment rose to its highest rate since late 1965. (See also CONSUMER AFFAIRS; INCOME.)

Housing. Housing construction showed brisk improvement in 1967. On a seasonally adjusted annual rate basis, private nonfarm housing starts had hit an abysmally low figure of 845,000 in the latter part of 1966. Gains were registered since then, and in late 1967 new housing starts were near 1.5 million.

Monetary Troubles. In one critical economic area, developments were definitely unfavorable. The U. S. balance of payments deficit deepened throughout 1967, and it appeared that the total deficit for the year might exceed $2.2 billion—the largest since 1964, when the deficit amounted to $2.8 billion.

Such funds in foreign hands can be used to purchase U. S. gold at $35 an ounce. With U. S. gold stocks down about $7 billion in a decade to a total of about $13 billion, the unfavorable deficit took on a more commanding significance. Because the dollar was under attack from some quarters and because a number of foreign governments look to the United States for assurance on the soundness of its money and economic system, several unpleasant possibilities faced Washington at the end of 1967.

The principal monetary drama of 1967 began to unfold on November 18 with the devaluation of the British pound, accompanied by an increase in the Bank of England's discount rate from 6.5% to 8%. The Federal Reserve Board followed by increasing its discount rate from 4% to 4.5%, a move aimed at preventing an outflow of American dollars, but it also resulted in tighter credit in the United States. A number of major U. S. banks promptly raised their prime rates from 5.5% to 6%.

And so at a time when the U. S. economy was struggling to push on to records of productive output, another clamp was put on expansion. Many classes of borrowers found themselves paying the highest rates for money since the 1930's. (See also BANKING; INTERNATIONAL FINANCE.)

ECUADOR

Ecuador enjoyed marked economic improvement in 1967, a trend that continued from late 1966 after a very poor situation in the first half of 1966. Greater political stability and confidence followed the establishment of a constitutional government. Toward the end of the year, electioneering began for the 1968 general elections.

Political Affairs. The 79-member Constituent Assembly chosen in October 1966 wrote a new constitution—the 17th in the history of Ecuador—that became effective on May 25, 1967. The assembly, which also elected Otto Arosemena Gómez provisional president, later resolved itself into a unicameral congress to serve until the June 1968 elections.

President Arosemena Gómez was elected as a compromise candidate with the backing of a former (one-term) president, Camilo Ponce Enríquez, a conservative. The election of Arosemena, who later announced that he would not be a presidential candidate in 1968, stirred hopes for the later reelection of Ponce Enríquez and dimmed the hopes of four-time president José María Velasco Ibarra, a populist whose critics accuse him of being a demagogue. Velasco returned to Buenos Aires to live; however, his chances seemed improved by local elections on June 11, 1967, when center-left candidates won major offices in 9 out of 17 of Ecuador's largest cities. Ponce Enríquez criticized Arosemena for behaving too independently when the latter paid a visit to Velasco in November.

On other fronts, a small military uprising in October passed with few consequences. Moderate student demonstrations took place in May at Central University in Quito, and more violent ones, culminating in a 24-hour nationwide strike by students, occurred at Guayaquil in November.

Foreign Affairs. Ecuador's foreign policy became noticeably more nationalistic and defiant under Arosemena, and was marked by a few clashes with the United States.

In April, at the Punta del Este meeting of hemisphere presidents, Arosemena bitterly criticized U. S. lending policy under the Alliance for Progress. Arosemena was the only president not to sign the final declaration, which advocated economic integration of Latin America. U. S. officials claimed that Ecuador's hostility was based on the reduction of a promised U.S. loan from $10 million to $7 million. In negotiations with fellow members of the Latin American Free Trade Association, Ecuador demanded continued treatment as a poor country.

On October 8, U. S. Ambassador Wymberley Coerr was recalled when Ecuador alleged that he had publicly criticized Arosemena. The U. S. State Department denied the charge.

Economic Affairs. The years 1966 and 1967 saw great changes in the Ecuadorian economic atmosphere. At first the country experienced difficulty: government spending was cut sharply, private credit was restricted, and imports were curtailed. Taxes were raised and, in some cases, reformed. A low point was reached in July 1966; and, after the International Monetary Fund had granted a $13 million standby agreement, Ecuador negotiated a $10 million budget support loan (later cut to $7 million) with the U. S. Agency for International Development (AID). The free-market value of the sucre, 18.53 to U. S.$1 in January 1966, fell to 22.20 in May. By January 1967, however, the sucre had recovered to 20.84 and reached 19.94 in September. The foreign trade deficit of $47.9 million in 1965 was reduced to $16.8 million in 1966.

There were other signs of economic improvement. The gross national product rose an estimated 6% in 1966, and new industrial investments stood at $603 million. In October the United States began negotiation of $20 million in new AID loans for educational and social needs. A Gulf-Texaco consortium drilled several successful wells in eastern jungle areas near the Colombian border.

The Ecuadorian Institute for Agrarian Reform and Colonization had allotted over 8 million acres to some 23,000 families by March 1966, and the Roman Catholic Church episcopate in 1967 decided to grant 144,000 acres of its Andean basin land to some 1,200 families as part of a broader program.

EDUCATION

Teachers' strikes increased sharply in the United States in 1967. In the biggest one, unionized New York City teachers *(shown here)* delayed the normal reopening of school in September.

EDUCATION

Strikes by teachers delayed or disrupted the opening of schools in two of the largest U. S. cities—New York and Detroit—in September 1967. Among other developments of the year in education, James B. Conant appraised the comprehensive high school; Pittsburgh embarked on a bold program to build super high schools set in educational parks; and an international comparison showed U. S. students lagging in mathematics. This article discusses elementary and secondary education; for higher education, see COLLEGES AND UNIVERSITIES.

TEACHERS' STRIKES

In New York City, a strike by the 49,000-member United Federation of Teachers (UFT), an AFL-CIO affiliate, interfered with the normal schooling of 1,100,000 children for 14 class days. The strike against the nation's largest school system began on September 11, the opening day of the fall term. At one point attendance at the 900 city schools dwindled to 130,000, or 12% of normal, with more than 40,000 of the 55,000 teachers out.

Union leaders demanded a basic wage scale of $7,500 to $15,000 in 10 years, with a top of $18,000 for teachers with maximum qualifications, in place of the existing scale of $5,400 to $9,950 in 14 years, with a top of $11,950. The UFT also called for improvements in school conditions for teachers and pupils, including smaller classes, special programs for slum schools, and more authority to deal with disciplinary problems.

The strike ended with the ratification of a new contract providing an additional $135 million in wages and benefits over 26 months. A minimum pay increase of $1,200 resulted. The new scale provided a range of $6,750 to $13,750 in basic annual salary.

In Detroit, the opening of school for 300,000 pupils was delayed 13 days until the city's 11,500 teachers won an $850 across-the-board annual increase for two years. A $7,500 to $12,700 scale was to become effective in 1968.

Teachers' strikes extended summer vacations for 200,000 pupils in other parts of Michigan; 90,000 in Broward county, Fla. (including Fort Lauderdale); 24,000 in East St. Louis, Ill.; and 6,000 in McCracken county Ky.

The American Federation of Teachers (AFT), with its militant policy of strike calls, has developed as a rival organization to the powerful National Education Association, which has preferred "professional sanctions" as a means of improving salaries and teaching conditions. The AFT's greatest strength is in the large cities, where crowded classes, antiquated buildings, and disadvantaged children make teaching difficult. Its officers contend that they seek better education for children as well as improved salaries for teachers. Accomplishments in the area of salary increases have been impressive. AFT leaders have announced plans to form chapters in new metropolitan areas where the local or state affiliate of the National Education Association is the only teachers' organization.

NEW CONANT REPORT

James B. Conant, whose survey, *The American High School Today,* published in 1959, was widely read and discussed, has followed with a new appraisal under the sponsorship of the American Association of Secondary School Principals. It is entitled *The Comprehensive High School Today: A Second Report to Interested Citizens.* The book, published in 1967, reaffirms Conant's belief that the comprehensive high school, with a broad program of course offerings, is the type best suited to American needs. The returns from his survey of 2,000 medium-sized high schools indicate that considerable progress has been made in improving the curriculum, especially in the academic subjects.

However, the former Harvard University president expresses concern over the inequalities among schools within the same state and from state to state. Only about 10% of the high schools presently meet all the criteria he had set up in his original study. His report confirms that the American ideal of equality of educational opportunity is far from being realized.

Noting that state support varies from 67% in some school districts to as low as 6% in others, Conant urges that more power and resources be afforded the state governments to effect improvements. The Conant report proposes that each state be allocated a share of the funds collected by the federal income tax to be spent for education as the individual state sees fit.

The study reveals considerable progress in improving the academic offerings. Of the 2,000 schools in the survey, 816—or 40.3%—now teach calculus. The new physics program is used in almost half of the schools, and 64.9% offer the new biology.

A 4-year course in a foreign language is available in 1,290 of the schools. In contrast, the earlier Conant study had reported that most high schools offered only two or three years of a language.

Guidance counseling, an important ingredient of the comprehensive high school, is still badly understaffed. Conant's earlier report recommended one full-time counselor for every 250 pupils. Only 3.4% of the 2,000 schools were meeting this ideal in 1967. In only 14% was the ratio 1 to 299 or less.

NEW YORK CITY SCHOOLS opened their own television station in 1967. The station—its Channel 25 identification appears on the screen—sends lessons to 50,000 classrooms.

ALBERT SHANKER, president of the striking United Federation of Teachers, New York City, addresses a rally in September.

EDUCATIONAL PLANNING

In educational planning, Pittsburgh moved toward creation of super high schools, and the new John F. Kennedy High School in Wheaton, Md., embodied many innovations.

Super High Schools. Like many other large cities, Pittsburgh has experienced a steady exodus of white families from the inner city, with a corresponding increase in the number of Negro families. To halt this trend and to forestall de facto segregation while it is still possible to do so, the city has embarked upon a bold plan.

At an estimated cost of $120 million, Pittsburgh plans to replace 23 old high schools—the newest was built 40 years ago—with five super high schools located in 40-acre educational parks and enrolling 5,000 to 6,000 students each.

A broad curriculum will be offered, and salaries will be high enough to attract topflight teachers and administrators. The schools will also serve as adult education centers, offer facilities for theater and music groups, and possibly provide space for public health agencies. A year-round, 24-hour-a-day operation of facilities is anticipated.

School district lines are being redrawn to provide a cross section of the entire city for each educational complex. It is hoped to balance the racial mixture at one third Negro, two thirds white.

The project represents the largest single investment of public money in the history of Pittsburgh. Millions of dollars are now being spent for sites. The first school is scheduled to open in 1971.

High School of the Future. In the new John F. Kennedy High School in Wheaton, Md., .a special effort has been made to provide facilities for independent study programs that enable the bright student to work at his own rate. There are rows of study carrels in the library; a resources center has tapes, films, and records, along with individual projector-screen combinations for viewing; and "seminar banks," or a series of small rooms, are available to discussion groups outside of the classroom. The school has its own closed-circuit television system and a full-time TV technician. The principle of in-flight movies is used, with the inverse image projected on the screen from behind. A concave mirror throws a much-enlarged image on the back of the translucent screen.

Team teaching is emphasized. An "instructional center" with removable dividers enables a teacher to lecture to six classes at once. For flexibility, the school day is divided into 17 "modules," each 23 minutes long.

ACHIEVEMENT IN MATHEMATICS

The first major international comparison of achievement in mathematics, in which 133,000 students in 12 countries participated, revealed that standards of accomplishment in the United States fall below those of Japan and Britain.

Students were tested at age 13 and at the end of the secondary school period. Japan placed first in both categories. In the 13-year-old group, 76% of the Japanese scored in the upper half, compared with 43% of the Americans; 31% of the Japanese were in the upper tenth, compared with 4% of the Americans. The comparisons with Japan are pertinent, as both countries enroll a high proportion of their youth up to age 14.

In the assessment of the high school seniors the American record was even worse. Only about 2% reached the upper tenth, compared with 26% in Britain, followed closely by Belgium, Japan, and Israel, all above 20%. The nonselective character of the American high school makes comparisons of this type open to question. However, in this instance, data on the mathematical ability of all youth at the age of high school graduation, whether they have attended or not, still do not present a favorable picture of the United States.

The National Council of Teachers of Mathematics feels that elementary teachers are not well prepared to teach mathematics. Fewer than half of the teaching-training institutions require a course in mathematics in their program for prospective elementary teachers.

The survey reveals that students trained in the "new mathematics" scored higher on the tests than did students with traditional mathematics.

DESEGREGATION

The U.S. Department of Health, Education, and Welfare (HEW) announced in September 1967 that its surveys of the racial makeup of schools, conducted previously only in the 17 Southern and border states, would be made on a nationwide basis. In line with recent federal court decisions, guidelines have now been prepared for Northern schools so that discriminatory practices can be dealt with.

Federal Surveys. Although the new federal surveys will not be subject to local or state approval, HEW's Office for Civil Rights has announced that it hopes to work through the chief state school officer. The survey is expected to "identify schools which may have . . . compliance problems." However, federal aid will not be cut off solely on the basis of information obtained in the survey.

Some progress has been made, even if only in a token fashion. In the South as a whole, the percentage of Negroes attending integrated schools has doubled each year since 1964: 3% in 1964-65, 6% in 1965-66, and 12% in 1966-67. The federal government guidelines, raising the possibility of withholding federal funds, have been important factors.

Washington Ruling. On June 19, in a case involving the schools of Washington, D.C., Judge J. Skelly Wright, of the U.S. Court of Appeals, went beyond the Supreme Court decisions of 1954 in ruling de facto segregation itself to be unconstitutional. Residential patterns that result in schools that are almost entirely Negro or white, he held, constitute "unintentional but undesirable discrimination." Judge Skelly ordered the busing, on a voluntary basis, of Negro pupils to predominantly white public schools; the mandatory redistribution of teachers among white and Negro schools; and the immediate abandonment of what educators call "the track system."

This system, initiated by school superintendent Carl F. Hansen in 1955, sought to group pupils according to their learning ability into "honors," "regular," "general," and "basic" curricula.

With Negro children constituting 93% of the public school enrollment, Washington is a dramatic example of the difficulty of attaining racial balance as the ethnic character of the population changes. For several years there has been a steady exodus of white families to suburban Virginia and Maryland. The track system was regarded as a means of stemming the withdrawal of white pupils, most of whom were enrolled in the "honors" and "regular" tracks. But Negro leaders charged that disadvantaged pupils were assigned to lower tracks on the basis of "inappropriate aptitude testing geared to middle-class white children."

When the district school board (which has a Negro majority) refused to appeal Judge Skelly's ruling, Hansen resigned on July 3. The track system was discontinued, although many educational leaders regard some form of ability grouping as highly desirable.

While Judge Skelly's ruling applied only to the District of Columbia, educators were concerned about its possible implications. De facto segregation is widespread, especially in the large cities. The busing of white or Negro pupils to obtain better racial balance has been violently opposed in some areas. Where it has been on a voluntary basis, as in New York, only about 5% of those eligible have taken advantage of it.

Court opinion has been divided on the constitutionality of school segregation based on neighborhood dwelling patterns. The issue has not been ruled upon by the U.S. Supreme Court.

Civil rights leaders have charged that substandard educational facilities in Negro ghettos have been

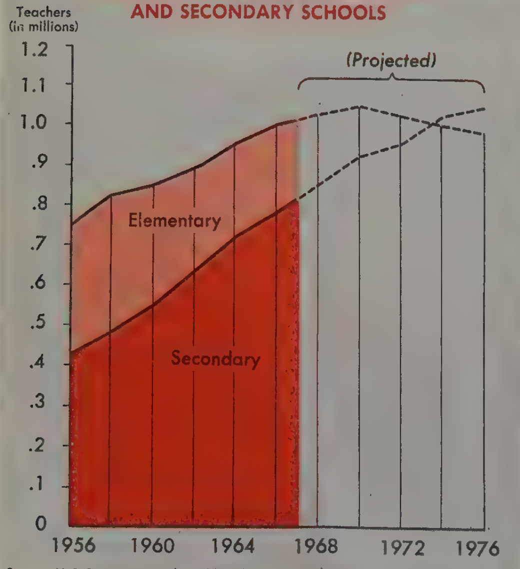
a contributing cause of the unrest resulting in the 1967 summer riots. It is alleged that Negro children have been crowded into inferior slum schools, while the more affluent whites flee to the suburbs, with vastly superior, predominantly white schools.

ENROLLMENTS

For the 23d consecutive year, the number of pupils attending elementary and secondary schools in the United States increased. According to estimates compiled by the U.S. Office of Education, the fall 1967 school enrollment from kindergarten through grade 8 was 37 million. The increase of 500,000 over the 1966 enrollment is impressive, but it represents some decline from previous increases. In earlier years the high birthrate of the late 1940's and early 1950's had resulted in some annual increases of over one million in elementary school enrollments.

TEACHERS IN U. S. PUBLIC ELEMENTARY AND SECONDARY SCHOOLS



Source: U. S. Department of Health, Education, and Welfare, *American Education*

Secondary school enrollments (grades 9-12) reached an estimated 13.7 million, an increase of 400,000 over the fall 1966 figure. Proportionately, the increase in high school enrollment (3%) was greater than that in the elementary grades (1.4%). The higher education enrollment was up 8.3%.

Enrollment Trends. The U. S. Office of Education has predicted an increase of 25% in the high school enrollment between 1966-67 and 1975-76, from 13.3 million to 16.6 million. By the latter date, nearly 98% of the population aged 14 to 17 may be enrolled in school, compared with the present 93%. These projections are based on the birthrate in the 1950's and the growing percentage of pupils who remain in school.

The increase in elementary school enrollments will be slight because the birthrate declined after 1961. By 1975-76, elementary school pupils are expected to total 37 million, only a nominal gain from the 36.4 million enrolled in 1966-67.

Nonpublic Schools. The school enrollments cited above include both public and nonpublic schools. The estimated fall 1967 enrollment in nonpublic elementary schools (kindergarten through grade 8) was 5,200,000; in high schools (grades 9-12), 1,400,000. The largest nonpublic segment is that of the Roman Catholic parochial schools. The National Catholic Education Association (NCEA) estimated the 1967-68 elementary school enrollment at 4,263,000, compared with 4,376,872 the previous session. Catholic high schools enrolled 1,350,000, compared with 1,108,177 the year before.

According to the NCEA, the sharp decrease in elementary enrollment, after many years of annual increases, is due to the elimination of kindergartens and first grades in some schools and to the limitation of class size in others.

Nursery Schools and Kindergartens. Three out of every ten children aged 3 to 5 were in nursery schools and kindergartens in 1966–67, a U. S. Office of Education survey shows. The proportion two years earlier was one in four. As a group, the 5-year-olds show the highest attendance—62.2%—compared with 18.9% for the 4-year-olds and 6.1% for the 3-year-olds.

Preschool enrollment rates are lowest for children of low-income families, but a sharp increase has occurred, attributable in part to federally aided Head Start programs and other special provisions for economically disadvantaged children.

The kindergarten-nursery school enrollment, public and private, in 1966–67 was about 3,674,000. Of this number, 686,000 were enrolled in nursery schools (public, 213,000; private, 473,000), and 2,988,000 in kindergarten (public, 2,413,000; private, 575,000).

ADMINISTRATION

The U. S. Office of Education has estimated that the nation will spend a record $52 billion for education for the 1967–68 school year.

Expenditures. Current expenditures and interest charges for public elementary and secondary schools in 1967–68 are expected to total $25.9 billion; for nonpublic schools, $3.5 billion. Capital outlays for the same period are estimated at $4 billion for public schools and $0.5 billion for nonpublic schools. The faith of the American people in education becomes increasingly apparent as a larger proportion of the national income is spent for the establishment and maintenance of schools and colleges.

Congress passed on Dec. 15, 1967, a compromise measure providing a massive $9.3 billion for a 2-year expansion of federal aid to elementary and secondary schools. Last-minute conferences resolved House and Senate differences over the wording of the enforcement of school desegregation laws and the extent of state control over certain funds. Although the Senate had sought a 3-year commitment of federal aid, the bill as passed provides a record $4.5 billion for fiscal 1969 and $4.8 billion for fiscal 1970 only.

Teaching Staff. The estimated number of classroom teachers in public and nonpublic elementary and secondary schools reached a record total of 2,107,000 in the fall of 1967. Of this number, 1,204,000 were employed in the elementary grades, and 903,000 in high school.

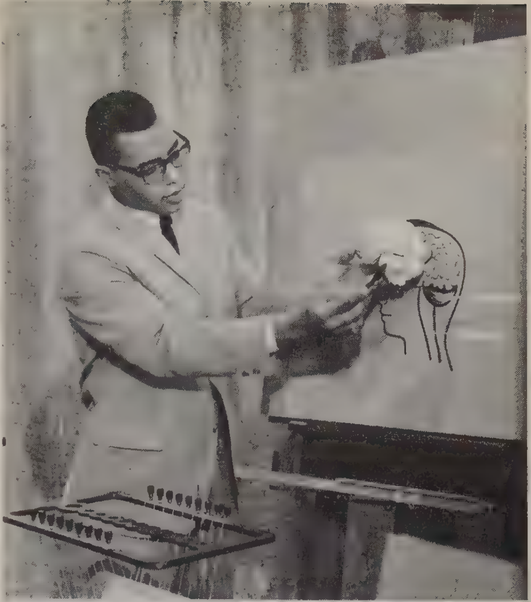
The shortage of public school teachers is continuing, according to the NEA research division. Twenty states reported a more severe shortage of qualified applicants in the fall of 1967 than in the previous fall, itself a time of critical conditions. None of the 45 states that replied reported an excess of applicants. The research division estimates that 171,300 additional teachers are needed to meet standards of quality in educational staffing.

The average annual salary of classroom teachers in 1966–67 was just below $7,000. Only 1% got less than $4,000, while 6.4% received $10,000 or more. The latter percentage represents more than a doubling in two years, even though it is only a small proportion of the total number of teachers.

LEGISLATION

On June 29, 1967, one day before the Teacher Corps was scheduled to expire, President Johnson signed the new Education Professions Development Act, which extended the Teacher Corps for three years and authorized several new teacher-training programs. The administration's request of $36 million for the corps was cut to $13.5 million by Congress.

The overall billion-dollar act authorized a new 2-year program, starting in mid-1968, consisting of institutes, subdoctoral fellowships, traineeships, and other projects to train college teachers, administrators, and education specialists.



MANPOWER EDUCATION INSTITUTE

"TV HIGH SCHOOL" directed lessons to adults who lack a high school diploma. The Manpower Education Institute developed 60 lessons for educational and commercial TV use.

Other parts of the act merge the present National Defense Education Act (NDEA) institutes for guidance counselors and teachers of certain subjects into a new and broader program of in-service and preservice training for elementary and secondary teachers of any subject generally taught; extend and broaden the present fellowship program for elementary and secondary teachers; and establish new programs, starting in mid-1968, to attract, recruit, and provide short-term training for the schools.

EDUCATIONAL TELEVISION

In October 1967 a nationwide television program to enable adults without a high school education to qualify for equivalency diplomas was launched in the New York City and Washington, D. C., areas under the auspices of the Manpower Education Institute. At a cost of $12.50, students could obtain a 10-volume home-study kit of books on English grammar, general mathematics, social studies, natural sciences, and literature to be used with the television instruction. Programs were offered from 6:30 to 7:30 P. M., Monday through Friday, for 12 weeks.

REGIONAL EDUCATIONAL LABORATORIES

About $15 million has been allotted by the U. S. Office of Education to regional educational "laboratories" designed to enlist the cooperation of educators at all levels in fostering new programs and ideas. The 20 laboratories throughout the country are actually associations of the colleges and universities, school systems, and state departments of education in a given area, working together to improve education at all levels. A typical laboratory, the Central Atlantic Regional Educational Laboratory, set up headquarters at Alexandria, Va., to study art, dance, literature, music, and theater arts.

FORMER MOVIE STAR Shirley Temple Black campaigned (unsuccessfully) in California for a seat in U. S. Congress.

ELECTIONS

In a year without nationwide elections, returns from balloting in various states and cities in 1967 showed political unrest that disturbed established political patterns but provided no certain guide for candidates in 1968.

Weakening of Democratic strength in some major cities concerned leaders of that party and gave clear promise of a hard-fought presidential contest in 1968. Issues of law and order, racial tension, the war in Vietnam, inflation, taxes, and confidence in public leadership showed unmistakable signs of weighing more heavily with the voters than normal party allegiance.

CARL STOKES, shown with wife, won in Cleveland to become the first Negro elected mayor of a major U. S. city.

UPI

Congressional Elections. On March 28 a close vote in a special election in Rhode Island's usually Democratic 2d congressional district gave the vacant seat to Democrat Robert O. Tiernan. He polled 48.8% of the vote to 48.5% for James DiPrete, Jr., Republican mayor of Cranston, and 2.6% for a "peace" candidate. On April 11, Democrat Adam Clayton Powell, Jr., of New York won reelection to Congress after the House had denied him a seat. Powell did not present himself for the oath of office pending court tests of the power of the House to deny him membership.

Returns in a much-publicized special Republican primary election in California on November 14 gave Paul N. McCloskey 34.4% of the vote against 22.4% for Shirley Temple Black, the former child movie actress, who ran as a "hawk" on the Vietnam War. McCloskey won election in a December runoff.

State Elections. On January 10, by a vote of 182 to 66, the Georgia legislature elected Lester G. Maddox governor. As the Democratic nominee in the 1966 election, Maddox had received fewer votes than Republican Howard H. Callaway, but because of write-in votes for former Gov. Ellis Arnall no candidate had received the required majority. Joining the 30 Republicans in the legislature in voting for Callaway were 36 Democrats.

In Florida, Republicans increased their strength to 35% in the legislature in a special election on March 28. The election was ordered by a federal court because of legislative malapportionment.

Democratic voters in Louisiana's primary election on November 4 assured reelection of racially moderate Gov. John J. McKeithen, who faced no Republican opposition, by giving him more than a 4 to 1 lead over U. S. Rep. John Rarick, a segregationist.

Election of Louie B. Nunn on November 7—the first Republican elected governor of Kentucky since 1943—left Democrats with only 24 of the 50 governorships. In Mississippi on the same day former Rep. John Bell Williams, a segregationist Democrat, was elected governor by 70% of the vote, and Republicans lost their three seats in the legislature. New Jersey voters destroyed Democratic margins in both houses of their legislature, providing the Republicans with majorities of 3 to 1, sufficient to override all vetoes by Democratic Gov. Richard J. Hughes.

The state constitution drafted for New York by a Democratic-controlled convention was overwhelmingly rejected on November 7 by a margin of 2½ to 1. It was believed that a proposed repeal of a prohibition against state aid to church-related schools was largely responsible for the outcome. At the same time, voters approved $2.5 billion in bonds for New York state transportation construction. Pennsylvania voters elected a majority of Republicans to the state constitutional convention. Delegates to the Maryland convention were elected on June 13 without party identification.

City Elections. Democrats scored an easy victory in Chicago on April 4 with the election to a fourth 4-year term of Mayor Richard J. Daley, who polled 72.8% of the vote.

In city elections held on November 7, Negro Democratic nominees Carl B. Stokes and Richard G.

Hatcher won in Cleveland, Ohio, and Gary, Ind., respectively. They were the first of their race elected to the mayoralty in major American cities. In both cities, normally Democratic strongholds, margins were razor-thin, and voting based on race was sharply in evidence.

Boston's technically nonpartisan race for mayor pitted Mrs. Louise Day Hicks against Massachusetts Secretary of State Kevin H. White, both Democrats, in a campaign with racial overtones. Negroes strongly opposed Mrs. Hicks' record on racial issues, and White was elected with a margin of 12,000 votes. In Philadelphia, Democratic Mayor James Tate was narrowly reelected with strong labor support over Republican challenger Arlen Specter, the district attorney. Democrat Thomas D'Alesandro III, son of a former mayor, was overwhelmingly elected in Baltimore.

In Ohio, Democrat Maynard E. Sensenbrenner of Columbus and Republican John S. Ballard of Akron were reelected, and Democrat William Ensign overturned a Republican administration in Toledo. In Indianapolis, Richard G. Lugar became the first Republican elected mayor since 1951. In nonpartisan balloting, Joseph L. Alioto, a Democrat, was elected mayor of San Francisco; and J. Bracken Lee, former Republican governor of Utah, was narrowly reelected mayor in Salt Lake City.

ELECTRICAL INDUSTRIES

The electric utility companies of the United States increasingly are calling on nuclear generating plants to help meet the growing demand for electricity in the late 1960's and the 1970's. During 1967 they placed 25 orders for the construction of large nuclear units. These units will have a total capacity of 22.2 million kilowatts—more than 18 times the capacity of electric company nuclear units in service in 1967.

Late in 1967 nine investor-owned nuclear power plants (totaling 1.2 million kw capacity) were in full operation in the United States and two more nuclear power plants (totaling 945,000 kw) had reached criticality. Nuclear power units under construction or design included two scheduled to begin operation in 1968, four in 1969, seven in 1970, 13 in 1971, and 10 more in 1972. In all, nuclear power equipment with a capacity of 43 million kw (some of it ordered before 1967) was scheduled for operation by all U. S. utilities by the early 1970's. (See also ATOMIC ENERGY.)

Orders for new generating equipment—thermal (steam) as well as nuclear—reached an all-time high as 1967 ended. The new equipment scheduled for operation by the early 1970's totaled 145 million kw—greater than the total U. S. electric capacity at the end of 1958. The schedules included 19 steam units of 1 million kw or more, and 115 steam units of 500,000 to 1 million kw.

Generation and Capability. Production of electric energy by U. S. investor-owned utilities, government agencies, and rural electric cooperatives in 1967 was 1.212 trillion kilowatt-hours, according to preliminary estimates of the Edison Electric Institute. This was more than 68 billion kw-hrs above the 1966 total, an increase of 6%. An additional 103 billion kw hrs was produced by railroads and industrial plants not contributing to the public power supply.

The total electric utility industry in the contiguous United States had an estimated 265 million kw of generating capability at year's end, an increase of 7.1% over the 1966 capability of 247.7 million kw. Over 200 million kw, or more than 75% of the 1967 capability, was provided by investor-owned companies. The rest was provided by government agencies and rural electric cooperatives.

The industry's annual margin of reserve capability in 1967 was estimated to be 20% over peak demand. The 1967 summer peak reached a record 213.5 million kw, 5% above the 1966 summer peak. Summer peaks have tended to exceed December peaks in recent years, largely because of the increasing use of air conditioning. The December peak in 1967 was 206.2 million kw.

Investment and Purchasing. Investor-owned electric companies had an estimated $70 billion invested in electric plant and equipment by the end of 1967. Expenditures for new construction by these companies during the year were estimated at a record $6.1 billion, or about 10% of the new construction expenditures by all U. S. business.

The investor-owned electric utilities purchased about 237 million tons of coal in the year—more than any other U. S. industry. They used about $2.35 billion worth of coal, oil, gas, and nuclear fuel, about 6% greater than the $2.21 billion worth bought in 1966. Increasingly efficient power plants have reduced the amount of coal needed to produce 1 kw-hr of electricity from 1.34 pounds in 1941 to 0.87 pounds in 1966.

Customers. About 1.3 million new customers were added by the electric utility industry in 1967, bringing the total to about 68.2 million. Of these, investor-owned companies were serving some 53.5 million by the year's end, or over 78% of all customers. About 95% of the new customers were residential.

The average use of electricity in the home rose to a record high 5,565 kw-hrs during the year, an increase of about 300 kw-hrs over 1966. The average price of residential electric service dropped from 2.20 cents per kw-hr in 1966 to an all-time low of 2.16 cents per kw-hr in 1967.

The Edison Electric Institute lists 166 basic appliances available to the U. S. homemaker. In 1966 some 58.6 million homes had refrigerators, 58.5 million homes had radios, and 57.5 million homes had black-and-white television sets.

Worldwide Generation of Electricity. According to preliminary data for 1965, the United States, with 6% of the world's population, produced almost 36% of the world's electricity. Its total production was almost 2.5 times that of the second-ranking nation,

WORLD PRODUCTION OF ELECTRICITY, 1965

Country	Production (millions of kilowatt-hours)[1]	Percent of world production
United States[2]	1,157,583	35.6
USSR	480,383	14.8
Britain	184,260	5.7
Japan[3]	181,942	5.6
West Germany	160,554	4.9
Canada	143,160	4.4
France	101,442	3.1
Italy	80,287	2.5
East Germany	49,958	1.5
Norway	48,950	1.5
Sweden	48,500	1.5
Poland	39,742	1.2
Other countries (est.)	575,936	17.7
Total	3,252,697	100.0

[1] Preliminary data. [2] Includes Alaska and Hawaii. [3] For the year ending March 31, 1966. (Source: U. S. Federal Power Commission.)

the USSR. About 5,950 kw-hrs were produced for each American in 1965, or almost three times the Soviet per capita production of 2,083 kw-hrs. By 1970, the United States is expected to produce about 7,555 kw-hrs per person, in contrast to a forecast average of 3,140 kw-hrs for each Soviet resident.

EDISON ELECTRIC INSTITUTE

ELECTRONICS

The electronics industry in the United States set a new sales record in 1967 as total factory sales rose to an estimated $23 billion, up 10% over the previous year. Since 1960, when sales totaled $10.7 billion, the industry has more than doubled the value of its output, according to figures compiled by the Electronic Industries Association.

In research and technology, the industry made steady but undramatic progress during the year. Advances were led by developments in computers, lasers, and electronic components.

Sales Breakdown. All major segments of the industry showed increases in sales in 1967. Sales of consumer electronic products rose from $4.6 billion in 1966 to $5.2 billion in 1967, mostly because of the rising demand for color TV sets. About 6 million sets were sold in 1967, compared with about 5 million sets in 1966. Sales of industrial products rose from $4.9 billion in 1966 to $5.7 billion, as more and more computing and data-processing equipment was shipped. Sales to the government, which purchases about half of the industry's output, climbed from $10.1 billion in 1966 to $112.2 billion, spurred by the rapid military buildup in Vietnam.

The 1967 gains were not as high as some had anticipated, especially in the nondefense areas, because of sluggish sales early in the year. Color TV sets, for example, did not sell as well as had been predicted. Sales picked up during the second half of the year, however.

Technical Developments. Computers were being put to so many new and different uses that it was predicted that their share of the gross national product in 10 to 15 years would be equal to or greater than that of the automobile industry. As examples of computer applications in 1967, the Florida state government installed a machine to keep track of the movement of thousands of pieces of legislation; the Illinois Central Railroad began using a computer system to control train, car, and power operations; and the Philadelphia public school district began using a computer-assisted instruction system. (See also AUTOMATION.)

The technology of lasers was developing rapidly, and there were several new advances in applications for lasers. A laser transmitting and receiving system for underwater use was built for the U. S. Navy. With this system, the laser beam can penetrate through several hundred feet of water. Another laser system was developed to vaporize minute portions of any material for spectrographic analysis; the laser can accomplish this without damaging the remainder of the material. A weapons fire-control laser radar was successfully tested. It was designed to locate and track terrain-hugging aircraft that might avoid detection by conventional radar systems.

The United States and France made a series of tests using satellites and laser beams. Laser light from the ground was beamed at reflector-equipped satellites to determine the location of points on earth within an accuracy of 4 inches (10 cm).

Researchers working on the development of lasers were trying to find new lasing materials to increase the power output of lasers and to lower costs. In the field of holography (a type of lensless photography that uses light from lasers), many laboratories were engaged in research aimed at finding industrial or commercial applications for holography.

Further progress was made in integrated circuits—the integration of electronic components in a single chip of semiconductor material. Large-scale integration—the interconnection of many circuits on one chip—began attracting more interest because it provided a less expensive way to fabricate some types of circuits. One use of the large-scale integration technique was for logic and memory circuits in computers.

In experimental work, researchers were studying the properties of materials to develop devices whose output would be at higher frequencies than those of transistors.

Military Developments. The Pentagon was increasing its demands on the electronics industry for equipment to be used in Vietnam. In addition, the barrier line that is being built between North and South Vietnam to prevent infiltration will require a wide array of electronic detection devices.

Maj. Gen. William B. Latta, commanding general, U. S. Army Electronics Command at Fort Monmouth, N. J., charged that the electronics industry was not fulfilling its obligations in supplying military electronic equipment. He said delivery of equipment at the scheduled time was his most pressing problem.

Social Developments. There was continuing concern over some of the side effects of electronics technology. William H. Stewart, the U. S. surgeon general, noted that there is an "emerging health problem with respect to electronic products." In August he called for legislation that would establish enforceable government standards for controlling radiation emissions from industrial, medical, and household electronic products, including TV sets. Shortly before Stewart's request, one manufacturer of color television sets had found that the tubes in some models emitted dangerous X-rays.

Some critics worried about the growing use of surveillance and eavesdropping devices, which depend largely on electronic techniques. Others thought that private computer data centers and the proposed federal computer data center represented threats to personal privacy because of the centers' ability to store many records and retrieve them rapidly. However, Emanuel R. Piore, vice president and chief scientist of the IBM Corp., told a Senate subcommittee that privacy rests not with machines, but with the men who use them.

Future Prospects. Prospects looked good for more business and more growth for the electronics industry in the years ahead. Government officials, top executives, and scientists were calling on the industry to apply its know-how to such areas as detecting crime, monitoring air and water pollution, educating the growing population, exploring the ocean, increasing safety on the highways and in the air, and gathering weather data. Another good prospect for the electronics industry was the building of more earth stations for use with communications satellites. An earth station uses an estimated $3 million of electronic equipment.

EL SALVADOR • Information Highlights

SOUTH AMERICA

Area: 7,722 square miles (20,000 sq km).
Population: 3,037,000 (July 1, 1966 est.).
Chief Cities (1961 census): San Salvador, the capital, 255,744; Santa Ana, 72,839; San Miguel, 39,949.
Government: *President*—Col. Fidel Sánchez Hernández (took office July 1, 1967); *Vice President,* Humberto G. Cuestas (took office July 1, 1967). *Parliament*—Legislative Assembly, 52 members (party seating, 1967: Party of National Conciliation, 31; Christian Democratic party, 15; Party of Renovating Action, 6).
Religious Faiths: Roman Catholics, 97.7% of population.
Education: *Literacy rate* (1961), 50.8% of population aged 10 and over. *Total school enrollment* (1964)—435,172 (primary, 378,138; secondary, 35,539; teacher-training, 7,571; technical, 10,300; higher, 3,624).
Finance (1966 est.): *Revenues,* $100,400,000; *expenditures,* $112,120,000; *public debt* (1965), $23,208,000; *monetary unit,* colon (2.5 colones equal U. S.$1).
Gross National Product (1966), $794,400,000.
National Income (1966): $692,000,000; average annual income per person, $227.
Cost of Living Index (1967): 99 (1958=100).
Manufacturing (metric tons, 1966): Cement, 144,360; sugar, 120,000; gasoline (1965), 104,000; wheat flour, 38,000.
Crops (metric tons, 1966–67 crop year): Maize, 276,000; coffee, 126,000; cottonseed, 76,188; cotton (lint), 38,052; rice, 37,000; dry beans, 17,000; henequen, 3,035.
Minerals (metric tons): Salt (1965), 163,300; limestone and seashells (1964), 86,711.
Foreign Trade (1966): *Exports,* $192,760,000 (chief exports: coffee, $89,280,000; cotton, $22,400,000); *imports,* $219,960,000 (chief imports, 1965: nonelectrical machinery, $25,012,000; road motor vehicles, $15,064,000; textile yarn and fabrics, $13,032,000).
Transportation: *National roads* (1964), 4,940 miles (7,950 km); *motor vehicles* (1965), 35,046 (automobiles, 30,338); *railways*)1963), 378 miles (608 km); *principal airport,* San Salvador.
Communications: *Telephones* (1966): 19,882; *television stations* (1965), 3; *television sets* (1965), 35,000; *radios* (1965) 396,000; newspapers (1965), 15 (daily circulation, 127,000).

EL SALVADOR

The election and inauguration of Col. Fidel Sánchez Hernández as president of El Salvador and a border dispute with Honduras highlighted 1967.

Domestic Politics. On March 5, El Salvador, the most densely populated country of Central America, elected Colonel Sánchez to a nonrenewable 5-year term as president. He was the political heir of the outgoing president, Julio Adalberto Rivera, in whose cabinet he had held the post of interior minister. The successful candidate, promising social changes and political reforms along lines set by Rivera, campaigned on the slogan "Evolution in Liberty."

Colonel Sánchez, a member of the Party of National Conciliation, polled more votes than the three other candidates combined. Two of the opposition candidates, Abraham Rodríguez, of the Christian Democratic party, and Fabio Castillo, of the Party of Renovating Action, were termed by their foes as leftists—advocates of radical changes in the social and economic structure. The other candidate, Maj. Álvaro Martínez, led a small rightist group. Much name-calling and a few incidents characterized the heated presidential contest, in which approximately 40% of the registered voters cast ballots.

On July 1 the new president assumed office and announced the composition of his cabinet. Among the principal appointees were Vice President Humberto G. Cuestas, minister of finance; A. Martínez Moreno, minister of foreign affairs; and F. Armando Arias, interior minister. Promising to defend the nation against foreign threats, President Sánchez urged the armed forces not to underestimate foreign threats, especially Communist uprisings. He promised development at home and also pledged closer ties with the other nations of Central America. The president's attitude toward the United States undoubtedly will be influenced by his tour of duty as military attaché in Washington, D. C., in 1960–62.

Foreign Affairs. Charging that Honduran troops had penetrated 1 kilometer (0.62 mile) into El Salvador on June 2, the government put its armed forces in a state of emergency and ordered units to the border. Minor clashes occurred before meetings of a mixed military commission eased the situation.

At a meeting in Mexico City, El Salvador was one of 21 Latin American nations giving approval on February 12 to the final text of a treaty banning nuclear weapons from their region. Two days later 14 of the nations, including El Salvador, signed the treaty, which required ratification by 11 nations to become effective.

At the Third Special Inter-American Conference of OAS (Organization of American States) ambassadors, which was held concurrently with the OAS foreign ministers' meeting at Buenos Aires in February, the Salvadoran representative voted in favor of a reduction in Latin American arms budgets. In advance of the OAS summit meeting at Punta del Este, Uruguay, in April, attended by President-elect Sánchez, San Salvador hosted a meeting of Central American statesmen to study common economic problems, especially the coffee problem. At an OAS meeting in Washington, D. C., in September, El Salvador was a party to the unanimous condemnation of Cuban-inspired subversive efforts against Latin American nations. (See also LATIN AMERICA.)

During the Israeli-Arab conflict, El Salvador routinely backed the efforts of the United Nations.

FIDEL SÁNCHEZ HERNÁNDEZ, El Salvador's new president, with U. S. President Johnson at Punta del Este.

WIDE WORLD

OS UNIDOS
EL SALVADOR

Six Salvadoran deputies, representing three political parties in the national congress, visited Mexico in July and reaffirmed existing friendly relations.

Economy. In 1966, El Salvador was the only country in the Western Hemisphere in which consumer prices declined. In 1967, while striving for regional economic diversification at home, El Salvador remained conscious of its chief export, coffee. Santa Ana, the nation's second-largest city, reported having a coffee mill claimed to be the world's largest. Labor stoppages during the year included a bus drivers' strike in San Salvador in January and a brief general strike of 35,000 workers in April.

The eruption of the volcano Izalco early in the year proved to be a tourist attraction.

ENGLISH LITERATURE

The year 1967 was an excellent one in English literature. Biography and fiction remained plentiful and good, while both poetry and drama made strong recoveries from their 1966 doldrums. John Masefield, poet laureate since 1930, died in 1967.

Biography. It may well be that 1967 will be remembered as the year of the autobiography in English letters. Everybody seemed to be writing one. One of the first authors in the field was crusty old Hugh MacDiarmid with *The Company I've Kept,* which had a little something to offend everyone, but in general was well received. As *The Times* of London put it, "A smooth, well-documented autobiography from Hugh MacDiarmid would make us highly suspicious." A more suave performance was Harold Nicolson's *Diaries and Letters,* which was enormously popular with reviewers.

Also greatly appreciated was the *Autobiography* of Bertrand Russell, "in every way a splendid book," according to sociologist-author Barbara Wootton. Miss Wootton herself, a baroness who has been characterized as a distinguished "radical Establishment figure," won high praise for her book *In a World I Never Made.*

A number of large, continuing autobiographies brought forth new volumes. One of the best was *Downhill All the Way,* by Leonard Woolf, who further documented his life in the literary world of Bloomsbury and beyond, as well as the tragic story of his wife, Virginia Woolf. Graham McInnes, the brother of another author, Colin MacInnes, published the third volume of his life story, *Finding a Father.* Much of the book is concerned, in spite of its title, with McInnes' mother, the clever and formidable novelist Angela Thirkell. The way in which McInnes handled this rather difficult person won him praise and affection from the press. John Rothenstein's second autobiographical volume, *Brave Day, Hideous Night,* carried still further the story of his struggles at the Tate Gallery.

A late but important entry was Harold Macmillan's *The Blast of War,* the second volume of his autobiography. Reviewers agreed that the work should be read, but kept comparing it to Churchill's writings about the same era, with predictably unhappy results.

Two less ambitious autobiographies were Nicholas Monsarrat's *Life is a Four-Letter Word,* as long and erotic as his novels, but not so well plotted; and C. M. Bowra's *Memories,* a delightful book which does, however, refuse to document a famous anecdote about Bowra. When the sage was presented to Hitler, it is said, Hitler cried "Heil Hitler!" whereupon Bowra answered "Heil Bowra!"

Among biographies of special interest to Americans were Rae Jeff's *Brendan Behan: Man and Showman* and Frances Donaldson's excellent *Evelyn Waugh: Portrait of a Country Neighbor.*

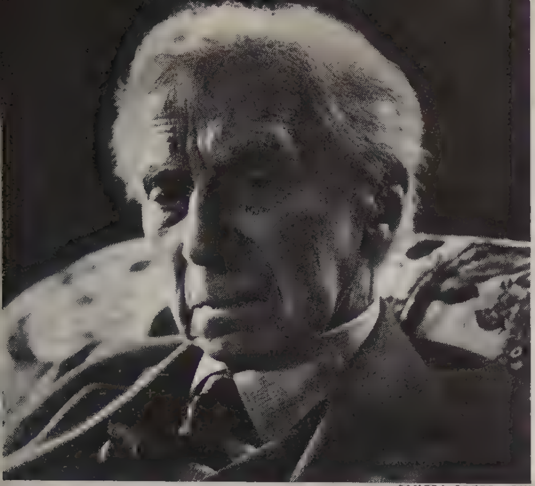
Fiction. A number of well-known novelists were productive in 1967. Rebecca West wrote *The Birds Fall Down,* the latest of Miss West's inquiries into the field of espionage, and the sort of philosophical adventure story at which the British have always excelled. The book was generally more successful in the United States than in England: the distinguished American critic Emile Capouya called it "fascinating," while the *Times Literary Supplement* (of London) rated it "bewildering."

Two novels by Colin Wilson, *The Glass Cage* and *The Mind Parasites,* led critic Robert Nye to comment, "For all his faults, he is one of the most earnest and interesting writers of his generation." *The Mind Parasites* is a lurid, science-fiction-like account of a great mental cancer that attacks human consciousness. *The Glass Cage* is simpler, if more violent; it features a Blake-quoting murderer.

One of the truly interesting British novelists is the maverick J. P. Donleavy, who is well known in the United States for his *The Ginger Man.* He wrote two new works in 1967, both of them characteristically strange: a novel, *The Saddest Summer of Samuel S,* and a collection of short stories, *Meet My Maker the Mad Molecule.* Samuel S is an aging American expatriate in Vienna, who remains indomitable in the depths of a rather turbid existence—he analyzes his psychiatrist and manages to keep at bay the women who offer him various easy solutions to his problems. The critics remain respectful although wary of Donleavy.

William Golding, another favorite with Americans, published *The Pyramid* in 1967. The novel, which was later released in the United States to enthusiastic reviews, is—as usual—deep and thought-provoking. It presents three incidents from the life of its small-town hero, Oliver; in each episode, Oliver fails someone who needs love. Golding is another writer by whom the critics are much fascinated, though puzzled. A more comfortable relationship was possible with J. B. Priestley, who is, as one reviewer put it, "still knitting very nice socks, thank you." The new novel, *It's An Old Country,* about an Australian boy going to England to find his father, didn't startle anyone, but neither did it detract from Priestley's solid reputation.

Among authors less well known to Americans, mention should be made of Peter Marshall, who wrote the novel *Excluded from the Cemetery.* The book opens with a shock: a slum woman, dying in the gutter, is approached by a grisly old man who promptly delivers her of a squalling infant. The man holds the baby up to its dead mother and says "Congratulations!" The work, said the *Times Literary Supplement,* "bristles with excitement and fecundity. . . . " Critics were also excited by Edward Caddick's novel *Hannah and the Peacocks,* which tells of an unglamorous, everyday London existence, but with great sensitivity and power. Other much-



CAMERA PRESS—PIX

BERTRAND RUSSELL'S autobiography, covering his youth, education, and first marriage, won high praise from critics.

PICTORIAL PARADE

HAROLD MACMILLAN'S autobiography, *The Blast of War,* suffered by comparison with Churchill's war histories.

admired novels were Angus Wolfe Murray's *The End of Something Nice,* which was hailed as ambitious and promising; Michael Frayn's book about the Fleet Street newspaper world, *Towards the End of the Morning,* considered a delicate, serious work; Hugo Charteris' vigorous work *The Coat;* and the talented second novel, *Winter Journey,* of Eva Figes (whom British critics have pointed out as a writer to be watched).

It was also a good year for short stories. Besides Donleavy's collection, there were offerings from Olivia Manning (*A Romantic Hero*) and Seán O'Faoláin (*The Heat of the Sun*), among others. Both of these collections were well received, though in Miss Manning's case there were a few politely smothered yawns. O'Faoláin, who, of course, was writing of the Irish, was highly praised for his subtlety and ingenuity.

Drama. The theater enjoyed a turbulent season, beginning with the Royal Shakespeare Company's production of *US,* perhaps the most controversial play of the year. The result of a collaboration among Dennis Cannon, Adrian Mitchell, Richard Peaslee, and Peter Brook, the play was an attempt, apparently, to grasp the whole horror and anguish of Vietnam. The ambiguous title *US* can be understood to mean the United States, but can also be interpreted, perhaps more appropriately, as the pronoun *us,* pronounced as an accusation. Contrary to what was believed in some quarters, the play did not spend itself in merciless satire of American policy, but commented fully on the venality and folly of the Vietnamese as well. The staging was sensational: a stage littered with junk and waste of war, dominated by a huge military figure with a great yellow bomb between his legs. Predictably, the play was as warmly praised in some places as it was excoriated in others.

William Gaskill's production of *Macbeth,* which followed soon after, was the occasion for another fine row. The critics did not mind the lack of scenery, or the fact that Negroes were cast as witches, but were reluctant to accept Negroes in the roles of murderers as well. Alec Guinness' Macbeth, however, was greatly admired. A play that evoked interest later in the season was John Bowen's latter-day account of Noah's flood, *After the Rain,* which featured an outstanding performance by Alec MacCowen as the little man who saves the situation.

The theater itself was the object of satire in David Halliwell and David Calderisi's *The Experiment,* the story of a famous director who decides to put on a "non-play" concerning what he considers a meaningless subject, the assassination of President

THE ROYAL SHAKESPEARE COMPANY'S production of *US,* an attack on the terrifying destructiveness of the Vietnam War, brought controversy to the theatrical season.

JESSE ALEXANDER, FROM NANCY PALMER

Garfield. The director has chosen this particular subject, he explains, because it is a case in which a nonentity was assassinated by a nonentity, with no effect whatever on history. From this point, the play wends its way through a highly diverting and meaningful parody.

Two other new plays drew the attention of the critics. These were David Mercer's *Belcher's Luck,* a commentary on the changing order in Britain, and Charles Dyer's *The Staircase,* a sketch of two aging homosexual barbers in a London suburb.

The pace did not slow down as the summer theater season arrived. An engaging farce by Harold Brooke and Kay Bannerman, *Let Sleeping Wives Lie,* was well received, as was Hugh and Margaret Williams' comedy of manners, *The Flip Side.* More ambitious and perhaps less successful was Robert Shaw's *The Man in the Glass Booth,* which deals with the guilt of the concentration camps. It features as hero—or antihero—a fugitive from the camps, who may be either a victim or a Nazi guard; a certain amount of ambiguity seems to be part of the author's purpose.

Finally, there was an import from Scotland that packed quite a punch: Peter Nichols' *A Day in the Death of Joe Egg.* Audiences were taken aback at finding the heroine "a beautiful but mindless girl-child, a spastic living-corpse." However, in spite of its initial shock impact, the play was widely praised for its tact and delicacy in depicting the girl's situation and the problems caused for her parents, a couple in early middle age.

Poetry. Poetry awoke from its yearlong slumbers in 1967. Hugh MacDiarmid, in addition to his autobiography, and in spite of a terriffic brawl some two or three years ago on the subject of plagiarism, brought out his *Collected Poems.* The 75-year-old author warned the public that the collection did not comprise his complete works, and substantiated his claim by publishing a second volume of verse, *A Lap of Honour,* which he proceeded to rate among his best work.

Ted Hughes, who has been called "the best British poet since Dylan Thomas," also published a new book of poetry, *Wodwo,* which had Hughes' characteristically mystifying effect on the critics, though they granted the poet his excellence. The less esoteric, highly popular John Betjeman brought out *High and Low.* Some critics carped at the public's misunderstanding of Betjeman's work, but as the *Times* summed it up, "All pieces give some degree of pleasure."

Other well-known writers, like Lawrence Durrell, did not come off so well. *The Ikons* was criticized for its platitudes and clumsiness, and one reviewer declared that Durrell's "vein of charm has run out." The critic Geoffrey Grigson tried his hand at poetry in *A Skull in Salop,* and was advised to stick to his last.

Some lesser-known poets enjoyed more success. Martin Bell's *Collected Poems* were commended for their acute social observation; George MacBeth's *Colour of Blood* was found wild and exciting; and David Wevill was highly praised for his fine, sensitive poems in the beautifully titled *A Christ of the Ice-Floes.* A word should also be said in honor of Elizabeth Jennings, who published her *Collected Poems,* greeted as substantial and impressive.

The year 1967 was a grand one for the reputation of the late T. S. Eliot, whose reassessment continues at a brisk rate. The definitive biography is still awaited, but new editions pour out, including the much-valued *Poems Written in Early Youth.*

John Masefield, England's poet laureate for 37 years, died on May 12, at the age of 88. Masefield was best known for his early realistic poems, particularly about the sea. Cecil Day Lewis, a poet who writes mysteries under the pseudonym Nicholas Blake, was named new poet laureate on Jan. 1, 1968.

EPISCOPAL CHURCH

The Episcopal Church operates on a triennial pattern, established by the meetings of its General Convention. In 1967 the 62d General Convention met for 10 days—September 17–27—in Seattle, Wash.

The bulk of the substantive matters dealt with by the General Convention originated either with the Executive Council, the interim executive instrument of the Church, or with the several joint committees and joint commissions created by the previous Convention.

Unquestionably, the most significant action of the General Convention was its adoption of a program and supporting budget in which the highest priority is given to ordering the Episcopal Church's response to the problems in American life dramatized by the violence in the nation's cities during the summer of 1967. In the words of Presiding Bishop John E. Hines, this will be "a program . . . by which this Church can take its place, humbly and boldly, alongside of, and in support of, the dispossessed and oppressed peoples of this country for the healing of our national life."

The adoption of the special program required a radical readjustment of other portions of the Church's budget so that its normal activities can be adequately maintained.

Liturgical Change. A second major decision of the General Convention was to begin a process of revision of its liturgical formulary, the *Book of Common Prayer,* last revised in 1928. As a first stage of the revision, a proposed *Liturgy of the Lord's Supper,* in preparation for 10 years, was authorized for a 3-year period of trial usage.

Ecumenism. In the ecumenical field, the Convention approved the continued participation of the Episcopal Church in the Consultation on Church Union (a group of 10 Protestant denominations working toward unity and eventual consolidation), and endorsed continued explorations of various kinds into relationships with other Christian bodies.

Vietnam. The General Convention debated at length the Episcopal Church's position with regard to the war in Vietnam, eventually producing a statement that called for restraint by the United States in the conduct of the conflict, and the development of "fresh, new ideas about alternative possibilities" in the search for a just and durable peace. The Convention reaffirmed the Church's support for the rights of conscientious objectors, and called for a broadening of the law to include objectors who base their position on other than religious grounds.

YARDLEY IN THE BALTIMORE SUN

'The Spy who Came in out of the Cold' is a cartoonist's reaction to the disclosure early in 1967 that the Central Intelligence Agency had been subsidizing programs of the National Student Association for some 15 years.

ESPIONAGE AND INTELLIGENCE

The 20th anniversary of the U. S. Central Intelligence Agency (CIA) was observed on Sept. 18, 1967. On that occasion, Vice President Hubert Humphrey, at the agency's headquarters in Langley, Va., personally delivered President Johnson's birthday message stating that the world "is a better place . . . because there has been, there is, and will continue to be a CIA."

During its 20-year existence, the CIA has often received less laudatory comment. It has been the object of suspicion, doubt, and fear. Suspicion has arisen from a traditional American repugnance for forms of "invisible government" and from a vague awareness that since 1947 the United States has created a vast bureaucracy for intelligence and espionage activities. Doubt derives from uncertainties about whether a democratic society needs to operate a secret apparatus engaged in espionage and various forms of political warfare, associated in the past with totalitarian governments. And fear has been a byproduct of secrecy and public ignorance about the purpose, organization, and functions of the "intelligence community."

Some critics have charged that the CIA, operating behind its high wall of secrecy and dispensing an enormous but secret amount of money, threatens to become a "state within a state" lacking adequate controls by responsible political authority. Still others believe that the United States has resorted to secret operations too frequently without adequately calculating risks or costs against benefits. Many prominent Americans have argued that the United States as a great power has the pragmatic necessity of maintaining an apparatus for secret operations in a revolutionary world. Others take the position that even if this is so, the failures and exposures of its secret operations have transformed the CIA into such a foreign policy burden that major changes are required in its organization and role. The "CIA problem" has remained unresolved for 20 years.

THE CENTRAL INTELLIGENCE AGENCY

The CIA was created by Congress in the National Security Act of 1947 as part of the "unification" of the defense establishment derived from the lessons of World War II. It became the first separate foreign intelligence agency in American history. The CIA was made responsible to the President and the National Security Council (NSC). The agency's basic constitution is the statute that created it and a set of National Security Council secret directives, spelling out its role and jurisdictional authority in a larger "intelligence community."

The CIA is but one of a half-dozen major intelligence units, including the Pentagon's Defense Intelligence Agency, the National Security Agency, the Bureau of Intelligence and Research in the State Department, foreign intelligence units in the Atomic Energy Commission and the Federal Bureau of Investigation (which has no major overseas functions), and the intelligence services of the army, navy, and air force. Other departments, such as the treasury and post office, also have some intelligence functions. Some estimates have placed the annual governmental cost of intelligence in recent years at $4 billion.

Functions of the CIA. The director of the CIA (Richard Helms, appointed in 1966, was the sixth) is also "director of central intelligence" and as such is the president's principal intelligence adviser and the NSC's intelligence adviser. As chairman of the U. S. Intelligence Board he is also coordinator of foreign intelligence activities. If statutes seem to assign to the CIA only functions related to intelligence (information), the agency has evolved into a multiple-function organization, including not only informational missions, but also covert and clandestine political and paramilitary warfare in various overseas areas. Such disclosures as those that followed the downing of an American U-2 plane deep within Soviet territory (1960), the Bay of Pigs disaster (1961), and later events in Laos, Vietnam, the Congo, and other areas, demonstrated clearly that the CIA was engaged in covert political activities, some having little to do with intelligence.

The NSA Controversy. Not until 1967, however, did the public and Congress become aware of the scope of the agency's involvement with private domestic organizations. Earlier, some public knowledge existed about the CIA's special ties with a few private foundations, university research centers, book publishers, and some labor organizations. But details were vague until February 1967, when *Ramparts* magazine disclosed the specifics of CIA's subsidy for nearly 15 years of the overseas programs of the National Student Association (NSA), a student-run organization comprising more than 300 member colleges and universities in the United States.

Between 1952 and 1967, it was later learned, the NSA received more than $3.3 million in secret CIA subsidies for its international programs. In 1962, 91% of NSA's total budget was supplied by the CIA, through "front" and "conduit" foundations. Money was provided primarily to enable the United States to be represented by college students at various international youth conferences overseas in which the Communist movement was strong.

Similar subsidies, it became known, were provided by CIA to dozens of other private organizations—including academic, labor, church, legal, and literary groups—for their overseas programs. Defenders of such programs argued that they were necessary expedients in the cold war, that the Communists had to be fought on their own terms.

Reactions to these disclosures varied widely. There were calls for congressional investigations, for reorganizing the CIA, and even for abolishing it. Most observers, including CIA's defenders, admitted that the publicity had further damaged CIA's image and created new complications for American students and researchers working overseas. CIA's defenders pointed out that such programs resulted from policies determined at the highest levels under all presidents since Truman. Some of CIA's harshest critics, such as columnist Walter Lippmann, acknowledged the need for a central intelligence agency but argued that its functions should be confined to gathering foreign information.

Recommendations. Responding to an avalanche of congressional, editorial, and public criticism, President Johnson ordered that CIA financing of the National Student Association be ended. On February 15 he appointed a 3-man committee to review the secret subsidy programs. Under Secretary of State Nicholas Katzenbach served as chairman; others were Secretary of Health, Education, and Welfare John Gardner, and CIA Director Richard Helms. A public version of the committee's report was released on March 29, 1967, accompanied by a presidential statement accepting the committee's findings. The President promised serious consideration of the recommendation "that the Government should develop and establish a public-private mechanism to provide public funds openly for overseas activities. . . ." With this end in view, the President appointed Secretary of State Dean Rusk to head an 18-member committee comprising public and private representatives to make more specific recommendations.

The Katzenbach committee recommended, and the President accepted, a policy statement that "no Federal agency shall provide any covert financial assistance or support, direct or indirect, to any of the nation's educational or private voluntary organizations." Any existing support was to be terminated by the end of 1967. Future exceptions to such a policy might be permissible "only where overriding national security interests so require" and on specific approval by the secretaries of state and defense. But, in the committee's most pointed reference to the whole scandal: "In no event should any future exception be approved which involves any educational, philanthropic, or cultural organization."

DEVICES AND TECHNIQUES

Despite all of the controversy about the CIA's secret subsidies, such activities represented but a tiny fraction of the government's secret operations. Most of the subsidy programs had little connection with intelligence functions, representing rather foreign political action or psychological warfare.

Technological Advances. A massive program of intelligence and espionage has evolved over the past 20 years as a result of the U. S. effort to utilize technology to bring the whole world under surveillance. Orbiting satellites, rapid advances in photographic equipment and sensing devices, and computer technology are radically changing the nature of intelligence systems. Code breaking, for example, is one of the most important and least publicized techniques of modern espionage.

Specific details of many developments are not easily obtainable. But it is known that numerous orbiting devices are in use, such as "ferrets" for electronic eavesdropping and instruments capable of monitoring conversations on the other side of the globe. Similar ground- or ship-based devices are even more extensively used, so that governments may try to keep under surveillance the widest range of electromagnetic emissions. Few subjects are more secret than some of the details of these international ELINT (electronic intelligence) programs, although techniques for local eavesdropping or surveillance are well known.

For certain kinds of covert missions, the U-2, a high-altitude jet aircraft, has been used extensively, even after its exposure in May 1960 when one was brought down deep within the Soviet Union. Since then, the U-2 has been known to be used by Chinese Nationalists for flights over mainland China. A successor to the U-2, the twin-jet SR-71, also built by Lockheed but capable of much greater speed and altitude and of carrying more sophisticated spying instruments, has been developed.

Aerial Reconnaissance. Meanwhile, the Samos satellite, an orbiting "spy in the sky," has been routinely placed in orbit, once a month for several years. Samos satellites have brought virtually the whole world into the range of their cameras and other detection devices. For example, a multispectral camera aboard the Samos employs several lenses at the same time and may use film sensitive to infrared light, making it difficult to conceal almost any form of human activity on the ground. After a week of orbiting, the Samos photographic "take" is ejected over a designated spot in the Pacific Ocean, where it is either caught in midair by special aircraft or retrieved from the ocean.

In addition to optical cameras, various electronic scanning devices are in wide use, ranging from radar to thermal sensors. The latter can detect from great heights such things as Vietcong campfires in a jungle or the heat from a jet plane hours after it has flown away. Computers have been of additional assistance. Deductions from evidence revealed in photographs or other sources can, with the use of high-speed computers, allow for accurate estimates of factory production, missile launchings, economic growth rates, and a wide range of strategically important information. For example, photographs of crops, floods, drought areas, or diseased plants give excellent capability to predict a nation's productivity.

The Soviet Union also has major programs for aerial reconnaisance by both orbiting satellites and conventional aircraft. For example, Soviet satellites of the Cosmos series have been flying over the United States since 1962 in orbits indicating intelligence missions.

INTELLIGENCE IN OTHER COUNTRIES

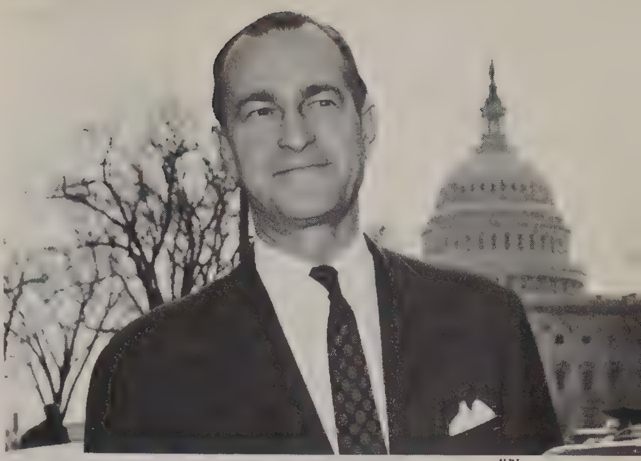
All modern nations maintain highly organized intelligence systems. Most developing nations aspire to them. The dominant models are the systems of Britain, the Soviet Union, and the United States. Constitutional differences greatly affect the nature of any particular system. One universal principle is that secret services try to remain anonymous.

Britain. The basic structure of British intelligence dates back to Queen Elizabeth I. Today it is centered in two main civilian organizations, commonly confused in the public mind and even more commonly—if incorrectly—referred to by their former military designations of MI-5 and MI-6. The more accurate name of MI-6 is Secret Intelligence Service (roughly the equivalent of the American CIA). However, its director—"C" in official slang—does not possess the federal coordinating authority held by the CIA chief, nor the vast research and analysis organization.

MI-5, the other principal service, more accurately called the Security Service, is under a director general known as "K." This service is responsible for internal security and is roughly equivalent to the American FBI, although much more anonymous in its leadership, organization, and operations. Unlike the FBI, however, it performs overseas counterintelligence functions.

The intelligence community in Britain also includes a defense intelligence staff in the Ministry of Defence, which is one of the most important arms of British intelligence, and a communications intelligence unit, concerned with codes and electronic intelligence. All of these and more specialized subagencies operate under the supervision of a Joint Intelligence Committee, a defense subcommittee of the cabinet, under the chairmanship of a top Foreign Office official.

The year 1967 marked a turning point in the British system as two events challenged its secrecy and reputation for cool efficiency. One was the breakdown of the "D-Notice" system under which the press had cooperated with the government to maintain secrecy for the secret services. For the first time the press published facts about the intelligence operations. The other was disclosure of many details of the case of H. A. R. Philby, who from 1940 to 1954 had been both an important official of the British Secret Service and a Soviet agent.



UPI

RICHARD HELMS was appointed director of the Central Intelligence Agency in 1966. He is principal intelligence adviser to the president and the National Security Council.

Soviet Union. The Soviet Union operates a vast intelligence system resembling that of the United States and Britain, but differing in a major respect. The resemblance is the maintenance of a large civilian, as well as a separate military, foreign intelligence service. More importantly, the difference is that the Soviets combine all intelligence, foreign and domestic, under the control of the centralized KGB (Komitet Gosudarstennoi Bezopasnosti, or "Committee of State Security"). It is as though the American CIA, FBI, Secret Service, Defense Intelligence Agency, and more were combined.

The precise relationship, however, between KGB and its civilian foreign intelligence arm, and GRU (Glavnoye Razvedyvatelnoye Upravlenie, or "Chief Intelligence Administration"), which is the military foreign intelligence arm, is not clear. Some evidence exists of past civil-military friction. The Soviet system doubtless has not been immune from the rivalries normally affecting governments with competing intelligence systems.

Other Systems. Much less detailed information is available about other major nations. The intelligence systems of Japan, Nationalist China, West Germany, South Korea, and South Vietnam resemble that of the United States. Western European (excepting that of West Germany) and Middle Eastern systems more closely resemble the British; in Communist countries the Soviet system has been the model.

The intelligence system of Communist China is subdivided into four major compartments—that of the party, of the defense ministry, of the foreign office, and of the state council, or government. Each checks on the other, with the party, through the Politburo and its "social affairs department," attempting to exercise dominant overall controls. In the turmoil that shook China in 1967, the several intelligence services were deeply embroiled. The struggles of Mao Tse-tung to guide the continuing Chinese revolution may be pivotally determined by his ability to control the secret services.

WIDE WORLD

ETHIOPIAN EMPEROR Haile Selassie and President Johnson in front of the White House in Washington on February 13.

ETHIOPIA

Ethiopian affairs in 1967 were dominated by a significant rise in Eritrean separatist activity and an increase in border difficulties with Somalia and the Sudan. The year was also notable for the visits of Emperor Haile Selassie to a number of countries, including the United States, and the steadily improving Ethiopian economy.

Eritrean Separatists. Separatist activity in the northern province of Eritrea has been growing since 1962, when the former Italian colony ceased to exist as an autonomous unit under the Ethiopian crown. Primarily Muslim, and tacitly supported by Saudi Arabia and Syria, the Eritrean guerrillas (Eritrean Liberation Front) resorted to terror tactics in 1967 in an effort to gain independence. After a general pardon offered to the rebels in July was ignored, federal troops began to act against the rebels in August. Raids on villages caused several thousand sympathizers of the Front to flee to the Sudan.

Border Disputes. Trouble flared between Ethiopia and the Sudan over the cultivation of farming areas claimed by both sides. Several incidents near Falasha between the Setit and Atbara rivers culminated in an announcement by the Sudanese in May that troops had been sent to the frontier to counter an "aggressive build-up."

Ethiopia's relations with Somalia took a turn for the worse as both countries massed troops on the French Somaliland border during a national referendum in March to determine that colony's future. Friction with Somalia also reflected the fact that parts of the Somalia frontier have never been satisfactorily delineated, and that Somalia has been receiving large Soviet arms shipments.

Haile Selassie's Travels. Emperor Haile Selassie arrived in the United States on February 13 on the first stop of a three-week tour that included stopovers in the Soviet Union, Turkey, and the Sudan. During his U. S. stay he discussed with President Johnson the tense situation with Somalia and sought additional American military aid. The emperor also offered his services as a peace mediator between countries fighting in Vietnam. In May the emperor consulted briefly with political leaders in France and Germany, and in September he attended a summit conference of the Organization of African Unity at Kinshasa, capital of the Democratic Republic of Congo.

The Economy. The Ethiopian economy in 1967 showed signs of recovering from the severe drought in 1965. The crop outlook was much brighter, and a narrowing of the foreign trade gap, based on expectations of larger exports and a lessened need for emergency food imports, was forecast. Ethiopia's international liquidity position appeared to have stabilized in the first half of 1967. Domestic bank credit continued to expand rapidly. In Addis Ababa, construction began on the 250-room Addis Hilton Hotel scheduled for completion in early 1968.

In January 1967, Ethiopia completed the latest in a series of hydroelectric dams for harnessing the Awash River. In July the International Finance Corporation (IFC), an affiliate of the World Bank, announced a commitment for $9 million as part of a total financing of $22.5 million to expand Ethiopia's sugar cultivation and processing facilities.

ASIA
AFRICA

Area: 471,776 square miles (1,221,900 sq km).

Population: 23,000,000 (July 1, 1966 est.).

Chief Cities (1963 est.): Addis Ababa, the capital, 560,000 (1965 est.); Asmara, 120,000; Dessie, 56,400; Harar, 42,700.

Government: *Emperor*—Haile Selassie I (proclaimed emperor Nov. 2, 1920); *Prime Minister*—Aklilou Hable-Wald (took office April 17, 1961). *Parliament*—Chamber of Deputies 250 members (elected); (name of 2d house:) Senate, 160 members (appointed).

Religious Faiths: Ethiopian Orthodox, 90% of population.

Education: *Literacy rate* (1963), 5% of population. *Total school enrollment* (1964)—397,084 (primary, 347,770; secondary, 40,334; teacher-training, 1,828; technical, 5,509; higher, 1,643).

Finance (1965–66 est.): *Revenues*, $119,200,000; *expenditures*, $179,680,000; *monetary unit*, Ethiopian dollar (2.50 dollars equal U. S.$1).

Agricultural Production (Index 1965): 122 (1952–1956=100).

Manufacturing (metric tons, 1965): Cement, 95,000; sugar (1966), 77,000; wheat flour, 35,000; beer (1964), 15,700; lumber, 51,000 cubic meters.

Crops (metric tons, 1966–67 crop year); Sorghum, 3,128,000; barley, 820,000; maize, 740,000; chick peas, 173,000; dry peas, 119,000; dry broad beans, 110,000; coffee, 102,000.

Minerals (metric tons, 1965); Salt, 188,000; lime, 4,000; manganese ore (1964), 3,248; gypsum, 2,500; gold, 24,236 troy ounces; platinum, 352 troy ounces.

Foreign Trade (1966): *Exports*, $111,000,000 (chief exports: coffee, $62,400,000; hides and skins, $14,120,000; oilseeds, $8,720,000; cereals, $8,600,000); *imports*, $161,680,000 (chief imports, 1965: transport equipment, $24,557,200; nonelectrical machinery, $22,652,400; textile yarn, $17,378,400; petroleum products, $9,326,800). *Chief trading partners* (1965): U. S. (took 55% of exports, supplied 11% of imports); Italy (took 6% of exports, supplied 18% of imports); Japan (took 2% of exports, supplied 15% of imports).

Transportation: *Roads* (1964). 14,292 miles (23.000 km); *motor vehicles* (1965), 32.875 (automobiles, 23,950); *railways* (1965), 423 miles (681 km); *merchant vessels* (1966), 5 (35,000 gross registered tons); *national airline*, Ethiopian Air Lines; *principal airports*, Addis Ababa, Asmara.

Communications: *Telephones* (1966). 24,791; *television sets* (1965), 2,500; *radios* (1964), 325,000; *newspapers* (1965), 8.

EUROPE

The year 1967 was not one of major happenings in Europe. Various events portended considerable changes, but those changes did not occur during the year.

In some respects the pace of change in Europe slowed down. For example, the rapid rise in productivity and consequent prosperity that characterized Europe for a decade before 1966 had reached a point in 1967 where productivity had stopped climbing in most countries.

That was the general rule. Several countries were exceptions to it, and some indications of a general upturn appeared in the last quarter of the year. Although it was far from vigorous, the British economy did better in 1967 than in 1966, and notwithstanding defeat in by-elections, the Labour government continued to seek an economic cure before the next scheduled general elections in 1971.

NATIONAL AFFAIRS

A major but not novel element of the European scene in 1967 was the intransigence of French foreign policy as shaped by President Charles de Gaulle.

France and its Neighbors. One striking result of de Gaulle's policy during the year was the elimination from France of U. S. troops and NATO military and civil headquarters (see also NORTH ATLANTIC TREATY ORGANIZATION). Another was the temporary success of his clearly demonstrated opposition to the prospective enlargement of the European Common Market. De Gaulle's obvious desire to have France dominate European developments was a source of irritation to the other market states, but the only one of them whose views France has to take seriously—West Germany—showed all too clearly that it would not oppose French policy with vigor. It was apparent that West Germany would continue to indulge French objections to Britain's membership in the Common Market as long as indulgence was the price of Franco-German cooperation in other matters.

De Gaulle's visit to Poland in September provided further evidence of the amount of tact that West Germany must exercise to retain French cooperation. The French president's references to the Polish character of former German towns east of the Oder-Neisse elicited official German protests, but weaker ones than might have been anticipated. In contrast, de Gaulle's flattering suggestion to the Poles that they adopt a more independent foreign policy was explicitly rejected by the Polish government.

Sterling Devaluation. After months of speculation that culminated in a virtual run on the pound, Britain announced on November 18 that it was devaluing its currency by 14.3% (see INTERNATIONAL FINANCE).

Eastern European Countries. Trade and other contacts between eastern and western Europe increased in 1967. In fact, the Common Market's trade with eastern Europe increased faster than its overall trade with non-Communist states.

NATO PHOTO

NEW HEADQUARTERS for SHAPE were officially opened near Casteau, in southern Belgium, on March 31. By French demand, SHAPE was required to leave France by April 1.

Establishment of diplomatic relations between Rumania and West Germany in February represented a considerable break with doctrine on both sides and provoked acrimonious discussion at a meeting of Warsaw Pact countries in Warsaw the same month. The move was welcomed in western Europe and the United States and encouraged commentators to assume that the differences between Communist East and non-Communist West were about to disappear painlessly. The assumption was naïve and unfounded. Although the Communist states of eastern Europe differ from one another, and the USSR no longer completely controls them, they remain Communist dictatorships, in which individual liberty is minimal.

Spain. In Spain—a dictatorship of another kind—the concessions to political freedom were also few. Organized labor planned a nationwide protest in October against a steeply rising cost of living, but its plan was rudely disrupted by the government.

Greece. Democratic government in Greece—long characterized by corruption, poor administration, and instability—succumbed to a military coup on April 21. There was strikingly little effective opposition to the coup or to the subsequent rule of a junta.

SUPRANATIONAL AFFAIRS

The three functional European communities—the European Economic Community (EEC), the European Coal and Steel Community (ECSC), and the European Atomic Energy Community (Euratom)—all of which have the same 6-nation membership (France, West Germany, Italy, Belgium, the Netherlands, and Luxembourg), remained poised

throughout most of 1967 at a very interesting and critical point in their histories. Their future will affect the whole western European picture, because the combined organization of "the Six" is capable of absorbing the European Free Trade Association (EFTA) that links the "outer seven" (Austria, Britain, Denmark, Norway, Portugal, Sweden, and Switzerland). Amalgamation could end the breach that divides free Europe into two trading blocs. Union or increasing division appear to be the alternatives.

The year was important as well for internal organization of the communities. On July 1 provisions of the Brussels Treaty of April 8, 1965, went into force, obliging the signatories to effect a partial merger of the three organizations by establishing a single Council and a single Commission. The three separate executive offices were supplanted by a 14-man European Commission nominated by the Council and installed on July 6.

Several well-known figures were deprived of office in the shift—notably Walter Hallstein of West Germany, the very active former head of EEC. The new Commission is headed by President Jean Rey (Belgium) and Vice Presidents Raymond Barre (France), Fritz Hellwig (Germany), and L. L. Sandri (Italy).

The merger of the three executive offices is regarded as merely a step in the direction of unifying the three communities. That, however, will require redrafting the three basic treaties, a process likelier to take years than months.

European Economic Community. The possibility of an enlarged EEC demanded the attention of all Common Market member-states throughout the year. On May 11, Britain applied for membership in the market, and shortly thereafter Ireland, Denmark, and Norway did too. Sweden applied for as close an association as is compatible with its neutrality.

The negotiations among the Six about how to treat the applications began in the fall, but in the face of skillful French obstructionism they made very little progress. The difficulties involved in enlarging the community would have been serious even without French opposition, and the negotiations appeared likely to be so protracted that anything like the French veto of 1963 would be unnecessary.

On October 2 the report of the special committee appointed by the (former) EEC Commission to consider the problems raised by the British candidacy was published. The report concluded that "negotiations should begin," but stated bluntly that Britain would have to put its economic house in order.

On October 7, *The Economist* of London commented on the report: "The problem is that of Britain's limping economy .... The commission would be absorbing a Britain that has had an awful lot of balance of payments crises in the past few years; and which ... has not done anything sufficiently fundamental since 1964 to remove the probability that it is going to have more balance of payments crises in future, even if Britain aims for only a feeble annual growth rate of about 3 per cent between now and 1970 ...."

Whatever the outcome, successful completion of the Kennedy Round tariff negotiations on May 15 ensured that trade will increase at least temporarily among EEC, EFTA, and nonmember countries, and, it is hoped, prevent the threatened compartmentalization of the non-Communist world's commerce (see INTERNATIONAL TRADE).

Within the market, meanwhile, restrictions have been fast disappearing. Intra-community tariffs on industrial goods dropped 5% on July 1, 1967, to 15% of their level in 1957. According to a Council of Ministers decision of July 26, 1966, the final tariff reduction will be made on July 1, 1968, two years ahead of schedule. After that date there will be no tariffs on trade in industrial goods between member-states. At the same time the member-states will also abolish quotas on goods traded among them, and they will complete the aligning of the common external tariff and, it is hoped, the common agricultural market.

In its 10th and last annual report, published in July, the EEC Commission stressed that even after July 1968 a number of important problems will still remain to be solved before a genuine economic union will have been created.

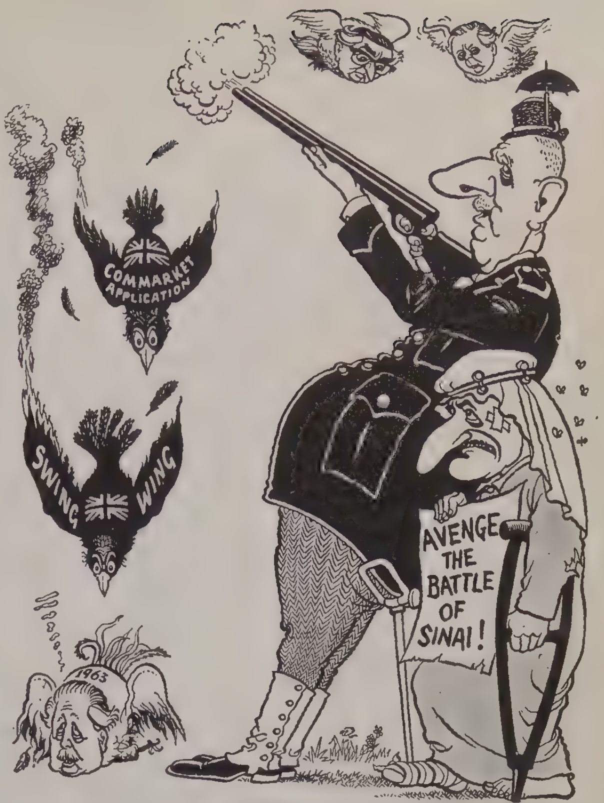
Coal and Steel Community. The coal and steel industries of the Six encountered increasing difficulties in 1967. The 15th annual report of the ECSC High Authority, released in April, observed that excess production capacity was the prevailing condition in both the coal and steel industries, though more so in the former. The report noted that such conditions were the direct contrary of what prevailed when the ECSC was created. Emergency provisions of the treaty were exercised with increasing frequency in order to cope with the strains.

In 1970 the ECSC coal industries are expected to mine 185 million tons, compared with 210 million in 1966. Social aid, including loans for industrial redevelopment to absorb surplus coal and steel workers, is one of the principal concerns of ECSC. There is a noteworthy shift here away from the pure philosophy of the market, on which EEC and ECSC were founded. The High Authority, its report states, still believes in healthy competition, but "there are limits; it is necessary to know these limits and to ensure, by suitable corrective steps, that the process of adjusting to circumstances does not degenerate into general disorder."

It is hoped that the merger of the three community executives will facilitate what was hardly possible before, the formation of a broad economic policy for all sectors of the economy, and will thus ease the difficulties that have plagued ECSC for a decade in regard to coal and for a year or two in regard to steel.

Atomic Energy Community. Euratom's research program passed several milestones in 1967. Under a contract with Britain's Atomic Energy Authority, irradiation experiments were carried on at Dounreay, Scotland, beginning in January and continuing throughout the year. In December 1966, the reaction rates of experimental fast breeder reactors in France and Germany became critical (that is, the first nuclear reactions began to take place), thus making possible research that simulated the behavior of large-scale fast breeders of the type expected to be in commercial use by 1980.

The Commission of Euratom submitted to the Council of Ministers a research program to cover the five years 1968–72; the existing 5-year program ended in 1967. The new lines of the research program take account of the development of new techniques of nuclear industry and the approaching commercial applicability of certain new power reactor designs. The proposals envisage the continuation of the present policy of Euratom participation in national projects that could benefit the entire community. Euratom assists in financing such projects and lends personnel and equipment.



CUMMINGS, IN THE DAILY EXPRESS, LONDON

"I understand you! I'm still avenging the Battle of Waterloo."

Council of Europe. The Council held three plenary meetings, its normal number, during the year. The third part of the 18th ordinary session of the Consultative Assembly met in Strasbourg from January 23 to 27. The five main themes of the meeting were the new British approach to the Common Market, the German problem, East-West relations, Europe's links with other continents, and the technology gap between the United States and western Europe. On January 23, on the first occasion

BRITAIN'S Harold Wilson (*right*) and West German Chancellor Kiesinger review troops in Bonn, where Wilson visited in February to discuss Britain's Common Market bid.

UPI

that a British premier had addressed the Assembly while he was in office, Prime Minister Wilson emphasized that Britain "meant business" in its renewed approach to the Market countries.

The first part of the Consultative Assembly's 19th ordinary session was held from April 24 to 28. A special delegation from the U. S. Congress visited the session to mark the 20th anniversary of the Marshall Plan. Members discussed, among other matters, the 5th report of the Organization for Economic Cooperation and Development (OECD) and witnessed the presentation of the Europe Prize for 1967 to the city of Strasbourg. Sir Geoffrey de Freitas of Britain was unanimously reelected president.

The second part of the 19th session was held from September 25 to 29. It was preceded, on September 21 and 22, by the 14th joint meeting with the European Parliament, the representative body of the three 6-nation communities.

Western European Union. WEU consists of the Six plus Britain and thus forms a useful link, if no more. Regular quarterly meetings of the WEU Council, to take stock of the political and economic situation, continued to be held in accordance with the agreement of July 1963. These meetings are private, but press conferences are held after them. The Assembly of WEU also met in June and December.

Free Trade Association. On Dec. 31, 1966, three years ahead of the original timetable, the seven member countries of the European Free Trade Association made the final reduction in their tariffs on manufactured goods originating in EFTA countries and being traded among them. EFTA thus established a single home market of 100 million people for manufactured goods. On the same date, Finland, EFTA's associate member, made a further 10% tariff reduction; her tariffs on goods imported from other EFTA countries then stood at only 10% of their 1960 level.

The EFTA Council met in Stockholm on March 2 and 3. The communiqué issued to members before the meeting stated that in view of the virtual abolition of internal tariffs attention would be concentrated on nontariff barriers to trade. The ministers met again in October in Lausanne.

The 7th annual report of EFTA, covering the period July 1966 to June 1967, was published in September. It noted that total exports of EFTA countries, at $15.6 billion, were 7.7% higher than in the preceding year. Imports, at $18.9 billion, were 6.2% higher and intra-EFTA trade in the first six months of 1967 was 14.4% higher than in the first six months of 1966.

The future of EFTA is, of course, in suspense, because three of its members have applied for EEC membership and the others seek some connection.

OECD. The Organization for Economic Cooperation and Development (OECD) has become chiefly a body for research and coordination. In 1967, OECD was considerably concerned with restrictions in the European money market, and held several conferences on this subject. The OECD survey of January correctly saw the 1967 economic outlook for Europe as less favorable than it had been in the preceding 18 months.

The OECD surveys of the economies of particular countries are noted for their impartial and often ruthless comments. Its survey of the United Kingdom economy (July) was skeptical of British ability to realize the growth target of 3% annually that the government had announced. Its Spanish survey (August) observed that the Spanish cost of living was rising at an "unacceptable" rate.

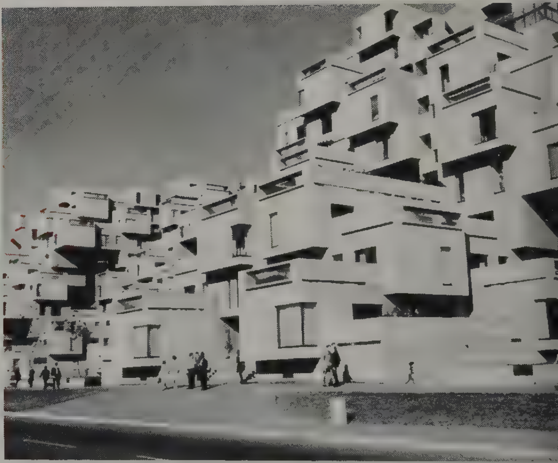
EXPO 67—CANADA'S GREAT CENTENNIAL EXPOSITION

Montreal's Expo 67 was the success of the year. Built partly on a bank of the St. Lawrence River, partly on islands created in the river, Expo 67 presented architectural innovations that delighted its more than 50 million visitors and favorably impressed professional observers and critics.



(*Right*) HABITAT 67, a complex of apartment houses, is composed of individual units lifted into place by cranes.

JOHN J. SMITH

EXPO 67

The largest international exposition ever held, and the crowning event of Canada's centennial year, Expo 67 attracted record crowds to Montreal from April 28 to Oct. 29, 1967. The Universal and International Exhibition of 1967, as it was officially named, had 116 pavilions, 76 restaurants, and more than 200 boutiques. It was built on a 1,000-acre site on Ile Ste.-Hélène and Ile Notre-Dame in the St. Lawrence River, and on Cité du Havre, a strip along the city's waterfront. Despite a month-long transit strike that paralyzed the city in the fall, Expo attracted more than 50 million visitors.

The purpose of Expo 67 was to present a picture of human progress in all areas of man's activity. The general theme—Man and His World—was inspired by the philosophy of the French aviator and author Antoine de Saint-Exupéry, as expounded in his book *Terre des Hommes.* The graphic symbol of the theme, designed by the Montreal artist Julien Hebert, was a circle of eight highly abstract, double figures with outstretched arms, representing mankind encircling the world in unity.

Expo 67, a "first category exposition" according to the classifications of the International Bureau of Exhibitions, was the first fair of this caliber ever staged in the Americas. It was financed jointly by the governments of Canada, Quebec, and Montreal and administered by the Canadian Corporation for the 1967 World Exhibition. Mayor Jean Drapeau of Montreal is credited with originating the idea, and responsibility for the general organization lay with Expo's commissioner general, Pierre Dupuy.

Ile Ste.-Hélène, formerly a mud flat in the St. Lawrence River, was enlarged, and Ile Notre-Dame was entirely created from earth and rock fill. Most of the 15 million tons of fill came from the excavations for Montreal's new subway, opened in 1966. To protect the two islands from being washed away by spring floods, an ice barrier 6,693 feet (2,040 meters) long was constructed upstream.

On these two islands and on the Cité du Havre waterfront area were constructed 16 pavilions related to the Man and His World theme, 62 national pavilions, 4 provincial pavilions, 34 pavilions of business and other organizations, and La Ronde, a giant amusement park.

CANADIAN INFORMATION SERVICE

ATTENDANCE

Attendance at Expo 67 broke all records for similar international fairs. It was toured by many dignitaries, notably Queen Elizabeth and the Duke of Edinburgh, who visited Expo 67 on July 3. In the 6-month period to which it was limited by the rules of the International Bureau of Exhibitions, 50,306,648 persons visited Expo 67. This figure might have been substantially higher had it not been for a strike of Montreal's bus and subway drivers that lasted from Sept. 21 until Oct. 14.

Accommodations. The great influx of visitors to Montreal created stupendous accommodation problems. The Canadian Corporation established Logexpo to provide a free registration service to bring together persons looking for rooms and those with rooms to let. The provincial government established the Quebec Lodging Service to supervise accommodation rates.

Transportation. Visitors to Expo 67 came from all over the world, but especially from Canada and the United States. At the site of the fair, a superb system of internal transportation, especially the free Expo-Express, carried people from one section to another swiftly and efficiently. Elevated "minirail" trains gave passengers a panoramic view of the fair, with stops at major pavilions. Information about the length of waiting lines at the various pavilions was flashed from 24 computerized boards around the grounds.

THE THEME PAVILIONS

The 16 theme pavilions at Expo 67 illustrated five different aspects of the general theme, Man and His World. The five sub-themes were Man the Creator, Man in the Community, Man the Explorer, Man the Producer, and Man the Provider. All of the theme pavilions expressed a feeling of optimism and confidence in man's ability to use the resources of nature wisely. Because they were built by the mutual cooperation of many of the countries participating in Expo 67, the theme pavilions had an international feeling that reflected the fair's purpose.

Man the Creator. A collection of 200 works of art from galleries in 30 countries was shown in the Museum of Fine Arts, focal point of the complex representing Man the Creator. An outdoor display of

(*Left*) CZECHOSLOVAKIAN PAVILION featured a multi-slide mosaic show in addition to its popular film shows.

modern sculpture, a superb selection of 500 photographs, and an exhibit of contemporary industrial design also were shown.

Man in the Community. Habitat 67, an extraordinary, multilevel apartment complex, was the outstanding feature of the Man in the Community complex. Designed by Moshe Safdie, it will remain as a permanent part of Montreal.

The main pavilion of the Man in the Community complex was a pagodalike structure housing an exhibit of the major social problems of modern man. Other popular sections of this complex were Labyrinth, a revolutionary film display prepared by the National Film Board of Canada, and the Man and His Health pavilion displaying recent advances in all branches of medicine.

Man the Explorer. A group of four pavilions illustrated the sub-theme Man the Explorer. They represented the exploration of the seas and oceans, the polar regions, space, and of life itself. At nearby Dupont Auditorium scientific films were shown daily under the title *Insight 67*.

The Man and the Oceans pavilion featured an underwater house, designed by the famous oceanographer Yves Cousteau. Also shown was a large, animated model of the Zuider Zee land reclamation project.

Audiovisual displays simulated polar experiences for visitors to the Man and the Polar Regions pavilion. In Man, His Planet, and Space, films and exhibits emphasized man's attempts to adjust to various environments. Visitors were led through a series of underground exhibits depicting the genesis of the earth and the structure of its subterranean regions. Another section portrayed the effect of space exploration on human behavior.

The final pavilion of the Man the Explorer complex represented man's exploration of life itself. An enormous reconstruction of a human cell was the most impressive exhibit. Other displays demonstrated the growth of a neuron, the functioning of the brain, and the progressive improvement in systems of communication from lower to higher animals.

Man the Producer. Visitors to this pavilion saw demonstrations of various sources of energy, from coal to nuclear power. The marvels of the computer age were demonstrated in an exhibit where television sets were being assembled entirely by programmed machines. One popular display was set up as a game where visitors matched wits with a computer.

Man the Provider. The largest and the most idyllic of the theme areas was Man the Provider, which told the story of agriculture. Crops were actually grown in a central area called Sun Acre. Different phases of farming were demonstrated in the nine buildings surrounding Sun Acre.

THE NATIONAL PAVILIONS

A major attraction of Expo 67 was the individual pavilions of the nations. Each of the 62 nations participating in the fair had its own building, expressive of its own national genius.

Canada. The largest of the national exhibitions was the 11-acre Canadian pavilion, a cluster of pyramids around a massive inverted pyramid. Called Katimavik, the Eskimo word for "meeting place," the pavilion's displays included the striking Tree of the People, a 6-story-high construction of life-sized photographs of Canadians of all types and all occupations. The photographs were tinted to suggest the fall color of a maple leaf, the symbol of Canada.

United States. The awe-inspiring 20-story-high geodesic sky-bubble that composed the United States pavilion was designed by R. Buckminster Fuller. The most impressive section of its interior was the reconstruction of a projected Apollo space trip to the moon in 1970, complete with lunar landscape.

USSR. The Soviet pavilion, one of the largest and most impressive at Expo 67, was strikingly modern with a curved roof and glass sides. The exhibits stressed the Soviet Union's achievements in technology and in economic progress. A popular feature was the simulated space ride, in which visitors experienced sensations of space travel.

Britain. The British pavilion was a dominant landmark of the fair with its jagged tower, 200 feet (61 meters) tall, surmounted by a three-dimensional Union Jack. The tower suggested an incomplete state of construction; it was designed to symbolize Britain's continuing contribution to the world. The pavilion's exhibits demonstrated Britain's achievements in the arts, literature, music, science, industry, government, and world affairs.

Czechoslovakia. Of the small pavilions at Expo 67, the most outstanding was the Czechoslovakian. An immensely popular feature was its unique audience-participation film, *Kino-automat*. Also on display were fine Bohemian glassware and lace.

Other National Pavilions. The smaller national pavilions attracted visitors by their architectural innovations and by special exhibits designed to reflect native specialties. The German pavilion, one of the most original architecturally, was covered with 110,000 square feet (10,219 sq meters) of transparent plastic stretched over poles to form a circus tent form. Many countries, including Ceylon and Iran, used modern variations on their traditional architectural styles for their pavilions.

Among the most striking modern structures were the pavilions of Mexico and Venezuela. Food and art were emphasized at the French pavilion, which had several of the most exciting restaurants at Expo 67, as well as a miniature museum tracing the history of French art. Treasures of national art also were exhibited at the Belgian, Ethiopian, Swiss, and Italian pavilions. The pavilion of Nationalist China was badly burned in May but was quickly rebuilt.

LA RONDE

In lively contrast to the serious note struck in many of the pavilions, La Ronde, Expo 67's amusement area, was the fun center of the exhibition. Its 135 acres (55 hectares) were devoted solely to the entertainment of its millions of visitors.

At Fort Edmonton—Pioneerland, visitors saw a traditional Western setting that carried them back to the days of the Gold Rush. Attractions at Children's World were Mother Goose tales brought to life and a miniature roller coaster that climbed and dipped on the sides of Pumpkin Hill. And at Dancing Waters, visitors watched the spectacular effects of 1,000 changing water patterns synchronized with a fireworks display.

WORLD FESTIVAL

An integral part of Expo 67, the World Festival brought to Montreal the greatest program of cultural entertainment ever presented in one place during a 6-month period. Almost 2,000 various attractions, involving about 25,000 participants, were presented. Among the notable attractions were the La Scala Opera of Milan, the Vienna State Opera, the New York City Ballet, the Royal Ballet, the National Theatre of Great Britain, the Stratford Festival of Canada, the New York Philharmonic Orchestra, and the Vienna Philharmonic Orchestra. Most of the performances were held at the Place des Arts in downtown Montreal.

For sports enthusiasts, there were several outstanding events, including an international soccer tournament in Expo 67's 25,000-seat stadium.

Allan M. Fraser
Provincial Archivist of Newfoundland

EYE DISEASES

Several major advances were made in the field of eye diseases in 1966 and 1967. Two such gains are the screening of preschool children to determine the presence of correctable eye defects, and the rehabilitation of persons classified as partially sighted or industrially blind. In addition, there have been investigations into the causes of reading difficulties in children and the incidence of eye disorders in infants whose mothers contracted rubella (German measles) during pregnancy. Also, requirements in visual acuity have been established for persons operating private automobiles.

Preschool Screening. The two disorders most easily diagnosed through preschool screening are amblyopia ex anopsia and ocular nystagmus. In amblyopia ex anopsia, the vision in one eye is impaired due to disuse. If the child wears special glasses or a patch over the better eye, the poorer eye can be stimulated to develop. In ocular nystagmus, there are rapid, involuntary movements of the eyeball, and the associated visual impairment is in proportion to the extent of the jerky movements. Cross-eye, walleye, and other similar conditions (known collectively as strabismus) often accompany this condition. In the past few years it has been noted that correction of the strabismus, with glasses that correct the refractive error, has improved vision.

Rehabilitation. Persons whose corrected visual acuity ranges between 20/70 and 20/200 in the better eye are said to be partially sighted. A person with less than 20/200 in the better eye is considered industrially blind. In the past two years, progress has been made in reading aids for both groups. It has also been found that the rehabilitation of these people depends largely on the way they react to their blindness, especially the efforts they make to deal realistically with their disability.

Reading Difficulties. Children with reading difficulties have been found to fall into three groups: (1) those of average or above average intelligence, with a specific reading disability, probably due to a physiological disturbance in the cerebral hemispheres of the brain; (2) the slow readers, whose disability is related to low intelligence, faulty vision or hearing, emotional disturbances, or a combination of these factors; and (3) the mixed type, whose disability is due to a combination of factors in both the first and second categories.

Eye Disorders and Rubella. A high incidence of retinal disorders has been found in infants born with congenital rubella. Such changes in the retina may result from cataracts, glaucoma, or other eye abnormalities caused by rubella. In addition, the frequency of microphthalmos (very small eyes) contributes to blindness in rubella infants.

Drivers' Licenses. In all states of the United States, licensing authorities have established visual acuity requirements for drivers of private automobiles. At present, people whose corrected vision is 20/40 or better may be advised that their vision is adequate for operating a private vehicle. Those with less than 20/70 corrected vision in the better eye should not be permitted to drive, and those whose corrected vision ranges between 20/40 and 20/70 should be judged on an individual basis.

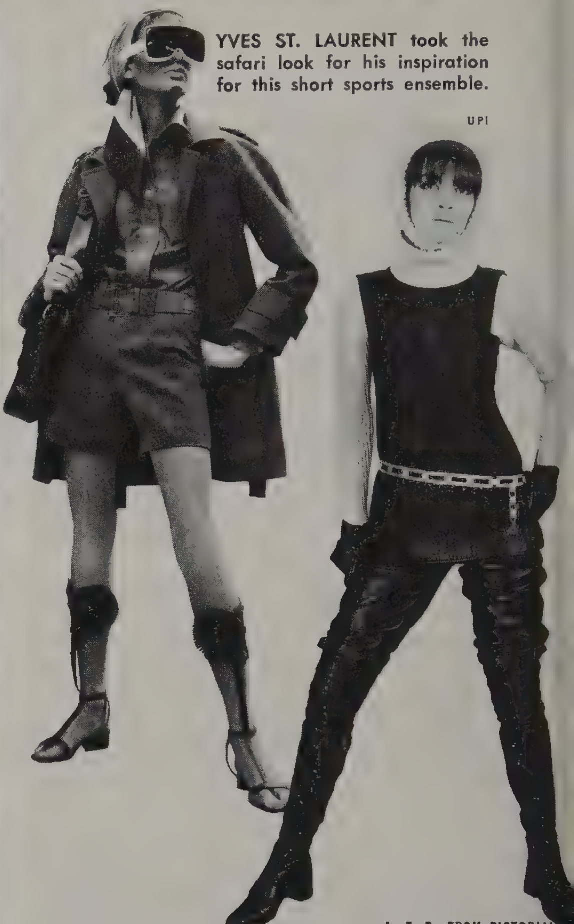
FASHION

WIDE WORLD

TWIGGY, British model and fashion rage of 1967, arrives in New York in March with her manager, Justin de Villeneuve.



YVES ST. LAURENT took the safari look for his inspiration for this short sports ensemble.

UPI

A. F. P. FROM PICTORIAL

BOOTS reached new heights in all the important 1967 collections. This casual costume is from Yves St. Laurent.

FASHION

Fashion began and ended on a note of femininity in 1967. Clothes were more figure conscious, more individual, and in almost all respects very colorful and inventive.

Silhouette. The belted look made a comeback in the spring collections and remained important throughout the year. Even unbelted silhouettes—skimmers, tents, and drifting shapes—showed more control. There were many halfbelts in back, worn high or loosely at normal height, as well as three-quarter belts that attached to buttons at double breasted fronts. For spring and summer, daytime dresses were short, uncluttered, and colorful. In the autumn collections belts made the biggest silhouette news especially some that were very wide, wrapping the midriff from bust to waist.

Suits featured long jackets over short skirts, or short jackets cropped at the waistline. Most suits had coordinated blouses. Generally skirts were easy even when slim; many had dirndl fullness.

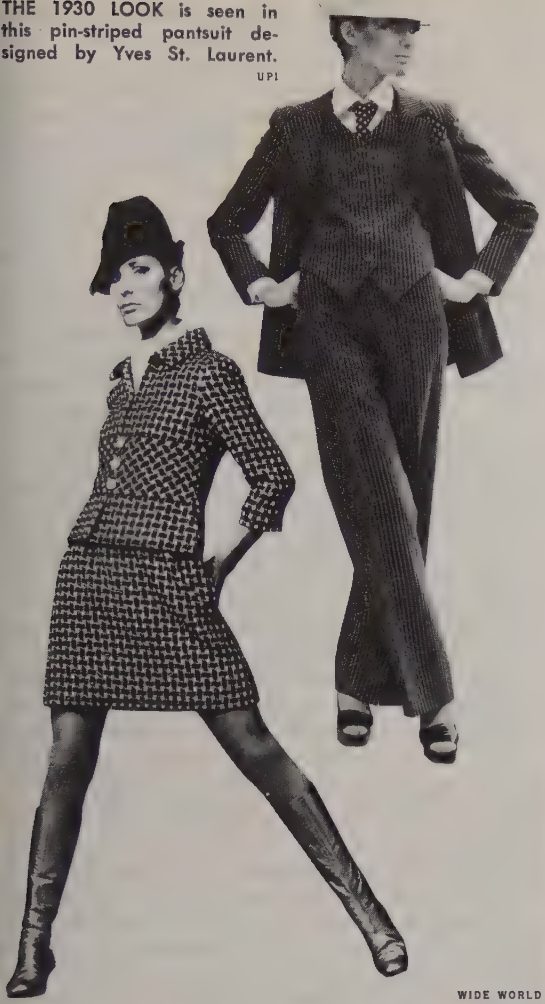
The short-sleeved coat made a surprising comeback, and some sleeveless coats were shown over long-sleeved dresses. Most coats were loosely belted.

By fall, the soft, romantic look was in full swing. Soft shirt dresses in billowy chiffon or in satin had demure, high necklines and French cuffs. Skirts puffed out with restrained fullness and often went all out for fullness in fabrics like velvet (iridescent or panne), matelassés, and brocades. The influence of the motion picture *Dr. Zhivago* was seen in high fur collars, fur cuffs, and side fastenings. Nailheads, commercial zippers, metal inserts, outsize metal sequins, buckles, and metal clasps were used as decorations.

Skirt lengths were short in all garments except "Dr. Zhivago" coats. Mature women adhered to knee length, while youngsters favored miniskirts that rose to three inches or more above the knee.

Fall coats were neat, slim, and generally single-buttoned. The newest looking coat featured a fitted waistline and a bowled-out skirt. Capes were popular for day and evening.

Colors. The colors of 1967 were the reddest reds, the yellowest yellows, the greenest greens, violet, and the entire family of mauves. Brown was rediscovered as a basic color for clothes and accessories. Throughout the year colors were used in bold, contrasting combinations. Fall fashions were ablaze



THE 1930 LOOK is seen in this pin-striped pantsuit designed by Yves St. Laurent.

UPI

WIDE WORLD

THE CLASSIC SUIT was updated with new details and worn short with boots, as in this design by Lito Manalang.

with brilliant color, and even blacks sparkled with nailheads, sequins, and jewels.

Fabrics. Popular fabrics of the year were textured wools, tweeds, lacy woven wools, plaids, checks, patterned worsteds, and textured cottons. There were several new wrinkleless synthetics on the market. Lace made an important comeback in dresses and trimmings, and four-ply crepe, chiffon, surrah, silk twill, and silk linen enhanced the overall feminine feeling of fashion. The whole gamut of silks and new patterned cottons became popular.

Fall fabrics were unusually varied—spider web laces, lush velvets, matelassés, shimmering metallics, great plaids, and tartans. Traditional and romantic fabrics such as velvet and taffeta were used for both day and evening wear. Evening fabrics were elaborate, romantic, and brilliant in color. Patterned sequins, jeweled flannels, yards of chiffon, lace, and richly embroidered fabrics completed the picture.

Sportswear. Pants were designed to wear everywhere. There were pants for city, country, dances, at-home dinners, and travel. Slim long pants with pea coats were popular, as were short pants or culottes designed with the grace of a skirt. Culottes often had matching tops to give them the look of a suit for city appearance. Evening pants were exotic and full, sometimes resembling twin skirts.

It was a big year for shirts—the classic button-down shirt, the four-pocketed safari shirt, and the ruffled, lace-trimmed Edwardian shirt. They were worn with short skirts, evening skirts, and pants.

Sweaters were longer, leaner, and often belted. Many had shirtlike collars or high turtlenecks.

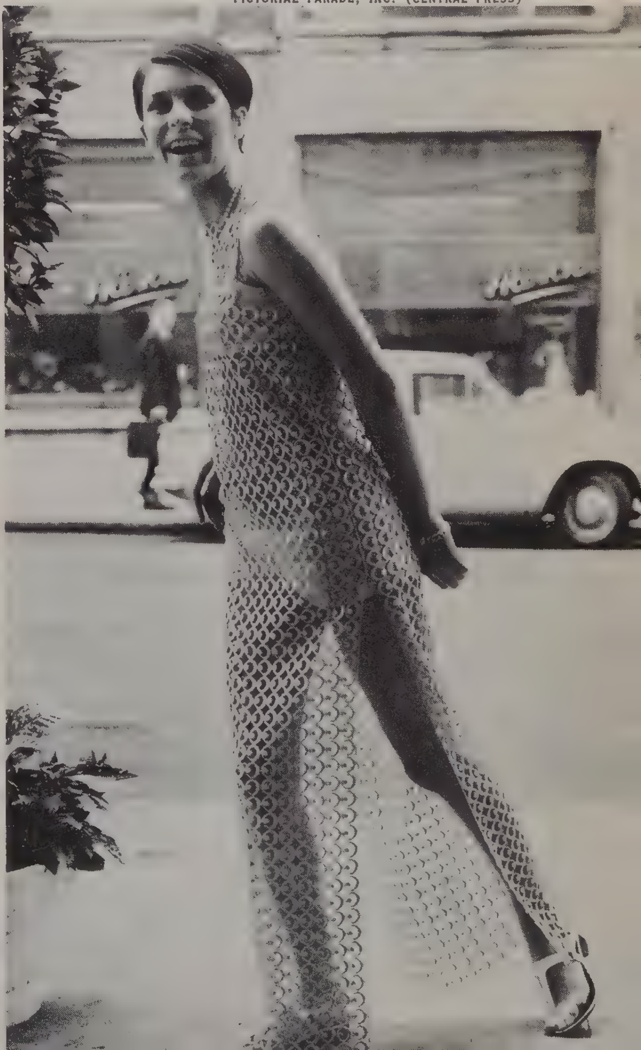
Accessories. Short skirts made shoes and stockings an important part of the fashion picture in 1967. The most important shoe was still the pump with a low, thick heel, sometimes in clear lucite. Boots ranged in height from the ankle-length shoe boot to a thigh-high elasticized boot fitted like hose. Jumpers, kilts, short puffy skirts, and dresses were worn with short matching pants or bloomers and usually with knee socks.

Opaque hosiery in neon-bright summer and fall shades was popular. Knee socks were worn with short pants, culottes, and knickers. Evening hose were made of gold, silver, or bronze metallic threads.

Jewelry was highlighted by long earrings for evening and big, colorful earrings for daytime. Bracelets had gigantic colored stones. Necklaces made a small comeback, especially three-strand pearls.

CHRISTIAN DIOR OF LONDON created this resort ensemble with its chain-mail tunic and bikini bathing suit.

PICTORIAL PARADE, INC. (CENTRAL PRESS)



WIDE WORLD

LACE and other rich fabrics were used to create a romantic and opulent look in evening fashions for 1967. Here, black lace is contrasted with white lace and white accessories.

Bright "Mod" wristwatches with enormous faces and wide bands were sold in every price range.

Metal chains decorated shoes, wrapped waists, and detailed handbags. Tiny purses in leather with chain handles and small evening bags in a variety of fabrics and furs were also popular.

Men's Wear. A revolution took place in men's fashion during 1967. Color was more brilliant and unrestrained than it had been for years. Silhouette was carefully shaped, and coordinates guaranteed a total look. Sports coats and blazers came with their own trousers or vests; outer jackets and sports shirts were coupled with compatible slacks; and sweater sets abounded.

Double-breasted styles were worn for both town and country. Plaids were used in suits and sports jackets, and tattersall was introduced in all varieties of casual wear. Cavalry twill, whipcord, citified tweeds, and aggressive plaids were prominent.

Turtleneck sweaters appeared under jackets, even for formal evening wear. Shirts featuring spread collars and French cuffs followed the color trend in bright solids or boldly contrasting stripes.

Shoes were designed in softer leathers and often had squared toes. Handsewn slip-ons were popular, as were shoes detailed with saddle stitching, saddle chains, buckles, and lacings.

Ties emphasized prints, woven stripes, and textured solids, often with a traditional feeling imported from Britain.

Children's Wear. The year 1967 was one of the most colorful in the history of children's wear. Bold, bright, and sophisticated shades replaced the traditional candy-colored pastels. Ruffles, bows, and fussy details gave way to impeccably tailored clothes that were spirited and modern.

Spring and summer playclothes came in wild and dazzling stripes. Even boys' clothes for every age category were bright and imaginative. Fall fashions had an international feeling. The free spirit of Paris and the whimsy of the London "Mod" styles were combined by American designers.

Tartans were important for schoolwear in everything from pullovers and knickers to knee socks. For girls, there were kilts and pantdresses. Cold weather clothes were often buckled and zippered in shiny hardware.

ANNE FOGARTY
Fashion Designer; Author of "Wife-Dressing"

FEDERAL BUREAU OF INVESTIGATION

Fines, savings, and recoveries resulting from Federal Bureau of Investigation (FBI) work in the 1967 fiscal year rose to more than $278 million. This amounted to a return of $1.53 for every dollar appropriated for FBI operations.

More than 15,000 fugitives sought in FBI investigations were located during the 1967 fiscal year. This was an increase of 11% over the preceding year. Among those apprehended were over 3,200 criminals sought under the Fugitive Felon Act and 14 felons on the FBI's "Ten Most Wanted Fugitives" list. Crimes against banking institutions continued to rise with 2,259 bank robberies, burglaries, and larcenies reported to the FBI.

During the fiscal year 1967, an all-time high of 121 persons were convicted and over 300 were awaiting trial for violating interstate gambling laws under FBI jurisdiction. A substantial rise in the number of thefts of government property was noted. In one case, the FBI recovered property worth nearly $573,000 that had been stolen from a military supply depot.

In the field of internal security, retired Army Lt. Col. William H. Whalen and Air Force Sgt. Herbert Boeckenhaupt, in separate cases investigated by the FBI, were sentenced to prison for conspiracy to commit espionage for the Soviet Union. In both instances, Soviet personnel involved left the United States.

The FBI continued its surveillance of the Communist party, USA, which held its first national convention since 1959 in June 1966. The party undertook extensive reorganizational plans in the fiscal year 1967. FBI reports indicated that Communist party activities are being directed toward youth, labor, the press, civil rights, and the influencing of foreign policy.

Two sessions of the FBI National Academy were held during fiscal 1967, bringing the total number of graduates to 5,136. FBI personnel participated in over 6,000 departmental and regional-type police training schools during the year.

In the same period, the FBI Identification Division received a total of 6,974,179 sets of fingerprints. The files now contain over 184 million sets of fingerprints representing more than 80 million persons. During the 1967 fiscal period, the FBI Laboratory received 223,996 specimens of evidence, requiring over 330,000 scientific examinations.

The FBI is the investigative arm of the U. S. Department of Justice. Established in 1908, it is charged with the investigation of violations of certain specific federal laws and the collection of evidence in such instances. It has jurisdiction over 175 investigative matters in the criminal and internal security fields.

J. EDGAR HOOVER
Director, Federal Bureau of Investigation

FEDERAL POWER COMMISSION

Of major concern to the Federal Power Commission (FPC) during 1967 was the question of how to prevent recurrences of electrical system outages, or power failures.

Reports. On July 26 the FPC sent a report on "Prevention of Power Failures" to President Johnson. The report recommended strengthened interconnections and expanded coordination of electric utility systems in the United States to prevent major cascading outages. The report also outlined a pattern of extra-high-voltage transmission lines that will be needed by 1975. The commission found that the electric power industry has adequate technical competence, equipment, and operating knowledge to provide reliable power.

To implement the recommendations of the report, the proposed Electric Power Reliability Act had been sent to Congress by the FPC on June 8. The act would give the FPC authority to facilitate the provision of reliable, abundant, and economical electric power in the United States.

Major Failure. On June 5, just three days before the Electric Power Reliability Act went to Congress, the 20th major outage since the great Northeast power failure of 1965 hit the United States. Nearly 13 million persons in eastern Pennsylvania, most of New Jersey, and parts of Delaware and Maryland were without electricity for as long as 10 hours.

Electricity. The electric power industry generated a record 1.14 trillion kilowatt-hours in 1966, an increase of 8.4% over 1965. Installed generating capacity at the end of 1966 totaled over 247 million kw, an increase of 11 million kw over the record set the previous year. Nuclear-powered generating stations accounted for over 1.5 million kw by the end of 1966, up from 925,000 kw a year earlier.

In 1966 the commission licensed the construction of two new hydroelectric power projects having a combined capacity of 1.27 million kw.

Natural Gas. The FPC authorized a record $1.4 billion of additional natural gas pipeline construction in the fiscal year ending June 30, 1967. Included were authorizations for 8,371 miles (13,469 km) of pipeline and 666,200 horsepower of compressor capacity. Major pipeline companies sold 10.4 trillion cubic feet of gas in 1966. The average price paid by the pipeline companies to producers of gas was 16.86 cents per thousand cubic feet in 1966, 0.15 cents higher than 1965. The average price of gas sold by pipeline companies under the commission's rate schedules to distribution utilities was 36.18 cents per thousand cubic feet in 1966, down from 36.59 cents in 1965.

In 1967 the commission endorsed legislation that would give the Department of Transportation jurisdiction over safety precautions in gas pipelines.

Rates. In 1966 interstate natural gas pipeline companies filed with the commission wholesale rate reductions totaling nearly $20 million annually and rate increases of about $650,000 per year. Electric utilities filed $6,665,595 in annual wholesale rate reductions and $9,070 in increases during the year.

Membership. The Federal Power Commission on Sept. 1, 1967, was composed of Lee C. White, chairman; John A. Carver, Jr., vice chairman; Lawrence J. O'Connor, Jr.; Charles R. Ross; and Carl E. Bagge.

LEE C. WHITE
Chairman, Federal Power Commission

FEDERAL TRADE COMMISSION

In protecting consumers and reputable businesses from deceptive practices, principally false advertising, the Federal Trade Commission (FTC) in 1967 gave priority to those areas in which consumers least able to afford losses were being victimized. These included spurious part-time job opportunities, exaggerated claims for health remedies and correspondence schools, and high-pressure selling practices for home improvement products.

The FTC is an independent regulatory agency of the U.S. government with responsibility for safeguarding business and the public from unfair methods of competition and from deception in advertising and selling. The commission makes a particular effort to halt illegal activities at their start, especially in the field of trade restraints. These include corporate mergers, price manipulation, illegal advertising allowance arrangements between buyers and sellers, illegal brokerage payments, and prohibited resale price maintenance.

The actions and decisions of the FTC are subject to review by the courts. For example, in April 1967 the U.S. Supreme Court upheld the FTC's order requiring Procter & Gamble to divest itself of its illegal acquistion of Clorox, Inc. This decision clarified the FTC's authority to proceed against conglomerate mergers that endanger competition.

In recent years the FTC has been making a strong effort to employ enlightenment and persuasion to gain compliance with the law as an alternative, whenever possible, to mandatory proceedings. Means to this end are trade regulation rules, advisory opinions, industry guides, and trade practice conferences. The commission also is more frequently concluding proceedings by accepting from respondents assurance that illegal acts will be discontinued and not resumed. This procedure has proven effective and is far less costly than formal litigation.

Efforts went forward during 1967 to develop closer cooperation between the FTC and agencies of state governments to correct unfair methods of competition and deception which occur at state levels. Such liaison has the dual effect of informing the FTC about trade abuses which may warrant its attention and encouraging state officials to move against such practices when they occur in intrastate commerce, which is outside of the FTC's jurisdiction.

Economic reports by the FTC included a study of product standards in the marketing of softwood lumber, an analysis of tire pricing and advertising, a study of bread and milk marketing, and a continuing study of the trend toward corporate mergers and economic concentration.

With headquarters in Washington, D.C., the FTC maintains 11 field offices in the United States.

The FTC is directed by five commissioners: Paul Rand Dixon (chairman), Philip Elman, Everette MacIntyre, John R. Reilly, Jr., and Mary Gardiner Jones. Commissioners are appointed to staggered seven-year terms by the President, and no more than three may be of the same political party. The President names the chairman.

FINLAND

"No one can be unaware that a presidential election is coming," Premier Rafael Paasio noted early in 1967. "Although it is nearly a year away, excitement has been rampant for a long time."

When the two-step elections were held early in 1968 (election of the 300-member electoral college by popular vote on January 15, and election of the president by that body on February 15), President Urho K. Kekkonen won his third 6-year term.

Election. President Kekkonen's prospects for an unopposed third term looked good at first. Then the Conservative and the Farmers' parties nominated Matti Virkkunen and Veikko Vennamo, respectively, and a Helsinki newspaper rejoiced that "now we can speak of a real presidential race." Yet victory for Kekkonen seemed certain. He was endorsed by the three major parties, as well as by several minor groups. By praising the Communists (currently represented in the ruling coalition) for bringing "new spirit and vitality" to the political scene, Kekkonen made his left flank even more secure.

Foreign Relations. A poll in September showed that 85% of the Finns heartily approved the handling of foreign affairs. Foreign Minister Ahti Karjalainen reported "no serious unresolved questions" but called for acceptance of Kekkonen's often-proposed Nordic nuclear-free zone. At the United Nations, Finnish spokesmen urged de-escalation of military operations in Vietnam and cessation of bombing of North Vietnam, as well as Israeli withdrawal from occupied territories and Arab recognition of Israel.

Minor irritations ruffled relations with the Soviet Union. The Finnish government called attention to a gross error, later acknowledged, in a Moscow television documentary on the Winter War (the Soviet-Finnish war of 1939–40). The Soviet armed forces' news organ, *Krasnaya Zvezda* (*Red Star*), charged Finnish right-wing circles with fomenting ill feeling in connection with the celebration of the 100th anniversary (June 4, 1967) of the birth of the Finnish military leader and statesman Carl Gustaf Emil Mannerheim (1867–1951). Another Soviet paper, *Izvestia*, was alarmed over visits to Finland of West Germans, including Willy Brandt, who were suspected of pro–European Economic Community and anti–East German machinations. Recognition of the two German regimes, with which Finland has only commercial ties, was vigorously, if inconclusively, debated.

Economy. Only modest economic gains were made in 1967. The gross national product rose 3%, and industrial production about 4%. Factors in the slowdown were a shortened workweek, a rise in unemployment, strikes, higher taxes, curbs on installment buying, and reduced foreign demand (the economy depends heavily on exports). Various steps were taken to spur activity, including a 10-year housing program, with an annual goal of 50,000 units, and more attractive opportunities for direct foreign investment (mining and forest industries excluded). Finnair, Finland's major airline, received a $21 million loan from the Export-Import Bank for purchase of DC-8 jets. The government easily floated a $15 million bond issue in the United States, the fifth offer since 1960.

Exports rose 6% and imports, only slightly. Although a modest reduction in the trade deficit occurred, a serious and chronic balance of payments deficit compelled the government to devalue the currency by 31.25% on October 11. Measures were taken to cushion domestic and international repercussions.

One half of Finland's exports fell within Kennedy Round tariff reductions. Integration of European economies was a matter of grave concern. In late August, President Kekkonen expressed the view, not shared by the Communists, that Finland's neutrality would not hinder cooperation with the European Economic Community if mutually satisfactory arrangements could be devised.

(See also EUROPE; INTERNATIONAL TRADE.)

Finland's aid to developing nations rose from 3.8 million marks (markkaa) in 1962 to 13.2 million 1967; 74% of this aid was extended through UN channels.

Jubilee Year. Finns celebrated the 50th anniversary (Dec. 6, 1967) of their country's independence with appropriate ceremonies.

UPI

BRUSH FIRE rages through Chatsworth, Calif., just north of Los Angeles, in October. More than 24 houses were destroyed by fire in this hard-hit area of the state.

FIRES

Fires in the United States in 1967 caused 12,200 deaths and $2.07 billion in losses, up $270 million from 1966, according to a preliminary estimate from the National Fire Protection Association (NFPA).

Although reported fire losses have continued to increase steadily, these losses in relation to simultaneous population growth and rising gross national product have declined on a long-term basis.

Worst Fires in 1967. Two accidents involving passenger planes caused the worst fires in loss of lives. Thirty-eight persons were killed in an in-flight explosion and crash of a Lake Central Airlines plane near Kenton, Ohio, on March 5, and 34 more lives were lost when a Mohawk Airlines plane crashed and burned near Blossburg, Pa., on June 23.

The worst building fire, in terms of lives lost, occurred atop a 10-story apartment building in Montgomery, Ala., where smoke and flames swept

Miscellaneous buildings	33	10,928,800
Total	447	$274,659,400

through Dale's Penthouse Restaurant on February 7, killing 25 persons and injuring others.

The costliest fire was the $75 million blaze that swept an Apollo spacecraft during tests on a launching pad at Cape Kennedy, Fla., on January 27, killing three astronauts. The worst building fire occurred on January 16 at Chicago's McCormick Place, the nation's largest exhibition hall, which at that time held nearly 1,000 housewares displays. It cost about $52.5 million, including displays. A fire in the Morgan annex of the New York General Post Office on December 15 destroyed 6,000,000 parcels and pieces of mail to be sent overseas.

1966 Losses. Final NFPA figures for 1966 show that an estimated 2,396,550 fires took 12,100 lives and destroyed property valued at $1,860,500,000. Compared with 1965, the number of fires was up 2.1%, 100 more lives were lost, and dollar losses rose 6.8%. Building fires numbered 970,800 (up 5%) and cost $1,528,000,000 (also up 5%). There were 628,600 fires in houses and apartments in 1966, resulting in 6,500 deaths—2,100 of them children—and property losses of $451,800,000.

Records maintained by the NFPA show that in 1966 U. S. fires in places other than buildings involved aircraft, missiles, and space vehicles (150); motor vehicles (429,000); forests (123,900); brush, grass, and rubbish (832,000); and miscellaneous (40,700).

National Fire Protection Association

FISHERIES

The world catch of fish and shellfish continued to increase more rapidly than the human population. The 1966 catch of 61.8 million tons was nearly 7% above 1965. Peru, with a catch of 9.7 million tons, led all other nations, followed by Japan with 7.8 million tons. Other leading countries in order of volume were mainland China, Union of Soviet Socialist Republics, Norway, and the United States.

U. S. Fisheries. The U. S. catch of fish and shellfish in 1967 was about one hundred thousand tons less than the 2.2 million tons taken in 1966. Sharply reduced catches of salmon in Alaska were largely responsible for the decline. Other important items taken in less volume were menhaden in the Gulf of Mexico; and flounders, haddock, ocean perch, and scallops in New England. Species taken in larger volume were anchovies and tuna in California, Pacific hake in Washington, salmon in Washington and Oregon, shrimp in the Gulf states, and alewives in Michigan and Wisconsin. The low salmon run in Alaska—the smallest since 1897—was a disaster for fishermen and packers and also for the state, which depends on it for tax revenue.

The once proud U. S. fishing fleet, which for many years harvested a catch second only to Japan and took over 12% of the world total, was in sixth place with less than 5%. Nearly 70% of the 1967 U. S. supply of fish and shellfish was imported. With only 6% of the world population, the United States received 12% of the world catch in 1967.

Per Capita Consumption. The relatively stable annual per capita consumption of fish and shellfish in the United States (about 10.6 pounds or 4.8 kg edible weight) was threatened in 1967, when meatless Fridays ended for U. S. Roman Catholics on December 2, 1966. By late 1967, however, there had been no significant decline in consumption.

Alewives in the Great Lakes. The alewife, a newcomer to the Great Lakes from the Atlantic coast, greatly concerned fishermen, conservation officials, and the public in 1967. Alewives already dominate the fish population in Lakes Ontario and Huron, and in 1967 made up an estimated 90% of the total weight of all fish in Lake Michigan. The small, bony fish have replaced better food species, clogged water intake systems, and contaminated beaches as a result of annual die-offs. Increased commercial use of the fish for meal, oil, and pet food, along with the planting in the lakes of predatory species that feed on alewives, may eventually control them.

Soviet Fishing in U. S. Waters. The U. S. Department of State signed an agreement with the USSR on Feb. 14, 1967, reducing the annual quota of king crab to be taken by Soviet fishermen in the eastern Bering Sea and regulating Soviet fishing in prescribed areas inside the new U. S. 12-mile limit. Two Soviet trawler captains were fined $5,000 and $10,000, respectively, for fishing too close to shore.

Fish Protein Concentrate (FPC). Early in 1967 the U. S. Food and Drug Administration approved for human consumption the FPC made in separate processes by the Bureau of Commercial Fisheries and the VioBin Corporation. Congress authorized two experimental plants to make FPC by the bureau process.

FLORIDA

Claude R. Kirk, Jr., Florida's first Republican governor in 90 years, was the center of events in 1967. On February 18, Kirk, a divorcé, married Erika Mattfeld, a German-born divorcée whom he had met in Brazil. Kirk's flair for making news caused him to be mentioned as a potential candidate for the vice-presidential nomination, especially after Miami Beach was selected as the site for the 1968 Republican convention.

"War on Crime." In his inaugural address on January 3, Kirk announced a "war on crime" to be conducted by a private police force answerable only to the governor and headed by George R. Wackenhut, president of a private detective agency. The private donations which were to have financed the controversial force lagged behind expectations. In May the legislature, at Kirk's request, passed a bill that would have transferred the force's duties to the state. However, Kirk vetoed the bill on the grounds that it infringed on the authority of the governor.

Reapportionment and Elections. The legislature had scarcely assembled when, on January 10, the U. S. Supreme Court ruled that the reapportionment plan adopted in 1966 failed to meet the "one man, one vote" standard. The special session thereupon turned to reapportionment. Dissatisfied with legislative progress, a special three-judge federal court announced its own districting plan on February 8 and ordered new elections prior to the regular session of the legislature beginning April 4.

In the voting on March 28, Republicans made gains in both houses. They increased their Senate seats from 11 to 20; House seats from 26 to 39.

Legislation. Republican gains in the legislature enabled the party to sustain the vetoes imposed by Governor Kirk on appropriations and tax bills. In the regular session, which lasted a record 102 days, the legislature established a new pollution control commission, adopted a code of ethics for itself, revised insurance regulation, and passed a tough traffic safety program. Immediately after adjournment, the legislature was called back into session to consider junior college financing and the abolition of the private police force. From July 31 to September 1, the legislature was again in session, this time to consider constitutional revision.

Education. Governor Kirk's most serious controversy involved the public school teachers. Determined to maintain his campaign promise of no new taxes, Kirk vetoed a $1.536 billion appropriation bill. The amount finally approved was $1.373 billion, with the heaviest cuts in education funds. The Florida Education Association invoked sanctions against the state, and the National Education Association placed Florida on its blacklist of censured states. Threatened teachers' strikes were averted in October by the governor's promise to call a special session on education by January 1968.

UPI

FLORIDA GOV. CLAUDE KIRK and his bride, Erika, prepare to cut towering cake at their February 18 wedding.

The University of Florida got a new president in 1967, when former state supreme court justice Stephen O'Connell succeeded J. Wayne Reitz. Former Justice Alto Adams replaced O'Connell on the bench.

Race Relations. Interracial peace was shattered in Tampa on June 11, when riots broke out in the Negro section and raged for two days and three nights. One person was killed and 15 were injured before the National Guard was able to restore order. Jacksonville, scene of previous racial strife, was calm in 1967. A drive for Negro employment, carried out by the city government and the Chamber of Commerce, was credited with easing tension in that city.

Coppolino Murder Case. In a nationally publicized trial, Dr. Carl Coppolino was found guilty on April 28 of the murder of his wife in Sarasota in 1965. He was sentenced to life imprisonment.

Florida Southern College

FOOD INDUSTRY

Food prices at retail food stores averaged about the same in 1967 as in 1966. However, the prices of food served away from home—30% of all food consumed—increased about 5%. Volume feeders found themselves plagued with increased labor costs and inability to use labor efficiently for more than a third of the hours worked. Because of these problems, food is being prepared less in kitchens of feeding establishments and more at the point of raw production.

Some major restaurant chains made progress in solving these problems by preparing up to 70% of their foods in centralized processing facilities. Their menu variety, however, was limited to a small number of standard items. The food industry aided other volume feeders by offering convenience foods developed by chefs and dieticians and prepared with efficient mechanized operations under quality control supervision by food technologists. However, as long as convenience foods constituted only a part of the menu, the advantages of labor savings and reduced kitchen equipment and area for preparation were only partially realized.

A breakthrough occurred when the University of Maryland, faced with the problem of providing more than 75,000 meals a day to its student body, demonstrated that a complete changeover to a system using only convenience foods made their advantages realizable. In addition, the new system offered over 400 standard items. The food industry is also offering a variety of special dietary prepared foods so that hospitals can make the complete changeover to the convenience-foods system. In a new building planned for a hospital in Chicago, the convenience food system for serving 2,000 meals a day will save $200,000 in kitchen equipment and $50,000 annually in labor costs.

Imitation Milk. Vegetable-fat-based products have cut heavily into butter and cream consumption. Per capita consumption of butter dropped to less than 5 pounds in 1967 while that of margarine increased to above 10.5 pounds. Imitation milk now poses a similar threat to whole milk. Because the Filled Milk Act prohibits interstate commerce of milk in which vegetable fat has replaced butter fat, the imitation milks must be produced and consumed locally. Although canned evaporated filled milk products are common in many areas, numerous attempts in the past by small companies to market imitation milk as fresh fluid milk have not been successful. In 1967 several large dairy processors added imitation milk to their product line and promoted it on the basis of lower cost, milder flavor, high protein content, fortification with vitamins, and freedom from animal fat. Figures for central Arizona show that imitation milk increased its share of fluid milk sales from 1.7% to 5.4% in one year.

U. S. FOOD INDUSTRY

Group	Employees[1]		Value added by manufacture (billions)		Value of shipments (billions)	
	1964	1965	1964	1965	1964	1965
Meat and poultry products	305,000	298,000	$ 3.1	$ 2.9	$17.6	$18.6
Dairy products	252,000	246,000	3.4	3.3	11.7	11.6

Total[3]	1,648,000	1,632,000	$23.1	$23.3	$70.5	$73.9

[1] Excludes employees at central administrative offices, distribution warehouses, and other auxiliary establishments. [2] Includes animal and vegetable oils and fats, roasted coffee, macaroni, potato chips, etc. [3] Details may not add to totals because of rounding. (Source: U.S. Bureau of the Census.)

Textured Vegetable Protein. A whole new food category is based on protein that is extracted from low-cost soybeans and processed to impart textures such as those in meat fibers or nuts. The U. S. Food and Drug Administration (FDA) is considering petitions for establishing a standard of identity for this new class of food. When introduced, the new products were used to supply protein in vegetarian diets as analogs of ham, beef, chicken, seafood, and bacon.. In addition they are now finding application in various snack foods and in improving the characteristics of other processed foods.

Irradiation. The development of processes for preservation of foods by radiation is still being actively pursued by the Atomic Energy Commission and the armed forces. The development continues despite the rather unfavorable judgment of President Johnson's Scientific Advisory Committee that "technical problems indicate that food irradiation is not likely to have a significant application for food preservation in the foreseeable future." The firm of Irradco, Inc., was awarded a government contract to build the first privately owned, large-scale food irradiation plant in the country. The first item to be processed in quantity will be ham—for the Army and for Thompson Farms of Chicago. The production facility, however, will not be erected until irradiated ham has been cleared by FDA as safe for consumption. Clearance is expected in 1968. The U.S. Department of the Interior continues to sponsor experimental work on prolonging the shelf life of fresh seafood by use of pasteurizing doses of irradiation aboard ship. (See also ATOMIC ENERGY.)

Tin-Free Cans. Two major can companies began production of tin-free cans in 1967. American Can uses a cemented side seam; Continental Can welds the side seam. The result is a stronger can of steel that costs about two tenths of a cent less (for an 8-ounce size).

New Food Products. Statistics on new food products in the supermarkets can be misleading unless newness is defined. To a supermarket, a new item is simply any product added to stock for the first time. It may be a new package size, a new flavor, or a new variety of an existing brand—or it may be distinctly different in form or basic ingredients or method of use in the home. In one typical large chain, the dollar volume of new items introduced annually since 1960 has been 10–11% of total annual sales. Distinctly new types of products, however, were only about 0.2% of total annual sales in 1960, 0.9% in 1962, and 1.3% in 1964.

The development of distinctly new types of food products is now dominated by large food processors. One study reports that in 1964 average expenditures per new product amounted to $68,000 for technical research and development, $26,000 for market research, and $248,000 for test marketing. In the first year of regular distribution, marketing expenditures average 43% of sales at factory prices—more than three times as great as the average rate of marketing expenditures for all processed foods.

FOREIGN AID

UPI

AMERICAN AID has changed the landscape of Iran. A cement plant, built with U. S. assistance, typifies progress that led Iran to the point of needing no more aid.

FOREIGN AID

United States foreign economic aid commitments from all sources totaled $5,290 million in 1967, about the same as the $5,249 million the previous year. This includes capital subscriptions to international organizations and funds from the Agency for International Development (AID), Food for Freedom, Export-Import Bank, Peace Corps, and other programs.

Both foreign and domestic factors pointed toward a potential downturn in the U. S. aid level in the near future. Although prosperity climbed generally in western Europe and Japan, the United States experienced a severe balance-of-payments deficit and was making heavy expenditures for the Vietnam War. Domestic pressure against foreign aid was nurtured by opposition to the war and the extent of U. S. commitments abroad, by a large federal deficit, by demands for more social welfare at home, by protectionism, rising prices, and proposed tax increases.

A recalcitrant Congress slashed President Johnsons' proposed 1968 Foreign Assistance Act appropriation, the main source of aid funds, by almost $1 billion in voting a record low $2.3 billion—$1.9 billion for economic aid and $400 million for arms.

Terming the congressional action shocking, AID Administrator William S. Gaud voiced fear that the effect of the cut globally would be multiplied through future corresponding cuts by other advanced nations sharing in aid programs and by increased reluctance of aid-receiving countries to undertake needed economic reforms in expectation of U. S. help.

U. S. Aid Purposes. The broad national interest continued to serve as the primary justification for further foreign aid. Applying his domestic Great Society concepts overseas, President Johnson portrayed hunger, disease, and ignorance as potential breeders of violence abroad that, if unchecked, could cost America dearly in money and lives. The President said in his 1967 annual foreign aid report that by combating these "oldest enemies" of mankind among the impoverished masses of Asia, Africa, and Latin America, aid wins "victories of prevention . . . the shots that did not sound, the blood that did not spill, the treasure that did not have to be spent to stamp out spreading flames of violence."

Arms aid was extended on grounds that it strengthened the common defense of the non-Communist world. Strategists also calculated that aid programs, even where small, helped maintain a U.S. presence and prestige and, they hoped, some political leverage in aid-receiving countries.

Programs and Policies in 1967. The Johnson policy of focusing on the hunger-disease-ignorance triad had its first full year of implementation in 1967. Under a new Food for Freedom program (Public Law 480) keyed to promoting farm production in aid-receiving countries, U. S. commodity sales, loans, and grants totaled $1,040 million and AID earmarked a further $497 million for foreign agricultural development. Health programs received $156 million and education $189 million.

UPI

THAILAND'S young people learn modern skills with the help of American aid funds. Here, boys are taught engine repair. Signs in 1967 pointed to a downturn in volume of U. S. aid.

AID established a central War on Hunger Office to supervise the multifaceted agriculture program and the companion effort to curb the population explosion in hungry lands. It combined direct U. S. food shipments with financing of technical assistance, fertilizer, machinery, and construction projects aimed at increasing foreign farm output. The new U. S. policy of supporting foreign family planning advanced a notable step when Gaud announced in April that U. S. funds could be used, upon request of the recipient nation, to buy U. S. contraceptives or to manufacture contraceptives abroad.

Health programs concentrated on fighting communicable diseases, training local health workers, and alleviating malnutrition in mothers and children. Millions of persons in the underdeveloped continents were vaccinated against measles, smallpox, and cholera. Special vitamin and mineral enrichment was added to U. S. Food for Freedom shipments to 88 countries. Training of foreign physicians, nurses, and auxiliaries was stepped up 67%.

In education, less-developed areas received expanded U. S. help in specialized, technical, and basic schooling. More than 21 million students abroad were enrolled in U. S.-assisted schools of various types. Projects to train foreign teachers and administrators and strengthen their educational institutions got priority.

The long-term objective of U. S. economic assistance remained that of raising aid-receiving countries to the point where they no longer require outside financing on noncommercial, "soft" terms. During 1967, Iran was added to the slowly growing list of nations deemed to have reached this level. For fiscal 1968 U. S. authorities scheduled only $300,000 in terminal economic aid for Iran. (See also IRAN.)

Some other countries went off the list for political reasons. Yemen ousted the small U. S. economic program in April after accusing American aid workers of trying to blow up the city of Taiz—charges that Washington denied. The Israeli-Arab war in June disrupted aid efforts generally in that area and by the end of the year U. S. programs for Egypt, Sudan, and Algeria had not been resumed. But Indonesia, once off the U. S. aid list during the Sukarno regime, received a $65 million American contribution in a $200 million, 11-nation pledge for her foreign exchange requirements.

With $2,249 million in economic assistance to some 70 countries in 1967—$296 million drop from 1966—AID continued to concentrate on a relatively few nations where it hoped to achieve the most. More than 90% of its $718 million in what is called "supporting assistance"—grants to countries in which the United States has a high security interest—went to the Dominican Republic, Jordan, South Korea, Laos, Thailand, and South Vietnam. Three quarters of its $1.1 billion in "development loans"—those linked to self-help by the recipients—went to Brazil, Colombia, India, Korea, Pakistan, and Turkey.

United States aid to the Middle East and South Asia region focused on boosting agricultural output. In Africa, where the United States had bilateral programs with 35 states, policymakers decided to shift to multicountry, regional programs in the future except for 10 nations with which America has special relationships. In East Asia and Oceania, U. S. aid went into both agricultural and industrial projects, again with growing emphasis on regional and multilateral undertakings.

The program for South Vietnam was unique because of the war. A separate Bureau for Vietnam was set up in AID's Washington headquarters to handle it. The dollar level of economic help was

U. S. FOREIGN ASSISTANCE ACT
(Fiscal Year 1968 Presidential Appropriation
Requests and Congressional Action—
in millions of dollars)

Type of Appropriation	Requested by President	Appropriated by Congress
Economic assistance		
Development loans	$ 774	$ 435
Technical cooperation and development grants	242	180
Alliance for Progress	643	469
Development loans	533	389
Technical cooperation and development grants	110	80
Contingency fund	31	10
Supporting assistance	720	600
International organizations and programs	141	130
American schools and hospitals abroad	14	12[1]
Pre-investment assistance	2	1
Administrative expenses: AID and State Department	62	58
Economic assistance total	2,630	1,896
Military assistance	596	400
Foreign Assistance Act total	$3,226[2]	$2,296[2]

[1] In addition, $6 million in excess foreign currencies was appropriated for five institutions in Israel. [2] Detail may not add to totals because of rounding.

Note: Public Law 90–249: also continued available any unobligated balances as of June 30, 1967; appropriated $300 million for the first installment of the U.S. share in the 1968–70 increase in the resources of the Inter-American Development Bank's Fund for Special Operations; $104 million for payment of the third installment of the U.S. supplementary contribution to the International Development Bank; and $107.5 million for the Peace Corps. Title III of the act provided limitations on the program activity and administrative expenses of the U.S. Export-Import Bank.

[1] Revised from previously published figures. [2] Preliminary. [3] Detail may not add to total because of rounding. [4] Excludes $43.1 million reimbursements by the Department of Defense for grants to Vietnam. [5] Military assistance to Vietnam under the Foreign Assistance Act has been transferred to regular Department of Defense funding. (Source: Statistics and Reports Division, Office of Program and Policy Coordination, Agency for International Development.)

reduced to $542 million in 1967 from $729 million the previous year, mainly because higher Vietnamese foreign currency holdings allowed a drop in the Commercial Import Program for U. S. financing of imports to combat inflation. Higher amounts were devoted to projects aimed at winning popular support in the countryside, ranging from classroom building to medical and refugee care.

The Alliance for Progress program for Latin American development received $1,486 million worth of U. S. economic aid, up $132 million from 1966. This included $556 million from AID, $492 million from the Export-Import Bank, $70 million in Food for Freedom shipments, and $368 million from the Inter-American Development Bank and other sources. The hemisphere heads of state met at Punta del Este, Uruguay, in April to breathe new life into the program. The presidents called for accelerated development and set a 1970–85 timetable for bringing into being a Latin American common market. (See also LATIN AMERICA.)

Arms Aid. Total U. S. military loans and grants abroad were listed at $1,647 million in 1967. This figure is not comparable with prior years because a large and undisclosed amount for South Vietnam was shifted into the regular U. S. defense budget.

Weapons shipments went to 36 countries, under a legislative restriction holding the number to no more than 40. Nearly 80% of the total went to seven nations ringing the Sino-Soviet perimeter from Korea to Turkey, although no arms grants went to India or Pakistan.

The U. S. program for Japan was terminated with her assumption of full payment for her own forces.

Diplomatic Affairs Reporter, Associated Press

FOREIGN INVESTMENTS

Net outflows of U. S. private capital rose to $4.2 billion in 1966, nearly 15% over the amount recorded for 1965. The outflows in the first half of 1967 were about the same as in the first half of 1966, indicating an annual outflow for 1967 of about the same amount as in 1966.

Direct investment flows rose slightly in 1966 to $3.5 billion (compared with $3.4 billion in 1965), but continued at a somewhat reduced level in the first half of 1967. Foreign securities issued in the United States remained level at $1.2 billion for 1966, but indications were that 1967 totals would be higher.

Other types of capital transactions resulted in inflows from abroad of $500 million in 1966, in sharp contrast to early developments in 1967 when these capital flows resulted in a small outflow. Long-term government credits and claims (net of repayments) rose by $900 million (compared with $1.6 billion in 1965) while short-term government claims declined.

These capital outflows—together with reinvested earnings on direct investments of $1.7 billion, changes in market prices of foreign securities, and improved reporting—raised the cumulative total of U. S. foreign investments to nearly $112 billion at the end of 1966, and the total of private U. S. investments abroad to $86 billion.

Direct Foreign Investments. New investments by U. S. companies in Europe accounted for the largest portion—about 44%—of the additional direct investments (capital flows and retained earnings) in 1966, and rose to more than 50% of the total in the first half of 1967. In 1966 new direct foreign investments included about $550 million to acquire existing foreign enterprises, nearly twice as much as U. S. investors spent for that purpose in the prior year. About three quarters of these investments represented acquisitions of European enterprises.

The cumulative value of direct investments in western Europe was $16.2 billion at the end of 1966, about $2.2 billion or nearly 16% more than at the end of 1965. Investments in manufacturing industries in Europe increased about $1.3 billion to a total of $8.9 billion at year-end. Investments by oil companies rose by more than $500 million to a cumulative total of nearly $4 billion.

Nearly half ($7.6 billion) of the total European investments at the end of 1966 were located in Common Market countries, including $3.1 billion in Germany. Investments in Britain were about $5.7 billion at the end of 1966, up $530 million from the 1965 total. Investments in other European countries rose by about $400 million to nearly $3 billion.

Canada. U. S. capital outflows to Canada continue to set records. The 1966 figure was $1.1 bil-

[1] Revised. [2] Preliminary. [3] Less than $500,000. [4] Represents the estimated investments in shipping companies registered primarily in Panama and Liberia. [5] Consists primarily of securities payable in foreign currencies but includes some dollar obligations, including participations in loans made prior to 1963 by the International Bank for Reconstruction and Development. Effective in 1963, participation in IBRD loans are included under banking claims and "other" long-term investments, according to country or obligor. [6] Excludes $200 million netted against a related inflow of U.S. direct investment capital. [7] Includes $254 million loaned to Canada for Columbia River power development. [8] Excludes World War I debts that are not currently being serviced. [9]Negligible. (Source: U.S. Department of Commerce, Office of Business Economics.)

lion—20% above the record level of 1965. Of this, about $550 million went into manufacturing enterprises, and about $260 million was invested in finance, trading, and other service industries. About $280 million went into petroleum and mining ventures, partly in the development of new oil and mineral resources. In the first half of 1967, however, these outflows to Canada were strongly reduced. Inclusive of $540 million of earnings reinvested during 1966, direct investments in Canada rose by $1.6 billion to a total of $16.8 billion at the end of 1966.

Other Countries. U. S. companies continued to increase investments in other developed countries, principally Australia, Japan, and South Africa. More than half of these new funds were invested in manufacturing facilities. Direct investment in the less-developed countries of Latin America, Africa, and Asia rose by $1 billion in 1966. More than 60% of these new investments were in the Western Hemisphere. Outstanding investments in Venezuela declined because of return flows of capital from oil operations. Investments in most other Western Hemisphere countries expanded, particularly in Brazil and in the Caribbean areas.

Earnings of Direct Investments. Although the value of U. S. direct investments abroad increased by 11% in 1966, earnings rose by only 4%. In 1966 the earnings of foreign branches, subsidiaries, and other foreign affiliates of U. S. parent companies amounted to $5.7 billion, providing a yield of 11.5% on invested capital.

Earnings of manufacturing enterprises abroad reached $2.1 billion in 1966 because of gains in Latin America and, to a lesser degree, in Canada. Earnings in western Europe and the rest of the world were unchanged from 1965 levels. Mining enterprises strongly improved their earnings performance in all areas except Canada. On the whole, oil profits remained stable.

In 1966 the distribution of income to U. S. owners in the form of dividends, interest, and branch profits remained relatively unchanged at $4 billion. Income from mining enterprises rose 20% to $520 million, but revenue from all other industries continued at the level of the preceding year. Income from the oil industry amounted to $1.8 billion, and manufacturing firms accounted for $1.1 billion.

Royalties and fees from foreign direct investments continued as an increasingly significant supplement to total receipts of U. S. parent companies. In 1966 these royalties and fees amounted to $1,045,000,000, or about 13% above the 1965 amount. Two thirds of this amount was derived from manufacturing.

Other Foreign Investments. Transactions by Americans in foreign securities resulted in outflows from the United States of $500 million in 1966. In that year U. S. investors purchased about $1.2 billion of new foreign dollar issues. Retirements of prior issues amounted, however, to $400 million, and other transactions in foreign securities resulted in additional inflows of $300 million. Of the new foreign dollar issues sold in the United States, Canada accounted for more than $1 billion in 1966. In the first half of 1967, an additional $760 million of these issues were placed in the United States, with Canada accounting for $500 million.

Foreign Investments in the United States. Foreigners continued to liquidate their holdings in U. S. corporate stocks in 1966 and early 1967. They shifted their funds to corporate and U. S. government agency bonds and to bonds of state or municipal governments. Flows of foreign capital for direct investment in the United States remained relatively small, amounting to about $100 million for 1966. Additions to these investments from reinvested earnings were $340 million, bringing total foreign direct investments in the United States to $9.1 billion at year-end. More than two thirds of these investments were owned in Europe, and most of the rest were held by Canadian parent companies.

FOREIGN POLICY OF THE U.S.

UPI

AT A CONFERENCE on Guam in March, Dean Rusk, President Johnson, and Robert McNamara (*rear*) confer with Chief of State Thieu and Premier Ky of South Vietnam.

FOREIGN POLICY OF THE UNITED STATES

The deepening and seemingly endless U. S. military involvement in the war in Vietnam remained the dominant foreign policy issue—in fact dominated all other issues, foreign and domestic—in political debate in the United States during 1967. Criticism of the administration's policy in Vietnam mounted rapidly in both public and governmental circles during the year, and for the first time conspicuous numbers of critics went beyond considerations of the wisdom or rightness of the policy to raise fundamental questions about the policymaking process and the limits of executive power in respect to U. S. military commitments overseas.

Vietnam. In an address in San Antonio, Texas, on September 29, President Johnson expressed his determination to persevere in the war until North Vietnam indicated a readiness to negotiate. He said the object of the war was to contain communism, which would probably spread to all of Southeast Asia and beyond if not controlled, and for the first time he specifically cited U. S. security as an important reason for U. S. involvement.

President Johnson declared in his San Antonio address that the war was moving favorably for the United States. He also commented approvingly on the support of his Vietnam policy by the governments of South Korea, the Philippines, Thailand, Malaysia, Singapore, Australia, and New Zealand. However, outside these seven countries and the United States—with less than 10% of the world's population—there was increasing criticism of U. S. policy and an increasing demand for cessation of the bombing in North Vietnam, which Ho Chi Minh had made a prerequisite for any discussion of negotiation.

In the course of the year, peace groups and foreign governments increased pressure for unconditional cessation of U. S. bombing of North Vietnam, expressing the belief that such an act would lead to negotiation. But the U. S. military authorities opposed such action, claiming that bombing was necessary to check the flow of arms and men to the South.

Inside the United States approval of President Johnson's policies on Vietnam declined sharply in the opinion polls, from more than 50% by some counts to less than 25%. Gerald Ford, Republican leader in the House of Representatives, and other legislators identified with the "hawks," criticized the President for not permitting more thorough bombing and not authorizing a blockade of the port of Haiphong, through which the Soviet Union was supplying Hanoi. The hawks generally thought such bombing would bring the war to a speedy end with victory. On the other hand, the "doves," such as Democratic Senate leader Mike Mansfield, Chairman of the Senate Foreign Relations Committee J. William Fulbright, and several former members of President Kennedy's administration, criticized the President on the grounds that his efforts toward negotiation were unrealistic and unsuccessful. The doves generally feared that China or the Soviet Union might intervene if attacks on North Vietnam were broadened. The military wholeheartedly supported the hawks, while Congress, the leaders of both political parties, and the people remained deeply divided.

The President professed to be following a middle-of-the-road policy on escalation. He reiterated a willingness to negotiate—although, his opponents said, on terms that were almost sure to be unacceptable to the North Vietnamese and the Vietcong. At the same time he continued to escalate the war as recommended by the Joint Chiefs of Staff. Secretary of Defense McNamara supported the President's middle-of-the-road policy, as he saw it, by emphasizing the danger of widening the war. He urged that an electronic barrier be built south of the demilitarized zone dividing North and South Vietnam and expressed his belief that a device of that kind would be both cheaper and more effective than the bombing in inhibiting infiltration from the North. Independently, the Senate Preparedness Investigating Subcommittee reported on October 11 that by the end of March 1967 the U. S. had lost aircraft worth $911 million in destroying property worth only $180 million in North Vietnam.

In a televised press conference on October 12, Secretary of State Rusk vigorously affirmed the President's position and said that American security was threatened by the prospect "in the next decade

RENI PHOTOS

WALT W(HITMAN) ROSTOW was appointed in March 1966 as special presidential assistant for the development of long-range foreign policy. As the President's chief foreign policy aide, he took part in a number of important diplomatic conferences during 1967. In June he was present at summit talks between President Johnson and Soviet Premier Kosygin at Glassboro, N. J.

Rostow was born in New York on Oct. 7, 1916. He graduated from Yale (B. A., 1936; Ph.D., 1940) and studied at Oxford as a Rhodes scholar (1936–38). During World War II he served with the Office of Strategic Services, and in 1950 he became professor of economic history at the Massachusetts Institute of Technology. A trusted adviser to President John F. Kennedy, he was appointed his deputy special assistant for national security affairs, as well as counselor of the State Department, in 1961. A reputed "hard-liner" on relations with Communist states, Rostow is the author of a number of books on economics and foreign policy.

or two of a billion Chinese on the mainland armed with nuclear weapons." Rusk denied that he had invoked the idea of the "yellow peril," as Sen. Eugene McCarthy of Minnesota and other commentators asserted. However, Rusk's emphasis on containing China and maintaining the balance of power in Asia seemed to his critics to escalate the objectives of the war, which had originally been declared to be collective defense of South Vietnam. Furthermore, it raised doubts whether widespread destruction in Vietnam would achieve either objective.

China. The United States appeared to be moving toward a "two-China" policy, by which the Peking government would represent China in the United Nations and Taiwan would continue to be a member with a seat in the General Assembly but not in the Security Council. It seemed unlikely that either Peking or Taipei was ready to accept this policy; but the Vietnam situation, the continuing demand in the United Nations for representation of mainland China, and the need for Chinese participation in the nonproliferation and other arms-control treaties indicated the advisability of modification of the U. S. policy of nonrecognition and opposition to UN membership for a nuclear power with a quarter of the world's population.

Middle East. In a 6-day war that broke out on June 5, Israeli forces occupied Egyptian, Jordanian, and Syrian territory twice as large as the area established as the entire state of Israel in the 1949 armistice agreement ending the first Israeli-Arab war. The outbreak in June ending a period of anxious watching and waiting that had begun on May 18 when U Thant announced that the UN Emergency Force policing the troubled borders would be withdrawn the next day at Egyptian request.

Immediately after the removal of the UN force, troops of the United Arab Republic moved up to the Israeli frontier, and President Nasser announced a blockade of the Gulf of Aqaba and the Straits of Tiran, Israel's vital sea route to the Red Sea. The United States, which had committed itself in 1956 to assuring Israeli access to the Red Sea, tried to avoid taking sides. On May 23, President Johnson expressed his government's belief that the blockade was illegal. He described free passage of international shipping through the gulf as "a vital interest of the international community," but went on only to request that the UN seek "a clarification of this point." Johnson's critics in the United States quickly drew comparisons between the government's massive military assistance to South Vietnam and its reluctance to commit any forces whatever to preserve the vital interests of Israel.

After Israel's shattering defeat of the Arab armies, Ambassador Arthur Goldberg presented the U. S. position to the United Nations. He proposed termination of Arab belligerency against Israel, settlement of the Arab refugee problem, opening of the Straits of Tiran and the Suez Canal to Israeli shipping, and respect for the territorial integrity of all Middle Eastern states.

Greece. Although accused by the Soviet press of initiating the military coup in Greece in April, and accused by Greece of supporting Turkey and by Turkey of supporting Greece in the Cyprus situation, the United States seems to have sought to maintain a detached position in these crises. It cut off military aid to Greece after the coup and continued to support the presence of UN peace-keeping forces in Cyprus. When Greece and Turkey threatened war over Cyprus in November, President Johnson sent a special envoy, Cyrus R. Vance, to persuade both countries to desist. Vance's mission was at least temporarily successful—partly because of Soviet sufferance.

Soviet Union. Many Americans, including former Undersecretary of Defense Roswell Gilpatrick, agreed with most Europeans that by 1967 the cold war was coming to an end. During the year the United States continued to seek a détente with the Soviet Union through cultural exchanges and agreement on a draft treaty to prevent the further spread of nuclear weapons, which was jointly submitted to the UN Disarmament Committee on August 24. In addition, Congress ratified a treaty establishing consulates in both countries and a treaty to ban weapons of mass destruction in outer space.

The policy of détente was seriously hampered by continuing U. S. escalation of the Vietnam war and increasing Soviet material support of North Vietnam. It was apparent that efforts to settle most local disturbances peacefully depended on U. S.–Soviet cooperation. On June 23 and 25, in the wake of the Israeli-Arab war, Soviet Premier Kosygin and President Johnson held a summit meeting at Glassboro, N. J., to try to arrive at a general understanding. The meeting was widely acclaimed, but evidence of any significant progress was not forthcoming.

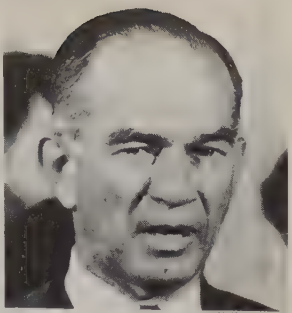
Meanwhile Communist China and Albania interpreted the joint effort to effect a détente as a move of the superpowers to divide the world between them.

Europe. In spite of President de Gaulle's withdrawal of France from military cooperation in NATO, the United States continued to support that organization as a necessary deterrent to Soviet expansionism in Europe. In general the U. S. acted with restraint toward de Gaulle's policy of seeking to create a "third force" in Europe.

Fortunately for the United States, the rest of Europe was less attracted than France by de Gaulle's design for a united Europe under French hegemony.

J(AMES) WILLIAM FULBRIGHT, chairman of the Senate Foreign Relations Committee, remained in 1967 a leading critic of U. S. involvement in Vietnam. The Arkansas Democrat proposed measures aimed at reasserting the role of Congress in making international commitments. On August 8 he linked the Vietnam conflict with domestic racial violence and declared that the Great Society was "a sick society" as a result of the "unnecessary and immoral war."

Fulbright was born in Sumner, Mo., on April 9, 1905. He attended the University of Arkansas and Oxford University as a Rhodes scholar and, after graduating from George Washington University (LL.B., 1934), served with the Justice Department. Later he taught law at both George Washington and Arkansas universities, and from 1939 to 1941 he was president of the latter. In 1943 he entered Congress, and since 1945 he has served in the U. S. Senate. In 1954 he was a delegate to the UN. He is the author of *Old Myths and New Realities* (1965) and *The Arrogance of Power* (1967).



WIDE WORLD

Continuing fundamental cooperation between Britain and West Germany on the one hand and the United States on the other was symbolized by meetings of heads of state in Washington during the year.

Africa. U. S. policy in Africa depended more on words than on deeds in 1967. The government supported UN resolutions introduced by African states to put the world community on record against colonialism and racism, but it refused to commit itself to sanctions that were urged by the African states and that would make the resolutions meaningful. And when, in a rare instance of actual commitment of materiel, the administration sent three transport planes to the government of the Democratic Republic of Congo, which was being threatened by a well-armed force of white European mercenaries, the congressional outcry forced the administration to withdraw its help quickly.

Likewise the United States supported in theory the integrity of the Federation of Nigeria against the dissolution threatened by secession of the self-styled state of Biafra. But on July 11 a spokesman of the federal government of Nigeria accused the United States of refusing to grant permits for private export of arms to the government. It appeared that the U. S. was exercising restraint in Africa.

Latin America. The United States continued to rely on the Alliance for Progress as its main instrument for helping improve the economic and political stability of Latin America, but progress toward both goals appeared to be slow. Nevertheless, U. S. planners expressed satisfaction that Cuban-based Communist subversion appeared to be a failure on the continent of South America. Cuban-inspired insurgencies in Venezuela and Bolivia collapsed during the year, and on October 10 the Bolivian Army high command reported that Ernesto (Che) Guevara, Premier Castro's former minister of production in Cuba, had died the day before, following a battle near Higueras.

Public Opinion. Concern over the Vietnam war, over racial rioting in major U. S. cities during the summer of 1967, and over the prospect of rising taxes combined to threaten American support of the Johnson administration's foreign policy. The image of the United States as a mature champion of peace, democracy, and the United Nations had deteriorated in most of the world, and the American people seemed to be wondering where their country was going. Dissident groups—pacifist, racial, liberal, and conservative—became louder in their protests.

The general pessimism of the world was reflected by Secretary-General U Thant in a somber report to the 21st General Assembly in September. Thant commented on the serious situations in Vietnam and the Middle East and the widening economic gap between developed and developing countries as population growth in the latter outpaced production. Although the United States made extensive grain shipments to India to avert a serious famine there, it otherwise reduced its programs of overseas economic assistance in view of congressional concern over a prospective record-making deficit as a result of the war. In November Congress passed a $2.7 billion foreign aid authorization, but later in the year it appropriated only $2.3 billion—the smallest aid appropriation in the program's 20-year history.

There was also much public discussion about the increasing role of the military in making foreign policy. It was stimulated by a running controversy between Secretary of Defense Robert S. McNamara and the Joint Chiefs of Staff on the limitation of bombing in North Vietnam and the anti-ballistic missile program. Increased public speculation on the possibility of a serious rift among President Johnson's top advisers followed a November 27 news leak that Johnson had nominated McNamara to head the World Bank.

Congress. The disturbed state of public opinion was reflected in congressional debates, in which critics charged that the constitutional balance between executive and legislative authority had been upset by presidential actions in making foreign commitments and initiating war without congressional consent. The Tonkin Gulf resolution of 1964, by which the President sought to justify the administration's escalation of the Vietnam War in 1967, was a case in point. Fulbright and most other members of the Senate Foreign Relations Committee insisted that their vote for the resolution implied no intention to endorse in advance the level of fighting that had since been reached. Others pointed out that the President has always had the initiative in making foreign policy and war. It was recognized that Congress could exert an influence by advisory resolutions, control of appropriations, and exercise of its powers to declare war and ratify formal treaties; but in the increasingly complex, changing, and dangerous world these powers could not check presidential initiatives, which, once taken, had a habit of becoming commitments. On November 16, by unanimous vote, the Senate Foreign Relations Committee adopted a resolution providing that the President not commit U. S. forces in overseas conflicts without a prior affirmative action by Congress.

FORESTRY AND LUMBERING

Forestry highlights of 1967 included new wilderness area proposals, new park proposals, and heavy use of forest recreation areas. New heads were named at several important forestry schools in the United States during the year, and funds appropriated for the U.S. Forest Service reached a new high.

Wilderness System. The San Rafael Wilderness in California was proposed for inclusion in the National Wilderness Preservation System. The San Rafael area would be the first addition to the system since it was created by the Wilderness Act of 1964. In 1967, President Johnson recommended this area for approval by Congress following studies and public hearings conducted by the Forest Service. The Forest Service prepared recommendations on 12 other areas in national forests for presentation to Congress later in the year. Additional proposals for new wilderness areas in national parks and wildlife refuges were prepared by the Department of the Interior.

Following a special study by a federal committee of the North Cascade mountain range in the state of Washington, the administration recommended the establishment of a North Cascade National Park, a national recreation area, and enlargement of wilderness areas in the region. At congressional hearings, the proposals generally were supported by recreation and wilderness groups and opposed by commercial and sportsmen's interests. All of the areas involved were already in national forests administered by the Forest Service. Also pending in Congress during the year were proposals for establishment of a Redwood National Park in California. (See also Conservation; National Parks.)

Tree Planting. Forest tree planting in 1966 covered a total of 1,281,947 acres, a slight decrease from the 1965 figure. The 1966 total included 301,225 acres planted by federal agencies, 79,960 acres by state and local government agencies, and 900,762 acres by private landowners. Of the private planting, 60% was done by forest industries and other industries, the remainder by farmers and other landowners.

International Symposium. Delegates from 43 countries met in Canberra, Australia, in April 1967, for the world's first symposium on man-made forests and their industrial uses. The symposium estimated that there are about 200 million acres of planted forests in the world. Of this total, China accounts for more than 33%, with the United States and the Soviet Union each having about 12%.

Forestry Schools and Appointments. Full professional curricula in forestry were offered by more than 40 American colleges and universities in 1967. At Yale and Duke universities, forestry work was offered only at the graduate level. Harvard University offered graduate studies in specialized fields of forestry.

Dr. Lee James, professor of forest economics, was appointed chairman of the Department of Forestry at Michigan State University in 1967. At Iowa State University, Dr. Henry H. Webster was named head of the Forestry Department, succeeding Carl H. Stoltenberg, who became dean of forestry at Oregon State University. Dr. Grant A. Harris, a member of the Department of Forestry and Range Management at Washington State University, was named chairman of the department. At Syracuse University, Dr. Edwin C. Jahn, associate dean, was appointed executive dean of the College of Forestry. Dr. Herbert O. Fleischer was named director of the Forest Products Laboratory at Madison, Wisc.

Forest Service. For the fiscal year beginning July 1, 1967, Congress appropriated $358,806,000 in regular funds for the operation of the Forest Service, a division of the U.S. Department of Agriculture. This is the largest forestry appropriation to date and represents an increase of about $20 million over the preceding year. The total included $185,618,000 for national forest protection and management, $110,000,000 for national forest roads, $41,657,000 for forest research, and $19,751,000 for federal cooperation with states and private forest owners.

The Forest Service reported a total of 151,000,000 visitor-days' use of national forest areas for recreation in 1966. The "visitor day" unit of measurement was newly adopted by federal land-managing agencies, and had no statistical correlation with earlier figures; but there was no doubt that people were visiting the national forests for recreation in ever-increasing numbers.

Forest Fires. In late August 1967, fires raged out of control over large areas in northern Idaho, Montana, Oregon, Washington, and British Columbia. More than 200,000 acres were burned. The Forest Service closed U.S. national forest lands in the region to the public during the emergency. Later in the year, brush fires did extensive damage to watersheds and residential areas in California. In Canada, more than 100 fires burned over 8,000 acres in northern Ontario in June. Near Sault Ste. Marie, Ontario, forest fires covered some 30,000 acres.

Lumber. Lumber production in the United States in 1966 was estimated by the National Forest Products Association at 36.1 billion board feet, which was below the 1965 figures of 36.9 billion.

In Canada, total lumber production in 1965 was approximately 10.04 billion board feet, of which 95% was softwood lumber.

UNITED STATES LUMBER PRODUCTION, 1965–66
(In million board feet)

Producing Regions	1965	1966
Southern pine region	6,574	6,665
Douglas fir region	9,234	8,428
Western pine region	10,251	10,442
California redwood region	1,912	1,859
Other softwoods	1,269	1,245
Total softwoods	29,240	28,639
Southern hardwoods	3,936	3,930
Appalachian hardwoods	1,438	1,329
Other hardwoods	2,281	2,230
Total hardwoods	7,655	7,489

Estimated world production of sawn wood in 1965, according to the United Nations Food and Agriculture Organization, was a record 370 million cubic meters, a modest rise over the 1965 figure. (One cubic meter equals 424 board feet.) Softwood production accounted for 79% of the total, although the output of hardwood lumber increased at a slightly faster rate. The Soviet Union and North America together accounted for about 60% of reported production.

FRANCE

WIDE WORLD

PRESIDENT DE GAULLE, at a November news conference in Paris, explains that he once again opposes Britain's admission into the European Common Market.

FRANCE

French affairs in 1967 were marked by prosperity, some simmering discontents, restiveness in the traditional parties, and Gaullist extravagance in foreign policy. Throughout the year business and industrial modernization continued. Basic questions of social policy were aired, and President Charles de Gaulle presided over the nation as autocratically as ever. "In any event and whatever happens," he said on November 27, "it is the President of the Republic, and Head of State, who is responsible for upholding the spirit and letter of France's institutions and for orienting her policy during the period when he alone is the mandatory of the entire French people."

DOMESTIC AFFAIRS

The spectacle of a serene leader followed by a comfortable people characterized the French political scene throughout the year, as before.

Elections. The March legislative elections brought a long period of political jockeying in France to a culmination. Having failed to deprive de Gaulle of reelection in the presidential contest of 1965, the opposition in 1967 hoped to confront him with a non-Gaullist majority in the National Assembly, and thereby create a government crisis.

FRANCE • Information Highlights

Area: 211,207 square miles (547,026 sq km).

Population: 49,750,000 (March 1, 1967 est.).

Chief Cities (1962 census): Paris, the capital, 2,790,091; Marseille, 778,071; Lyon, 528,535; Nice, 292,958.

Government: *President*—Charles de Gaulle (took office for 2d 7-year term, Jan. 8, 1966); *Premier*—Georges Pompidou (appointed Nov. 28, 1962). *Parliament*—National Assembly, 486 members (party seating, March 1967: Gaullists, 245; Federation of the Democratic and Socialist Left, 116; Communists, 73; Democratic Center, 27; Moderates, 15; Left, 10); Senate, 273 members (party seating, December 1966: Socialists, 53; Independent Republicans, 51; Left Republican Rally, 47; Union for the New Republic, 39; Popular Republican Movement and Democratic Center, 38; Republican Center Group of Social and Rural Action, 18; Communists, 14; nonaligned, 13).

Religious Faiths: Roman Catholics, 82.6% of population.

Education: *Total school enrollment* (1964)—9,153,866 (primary, 5,602,303; secondary, 2,316,981; teacher-training, 36,246; technical, 743,225; higher, 455,111).

Finance (1966 est.): *Revenues*, $22,680,000,000; *expenditures*, $23,091,000,000; *public debt* (1964), $18,010,000,000; *monetary unit*, franc (4.93706 francs equal U. S.$1).

Gross National Product (1966): $101,351,000,000.

National Income (1966): $76,140,000,000; average annual income per person, $1,541.

Economic Indexes (1966): *Industrial production*, 151 (1958=100); *agricultural production* (1965), 131 (1956–57=100); *cost of living*, 136 (1958=100).

Manufacturing (metric tons, 1966): Cement, 23,436,000; crude steel, 19,584,000; wine, 5,873,000; meat, 2,287,200; sugar, 1,787,000; plastics and resins, 800,400.

Crops (metric tons, 1966): Grapes, 9,098,000 (world rank, 2d); apples, 3,161,000 (world rank, 1st); wheat, 11,297,000; potatoes, 10,988,000; barley, 8,998,000.

Minerals (metric tons, 1966): Iron ore, 55,044,000 (ranks 3d among world producers); coal, 50,340,000; salt (1965), 3,859,000; crude petroleum, 2,928,000; bauxite, 2,808,000.

Foreign Trade (1966): *Exports*, $10,884,000,000 (chief exports, 1965: nonelectrical machinery, $1,065,000,000; iron and steel, $967,000,000; textile yarn and fabrics, $717,000,000; automobiles, $494,000,000); *imports*, $11,836,000,000 (chief imports, 1965: nonelectrical machinery, $2,178,000,000; petroleum, $1,088,000,000; iron and steel, $549,000,000). *Chief trading partners* (1965): West Germany (took 19% of exports, supplied 18% of imports); Belgium-Luxembourg (took 10% of exports, supplied 8% of imports); U. S. (took 6% of exports, supplied 10% of imports).

Transportation: *Roads* (1964), 888,559 miles (1,429,958 km); *motor vehicles* (1965), 10,687,820 (automobiles, 8,777,500); *railways* (1965), 23,729 miles (38,180 km); *merchant vessels* (1965), 537 (4,989,000 gross registered tons); *national airline*, Air France; *principal airport*, Paris.

Communications (1967): *Telephones*, 6,554,441; *television stations*, 91; *television sets*, 7,196,000; *radios* (1965), 15,336,000; *newspapers* (1964), 128 (daily circulation, 11,872,000).

On Dec. 20, 1966, François Mitterrand's federation of the non-Communist left agreed with the Communist party to consult between the first and second ballots in the 2-stage spring election and to choose a common candidate in each constituency for the runoff. In January, Pierre Mendès–France's splinter Socialist Unity party joined the pact.

The threat of at least a temporary coalition of Communists and other leftists worried the Gaullists. With some 2,200 candidates in all, 487 Assembly seats to fill, and about 2,000,000 new voters, the professionals of all persuasions had much at stake.

As in 1965, the opposition forced de Gaulle to enter the campaign, although reluctantly, once it had begun. In an appeal on February 9 for a Gaullist Assembly, the president told the nation that the Fifth Republic was "at stake next month," and he denounced the opposition as "the great confusion that seeks to succeed it."

Valéry Giscard d'Estaing, the 41-year-old leader of the Independent Republican party, promised de Gaulle qualified support (his "Yes, but" prompted de Gaulle to retort, "One does not govern with 'but' "), and other politicians clung to the president's magic name without necessarily believing in Gaullist orthodoxy.

As an example of the highly personal nature of the campaign, when the Communists, at their 18th party congress in January, praised the president for his good relations with Moscow, various outraged Radicals and Socialists threatened to break the accord with the Communists.

De Gaulle's regime appeared at first glance to have a clear advantage, but, despite its self-interested use of government-controlled radio and television and its blatant wage and tax "bribes" to the electorate, it seemed to lose ground. Once again the president intervened. In a broadcast on the eve of the first ballot—in clear violation of a law that forbade electioneering after the previous midnight—de Gaulle claimed to be the bearer of "the superior, permanent and collective interest of the nation" against an "absurd and ruinous" opposition. His speech lent considerable credence to the left's contention that they were fighting "personal power."

The first balloting, on March 5, was heavy. Some 81% of those registered voted. The Gaullists (including Giscard d'Estaing's Independent Republicans) obtained 37.75% of the popular vote and took 68 of the 81 seats won outright that day. (A majority of the vote is required to win on the first ballot, 10% to compete on the second, and a plurality to win on the second.) The Communists won 22.45% of the vote; the Federation, 18.79%; the Democratic Center party, 12.79%; and the Socialist Unity party, 2.26%.

In the bargaining sessions that followed the polling the Communists withdrew from 15 contests in which their candidates led in the first round but appeared likely to lose in the second. Socialists previously scornful of the accord with the Communists welcomed the chance it offered to escape defeat. Thus, with the eclipse of the old right and the weak showing of the Democratic Center, the voters' choice was more polarized than it had been for years—Gaullist right versus non-Gaullist left.

In the second round of balloting, on March 12, the Gaullists obtained 42.99% of the vote; the Federation, 24.01%; the Communists, 21.55%; the Democratic Center, 8.86%; and the Socialist Unity party, 0.95%. The overall result was a Gaullist setback—from 269 to 245 seats, a bare Assembly majority. The Communists made the largest gain—from 41 to 73 seats. The Federation improved its standing from 91 to 116 seats. The Democratic Center lost heavily—from 56 to 27 seats, and the unaffiliated moderates and leftists obtained only 25 seats.

In widely publicized individual contests, former Premier Pierre Mendès-France was returned to the national legislature after an absence of nine years, and Jacques Soustelle, an exiled diehard opponent of Algerian independence, running in absentia, failed to gain a seat. The defeat of three cabinet ministers—Maurice Couve de Murville (foreign affairs), Pierre Messmer (armed forces), and Alexandre Sanguinetti (veterans' affairs)—was mitigated by the fact that ministers need not be members of Parliament.

The election results reflected the discontent of workers, farmers, and businessmen with de Gaulle's domestic policy. Prime Minister Georges Pompidou's Union for the New Republic, the major Gaullist party ("nothing but an echo of its chief," Mitterand said), was the principal government loser. Giscard d'Estaing's semiautonomous Independent Republican party was the principal government winner. Thus the government lost some freedom of action, especially in financial and social legislation, where the Independent Republicans look to their party leader for direction.

Despite the effectiveness of its electoral alliance, the opposition was far from truly unified. Whether the Socialists and Radicals would succeed in uniting the non-Communist left in a Social Democratic party as planned remained to be seen sometime after the end of the year, but the government of Charles de Gaulle did not anticipate a serious challenge at home before the next presidential election, in 1972—barring, of course, incapacitation of the president.

Decree Rule. On April 1, Premier Georges Pompidou and the 21 other members of the cabinet resigned in a parliamentary maneuver to permit them to take part in a vote on the Assembly speaker. In

PIERRE MENDÈS-FRANCE, the liberal intellectual economist and statesman who was premier of France in 1954 and 1955, was returned to the national legislature in 1967.

KEYSTONE

the crucial vote the Gaullist speaker, Jacques Chaban-Delmas, narrowly defeated Socialist Gaston Deferre.

On April 6, Pompidou was reappointed premier. He immediately dropped seven colleagues from the cabinet, changed five portfolios, and added eight new men. Couve de Murville and Messmer were retained in their posts despite their defeat at the polls. Christian Foucet was given the ministry of the interior, and Alain Peyrefitte that of education.

Although dependent on both left-wing Gaullists and followers of Giscard d'Estaing for their majorities in the Assembly, de Gaulle and Pompidou resolved to make no concessions to anyone. In a test of their strength they requested special powers from Parliament to rule by decree for six months in order to enact social and economic legislation without parliamentary interference. They agreed to submit decrees for Assembly ratification by December 31.

De Gaulle had invoked such powers six times since coming to office. In justification of his request, he cited the urgency of acting on tariff elimination before the July 1, 1968 deadline set by the Common Market and to the necessity of modernizing industrial structures and grappling with unemployment.

The government's request was delivered to the Assembly on May 17, and it immediately provoked a motion to censure the government. Giscard d'Estaing wished to see Parliament's role upheld, but he was not willing to pull down the government in order to do so. And without his party's support the motion to censure failed.

The special powers were nevertheless unpopular. Edgar Pisani, minister of public works and housing, resigned in protest, and unions demonstrated en masse on May 17. But the nation as a whole was submissive, and ultimately the opposition was reduced to mouthing futile complaints. "Before, the majority was asked only to ratify," Jean Lecanuet, leader of the Democratic Center, said. "Now it is invited to abdicate."

Hard-line Gaullists suggested that the government should quit and thereby force new elections, but they were given pause by a Communist show of strength in the fall elections to the general councils. Forceful Communist electioneering had paid off against Gaullist indifference in the provinces. Moreover, by-elections for Assembly seats, held on August 27 and September 24, went against the government.

The political scene remained cloudy. Between the ambitions of Giscard d'Estaing and those of Pompidou—the assumed "dauphin"—the political future was obscure. At a Gaullist congress in Lille on November 26 the conservative Gaullists backed Pompidou in refusing concessions to the left-wing. (The Gaullist coalition was named the Union of Democrats for the Fifth Republic at that time.)

Coherence on the left was even more doubtful, and the center was in collapse. During the year the once powerful Popular Republican party vanished; one of its leaders, Maurice Schumann, was a cabinet minister and the other, Georges Bidault, was in exile. Although de Gaulle's age—77 in November—encouraged ambitions, no successor was visible.

Executive and legislature lived their separate lives, the one arbitrary, the other nearly impotent. De Gaulle's popularity declined during the summer following attacks on his "solitary exercise of power" at home and abroad. On August 10 he lashed back at his critics as "the school of national renunciation" whose "strange passion for abasement" made its adherents "apostles of decline."

Le Monde, the independent afternoon paper, warned that de Gaulle was making Frenchmen "victims of his strength of pride and obstinacy in pursuit of set ideas" and urged the opposition to "make haste to organize themselves so as to be fit for future responsibilities." But serious politics remained inert, as most Frenchmen wanted them.

Internal Security. The murky Ben Barka affair ended in June after 74 days of proceedings in two trials. Minor participants in the kidnapping and presumed murder of the Moroccan opposition leader in October 1965 received short prison terms. Four French gangsters and Gen. Mohammed Oufkir, Moroccan minister of the interior, safely in absentia, were given life imprisonment. Oufkir's aide and chief of the Moroccan security forces, Lt.-Col. Ahmed Dlimi, who had been sent by King Hassan in 1966 to stand trial, was acquitted. Others were amnestied.

Economy. Discontent with the economy was evident throughout the year. De Gaulle remarked at his May 16 press conference, "Although everyone is theoretically in favor of progress, progress never fails in practice to arouse bitterness or anxiety in many minds." But the progress he mentioned was by no means general. The chemical, automobile, and aerospace industries were strong, but business in general was not booming. Unemployment was rising; exports were lagging; tourism was in decline; steel and shipbuilding were in trouble; textiles and food

"I'm Trying to See it From Your Viewpoint"

processing were weak; and, despite government encouragement, business consolidation was slow.

The market remained feeble, and the run on U. S. gold had to be abandoned. Investment capital, particularly for family-owned enterprises, was short. Slowdowns in the economies of Common Market partners reduced French export trade. Domestic market sluggishness in textiles, leather, appliances, and automobiles was blamed on the stabilization program introduced in September 1963.

Neither 1964 nor 1965 had been a good year, but 1966's industrial production had grown by 7%. The subsequent falling off in 1967 heightened discontent. The government admitted that "we must get the economy going again." Organized business claimed that "overall production is stagnant."

This situation underlay de Gaulle's request for powers to rule by decree. On May 16 he promised that he would use the authority to promote "the spirit of enterprise" in "a system of freedom" but that "we absolutely reject *'laissez-faire, laissez-passer'* and we want the Republic to direct the economic course of our country in our century." Twice rejected by the Senate, but with the opposition in the Assembly failing three times to stop it, the bill was passed on June 16.

The government's additional scheme for "participation by workers in the fruits of expansion," instituted by decree on August 17, was highly controversial. "To stick to wages alone," the president told the cabinet on July 12, "is to maintain a permanent class struggle." Only the left-wing Gaullists favored the plan for compulsory allotment of a part of company profits to workers. (The profits would be reinvested in the company—through stock purchase or mutual loan—or deposited in a mutual industrial fund.) Moreover, the workers wanted cash, and the managers wanted no part of labor meddling in their affairs. The president's hope of ending worker alienation was paralleled by leftist fears of a weakening of working-class identity and strength.

Other decree measures, announced on July 12, included additional funds in the 1968 budget for public housing, road building, and telephone expansion, and, in the private sector, tax relief, increased family allowances, and more credits for private investors in depressed areas. Balancing these stimulants to the economy were heavy transit fare increases, cuts in the social security program, and higher payroll deductions for medical services.

The master plan of Finance Minister Michel Debré was to revitalize underdeveloped areas and prepare for the dismantling of the last protectionist walls within the Common Market. On August 30 he declared that, despite the older generation's finding it "hard to face reality," France had passed "from a closed . . . to an open economy." Conservatives charged that the 1968 budget of $26.5 billion was too high. Socialists insisted it was too low. But after bitter Assembly debate, it was nevertheless approved on October 11 (only the Assembly passes on decree legislation).

In the countryside dissatisfaction was rife. Industry struck in the spring. Winegrowers in the south (supported by various bishops) demonstrated against importation of North African wine. In October riot police and hundreds of farmers were hurt in collisions. Telephone and power lines were cut in Brittany. Tear gas routed union members stoning the prefecture in Le Mans. But the president was imperturbable. "Preconceived ideas," he said on May 16, "must not obscure the general interest."

FOREIGN AFFAIRS

President de Gaulle's conduct of foreign affairs in 1967 reflected his belief that France has a central role to play in an accommodation of Europe's nation-states.

NATO. Between March 14 and 30 the North Atlantic Treaty Organization command was withdrawn from France as requested by the French government in 1966. Thus France had extricated itself, de Gaulle said, from "subjection" to "the insidious theories and the convenient practices of subordination." Pompidou told the Assembly on April 18 that the withdrawal ended a 9-year effort by France to restore its independence of policy. There was no open criticism of France's decision within the alliance. But the French journalist André François-Poncet wrote of de Gaulle's decorating the NATO commander, Gen. Lyman Lemnitzer, shortly before the final withdrawal, "A ribbon of honour on the breast does not erase the mark made by a kick in the rump."

In September, in a more cooperative spirit, the government relaxed its requirement of monthly review of permission for NATO overflights (imposed in June 1966) and granted permission on an annual basis. But observers believed that a final French withdrawal from NATO itself would come in 1968.

Common Market. By late 1967 the European Common Market nations were within sight of their goal of a tariff-free community. They agreed in the spring to integrate Euratom and the Coal and Steel Community with a combined commission under Belgium's Jean Rey as chairman (thus easing out Germany's Walter Hallstein, a critic of de Gaulle and defender of closer European political integration). The big question remained: Would Britain be permitted to join? At the close of 1967 the answer was clearly negative.

British Prime Minister Harold Wilson went to Paris on January 19–20 to discuss British entry directly with de Gaulle. No communiqué was issued, but Wilson told the House of Commons after his return that de Gaulle was "more enthusiastic about British entry than he had been at any other time."

The ambiguousness of Britain's prospects was compounded by de Gaulle's claim on May 16 that British entry "can cause nothing but satisfaction to France." De Gaulle denied ever having exercised a veto over Britain's application, but warned that Britain must transform its economic relations "fundamentally" before entering the market. Otherwise, he said, British entry would result in "a completely new structure which would virtually wipe out everything that has just been built," and lead to "a Western European free trade area, pending creation of the Atlantic area which would deprive our continent of all real personality." If, however, Britain turned fully toward Europe and accepted all the conditions of the market, he said, "how wholeheartedly France would welcome such a historic conversion!"

Although other market member-states pressed for taking up British application, de Gaulle steadily blocked serious talks. Wilson visited Paris again on June 19, but without results. At Brussels on July 10, Couve de Murville opposed his German, Belgian, and Dutch colleagues in the council of ministers, alleging that British entry would drag western Europe into the cold war and turn the market into a loose Atlantic and Pacific trading community. The commission nevertheless reported favorably on negotiating Britain's admission. No less determinedly, France refused its agreement. The French used the deepening economic and financial plight in Britain to strengthen their argument, until finally at a press conference on November 27, de Gaulle declared flatly that negotiations were "impossible."

West Germany. The regular, high-level exchange of visits to Paris and Bonn, in January and July respectively, was cordial. Chancellor Kurt Kiesinger, on his first official visit to Paris, on January 13, said that he hoped to eliminate previous "prejudices and misunderstandings" between the two nations and "cut many a Gordian knot." Expecting Kiesinger to be more independent of Washington than his predecessor, de Gaulle reaffirmed their treaty ties.

De Gaulle and Kiesinger agreed that West Germany should seek to establish normal relations with the eastern European states, and that West Germany and France should cooperate in defense, in eliminating a technological gap between western Europe and the United States, and in developing common transport, industrial, social, and taxation policies. Despite Bonn's willingness to assist British entry into the Common Market, Kiesinger repeatedly told London, "We have no pressure to exert on France."

The Bonn discussions, on July 12-13, began coolly as a result of de Gaulle's pronouncements on the Middle East crisis and his consultations with Soviet Premier Aleksei N. Kosygin in Paris on June 16 and July 1. Formal cordiality prevailed, but Kiesinger rejected de Gaulle's proposal for a European security conference excluding the United States (the idea was suggested by the Soviet Union). Establishment of a high-level interministerial Franco-German commission on defense was agreed to. After the meeting, the chancellor said of his guest, "Whether you agree with him or not, what a man!" Kiesinger's admiration may have diminished when de Gaulle, on a visit to Poland in September, repeatedly endorsed the Oder-Neisse frontier between East Germany and Poland, a line unacceptable to Bonn. Nevertheless, it was undeniable that de Gaulle wished to see a united Germany reintegrated into Europe in his own lifetime, and he had no desire, he said on November 27, "to offend our German friends."

Britain. Formally cordial relations with the United Kingdom barely masked the bitter struggle over Britain's bid for membership in the Common Market. Other Franco-British differences arose over policies in the Middle East crisis and attitudes toward U.S. involvement in Vietnam. France's withdrawal on July 5 from a January agreement to build a variable-geometry supersonic military aircraft (which would have provided the core of the Royal Air Force after 1975) increased the tensions. Nevertheless, de Gaulle insisted on November 27 on his "exceptional esteem, attachment and respect" for Britain.

Soviet Union. Relations with the Soviets remained friendly. Accords were concluded in January for increased trade, for a Franco-Soviet Chamber of Commerce with offices in Paris and Moscow, and for semiannual ministerial conferences to review industrial and scientific cooperation.

Premier Pompidou told the Assembly on April 18 that France sought "rapprochement for the greatest good of Europe and peace." On June 15, during the fierce diplomatic purging immediately following the 6-day Israeli-Arab war, Kosygin communicated with de Gaulle over the "green line" (a direct communication link established after the president's 1966 visit to Moscow) and met with him the next day in Paris. They conferred again briefly on July 1, when Kosygin returned from transatlantic travels. Pompidou's 5-day visit to the USSR on July 3-7 resulted in common declarations on the Vietnam War.

Poland. De Gaulle visited Poland from September 6 to 12. Hoping for greater cultural, technological, and scientific exchanges between the nations, he stressed historic Franco-Polish friendship and the need for an East-West reconciliation leading to "contractual settlement of the great problem of Germany." He repeatedly urged the Poles to be "in the first rank," and to "look a little further and see things in broader perspective than you have been obliged to in the past." He was careful not to suggest support for the hard-pressed Roman Catholic Church in Poland, and he was condemned by high church sources there for "lack of character."

AMERICAN FLAG is folded for the last time, March 14, at U. S. European Command military headquarters outside Paris. Headquarters was transferred to Stuttgart, Germany.

WIDE WORLD

PARIS MATCH—PICTORIAL PARADE

RUMANIAN PREMIER Gheorghe Maurer (*left*) talks with Charles de Gaulle across a desk in latter's sumptuous office in the Elysée Palace, Paris, June 28. De Gaulle maintained close contact with several East European states in 1967.

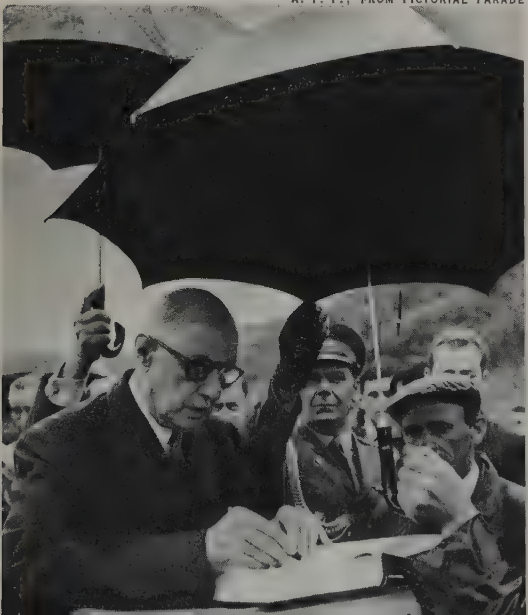
Thus de Gaulle subordinated his feelings as a Roman Catholic to the larger concerns of trying to urge Poland away from subordination to the Soviet Union. When he had concluded his address to the Polish Sejm (parliament) on September 11, however, he was formally told by Władysław Gomułka, the first secretary of the Communist party, that Poland would hew to the Soviet alliance.

On his return to Paris, de Gaulle insisted that he had merely encouraged Poland "to be herself," and that he had not asked the Poles to "renounce Soviet friendship." Nevertheless, his well-known view that nationalism is stronger than ideology and that the time may be ripe for reconciliation of East and West seemed to find no immediate response.

United States. De Gaulle's attack on the "American hegemony" in Europe was relentless in 1967. Arguing that the Soviet Union had become stable and inwardlooking, he told Chancellor Kiesinger that the principal menace to the world's peace was U. S. meddling in other nations' affairs. He condemned the "detestable war" in Vietnam.

DE GAULLE IN POLAND for a week's visit in September urged that nation toward more extensive ties with France.

A. F. P., FROM PICTORIAL PARADE



Despite his grievances, however, de Gaulle insisted to Vice President Hubert H. Humphrey in a Paris meeting on April 7 that France and the United States were friends. He refused to allow the Vietnam War Crimes Trial sponsored by Bertrand Russell and Jean-Paul Sartre to be held in France, and although some critics still thought he was close to taking the Soviet line in world affairs, he actually followed a purely French policy, based on a French conception of France and Europe and on fear of war between the Soviet and American camps.

Canada. Franco-Canadian relations were on a collision course long before President de Gaulle set foot in Quebec in 1967. His ill-starred visit from July 23 to 26 was preceded by numerous statements indicating that he was ready to encourage Quebec in its confused but determined effort to obtain a special place in the Canadian confederation. "All Frenchmen," he told Quebec's premier, Daniel Johnson, in Paris on May 22, "are profoundly convinced now of the great destiny common to them."

However, the effect of his declarations in Canada was shocking. Immediately after his arrival in Quebec City, following a rough Atlantic crossing on the cruiser *Colbert*, de Gaulle began urging the citizens of Quebec to stop playing "second fiddle," to become their "own masters," and to prevent "outsiders" from exploiting them. Along the route to Montreal, on July 24, he spoke repeatedly of "New France" and encouraged French-Canadian assertiveness.

The climax came that night in a speech from the balcony of Montreal's city hall: "Here and along the way, I have encountered an atmosphere the same as that at the Liberation." De Gaulle ended with a chant, shouting the Quebec separatist slogan, *"Vive le Québec libre!"* French-Canadian nationalists were delighted, but Canadian opinion as a whole was outraged. Prime Minister Pearson told the nation the next day that welcome as the president was, "certain" of his statements encouraged those who would "destroy Canada; and, as such they are unacceptable to the Canadian people and its government."

De Gaulle thereupon announced his departure. "It is not possible," he remarked privately on July 26, "that I should be criticized publicly, or that I should be summoned to explain myself." Until he flew home, he continued making remarks in that manner, but not without being directly admonished by Mayor Jean Drapeau of Montreal.

De Gaulle left a furious nation. Most Canadians were appalled by such unprecedented intervention by a foreign guest. "I couldn't have done otherwise," he told a member of his entourage. "I would have failed in my historical role."

At his November press conference, de Gaulle reiterated his position even more unequivocally, announced that cultural and technical assistance for the province would be increased, and predicted the establishment of a sovereign Quebec. Again, he drew the mild official Canadian reply that his statements were "intolerable," as well as the unofficial contempt of most Canadians.

"The great Quebec affair," as de Gaulle called it, interested few Frenchmen, but it was a striking demonstration of de Gaulle's bold, contemptuous design to make the voice of France heard in world affairs. (See also CANADA.)

Middle East. France's relations with Israel turned suddenly sour in 1967. Despite previous harmony and major French contributions to Israel's defenses, de Gaulle refused to support Israel in the Israeli-Arab war. He cut off all supplies to Israel, and on June 21 and again on November 27, he publicly condemned Israel for starting hostilities—the ultimate cause of which, he said, was the war "started in Vietnam through American intervention."

De Gaulle did not deny the existence of Arab provocation, but he refused to accept the excuse. "I told them: 'Don't be the first to attack.' Despite that, they did attack first. I hold it against them for having done that." The president's policy in this instance was one of seeking the leadership of nations not attached to either the Soviet or American camp. His course was far from universally popular in France, but he adhered inflexibly to it.

French Community. Despite riots in 1966 against continued French rule, the former African colony of French Somaliland voted on March 19 to remain in the French community with "increased autonomy" rather than become independent. The outcome of the vote reflected backcountry Afar support for France and opposition from the independence-minded Somalis of Djibouti, the capital. The referendum was held in almost warlike conditions, which continued unabated after the poll. French troops killed more than a dozen Somalis. Some 4,500 Somalis were arrested, and thousands of others were expelled to neighboring Somalia, which has designs on the French colony.

An attempt to assassinate Senegal's President Léopold Senghor failed on March 22. In Togo, however, President Nicolas Grunitzky was overthrown in a January coup led by the same officer who had murdered President Sylvanus Olympio four years earlier. France refused to help Grunitzky, who escaped harm.

De Gaulle stressed the theme of the "French presence" during a 10-hour visit to the North Atlantic islands of St. Pierre and Miquelon on July 20. He said the islands were "as French as can be . . . a token of our independence of everybody," and "symbols of what we French are worth in the face of an immense continent." Through them, he said "French influence is felt in Canada and the United States."

United Nations. There was no change in 1967 in the French government's view that the United Nations' peace-keeping role in the world was second to that of the great powers. Couve de Murville told the UN General Assembly on June 22 that it should discuss the Middle East crisis but not reach decisions. That, he said, "would not be its mission. If there should be action on the part of the UN, we know well that it belongs to the Security Council." On September 28, noting that the debate on the Israeli-Arab war had only revealed bitter divisions in the Assembly, he referred to the "disenchantment which today stamps the atmosphere of such discussions."

To President de Gaulle and his collaborators the vastly increased world body that the UN had become since its foundation was more a reflection of the world's troubles than an agent for ending them. (See also EUROPE.)

FREEMAN, Orville L. See biographical sketch under UNITED STATES.

FRENCH LITERATURE

France lost one of its most distinguished and prolific authors in 1967. André Maurois, who was a member of the French Academy for 29 years, died in October at the age of 82. Maurois was most celebrated for his biographies of the great literary men of the 19th century. His masterpiece, on the life of Balzac, was written at the age of 80.

The year 1967 also marked the deaths of Marcel Aymé, a cool and witty novelist and playwright; Thyde Monnier, a realistic and lyric author of novels on Provence; and Albertine Sarrazin, who, like Jean Genet, drew upon her prison experience in her writing. Mlle. Sarrazin died at the age of 30.

Poetry. A number of particularly excellent collections of poetry were published in 1966–67. In *Courir les rues,* a humorous, erudite, and often touching book, Raymond Queneau comments on the epochs of French history recalled by the street names of Paris. René Char collected what he calls his "seasonal theater" in *Trois coups sous les arbres.* The book, which evokes dramatic forms, including ballet, contains many poems on freedom, written just after the liberation of Paris in 1944. Eugène Guillevic's *Euclidiennes* is a clever collection in which each poem treats the secret life of a geometric figure. Guillevic tells, for example, of the wretchedness of the broken line, and of the unhappy lot of the sinusoid, an intricate type of curve: "It's tiring going uphill and frightening going down."

In *D'après tout,* Jean Follain writes of the objects and persona of daily life, as well as of such "in-betweens" as statues and their reflections. In a witty and charming collection, *Le savon,* Francis Ponge writes minutely descriptive *chosist* poetry, which leads the reader from meditation on simple objects to discovery of self and creation. Gisèle Prassinos collected her poems of the past 30 years in *Les mots endormis.* The majority of the poems are dominated by Mlle. Prassinos' obsession with terror and the fantastic.

Although Yves Bonnefoy, one of the most respected of the younger French poets, did not publish a collection in 1966–67, he gathered under the title *Un rêve fait à Mantoue* various meditations comprising a fine commentary on poetry and art. In an important essay entitled *La poésie française et la principe d'identité,* Bonnefoy declares, "Poetry is not the use of language. Perhaps it is madness within language."

Fiction. There were a number of best sellers in 1966–67, but novels of high quality were rare. The literary prizes awarded at the end of 1966 did not spotlight any exceptionally talented authors.

Mention should be made, however, of Irène Montési's *Nature morte devant la fenêtre,* a haunting and frightening book about a woman who does not love her children, and of Edmonde Charles-Roux's *Oublier Palerme,* which received the Goncourt prize. In her work, Mme. Charles-Roux draws a parallel between the two civilizations she knows best, the Mediterranean and the Anglo-American. She succeeds in bestowing upon her characters, drawn from both worlds, a convincing, although pathetic, existence.

Among widely known authors who published novels during the year were Louis Aragon, whose novel *Blanche ou l'oubli* is an erratic and brilliant exercise in style and confession; Romain Gary, who wrote the caustic *La danse de Gengis Cohn;* Marguerite Duras, who brought out in novel form, under the title *L'amante anglaise,* a version of her play *Les viaducs de la Seine-et-Oise;* Christine Arnothy, who published *Jouer à l'été,* a kind of suspense novel reminiscent of Colette's *Chéri;* and Louise de Vilmorin's frothy and precious *L'heure maliciôse.*

Histoire, by Claude Simon, was the most characteristic *nouveau roman* of 1966–67, and was also one of Simon's most difficult works. *Le prénom de Dieu* was a highly original but at times baffling collection of short stories by Hélène Cixous. The stories were written in the form of a long nightmare in a universe of anguish and terror. More conventional reading was to be found in Jean Freustier's *Les collines de l'est,* a collection of well-written tales that successfully mix irony and pathos.

Nonfiction. Several important journals and collections of essays appeared during 1966–67, including *L'extase matérielle,* the essays of Jean-Marie Le Clézio; *Journal en miettes,* in which Eugène Ionesco meditates unhappily on his life and work; and *Lettrines,* essays by Julien Gracq, who comments on life, history, and literary creation. Two other important books, both influenced by structuralism, were *L'écriture et la différence,* by Jacques Derrida, and *Système de la mode,* a difficult work by the critic Roland Barthes.

Theater. Among plays by French authors who are already widely known, the most durable will probably be Françoise Sagan's *Le cheval evanoui.* However, the most original play of the year, in the opinion of many theatergoers, was Romain Weingarten's *L'été,* a poetic work in which two children and two cats follow the love-play of an unseen couple. Mention must also be made of *Comme au théâtre,* by Frédéric Renaud, and *Un jour j'ai rencontré la vérité,* an amusing parable by Félicien Marceau.

FRIENDS, Religious Society of

The Fourth World Conference of Friends (Quakers) was held at Guilford College, near Greensboro, N. C., from July 24 to August 3, with 900 representatives from 35 nations attending. UN Secretary-General U Thant addressed the conference, denouncing the war in Vietnam and urging greater support of the United Nations. Other speakers included L. Hugh Doncaster of Birmingham, England, and Douglas V. Steere of Haverford College, Haverford, Pa. The conference approved a statement calling for a cease-fire in Vietnam, asked for a new attitude in race relations, and urged Quakers to take a new role in the sharing of world resources.

A Quaker Action Group, determined to aid victims of the war in Vietnam on both sides, sailed the *Phoenix* into the North Vietnamese harbor of Haiphong on March 28, 1967. The yacht carried $10,000 worth of medical supplies, despite the opposition of the U. S. government. Friends were not united in supporting the project in violation of the law banning the sending of such supplies to North Vietnam. When the Philadelphia Yearly Meeting decided to endorse this effort, the presiding clerk, Judge Albert B. Maris, resigned.

The American Friends Service Committee commemorated its 50th anniversary in 1967, and William D. Lotspeich was named executive secretary to succeed Colin W. Bell, who has served since 1959. A new project to provide prosthesis equipment has been started in Quang Ngai, South Vietnam, and efforts have been made to aid refugees in the Middle East following the Israeli-Arab war.

The Evangelical Friends Alliance began the joint publication of a new periodical, the *Evangelical Friend.*

Connecticut	1,782	2,250	1,875

[1] Estimates of the commercial crop refer to the total production of apples in the commercial orchards of 100 or more bearing-age trees. (Source: Statistical Reporting Service, U. S. Department of Agriculture.)

previous year. Production of the 20 major fruits totaled 17,123,000 tons, compared with 22,096,000 in 1966. Grapes, followed by peaches, pears, and apples, accounted for much of the decline in production, and all major citrus crops were well below 1966 levels.

Noncitrus fruit production in 1967 was 16% below both 1966 and the 1961–65 average. Citrus production for the 1967–68 crop year indicated a decline of 30%.

Grapes. The production of grapes in 1967 declined to 3,007,000 tons, or 19% less than the 1966 crop and 17% below the 1961–65 annual average. European-type grapes, grown principally in California and Arizona, accounted for 2,700,000 tons in 1967. California's crop in 1967 included 625,000 tons of wine varieties and 1,620,000 tons of raisin varieties. Less than one half of the output of raisin varieties was made into raisins, totaling 183,000 tons (dried basis), 35% less than in 1966.

Cherries. Sour cherry production in 1967 totaled 82,950 tons, 8% below the 1966 crop and less than half the 1961–65 average. Sweet cherry production totaled 108,010 tons, 7% below 1966 but 10% above average.

Apples. The 1967 apple crop of 5,462,000,000 pounds was 5% below the 1966 crop and 8% below the 1961–65 average. The crop (in pounds) included 127,800,000 of summer varieties, 447,200,000 of fall types, and 4,886,900,000 of winter apples.

Pears. The nation's 1967 pear crop totaled 454,975 tons, or 39% less than the 1966 crop and 26% below the 1961–65 average. Nearly all the production came from California, Washington, and Oregon, which together supplied 407,500 tons.

Peaches. The production of 2,699,000,000 pounds of peaches in 1967 was 21% below 1966 production and 24% below the 1961–65 average.

Plums and Prunes. California produced 98,000 tons of plums; this was 3% above the 1966 crop but 3% below the 1961–65 average. The California prune crop totaled 150,000 tons, 14% above 1966 but 2% below average. Production of plums and prunes in other states totaled 70,000 tons, 6% above 1965, but 8% below the 5-year average.

Bushberries. Production of bushberries in Washington and Oregon in 1967 totaled 88,000,000 pounds, 11% below 1966 production but 23% above the 1961–65 annual average.

Table 2—U. S. PRODUCTION OF FROZEN FRUITS

Product	1965 (Pounds)	1966 (Pounds)
Apples	93,392,000	94,352,000
Apricots	16,369,000	16,172,000
Blackberries	23,251,000	25,821,000
Blueberries	27,981,000	35,403,000
Boysenberries	8,962,000	9,165,000
Cherries	147,846,000	90,645,000
Currants	715,000	650,000
Gooseberries	383,000	968,000
Grapes and pulp	18,117,000	6,712,000
Loganberries	1,243,000	1,750,000
Olallieberries	3,821,000	63,000
Peaches	59,453,000	65,190,000
Plums	6,091,000	5,355,000
Prunes	1,178,000	259,000
Purees, noncitrus berries	4,214,000	20,264,000
Raspberries, black	6,210,000	3,465,000
Raspberries, red	27,631,000	31,575,000
Strawberries	191,613,000	236,492,000
Other fruit	14,982,000	19,278,000
Total	653,452,000	663,570,000
Citrus juice pack[1]	1965–66 (Gallons)	1966–67 (Gallons)
Orange, concentrated	70,831,000	127,610,559
Grapefruit, concentrated	3,971,000	5,484,816
Blend, concentrated	50,000	29,099
Tangerine, concentrated[2]	715,000	1,119,869
Limeade	795,000	...

Table 3—U. S. CITRUS PRODUCTION BY LEADING STATES
(Number of boxes[1])

	Average 1961–65	1966	1967[2]
Oranges			
Florida	86,560,000	144,500,000	98,400,000
California	29,700,000	37,400,000	25,000,000
Arizona	2,008,000	3,910,000	3,800,000
Louisiana	59,000	[3]	[3]
Total U. S.	119,279,000	188,610,000	128,500,000
Grapefruit			
Florida	31,620,000	43,600,000	32,500,000
California	3,764,000	5,000,000	4,400,000
Arizona	2,720,000	1,680,000	3,000,000
Texas	1,814,000	5,600,000	1,800,000
Total U. S.	39,918,000	55,880,000	41,700,000
Lemons			
California	14,380,000	15,300,000	14,000,000
Arizona	1,370,000	2,810,000	3,100,000
Total U. S.	15,750,000	18,110,000	17,100,000
Tangerines			
Florida	3,420,000	5,600,000	3,500,000

[1] Approximate weight per box varies as follows: Oranges—California and Arizona, 75 pounds; and other states, 90 pounds; grapefruit—California, Desert Valleys and Arizona, 64 pounds; lemons—76 pounds; tangerines—95 pounds. [2] Season begins with the bloom of the year shown and ends with completion of harvest the following year. [3] Production too small to warrant estimate. (Source: Statistical Report Service, U. S. Department of Agriculture.)

Apricots. Production of apricots totaled 148,000 tons, 24% less than in 1966, and 26% below the 1961–65 average.

Olives. An estimated 12,000-ton olive crop in California was about one fifth the size of the 1966 crop and less than one fourth the 1961–65 average.

Figs. The 1967 fig crop of 44,600 tons (fresh basis) was one third less than both 1966 production and the 5-year average.

Avocados. Florida grew 13,600 tons of avocados, sharply above the 1966 crop and 42% more than the 1961–65 average. California's fall and winter crop was forecast at 18,000 tons, or two thirds less than the 1966–67 crop.

Cranberries. The 1967 cranberry crop dropped 11% below the 1966 record crop to 1,425,000 barrels but was 8% above the 1961–65 average.

Strawberries. The production of 478,026,000 pounds of strawberries was up from the 464,542,000 pound 1966 crop but under the 1961–65 average of 510,691,000 pounds.

Citrus Crop. Citrus production ran substantially below the 1966-67 record citrus output—one third less for oranges and tangerines; one fourth less for grapefruits; and 6% fewer lemons. The U. S. Department of Agriculture estimated the total crop at 191,700,000 boxes.

Foreign Trade. The value of exports of American fruit and fruit products decreased slightly from $327,000,000 in the 1966 fiscal year to $320,000,000 in 1967, according to the Economic Research Service.

The value of fruit and fruit preparation imports increased in fiscal year 1967 to $314,000,000 compared with $290,000,000 in the preceding year. Bananas, the largest fruit import, accounted for $133,000,000 of the 1967 total.

GABON

The political power of Vice President Albert Bongo was solidified in 1967. President Léon M'ba's chosen successor, Bongo assumed the presidency on December 4 following M'ba's death in Paris, where he had been hospitalized, on November 28. The political situation was somewhat tense, but it remained controllable largely because of the French-supported army and the availability of French troops. Meanwhile, development programs were accelerated, and the economic outlook was bright.

Political Affairs. Bongo began his rise to power in mid-1966, when, though officially minister of defense, he became de facto chief executive while M'ba was ill in Paris. In a cabinet shuffle on Nov. 14, 1966, Bongo became vice president, replacing Paul-Marie Yembit, who became minister of justice. A further cabinet shuffle on Jan. 25, 1967, eliminated from the government Vincent de Paul Nyonda, a contender for political power, and Yembit was similarly purged on April 15.

On February 16 the National Assembly approved constitutional amendments making its own electoral life coterminous with the presidential and vice presidential terms and changing the vice presidency to an elective office with additional powers.

Bongo then announced that the 1967 elections would be postponed until 1968. This announcement was ill-received, and on February 26, M'ba, from Paris, declared that elections would be held as planned. He also announced that he and Bongo would be the presidential and vice presidential candidates of the ruling Gabonese Democratic Bloc. With the opposition leaders in jail and their party unrepresented in the assembly, the outcome of the March 19 election was a foregone conclusion.

Economy. Production of gold, petroleum, natural gas, and uranium concentrates showed significant increases in 1967. A new brewery was completed, and drilling continued on two new oil fields. Development projects to improve transportation and communications proceeded with assistance from France and the European Economic Community.

GABON • Information Highlights

Area: 103,346 square miles (267,667 sq km).
Population: 468,000 (July 1, 1966 est.).
Chief City (1964 census): Libreville, the capital, 45,909.
Government: *President*—Albert Bongo (took office Dec. 4, 1967); *Parliament*—National Assembly, 47 members (all belonging to the Gabonese Democratic Bloc).
Religious Faiths: Roman Catholic, 44% of population; tribal religions, 42%; Protestant, 8%; other, 6%.
Education: *Literacy rate* (1961), 12.4% of population aged 15 and over. *Total school enrollment* (1964)—78,863 (primary, 73,006; secondary, 4,015; teacher-training, 552; technical, 1,236; university, 54).
Finance (1967 est.): *Revenues*, $58,900,000; *expenditures*, $58,900,000; *monetary unit*, CFA franc (246.85 francs equal U. S.$1).
Gross Domestic Product (1966): $207,300,000.
National Income (1963): $152,200,000; average annual income per person, $334.
Cost of Living Index (1965): 114 (1962=100).
Manufacturing (1964): Lumber, 40,000 cubic meters.
Crops (metric tons): Cassava (1962–63), 114,000; cocoa beans (1967–68), 4,000; coffee (1965–66 est.), 2,500; rice (1964–65), 1,000.
Minerals (metric tons, 1965): Crude petroleum (1966), 1,452,000; manganese ore, 637,300; uranium oxide, 544; natural gas (1966), 1,152,000,000 cubic meters; gold, 37,133 troy ounces.
Foreign Trade (1966): *Exports*, $100,284,000 (chief exports, 1966: manganese, $30,406,000; wood, $28,410,000; petroleum, $15,731,000; uranium, $8,983,000); *imports*, $66,585,000 (chief imports, 1965: nonelectrical machinery, $11,643,750 motor vehicles, $6,674,000; alcoholic beverages, $382,950; trucks and lorries, $311,900; agricultural machinery, $307,000; petroleum products, $291,600; textile yarn and fabrics, $281,900; clothing, $276,600); *Chief trading partners* (1965): France (took 47% of exports, supplied 60% of imports); U. S. (took 18% of exports, supplied 12% of imports); West Germany (took 11% of exports, supplied 6% of imports).
Transportation: *Roads* (1965), 3,635 miles (5,849 km); *motor vehicles* (1965), 7,790 (automobiles, 5,700); *national airlines*, Air Gabon, Transgabon; *principal airport*, Libreville.
Communications: *Telephones* (1967 est.): 3,900; *television stations* (1967) 2; *television sets* (1967), 1,000; *radios* (1965), 36,000.

GAMBIA

Gambia (officially, The Gambia) took steps in 1967 toward fuller cooperation with Senegal, which adjoins it on three sides.

Foreign Relations. In January the United Nations appointed a regional association adviser to Prime Minister Sir Dauda Jawara's office to act as liaison between the governments of Gambia and Senegal.

GAMBIA • Information Highlights

ASIA
AFRICA

Area: 4,361 square miles (11,295 sq km).
Population: 336,000 (July 1, 1966, est.).
Chief City (1965 est.): Bathurst, the capital, 29,780.
Government: Governor *General*—Alhaji Farimang Singhateh (took office Feb. 9, 1966); *Prime Minister*—Sir Dauda K. Jawara (took office for 2d term, May 27, 1966). *Parliament*—House of Representatives, 32 elected members (party seating, 1966: People's Progressive party, 24; United party, 8).
Religious Faiths: Muslims, 73% of population; Roman Catholics, 2%; others, 25%.
Education: *Total school enrollment* (1964)—14,744 (primary, 11,504; secondary, 2,992; teacher-training, 146; technical, 102).
Finance (1966–67 est.): *Revenues*, $3,400,000; *expenditures*, $3,600,000; *public debt* (1964), $1,120,000; *monetary unit*, pound (0.4167 pound equals U. S.$1, as of Nov. 24, 1967).
Gross National Product (1965): $22,400,000.
Crops (metric tons): Peanuts (1966–67), 129,000; rice (1965–66), 37,000.
Foreign Trade (1966): *Exports*, $21,000,000 (chief exports, 1965: peanuts, $6,714,000; vegetable oils and fats, $4,264,400; palm kernels, $285,600; fodder, $78,400); *imports*, $20,100,000 (chief imports, 1965: cotton fabrics, $2,819,600; nonelectrical machinery, $1,271,200; rice, $963,200). *Chief trading partners* (1965): Britain (took 50% of exports, supplied 42% of imports); Italy (took 20% of exports, supplied 6% of imports); Japan (supplied 16% of imports).
Transportation: *Roads* (1965), 845 miles (1,360 km); *motor vehicles* (1965), 2,100 (automobiles, 800); *principal airport*, Yundum Airport.
Communications: *Telephones* (1965): 1,189; *radios* (1963), 30,000; *newspapers* (1959), 1 (daily circulation, 1,500).

The foreign minister of Senegal visited Gambia in March, and President Leópold Senghor of Senegal paid a 3-day state visit in April. At the conclusion of Senghor's stay he signed a treaty of association with Prime Minister Jawara, which called for annual meetings of the heads of state of Gambia and Senegal and established an interstate ministerial committee with a permanent secretariat. The purpose of the treaty was to further coordination and cooperation between the two countries. Despite these examples of apparent cooperation, however, real integration of services still remained a distant possibility.

Political Affairs. The major political party of Gambia is the People's Progressive party, headed by Prime Minister Jawara. The United party, led by P. S. N'Jie, provides the chief opposition.

In April 1967, Prime Minister Jawara rejected a proposal that the Field Force Division of Gambia's police force be converted into a military unit. He asserted that the country did not need to maintain a military force.

Economic Affairs and Foreign Aid. Gambia's peanut crop reached a record 129,000 tons in 1967. This enabled the government to dispense with a British budgetary grant-in-aid for the first time since 1962. Details of British financial commitments were announced in April. These included a £3,200,000 interest-free loan and yearly grants, if necessary. The grants would begin at £590,000 in 1967–68 and decline to £280,000 in 1970–71 to keep the budget balanced.

Gambia's improved financial position will allow the government to complete the projects previously outlined in a 5-year plan. Tourist trade was improving, and construction work began on the runways that will enable Yundum Airport to accommodate international flights.

GANDHI, Indira

Prime minister of India: b. Allahabad, India, Nov. 19, 1917.

Mrs. Gandhi's political fortunes and standing seemed to improve considerably in 1967, after a shaky start during her first year as prime minister in 1966. Her party, however, was seriously weakened by electoral reverses.

Domestic Affairs. Mrs. Gandhi was a central figure in three important political occurrences during the first half of 1967. These were the fourth general elections, which were held in February; the contest for the succession to the office of prime minister; and the election of the president of India.

Although Mrs. Gandhi won reelection to the Lok Sabha from a constituency in Uttar Pradesh—Rae Bareli—by a majority of more than 90,000 votes, her party suffered reverses in most parts of the country.

Before the new Parliament convened in mid-March, a struggle for succession to the prime ministership developed within the top ranks of the Congress party. Mrs. Gandhi emerged victorious when her rival for the office, Morarji Desai, was persuaded to settle for the posts of deputy prime minister and finance minister.

Mrs. Gandhi was also instrumental in the selection of a successor to 79-year-old Sarvepalli Radhakrishnan, president of India, whose term of office expired in May. She wished to nominate Dr. Zakir Husain, the vice president, but an influential group within the Congress party, headed by its president, Kumaraswami Kamaraj wanted Radhakrishnan to continue. The selection of Husain was regarded as a significant victory for Mrs. Gandhi. The victory was heightened in December with the announcement that Mr. Kamaraj would be succeeded in his post as president of the Congress party by Siddhavanahelli Nijalingappa.

In 1967 there was a change for the better in many areas of domestic activity. Fewer outbreaks of domestic violence occurred, and after the first good monsoon rains in three years the food situation and the economic picture improved perceptibly.

The language issue—which language or languages would be official in India—continued to cause controversy. Mrs. Gandhi spoke in favor of "indefinite trilingualism" (Hindi and English as national languages, plus a regional language in each state). In September, when Foreign Minister Mohammed Ali Currim Chagla resigned on the language issue, she temporarily took over his post. She also assumed the portfolio of planning when the Planning Commission was reconstituted in the same month.

Foreign Policy. Jan. 10, 1967, was the first anniversary of the signing of the Tashkent Declaration, in which India and Pakistan agreed to settle all disputes by peaceful means. On that day Mrs. Gandhi made a nationwide radio broadcast in which she reaffirmed India's commitment to peace and expressed hope for cooperation between India and Pakistan. In the Middle East crisis of May and June she supported the Arabs, a position which was widely criticized in India and in many foreign countries. In September she made a state visit to Ceylon, and in October to Poland, Yugoslavia, Bulgaria, and Rumania, with brief stopovers in Moscow and the U.A.R.

Background. Mrs. Gandhi is the only daughter of the late Prime Minister Jawaharlal Nehru. She attended Visva-Bharati University in Santiniketan and Somerville College, Oxford, where she studied history. In 1942, against her father's wishes, she married Feroze Gandhi, a Parsi lawyer. After Nehru was appointed interim prime minister in 1946, she became her father's hostess and constant companion.

Although she joined the Congress party as early as 1938, she did not hold office in it until 1955, when she became a member of two important committees. In 1959–60 she served as president of the party. In 1964 she became minister of information and broadcasting in the cabinet headed by Lal Bahadur Shastri. On Jan. 24, 1966, shortly after Shastri's death, at Tashkent, she was sworn in as prime minister of India.

GARDENING AND HORTICULTURE

"Flower power"—the rallying cry of the hippies—also seemed to be motivating their elders, who joined the ranks of home gardeners and community landscape groups in growing numbers during 1967. Especially apparent was an increasing interest in landscaping public areas.

Public Landscaping. A rapidly increasing need for outdoor recreational areas has made the federal government the largest single employer of landscape architects in the nation. Studies indicate that 90% of all Americans participate in some form of outdoor recreation. This has led to new interest in adding to and improving the recreational utility of national forests and parks. The same trend is apparent on the local level, as is indicated by the increase in county parks from 1,000 in 1960 to 4,500 in 1967.

The growing park industry is a spur to technical developments related to large-scale landscaping. New mechanical devices being adopted across the country include mowers designed for steep slopes along expressways, machines to collect litter, flexible herbicide applicators, and mechanical root pruners for use in nurseries.

Large cities showed evidence of an increasing appreciation of the place of plants in the urban environment. Los Angeles in 1967 adopted the coral tree as the official tree of the city. This genus (*Erythrina*), with its brilliant red-orange blossoms, has the advantage of being tolerant of city smog. Several species from tropical and subtropical areas of the world are adapted to public and private landscaping in coastal areas of southern California.

Fruit and Vegetable Industry. The trend toward mechanization of the fruit- and vegetable-growing industries advanced steadily in response to rising labor costs throughout the nation. Nearly all processed tomatoes were harvested mechanically in 1967, and many kinds of nuts and fruits were also being successfully harvested by machines. Some strawberry and sweet corn growers were using mechanical harvesters for the first time.

Citrus fruit is perhaps the most difficult kind of crop to harvest mechanically, but progress was being made, particularly in California and Florida. The tremendous capital outlay needed for machinery was the most important factor pushing the fruit- and vegetable-growing industries toward corporation systems. (See also AGRICULTURE.)

Sod Growing. The great demand for well-developed sod for home lawns, industrial developments, public parks, and other sites has led to technological advances in producing and installing sod turf. These improvements have made sodding the quickest and most efficient way to establish turf areas of Bermuda grass, bluegrass, bent grass, or dichondra. The sod is expertly developed in the growing nursery, where precise irrigation, fertilizing, and weed control are scientifically programmed. When installations must be made in hot weather, sod is often refrigerated before being delivered to the site.

Horticultural Chemicals. Among the most dramatic new developments in chemicals for horticultural use are the growth regulators. Alar, a retardant of vegetative growth, can bring about fruiting of young apple trees in four years instead of the usual seven. It also reduces pruning costs, helps overcome biennial bearing, delays fruit maturity, and retards preharvest fruit dropping. The trees produce firmer fruits, which retain their fresh flavor and texture longer after picking. Alar also increases the amount of fruit when used on seedless grapes, and produces more uniform ripening of tomatoes, an important consideration in mechanized harvesting.

New chemicals available for weed control include Parquat for annual weeds and grasses and to kill perennial weeds around the base of nonbearing fruit and nut trees. Terbacil or Sinbar can be used for control of annual or perennial weeds, including quack grass, in orchards established at least three years. Ramrod is used for pre-emergence application to control annual grasses in sweet corn planting.

Other new chemical products are being used for purposes other than weed killing. Ascorbic and iodoacetic acids sprayed on citrus and olive trees near harvest time make the mature fruit come off the tree more easily, an important factor in mechanical harvesting. Chemical side pruning of chrysanthemum buds is done by some growers with fatty acid sprays.

All-American Selections. Three new rose varieties were named All-American selections for 1968. They are Miss All-American Beauty, a hybrid tea of a deep pink, with fragrant double blooms; Europeana, a deep red floribunda that flowers all summer long; and Scarlet Knight, a red grandiflora with blossoms as large as 5 inches (12.7 centimeters) across.

All America gladiolus winners for 1968 are Royalty, Purity, and Bluebird. Their colors are, respectively, red, white, and blue.

Silver medals were awarded to three new flower varieties by the 1968 All-America judges. Winners of the coveted medals were two hybrid geraniums,

GERMAIN'S INC.

NEW FLOWER VARIETIES include the Los Angeles Beautiful (*left*), official rose of the city, and First Lady (*below*), a bright yellow marigold All-America selection.

ALL-AMERICA SELECTION

PALEY PARK, a restful spot in mid-Manhattan, is an example of a small, well-planned city park. It includes a cascading waterfall-fountain, small hardy trees, and vines.

WILLIAM S. PALEY FOUNDATION, INC.

Carefree Scarlet and Carefree Deep Salmon, and the hybrid zinnia Wild Cherry.

Bronze medals went to the hybrid geranium Carefree Bright Pink, and the *Celosia plumosa* Golden Triumph. Other flower selections were the hybrid marigold First Lady; another hybrid marigold, Orange Jubilee; and the verbena Blaze.

The 1968 All-America vegetable selection was the hybrid cucumber Spartan Valor, a vigorous producer that is also disease-resistant.

An All-America special award for horticultural achievement went to Pennsylvania State University for the geranium Nittany Lion Red, the first geranium to grow true from seed. It was produced at Pennsylvania State University.

New Books. New publications of interest to gardeners and horticulturalists include *The Pictorial Encyclopedia of Plants and Flowers,* by F. A. Novak, and *Modern American Gardens Designed by James Rose,* with a text by Marc Snow. Specialized subjects are covered in *The Magic World of Roses,* by Matthew Bassity; *Fantastic Trees,* by Edwin Menninger; and *Greenhouse: Place of Magic,* by Charles Potter. *Oranges,* by John McPhee, originally published in *The New Yorker* magazine, is a kind of travelogue through the commercial orange groves of Florida. *Desert Gardening,* a Sunset book, is especially useful for home landscaping in the Southwest.

GARDNER, John W. See biographical sketch under UNITED STATES.

GAS

Net production of natural gas in the United States reached a new record level of 17.5 trillion cubic feet in 1966, up 9.4% from 1965. Proved recoverable reserves of natural gas totaled 289.3 trillion cubic feet in 1966, an increase of 1.8 trillion cubic feet over the 1965 figure. Natural gas supplied 30.1% of the U. S. energy requirements in 1966.

Consumption. The gas utility and pipeline industry in the United States was serving 38,891,000 customers at the end of 1966. There were 35,723,000 residential gas utility customers, including 27,800,000 who were heating their homes with gas, 2,950,000 commercial gas customers, and 218,000 industrial and other users. Consumption in 1966 by class of consumer was (in trillions of cubic feet): residential, 4.1; commercial, 1.6; electric utilities, 2.6; field use, 1.8; petroleum refineries, 0.9; and other industrial users, 6.1.

Construction and Storage. Construction expenditures during 1966 set a new record of $2.4 billion. This outlay increased the gas utility and pipeline industry's plant value to a high of $31.2 billion, making it the nation's sixth-largest industry in terms of plant investment. In 1966 more than 32,000 miles of pipelines and mains were added to the nation's network that carries gas from wells to consumers; by the end of the year, there were 800,040 miles of pipelines in service.

There were 303 underground storage pools in 25 states in 1966. These storage pools, which have an estimated capacity of 4.4 trillion cubic feet, are located near consumer markets to enable gas companies to meet peak winter heating demands.

Uses. Shipments of major gas appliances during 1966 included 2,160,000 gas ranges, 2,636,000 automatic water heaters, 764,000 clothes driers, and 1,354,000 central heating units. Sales of gas central air-conditioning units in 1966 totaled 42,780, bringing the total in use to 202,860. At the end of 1966, gas utility lines were supplying fuel for 1,550,000 million gaslights, more than the total in use in the heyday of gas lighting in the 1890's.

Research. Under the American Gas Association research program, major efforts were being made to develop synthetic gas from coal, develop home climate controls, and improve gas air-conditioning and gas range equipment.

Gas Production and Consumption in Canada. Net production of natural gas in Canada in 1966 reached a record level of 1.1 trillion cubic feet. Proved re-

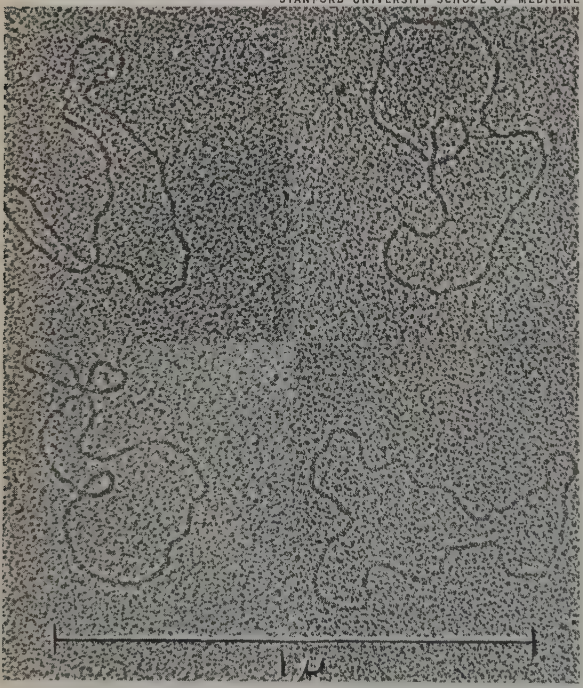
GENETICS

Major advances occurred in two basic fields of genetics in 1967. In the area of developmental genetics, the preparation of hybrid mice with cells containing two different sets of genes represented a novel experimental approach to the study of cell differentiation and tissue organization. In the field of biochemical genetics, scientists isolated two genetic repressors (substances that regulate gene activity). This success opens the way for an understanding of the molecular mechanism underlying the regulation of gene action. Another achievement was the *in vitro* synthesis of biologically active viral DNA.

Hybrid Mice. During the normal development of an embryo, cells become differentiated according to function and group together into tissues and organs. All of the body cells, however, remain identical in their genetic make-up (genotype). In experiments with mice, Beatrice Mintz of the Institute for Cancer Research in Philadelphia prepared hybrid mice with two genotypes by combining the cells of two eggs early in their embryonic development and then implanting the mass in the uterus of another female. In many instances, these "incubator" mothers gave birth to mice containing cells of both donors' genotypes. These mice are known as allophenic mice.

SYNTHESIZED DNA MOLECULES, as seen through an electron microscope, measure less than one micron in length. One micron (scale at bottom) equals 1/25,000 of an inch.

STANFORD UNIVERSITY SCHOOL OF MEDICINE



When allophenic mice are prepared from donors differing in pigmentation (for example, black and albino) they all have a standard color pattern—transverse stripes down the head, body, and tail. Through detailed analyses of the color distribution of many of these animals, it was found that each one has 34 areas of pigmentation, each derived from a single cell that differentiated early in embryonic development. These mice thus provided the first example of a vertebrate cell whose complete history of differentiation and development can be traced.

Allophenic mice were also used to study the development of skeletal muscle cells. These cells have many nuclei, and for years scientists wondered if these cells arise from the fusion of many single-nucleated cells or if they develop through the repeated nuclear divisions of a single cell. In an experiment with allophenic mice, the mice were prepared from donors that produce chemically different forms of an enzyme synthesized by skeletal muscle cells. The resulting mice were found to produce a chemically hybrid form of the enzyme, showing that each skeletal muscle cell contained nuclei of both donor mice. Such cells may have arisen from the fusion of many single-nucleated cells but could not have arisen by the repeated division of one cell's nucleus.

Gene Repressors. A few years ago François Jacob and Jacques Monod formulated a model for the regulation of gene action. According to this model, the first biochemical step—the synthesis of messenger RNA along a molecule of DNA—can be prevented by the presence of a cellular component called a repressor. For some genes, the action of the repressor can be neutralized by another substance called an inducer. Support for this model was based largely on genetic and physiological experiments with bacterial viruses, and these experiments also suggested that repressors are protein molecules.

In 1966 and 1967, the repressors of two groups of two groups of genes were successfully isolated and shown definitely to be proteins. Walter Gilbert and Benno Müller-Hill, working at Harvard University, isolated the repressor of the genes determining the fermentation of lactose in the bacterium *Escherichia coli.* Also at Harvard, Mark Ptashne used a different method to isolate a repressor of the bacterial virus *lambda.* In both systems, it was shown that the repressor acts by binding directly to the DNA of the genes whose function it regulates.

Gene Synthesis. The enzyme DNA polymerase, which is responsible for copying linear DNA strands, has been studied intensively for over 10 years. In 1967 scientists isolated an enzyme that joins the opposite ends of linear DNA molecules to form circles. Arthur Kornberg and Mehran Goulian of Stanford University, with Robert Sinsheimer of the California Institute of Technology, used this enzyme plus DNA polymerase to replicate the infectious single-stranded DNA of a bacterial virus. This experiment offers rigorous proof that the accurate copying of genes is achieved by these enzyme systems and it opens the way for the preparation of chemically modified forms of viral DNA, including that of the cancer-producing polyoma virus.

WIDE WORLD

HIGHEST MOUNTAIN in Antarctica, the 16,860-foot Vinson Massif, was first scaled in December 1966 by a U. S. team.

GEOGRAPHY AND EXPLORATION

The parade of former colonies moving from dependence to independence lost momentum in 1967. The former British colony of Aden and the Federation of South Arabia became the People's Republic of South Yemen on November 30—the only state to win full sovereignty in 1967. Five British possessions in the Caribbean achieved associate statehood, however, under the aegis of the United Kingdom. These territories were Antigua, Dominica, St. Lucia, Grenada, and the neighboring isles of St. Kitts, Nevis, and Anguilla. Anguilla attempted to secede from the Associated State of St. Kitts-Nevis-Anguilla, and its future status remained uncertain. Another British possession in the Caribbean—St. Vincent—was expected to achieve associate statehood but showed interest in joining Guyana, which had become an independent state in 1966.

Each associate state is individually linked with Britain. Though referred to collectively as the West Indies Associated States, they do not comprise a political entity.

Map Changes. The French territory of French Somaliland, in Africa on the Gulf of Aden between Ethiopia and Somalia, changed its name to the French Territory of Afars and Issas. The Afars, in the north, and the Issas, a clan of the Dir Somalis who reside in the south, are the principal peoples of the country. The territory has 8,500 square miles (22,000 sq km) and a population of 108,000.

Canada's colorful gold rush town of Yellowknife was designated capital of the Northwest Territories, which was formerly governed from Ottawa. Yellowknife's population is 3,800.

Space Age Geography. Many geographers were making preparations for the launching of the earth resources satellite by the National Aeronautics and Space Administration in 1969 or 1970. The satellite will be packed with remote-sensing devices (radar, infrared, and photographic) that will transmit back data relating to crops, forests, water, and weather.

Present photographs from space can show more than 6,000 square miles (15,500 sq km) of the earth's surface in useful detail. Such vast coverage, combined with the speed of camera-equipped satellites, may permit man to keep a running inventory of potential water resources in the form of snow. Space photographs can also provide a rough check of hydrographic charts, help locate unmapped shoals, and detect sudden changes in underwater topography—such as new deepwater channels that are cut rapidly by hurricanes.

Antarctic Exploration. Wernher von Braun and other prominent space experts visited McMurdo Sound to see how the area might be used to test the vehicles, life-detection equipment, and instruments now being developed for lunar and planetary exploration. The scientists inspected five dry valleys at the edge of the Transantarctic Mountains, about 50 miles (80 km) from McMurdo Sound.

These mysterious, ice-free valleys are regarded as a natural training ground for astronauts. Some geologists think the valleys were formed by volcanic activity; others believe that hard bedrock shifted millions of years ago and formed dams that kept glaciers from flowing. Still other scientists suggest that the ice-free state of the valleys is caused by the earth's temperature—that if man dug deeply into the earth in this area of Antarctica, he would find

UPI

DRILLING THROUGH ICE, Canadian scientists in a 1967 Arctic expedition prepare to make probes of the ocean floor.

the temperature there increasing more rapidly than anywhere else in the world.

The U. S. Geological Survey charted a 2,700-mile (4,300-km) stretch along the coast of Byrd Land, from Edward VII Peninsula near Little America to the Jones Mountains in Ellsworth Land. This land is so flat in some places that surveyors could make sightings for 10 miles (16 km) merely by mounting their theodolites and electronic equipment on 20-foot-high (6-meters) aluminum poles. As a part of the U. S. mapping program, the Navy made aerial photographs of more than 400,000 square miles (1,036,000 sq km).

American glaciologists initiated a project to obtain samples of 30,000-year-old Antarctic ice Using knowledge gained from boring down into the Greenland icecap, the scientists set up and tested a deep-core drill designed to pierce an 8,700-foot (2,650-meter) hole at Byrd Station. They hope the ice samples will show temperature variations over the millennia; rate of snow accumulation; deposits of extraterrestrial material, if any; and physical conditions of ice and rock at the bottom of the shaft.

The U. S. South Pole Station was reported sliding away from the pole at a speed of about 150 feet (46 meters) per year and, at the same time, sinking slowly into the ice. The sinking may be caused by increased polar gravitation—up about 1/10,000 of 1% in nine years.

Fifteen Antarctic areas have been set aside as "Specially Protected Areas" for Antarctic flora and fauna upon the recommendation of a special committee established to set conservation criteria.

Robert C. Murphy of the American Museum of Natural History suggested that Antarctica be made an international park. He said the continent's balance of nature can be disturbed by many outside influences—for instance, pet dogs that kill birds, oily bilge water from ships standing offshore, and scientists who collect more specimens than needed. (See also ANTARCTICA.)

Arctic Exploration. American and Soviet scientists continued to study the icy currents of the Arctic Ocean, which flow clockwise around the North Pole.

U. S. Army scientists at Camp Century, Greenland, more than 100 miles (160 km) inland from Thule Air Force Base, analyzed nearly 10,000 years of Arctic history from a 5,000-foot (1,525-meter) core sample obtained by drilling through the icecap. Special attention was given to the composition of the ice, contents of its salt nuclei, and evidence of volcanic eruptions.

The Camp Century team has already determined that cosmic dust now is settling on the surface of the

MAKING CAMP on a frozen ocean, Canadian Arctic explorers set up a lightly framed hut on the ice.

UPI

earth three times faster than 700 years ago. (See also Arctic Regions.)

Oceanographic Exploration. The U. S. Coast and Geodetic Survey tested a small, unmanned, remote-control "drone" boat. Drones eventually will be capable of radioing to a control ship up to 15 miles (24 km) away such information as its position, water depth there, air and water temperatures, and reports on undersea rock and mineral formations.

The tiny drones promise to be an invaluable aid in oceanographic exploration. A control ship will be able to handle more drones than manned survey boats, since the 4-man boats now used must return to their mother ship at night. The data gathered round-the-clock by drones could be combined with other information to give a more precise picture than is now possible of sea floors and their oil and mineral deposits.

The U. S. Navy reported it has been tracking a "false bottom," or "deep scattering layer," in the Arctic Ocean. By day the mystifying false bottom hovers about 1,800 feet (550 meters) below sea level, but goes deeper at night. Marine biologists believe that the layer is a densely concentrated form of life, as is the case with other false bottoms that have been found elsewhere.

American Geographical Society. The society announced two major institutional changes late in 1966: Shannon McCune, former president of the University of Vermont, succeeded Charles B. Hitchcock as director, and Serge A. Korff, professor of physics at New York University, succeeded Walter A. Wood as president.

National Geographic Society. Major changes in the society's executive structure were announced in August 1967. Melville Bell Grosvenor, who had held the dual office of president and editor since 1957, assumed the newly created post of editor-in-chief. He also became chairman of the board of trustees. Melvin M. Payne, executive vice president and secretary, succeeded Grosvenor as the 12th president of the 79-year-old society. Frederick G. Vosburgh, a vice president and associate editor, was elected editor of *National Geographic,* the society's magazine.

The American Antarctic Mountaineering Expeditions, partially sponsored by the National Geographic Society, achieved the first conquest of Antarctica's highest mountains in December 1966. A 10-man team, led by Nicholas B. Clinch, made historic first ascents of six peaks in the frozen, wind-raked Sentinel Range; 16,860-foot (5,139-meter) Vinson Massif, the highest; 16,290-foot (4,965-meter) Mt. Tyree; Mounts Shinn and Gardner, more than 15,000 feet (4,572 meters) high; and Mounts Ostenso and Long Gables, more than 13,000 feet (3,962 meters) high.

The discovery in Africa of the world's first white gorilla—a 2-year-old male albino with white hair, pink skin, and blue eyes—was announced by Arthur J. Riopelle, director of a society-supported study of lowland gorillas in Río Muni.

Publications. The American Geographical Society published Folio 14 of the *Serial Atlas of the Marine Environment* in 1967. The *Atlas,* begun in 1962, is issued as a continuing series of separate studies of biological, physical, chemical, and geological aspects of the sea. Folio 14, containing information published for the first time, is a definitive study of the breeding sites and oceanic ranges of 35 deep-sea birds of the North Atlantic. The author is Robert Cushman Murphy, Lamont curator of birds, emeritus, of the American Museum of Natural History. The society also published *The Pacific Basin: A History of its Geographical Exploration,* edited by Herman R. Friis of the National Archives in Washington, D. C.

The National Geographic Society's Special Publications Division, which was created in 1965, issued four new books in 1967: *Exploring Canada From Sea to Sea; World Beneath the Sea; The Revolutionary War: America's Fight for Freedom;* and *Isles of the South Pacific.*

The National Geographic Society's Book Service published three books in 1967: a revised edition of *Wild Animals of North America; Everyday Life in Bible Times;* and a revised edition of *America's Historylands.*

The Association of American Geographers published two books in 1967: *New Approaches in Introductory College Geography Courses* and *Introductory Geography, Viewpoints and Themes.*

Conferences. The annual meeting of the Association of American Geographers (AAG), held at St. Louis in April, brought together 1,500 professional geographers, the largest attendance in the association's history. The AAG scheduled its 1968 meeting for August 18–22 in Washington, D. C. The association launched a two-year study of communications in the field of geography, to be headed by William Garvey, director of Johns Hopkins University's Center for Scientific Communication.

The Congress of the International Geographical Union announced that its next quadrennial meeting will be held in New Delhi on Dec. 1–8, 1968.

National Geographic Society

GEOLOGY

Rapid strides were made in 1967 toward solving the long-standing problem of continental drift, the theory that the continents have drifted apart from one another. The possible site of the so-called "lost continent" of Atlantis was identified, and fossils of what may be the most ancient animals known were discovered. Scientists determined the composition of an area of the moon's surface.

Continental Drift. Two discoveries made in 1967——one pertaining to coastal similarities and the other to the mechanism of drift—strongly imply that one or two former large land masses broke up and dispersed to form the present continents.

Coastal Similarities. Because of the obvious parallelism of the opposite coasts of West Africa and northern Brazil, these regions were tested to determine the actual degree of correlation of their geologic structure, age, and rock types. Over 150 widely scattered analyses were made. They showed that rocks of the same age, disposed in two corresponding belts and separated by a sharp boundary, coincide when the two coasts are "fitted together."

A survey is similarly being conducted of the submerged coastline of southern and western Australia by scientists of Australia and the United States. Information thus acquired will be compared with data from Antarctica and India to determine how these areas may once have fitted together. Laboratory ships equipped with newly developed sounding and mapping devices, used in conjunction with satellite navigation techniques, will greatly facilitate these oceanographic studies.

Mechanism of Drift. In spite of such evidence, the lack of a sufficient operating mechanism has been a

NASA

SURVEYOR 5 photograph (*top*) shows lunar surface resembling loose earth thrown up by a prairie dog (*bottom*).

serious obstacle to general acceptance of the idea of drift. However, objections seem largely to have been met by the concept that the ocean floor is spreading as a result of convection currents in the earth's mantle. Strong evidence for the existence and effectiveness of such currents is growing.

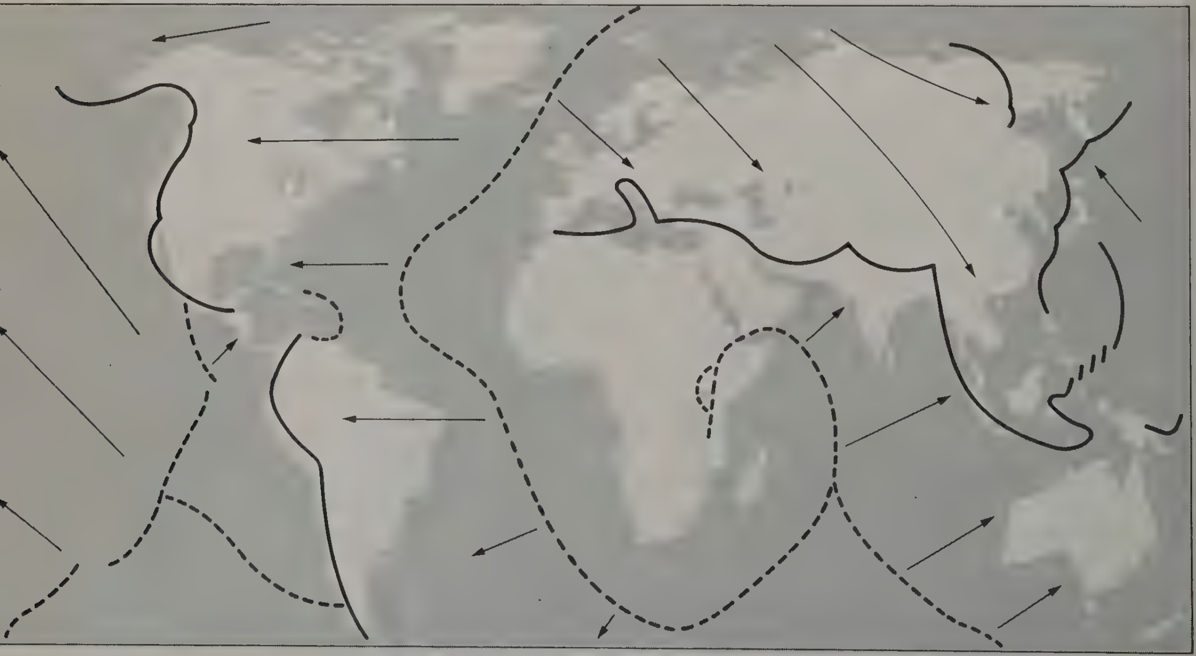
The chief links in the process are as follows. First, molten rock emerges along mid-ocean ridges after having been brought to the earth's surface by deep-seated, heat-generated convection currents in the mantle. Next, the emergent material spreads laterally from the mid-ocean ridges and is carried away in broad symmetrical bands. Concurrently, the magnetic history of the earth is "frozen" into, and carried outward from, the mid-ocean ridges by the successive bands of igneous rock as these bands of rock solidify.

In this manner, variations of magnetic intensity and, more significantly, distinct polarity reversals of the material in the rocks are recorded. The latter feature arises from sudden (and as yet unexplained) reversals of the earth's magnetic poles. Such "polarity epochs" are known to persist for varying but long periods; the last reversal took place 700,000 years ago. The really significant finding is that the bands of magnetic anomalies are preserved on both sides of the ridges in both the Atlantic and Pacific oceans. Furthermore, the rate of spreading—on the average, about 2 cm, or less than 1 inch, per year—is exactly that needed to account for continental drift. On the basis of these data, the Atlantic Ocean would have first appeared in early Jurassic time, about 180 million years ago.

The spreading of sea floors has other implications. There is evidence that tectonic activity along coasts such as that of eastern Asia is caused partly by the forcible thrusting of sea floor under continent in those areas. Inactive coasts, such as those of the Atlantic Ocean, may indicate passive transport away from mid-ocean ridges. It seems safe to predict that continental drift must be reckoned with as a fact in future geological studies.

Polarity reversals appear to be the long-sought means of correlating rocks of ocean basins with those of continents. They are especially applicable to nonfossiliferous rocks. It is fairly easy to establish the ages of polarity shifts by radiometric means, and

PATTERNS OF CONTINENTAL DRIFT were better understood as a result of geological discoveries made in 1967.



these ages can then be applied wherever corresponding reversals are identified.

Vulcanology. Geologists and archaeologists cooperating in a study of the Aegean island of Thira have found evidence of a tremendous volcanic eruption there about 3,500 years ago. The eruption spread a layer of ashes over land and sea and caused high tidal waves, a cultural collapse, and perhaps climatic changes. The event may prove to be an invaluable reference point for many historical studies, and may be the factual basis for the tales of the sinking of Atlantis. (See also ARCHAEOLOGY.)

Paleontology. In 1967 there continued to be high interest in primitive fossils, especially in relation to determining the beginning of the Cambrian period. Some investigators are inclined to establish the base of the Cambrian rock system below the first appearance of abundant many-celled animals (about 600 million years ago). However, elongate casts of objects with corrugated sides and bilateral symmetry have been found north of Lake Huron in Lower Proterozoic quartzite dated at between 2 and 2.5 billion years. If the casts represent wormlike organisms, they are the earliest animals known.

Fossiliferous Cambrian, Ordovician, Mississippian, and Pennsylvanian rocks have been reported in southern Mexico. This proves for the first time that the area has a history of tectonic and sedimentary events dating from Paleozoic times.

Astrogeology. An analysis of the moon's surface was accomplished by the U. S. Surveyor 5 spacecraft, which landed on the moon on Sept. 10, 1967. The small area analyzed consists of a basaltic material containing up to 63% oxygen, 21.5% silicon, and lesser percentages of other elements. The sample suggests that the moon is very earthlike in composition, and probably in early geologic history as well. (See also SPACE EXPLORATION.)

WILLIAM LEE STOKES
University of Utah

GEORGIA

Georgia began the year 1967 with the results of its November 1966 gubernatorial election still undecided. Republican Howard H. Callaway ran ahead of Democrat Lester G. Maddox by about 3,000 votes, but a write-in campaign for a former governor, Ellis Arnall, attracted enough support to prevent any candidate from receiving a majority, as is required by the Georgia state constitution.

On the morning of Jan. 10, 1967, the two houses of the General Assembly met in joint session to select a governor from the two leading candidates. When a day-long recount of the official election returns failed to produce a majority, the heavily Democratic Assembly elected Maddox by a roll-call vote of 182 to 66. The new governor took the oath of office that evening in a private ceremony, and formal inaugural ceremonies were held the next day.

Governor Maddox, who had been known as a strong segregationist, began his administration by calling for moderation along the lines established by his predecessor, Gov. Carl E. Sanders. The 1967 session of the General Assembly completed a court-ordered reapportionment of both houses and passed a variety of legislation, including substantial salary increases for state executives.

Atlanta continued to consolidate its position as the "economic capital" of the southeastern United States. Economic indicators, including bank clearings, permits for office construction, employment increases, and airline traffic, placed it statistically among the nation's 10 leading cities.

WIDE WORLD

LESTER MADDOX (*right*) is publicly sworn in as governor of Georgia in front of the state capitol on January 11.

Legislation. In reapportioning itself, the Georgia General Assembly reduced the membership of the House of Representatives by 10 (from 205 to 195 members), to take effect with the 1968 legislative session. The Senate membership was increased by 2 (from 54 to 56 members); but since the number of

Labor Force (employed persons, annual average 1966): Agricultural, 96,200; nonagricultural (wage and salary earners), 1,542,100 (27.7% manufacturing, 18% trade, 15.7% government). *Unemployed* (1966 average)—57,600.
Manufacturing (1965): Value added by manufacture, $4,060,-703,000 (transportation equipment, $700,417,000; food and products, $493,310,000; machinery, $212,903,000).
Agriculture (1966): *Cash farm income,* $1,095,982,000 (livestock, $632,678,000; crops, $383,131,000; govt. payments, $80,173,000). *Chief crops* (tons)—peanuts, 408,000 (ranks 1st among the states); peaches, 91,200 (rank, 3rd); pecans, 18,000 (rank, 2d); corn for grain, 1.647,072; hay, 867,000.
Mining (1966): *Production value,* $148.597,000. *Chief minerals* (tons)—stone, 25,690,000; clays, 5,128,000; sand and gravel, 3,915,000; iron ore, 447,000; talc, 41,000.
Fisheries (1966): *Commercial catch,* 16,022,994 pounds ($3,882,-653). *Leading species*—hard blue crabs, 8.555 820 pounds ($324,767); shrimp, 6,475,746 pounds ($3,340,985).
Transportation: *Roads* (1965) 101,500 miles (163,345 km); *motor vehicles:* (1966), 2,229,623; *railroads* (1965), 5,702 track miles (9,175 km); *airports with scheduled serv.,* 13.
Communications: (1966): *Telephones,* 1,687,900; *television stations* (1967), 22; *radio stations,* 199; *newspapers,* 33 (daily circulation, 986,000).

senators is fixed by the state constitution, the increase must be voted upon in the 1968 general election. The General Assembly also voted to increase the term of membership in both houses from 2 years to 4 years, subject to approval by the electorate.

The annual salary of the governor of Georgia was raised to $42,500, and that of the lieutenant governor to $20,000. Several other state officers received salary increases, as did the justices of the state supreme court and the judges of the court of appeals. A retirement plan, subject to voter approval, was adopted for members of the Assembly.

The appropriation bill for fiscal 1968 amounted to $785.3 million. Among other measures passed by the Assembly were bills providing for air pollution control, guaranteeing equal pay for males and females for comparable work, and making incitement to riot a misdemeanor.

Race Relations. Soon after his inauguration, Governor Maddox received a delegation of Negro legislators and promised to "deal fairly" in giving Negroes increased opportunities in state government. The governor signed a jury reform bill in March and shortly thereafter began an investigation of the county prison system. By July he had recommended the appointment of a total of 15 Negroes to serve on local draft boards. Racial disorders in Atlanta on June 19, following a speech by "black power" advocate Stokley Carmichael, resulted in several injuries and arrests.

Sports. The Chiefs of the National Professional Soccer League chose Atlanta as their home city and played their 1967 home games in Atlanta Stadium.

GERMAN LITERATURE

German literature in 1967 reflected a pre-World War II cultural nationalism, tempered by consciousness of the current unity of Western thought.

Fiction. The question of personal identity is the core of Rolf Roggenbuck's novel *Der Nämlichkeitsnachweis,* which depicts man as an entity both known and unknown, who wants to follow the dictum "Know thyself," but is confronted with the unanswerable query "Who am I?" The search for the self is characterized in Roggenbuck's work by alternating forms of address—from first person to third—signifying the ambivalent position of man in relation to himself and his fellow men. Günther Bruno Fuchs, in his novel *Bericht eines Bremer Stadtmusikanten,* created a satiric parable directed against those who create social institutions that threaten to overcome their creators. Hans Noever's *Venedig liegt bei Cleve,* which resembles a prose drama, concentrates on the development of human life past, present, and future.

Under the title *Unerhörte Begebenheiten,* Hans Christoph Buch united six stories that evolve from one another, starting with the death of an old grandfather and ending with the destruction of an entire army. Although decidedly of serious intent, the book tends toward satiric excess. Marie Luise Kaschnitz' collection of stories *Ferngespräche* portrays various types of individuals who, while not social outsiders, are nonetheless isolated and lost.

Nonfiction. *Als wär's ein Stück von mir* is the title of the memoirs of dramatist Carl Zuckmayer, in which he recounts his friendships and encounters with Germany's leading men of letters, from Gerhart Hauptmann to Bertolt Brecht and Max Frisch. More than a mere literary reminiscence, however, the book tells the story of one man's experience of life. A similar volume is *Dichtergehäuse,* selections from the autobiographical notes of Werner Bergengruen, edited by Charlotte Bergengruen, with an epilogue by Emil Staiger. The notes illustrate the driving motif of the author's life: to be a man who, although a writer, is not separated from the world of common experience. Schalom Ben-Chorin's *Zwiesprache mit Martin Buber* is a description of Buber's last years, recounting conversations with the venerable old man as well as episodes in Buber's life. The work also contains selections from Buber's notes and diaries that help him come to life as a human being, an individual whose love of man was in the truest sense a deep love of God.

Ernst Loewy's *Literatur unterm Hakenkreuz* is a penetrating analysis of the roots of Nazi belles lettres, maintaining that Nazi literature was not the mere outpouring of government propaganda but was rooted in such sources as the delusions of German romanticism, the dream of a folk soul, and the militant nationalism inherent in Germany's past.

Poetry. Hans Peter Keller's *Panoptikum aus dem Augenwinkel* is a collection of lyrics that are more fragments than whole poems, each a pictorial point in which contemporary language is so extended as to reveal entirely new meanings. Horst Bienek's *Was war was ist* contains 25 autobiographical poems, each a tightly knit narrative expressing a personal *Weltanschauung* (world view) and self-revelation. In *Etwas geschieht,* Wolfgang Weyrauch presents in monologue form the reminiscences of various individuals: lovers, the dying, demonstrators, and soldiers. Walter Helmut Fritz' *Die Zuverlässigkeit der Unruhe* is a direct confrontation between author and reader that demands a personal response from every individual. Fritz' linguistic mastery is revealed by his descriptive portraits of such figures in man's spiritual history as Michelangelo, da Vinci, and Pascal. *Ventile,* a collection of 28 poems by Günter Herburger, written in rapidly flowing, sharp colloquial language, is a comment on social, political, and psychological aspects of contemporary life.

Günter Grass' third volume of poems, *Ausgefragt,* epitomizes the "naturalness of reality" and, at the same time, the ambivalent interpretations that can be given to everyday occurrences. Günther Bruno Fuchs' *Prosa Vita* is the witty protest of a man who prefers his own world of "out-of-the-way streets and backyards." In *Wohnstadt zwischen den Atemzügen,* Johannes Poethen presents a mixture of prose and verse that sharply contrasts the freedom of classical Greece with the spiritual enslavement of contemporary urban life.

Scholarly Editions. The Insel Verlag's historical-critical edition of the works of Rainer Maria Rilke, containing Rilke's entire literary corpus, was completed in 1967 with the publication of the sixth volume. In addition to works by Rilke, the final volume contains an epilogue by the German literary scholar Ernst Zinn, with notes.

The first complete edition of the dramatic works of the 10th century nun Roswitha von Gandersheim was issued by Winkler Verlag in 1967, with an introduction by Bert Nagel. Roswitha's plays served as a basis for later morality plays.

GERMANY

STATE FUNERAL of former Chancellor Konrad Adenauer, April 25, was attended by all the Allied heads of state. Here the coffin is borne through the great west doors of Cologne Cathedral. Burial was near Adenauer's home in village of Rhöndorf.

UPI

GERMANY

Germany is divided politically into West Germany (Federal Republic of Germany) and Communist East Germany (German Democratic Republic). The city of Berlin is also divided, but the Western powers and the Soviet Union retain in both West and East Berlin rights based on the Berlin Declaration of June 8, 1945, reaffirmed by the Potsdam Agreement of Aug. 2, 1945.

WEST GERMANY

(FEDERAL REPUBLIC OF GERMANY)

The first test of a government of national unity in West Germany produced satisfactory results in 1967, especially in arresting a depression that began in 1966. However, both of the country's major parties, which are committed to the "grand coalition" government of Chancellor Kurt Georg Kiesinger, anticipated a return to party government after the general elections of 1969.

Grand Coalition. Toward the end of 1966 the government of Chancellor Ludwig Erhard encountered a fatal crisis of confidence. Erhard, who had taken over the chancellorship from Konrad Adenauer in 1963, had enjoyed great popularity and respect as the architect of West Germany's postwar economic recovery. He also had performed extremely well in the election campaign of 1965. But thereafter, Erhard's capacity as a political leader was subjected to increasing doubt. His authority was considerably weakened shortly after the 1965 election when his government was obliged by a financial crisis to revoke certain public spending measures that the Bundestag (lower house of parliament) had passed with the government's approval before the election campaign.

In addition it was obvious that drastic action would be needed to overcome a rapidly growing budget deficit. Unfortunately, however, the warring social interest groups in the loosely integrated Christian Democratic Union could not agree on where the budget should be cut. Erhard lacked Adenauer's iron will and great political cunning, and in a no longer expanding economy the government could not afford to make simultaneous concessions to all the different interests.

Because of the recession the budget could be balanced only by cutting special subsidies and social welfare programs or by raising taxes. After long disputes, Erhard's cabinet decided to raise taxes, whereupon the Free Democratic party, with which Erhard's Christian Democrats had formed a majority coalition in the Bundestag, withdrew from the government.

The tax issue probably was not the real motive for the Free Democrats' withdrawal. They had always feared that they might lose their identity in too close an association with the Christian Democrats, and their concern was redoubled by the col-

lapse of Erhard's popularity and the simultaneous appearance of a new radical right-wing group, the National Democratic party, that threatened to attract voters from Free Democratic ranks.

Many Free Democrats thought their party could form a new coalition government with the Social Democrats—a government that would have had only a bare majority—but the Social Democrats were unwilling to try to build a government on that basis. The Social Democrats were reluctant to associate themselves with a party oriented to the right of the Christian Democrats when they felt they could count on close cooperation with at least those Christian Democrats who rely on working-class support.

On Dec. 1, 1966, therefore, the Christian Democrats and the Social Democrats formed a "grand coalition" under the direction of Kurt Georg Kiesinger, the popular Christian Democratic governor of Baden-Württemberg. Willy Brandt, the mayor of West Berlin and chairman of the Social Democratic party, became vice chancellor and foreign minister.

Of 20 cabinet seats in the new government, 11 went to Christian Democrats—among them Franz Josef Strauss, chairman of the Bavarian Christian Democrats, who became minister of finance, and Gerhard Schroeder, a former foreign minister, who became minister of defense. Among the nine Social Democrats who were the first in their party since pre-Nazi days to obtain cabinet posts were Herbert Wehner, minister of all-German affairs, and Professor Karl Schiller, minister of economics.

Many Socialists opposed entering the grand coalition. They felt that the party would inherit responsibility for the failures of the Christian Democrats without inheriting credit for any of the achievements. Brandt and Wehner, however, argued that failure to enter the proposed government might precipitate a grave government crisis. Their view prevailed, and the two parties formed a government that they expected would rule until the next federal elections in 1969.

Anti-Recession Measures. The first major task the Kiesinger government set itself was to halt the recession it inherited from the previous government and to initiate a period of new economic growth. The budget deficit represented very largely the skyrocketing cost of upholding existing legislation—for example, broad-scale social welfare programs and

FEDERAL REPUBLIC OF GERMANY • Information Highlights

Area: 95,937 square miles (248,541 sq km).
Population: 57,616,000 (Jan. 31, 1967 est.).
Chief Cities (1965 est.): Bonn, the capital, 141,669; West Berlin (1966 est.), 2,190,577; Hamburg, 1,856,953.
Government: *President*—Heinrich Lübke (took office July 1, 1959); *Chancellor*—Kurt Georg Kiesinger (took office Dec. 1, 1966). *Parliament*—Upper House (Bundesrat), 45 members; (name of 2d house): Lower House (Bundestag), 498 members (party seating, 1966: Christian Democratic Union and Christian Social Union, 247; Social Democratic party, 202; Free Democratic party, 49).
Religious Faiths: Evangelical, 51% of population; Roman Catholics, 47.6%; others, 1.4%.
Education: *Literacy rate*, 99% of population. *Total school enrollment* (1964)—8,837,116 (primary, 5,362,899; secondary, 1,268,031; technical/vocational, 1,951,225; higher, 254,961).
Finance (1966 est.): *Revenues*, $16,185,000,000; *expenditures*, $16,742,500,000; *public debt*, $8,902,500,000; *monetary unit*, Deutsche mark (4 Deutsche marks equal U. S.$1).
Gross National Product (1966): $119,475,000,000.
National Income (1966): $90,500,000,000; average annual income per person, $1,574.
Economic Indexes (1966): *Industrial production*, 159 (1958=100); *agricultural production* (1965), 126 (1956–57=100); *cost of living*, 122 (1958=100).
Manufacturing (metric tons, 1966): Crude steel, 4,536,000; cement, 34,740,000; gasoline (1965), 9,785,000; beer (1965), 6,743,000; wheat flour, 3,180,000; meat, 3,063,600; sugar, 773,000; wine, 442,000; aluminum, 423,600.
Crops (metric tons, 1966): Potatoes, 18,833,000 (ranks 3d among world producers); rye, 2,693,000 (world rank, 3d); sugar beets, 11,303,000; wheat, 4,533,000.
Minerals (metric tons, 1966): Lignite, 98,088,000 (ranks 3d among world producers); potash (1965), 2,399,000 (world rank, 2d); barite (1965), 445,000 (world rank, 2d); feldspar, 335,000 (world rank, 2d); coal, 126,288,000; iron ore, 7,200,000; crude petroleum, 7,872,000.
Foreign Trade (1966): *Exports*, $20,147,500,000 (chief exports: nonelectrical machinery, $4.564,500.000; transport equipment, $2,862.300,000; electrical machinery, $1.619.300.000; iron and steel, $1,461,500,000); *imports*, $18,037,500,000 (chief imports: petroleum and petroleum products, $1,373,800,000; nonelectrical machinery, $1,223,000,000; fruit and vegetables, $1,162,700,000). *Chief trading partners:* France (took 12% of exports, supplied 12% of imports); U. S. (took 9% of exports, supplied 13% of imports).
Transportation: *Roads* (1966), 209.495 miles (3,371.500 km); *motor vehicles* (1965), 10,714,746 (automobiles, 9,718,778); *railways* (1965), 22 022 miles (35.433 km); *merchant vessels* (1966), 860 (5.401,000 gross registered tons).

commitments to buy arms abroad. Because the government could not escape many of these commitments, it adopted a medium-term finance plan.

In accordance with its plan the government estimated the available funds for the years 1968 through 1971 and laid down the sums available for each category of public expenditure. The new plan presupposes a 4% average annual increase in the gross national product. The federal budget is expected to grow from $20.2 billion—the record sum approved by the cabinet on September 13 for fiscal 1968—to $23.4 billion for the 1971 fiscal year.

The 1968 budget was planned to be fully balanced, albeit with the help of government borrowing. The borrowing, however, seemed to be unobjectionable because the public indebtedness of the Bonn republic is very small. But government use of the capital market did have the undesirable effect of restricting private investment.

The government had further recourse to the capital market in order to finance a massive program of pump-priming in plant investment. Altogether $1.8 billion was provided to revive the economy.

Other Economic Developments. Largely because of government intervention, especially financing of public investments by additional credits, the downward trend to the economy was brought to a standstill by September 1967. Although no considerable upward trend had begun by the year's end, planners expected that 1968 would witness expanding production and further growth of the economy.

From January to September 1967, German industries produced 4.6% less than in the same period of 1966. The recession undoubtedly would have been more severe if German industries had not managed to increase their exports by about 10%. High exports and falling imports resulted in a monthly surplus in the balance of payments of more than $250 million. Because German exports of capital exceeded foreign investments in Germany, however, the capital reserves of the federal bank declined slightly. Whereas the reserves had amounted to $7.45 billion at the end of 1966, they amounted to only $7.3 billion on August 31, 1967.

The number of the unemployed in West Germany reached 359,000 at the end of August, compared with 106,000 at the same time in 1966. The larger figure, nevertheless, is an extremely low one, even taking into account the number of workers on short hours, who in August numbered about 64,000. Simultaneously the number of foreign workers employed in West Germany fell to about 900,000 from 1,200,000 at the end of 1966.

While the major part of the West German unemployment should disappear with the expected return of prosperity in 1968, a serious problem of structural unemployment exists in the Ruhr and Saar districts where the German coal-mining industry is located. German dependence on coal has been shrinking steadily for 10 years, as oil, natural gas, and atomic energy have come into more general use. In 1957 coal provided 69% of the power used in Germany. In 1967 it provided only 36%, while oil in the same period extended its quota from 12% to 48%.

The end of this shift is not in sight. Whereas 604,000 workers were employed in coal mining in 1957, only 295,000 were so employed in 1967. Some 40,000 miners lost their jobs in 1967 alone, and an estimated 80,000 others will lose their jobs by 1971. The amount of West German coal mined has dropped from 149 million tons in 1957 to 126 million in 1966, and experts estimate that eventually not more than 90 million tons will be marketable.

The government accordingly has adopted a program that induces the mine owners to plan for partial closing of their mines while the government itself seeks to induce new industries to locate in the Ruhr and Saar in order to create new jobs for the unemployed miners.

Political Developments. The future of the West German economy will largely determine future political developments in the country. From its inception, the grand coalition of Christian Democrats and Social Democrats commanded 447 votes in the Bundestag, while the only opposition party, the Free Democrats, had only 49 votes. The Free Democrats, therefore, were in no position to conduct an effective opposition, and the government was in effect one of national unity.

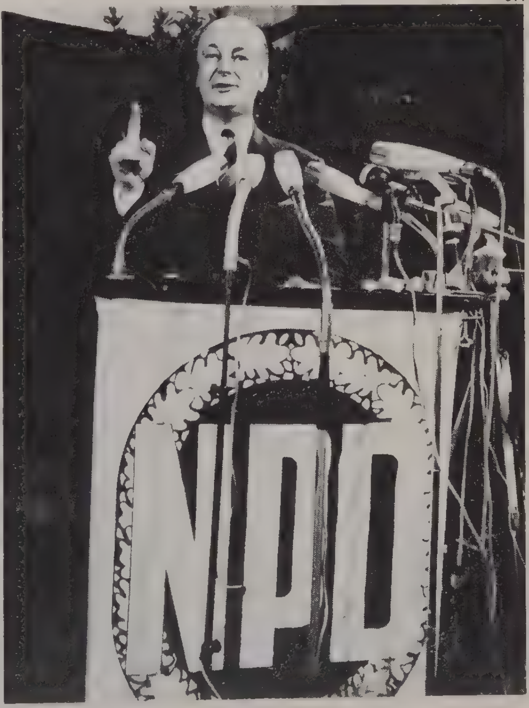
Parliamentary debates tend to lose interest in such circumstances, with the result in Germany that opposition groups begin to gravitate toward radical movments or parties of both extremes. In defense of centrist political rule, therefore, the two major parties agreed to reform the system of parliamentary elections to eliminate its inherent tendency to deny a clear majority to any party.

Until the 1969 elections there obviously will be some restlessness among left-wing Social Democrats, although that restlessness did not lead in 1967 to any group formation. On the right, however, there was a clear crystalization of support for the National Democratic party.

The National Democratic party was founded in 1964 from the remains of several shattered, right-wing splinter parties. Traditionally these parties have commanded about 4% of the total national vote, but beginning in 1966 the National Democratic

RIGHT-WING ACTIVIST Adolf von Thadden accepts leadership of National Democrats at Hannover on November 12.

UPI



party broke through to higher status. The breakthrough occurred simultaneously with the economic recession and the deterioration of confidence in Chancellor Erhard's government.

On Nov. 6, 1966, the party received 7.9% of the popular vote in provincial elections in Hesse, and on November 20 it won 7.4% in the Bavarian elections. In 1967 it won 6% and 7% of the popular vote in state elections in Schleswig-Holstein, Rhineland-Palatinate, and Lower Saxony.

The National Democratic party is generally considered to be a neo-Nazi party. In order to deny the government any pretext to suppress it, its leaders have taken care to adhere to democratic procedures and to moderate the real aims of the party, but it presents itself as the rallying point "for the renascence of the German nation." Its leaders deplore the alleged domination of the government by special interest groups, by politicians ready to give up German national claims, and by cultural Bolshevists. It denounces as traitors all Germans who accept the present borders with Poland and Czechoslovakia and who feel no concern over the neutralization of Austria or over Italian rule of the South Tyrol.

The party's chief spawning grounds are small towns in Protestant districts, where the Christian Democratic party is less safely anchored than it is in Catholic areas. Many former Nazis have flocked to the party, which partly explains the fact that there are more middle-aged than young members.

At a national party convention at Hannover on Nov. 10–12, 1967, Adolf von Thadden, a member of an old Prussian Junker family, was elected chairman of the party. His election appeared to have ended for the time being a serious threat of a party split that had emerged in the spring. The official party program adopted in November demanded the creation of a national command for the German armed forces in place of NATO integration. Among the constitutional changes demanded were the introduction of a popular referendum and plebiscite on reunification, and direct election of the federal chief executive.

Foreign Policy. When it took office, the Kiesinger government promised certain changes in German foreign policy. Although the government (and the overwhelming majority of West Germans) consider close relations with the United States to be the primary guarantee of Germany's international security, the government nevertheless sought a franker exchange of ideas between Bonn and Washington. To this end, Chancellor Kiesinger and Foreign Minister Brandt visited Washington in late August and reportedly enjoyed a considerable measure of success in discussions with U. S. leaders. The principal outstanding problem areas they dealt with were West German anxiety over the possibility of a U. S. withdrawal of forces from Germany; U. S. insistence on financial help from West Germany in maintaining those forces; and German fears that the U. S.-Soviet nuclear nonproliferation accord might limit German aims in peaceful development of atomic power.

Kiesinger also proposed to restore the friendly relations with France that had existed during Adenauer's administrations but had suffered under Erhard's. At a meeting in Paris on January 13–14, Chancellor Kiesinger and President de Gaulle restored a degree of warmth to top-level relations but failed to produce any agreement on new, common policies. German insistence on close U. S.-West German relations and the German desire to see Britain brought into the European Common Market made it unlikely that Franco-German cooperation would be significantly activated in the foreseeable future.

Kiesinger's government also took the initiative in seeking to ease relations with the countries of eastern Europe. While his government continued to adhere in other respects to the Hallstein doctrine, under which West Germany denies official diplomatic recognition to any country except the Soviet Union that maintains diplomatic relations with East

PICTORIAL PARADE

CAPTIVITY of East Germans, many of whom seek greater opportunity in West Germany, is symbolized by this group of East German soldiers implanting metal fence in unguarded wood at Braunlage.

Germany, it declared its willingness to ignore the doctrine with countries inside the Soviet orbit.

In January, Rumania agreed to an exchange of ambassadors, and throughout the year Hungary appeared to be moving toward similar agreement. Yugoslavia also seemed prepared to open diplomatic relations with the Bonn republic. Bulgaria and Czechoslovakia, however, flatly refused to do so (although the latter signed a trade agreement that will require it to exchange trade missions with West Germany), and efforts to improve West German-Soviet relations did not get off the ground.

On Jan. 31, 1968, West Germany and Yugoslavia resumed diplomatic relations after a break of 10 years. Bonn had severed relations in 1958 after Yugoslavia formally recognized East Germany.

Attempts to ease tensions between the two Germanys began promisingly in 1967, but stalled. In the spring Kiesinger initiated an exchange of letters with East German Premier Willi Stoph. On the basis of that cordial beginning, Stoph then proposed a direct confrontation with Kiesinger. But the chancellor rejected the invitation on the ground that a meeting would come too close to diplomatic recognition of the East German regime.

The West German government considers itself the only political representative of all the German people, and it has no intention of dropping that claim. Kiesinger's government had reasoned, however, that since the Germans are powerless to solve the political problem of their division, they should at least discuss how to make life easier for everyone.

Although the Bonn government likes to regard its Eastern policy as paralleling the U. S. policy of détente, it has shown considerable apprehension about U. S.-Soviet negotiations on the draft treaty to prevent the spread of nuclear weapons. Bonn feels that any nonproliferation agreement should be of only limited duration in view of the uncertainties about what future research will produce. While Bonn does not wish to own nuclear weapons, it does wish to develop nuclear power for peaceful purposes, and it fears that the nonproliferation agreement may hinder that development.

Moreover, Bonn is concerned that the international control envisaged in the treaty draft might enable the Soviets to conduct industrial espionage in West Germany. These worries, which are shared by many nations, have provided a continuous topic of conversation in U. S.-West German diplomatic exchanges. (See also ATOMIC ENERGY.)

West Berlin. Cut off 150 miles inside the Iron Curtain, West Berlin remains a showcase of Western technology and the continent's leading city in industrial production. But ever since the East Germans built the wall around their zone West Berlin's problems have increased. The number of old people living in the city is exceptionally high. Without immigration from other parts of West Germany the city cannot hope to maintain its population.

West Berlin had a clear-cut role in the Cold War; but that role has diminished in the recent period of limited détente, and the hiatus has led to political feuding, particularly in the ruling Social Democratic party. Furthermore, Mayor Brandt's successor, Heinrich Albertz, demonstrated far less assurance than Brandt in directing the unwieldy party in the city.

In city elections for the House of Deputies on March 12 the Socialists suffered a severe setback. Although the party retained an absolute majority in the House, it lost eight Socialist seats to the Christian Democrats.

On June 2 serious clashes occurred between police and students demonstrating against the visiting shah of Iran. The police acted with undue harshness and killed one student in the fracas. Mayor Albertz's moral authority suffered when he exonerated the police completely, a position from which he had to retreat shortly thereafter. Subsequently two members of the city government resigned. Mayor Albertz failed to find an acceptable successor for one of them, and on September 26 he himself resigned

The city parliament elected 41-year-old Klaus Schütz mayor on October 19. Schütz had been a representative of the city in Bonn, and when Mayor Brandt became foreign minister in December 1966, Schütz had accepted Brandt's invitation to become undersecretary of state in the foreign office. By mere coincidence, Berlin was due to receive the annual chairmanship of the Federal Council in Bonn in 1968, and thus shortly after Schütz was elected mayor he was also elected chairman of the Federal Council. The coincidence will underline boldly the connection between West Berlin and Bonn.

Berlin's budget for the 1968 fiscal year is based on anticipated income of $1.3 billion (of which $601 million will be provided in federal government subsidies) and expenditures of $1.46 billion.

Death of Adenauer. Former Chancellor Konrad Adenauer, who died on April 19 at the age of 91, was buried in the small Rhineland town of Rhöndorf on April 25, after a state funeral in Cologne attended by President Johnson and the heads of state of all the principal nations of western Europe. (See also ADENAUER.)

EAST GERMANY

(GERMAN DEMOCRATIC REPUBLIC)

The East Germans have made considerable economic progress since the Berlin wall was built and population flow to West Germany halted in 1961. Of 3 million East Germans who fled to West Germany before 1961 a very large portion were young, and East Germany's population, therefore, is overaged to a degree where future expansion of production will be limited by a shrinking labor force.

Nevertheless, apart from the Soviet Union, East Germany is the most productive industrial state in eastern Europe and the 7th or 8th in industrial output in the world.

Trade and Production. East Germany is the Soviet Union's most important trading partner. In 1967, 20% of the USSR's foreign trade was with the German Democratic Republic, which on its part sent about 45% of all its products to the USSR. East Germany's chief export items are chemicals, machine tools, precision machinery, optical instruments, textiles, and furniture. A substantial part of its Soviet imports consists of raw materials and semimanufactured products to be processed in East Germany.

The progress of East German production has been due largely to an improved expert management. Because the regime feels somewhat more secure than it did, it has become slightly more tolerant with regard to the expression of opinion. However, the attitude of the government in particular cases remains unpredictable. (For example, there is no question that all East German writers must toe the party line very carefully.)

EAST GERMANY • Information Highlights

Area: 41,814 square miles (108,299 sq km).
Population: 17,067,000 (July 1, 1966 est.).
Chief Cities (1965 est.): East Berlin, the capital, 1,073,647; Leipzig, 594,661; Dresden, 504,910.
Government: *Chairman of the Council of State*—Walter Ulbricht (took office Sept. 12, 1960); *Minister President*—Willi Stoph (took office Sept. 24, 1964). *Parliament*—People's Chamber, 434 members.
Religious Faiths: Protestants, 80% of population; Roman Catholics, 11%; others, 9%.
Education: *Literacy rate*, 99% of population. *Total school enrollment* (1964)—2,923,370 (primary, 2,247,557; secondary, 81,097; teacher-training and technical, 515,819; higher, 78,897).
Finance (1965 est.): *Revenues*, $15,000,000,000; *expenditures*, $14,900,000,000; *monetary unit*, Ostmark (2.22 Ostmarks equal U. S.$1).
Net Material Product (1965): $37,400,000,000.
Economic Indexes: *Industrial production* (1966), 169 (1958=100); *cost of living* (1965), 97 (1958=100).
Manufacturing (metric tons, 1966): Cement, 6,456,000; crude steel, 4,536,000; gasoline (1965), 1,604,000; beer (1965).
Crops (metric tons, 1966): Potatoes, 12,501,000; sugar beets, 5,899,000; rye, 1,730,000; wheat, 1,500,000.
Minerals (metric tons, 1965): Lignite (1966), 249,036,000 (ranks 1st among world producers); lime, 3,441,000; coal (1966), 1,992,000; iron ore (1966), 1,716,000.
Foreign Trade (1965): *Exports*, $3,067,000,000; *imports*, $2,802,000,000. *Chief trading partners* (1965): USSR (took 46% of exports, supplied 45% of imports); Czechoslovakia (took 10% of exports, supplied 9% of imports); West Germany (took 9% of exports, supplied 10% of imports).
Transportation: *Classified roads* (1964), 28,291 miles (45,530 km); *motor vehicles* (1965), 820,517 (automobiles, 661,584); *railways* (1965), 9,232 miles (14,856 km); *merchant vessels* (1966), 97 (596,000 gross registered tons).
Communications (1967): *Telephones*, 1,723,814; *television stations*, 22; *television sets*, 3,600,000; *radios* (1964), 5,759,000; *newspapers* (1964), 34 (daily circulation, 6,822,000).

Political Events. On July 2, elections were held in East Germany for a new People's Chamber and in East Berlin for a new Municipal Assembly. As usual the voters were allowed to vote only for or against a single so-called "national front" list of candidates. The Chamber list was endorsed by 99.93% of the voters, and the Assembly list by 99.98%.

Walter Ulbricht, the 74-year-old chairman of the state council, remained the unchallenged ruler of the German Democratic Republic. Although Willi Stoph is the prime minister, Erich Honecker, a younger member of the East German Communist party, is considered the heir-presumptive to Ulbricht.

Foreign Policy. The chief aim of East German foreign policy is to gain recognition as a sovereign state outside the Soviet orbit. Accordingly, since 1965 closer relations between West and East Germany have been made dependent on Bonn's willingness to recognize the German Democratic Republic. Cultural exchanges with West Germany that existed between 1963 and 1965 have been discontinued, as have general permissions for West Berliners to visit East Berlin.

The East German government has resented West German attempts to establish diplomatic relations with East Germany's eastern neighbors. In order to block these attempts, which were pressed with some success in 1967, the East German government concluded treaties of friendship, cooperation, and mutual assistance with Poland and Czechoslovakia. The treaties were ratified by the East German People's Chamber on May 2, 1967.

On July 5 announcement was made that the mayor of East Berlin, Friederich Ebert, the son of the first president of the Weimar Republic, had resigned for reasons of health. Herbert Fechner, district mayor of Köpenick, was elected his successor.

EVOLUTION

MASSIVE CELEBRATIONS throughout eastern Europe marked the 50th anniversary of the Bolshevik Revolution. East German leader Walter Ulbricht is shown addressing Communist Party Central Committee in East Berlin Auditorium, November 7.

GHANA

The National Liberation Council, which has ruled Ghana since President Kwame Nkrumah was overthrown in February 1966, continued its efforts in 1967 to consolidate and stabilize the country's economy. On the political front, criticisms mounted of the National Liberation Council, headed by Lt.-Gen. Joseph Ankrah, and demands for a return to civilian rule were intensified.

Issue of Civilian Rule. On March 31, in response to increasing criticism of the military regime, Gen. A. A. Afrifa stipulated four conditions the government felt must be met before there could be a return to representative government: (1) the people must be reeducated regarding their political rights; (2) they must become accustomed to their newly won freedom and understand the qualities of leadership; (3) the image of Nkrumah's Convention People's party must be finally destroyed; (4) the National Liberation Council must be assured that the country is on the road to economic recovery and that the administration has been cleansed of the faults that led to the coup in 1966.

Political Disturbances. On January 23 the National Liberation Front revealed the discovery of a plot by supporters of former President Nkrumah to assassinate government leaders and seize power.

A more serious political disturbance occurred on April 17, when an army squadron staged an abortive coup and briefly gained control of several of the principal buildings in Accra. Lt.-Gen. Emmanuel K. Kotoka, commander of the Ghana Armed Forces and an original member of the National Liberation Council, was killed in the fighting. The government did not believe that the coup was part of a movement to restore Nkrumah to power.

Over 800 persons were detained for questioning following the coup attempt, and on May 3 the government announced a reshuffling of senior army officers. A military court on May 5 sentenced to death two of the three lieutenants charged with instigating the coup. Their executions by a firing squad on May 9 were the first public political executions in Ghana's history.

AUTHENTICATED NEWS INTERNATIONAL

ALUMINUM PLANT at Tema, Ghana, built jointly by Kaiser Aluminum and Reynolds Metals, is the largest consumer of power from the Volta River hydroelectric project.

Political Changes. The National Liberation Council announced on January 13 that military tribunals would assume jurisdiction over subversive offenses committed by civilians that were punishable by death or long-term imprisonment. The military tribunals would therefore be able to "expeditiously" combat subversion, including publication of false statements likely to undermine the government.

On June 30 the National Liberation Council announced the creation of a 17-member Executive Council, including 14 civilians with ministerial re-

PICTORIAL PARADE

GENERAL KOTOKA (*center*), head of Ghana's armed forces, shows evidence in February of alleged plot against the regime. In April he was killed in an attempted army coup.

sponsibilities. The new Executive Council will be responsible for the "general direction and control" of the government, although the National Liberation Council will remain the supreme authority in Ghana. General Ankrah will also be chairman of the Executive Council.

A Center for Civic Education, to be headed by Dr. K. A. Busia, was established on June 7 to prepare Ghana for a return to civilian rule. On July 11, General Ankrah named a 31-member National Advisory Committee, also headed by Dr. Busia, to serve as a "clearinghouse" for the government commissions and to advise the National Liberation Council.

Economy. As part of efforts to strengthen Ghana's economy, the Ghanaian cedi was devalued 30% on July 8, from U. S.$1.40 to 98 cents. To offset resultant higher prices, the country's cocoa farmers were promised a 30% price increase, and the daily minimum wage was increased by 5%.

At talks held in Paris in April under the auspices of the International Monetary Fund, Ghana reached agreements to renegotiate its external debts with France, West Germany, Italy, the Netherlands, Britain, and the United States.

A balanced budget for 1967–68 was presented on August 4, with estimated expenditures of $547,840,000 and estimated revenues of $404,180,000; the difference was to be made up by foreign loans.

Over 900,000 persons attended Ghana's First International Trade Fair, which was held in Accra from February 1 to 20. Thirty-one nations and 2,000 firms participated.

GOLD

World production of gold in 1966 increased for the 13th consecutive year. Output amounted to 47.1 million fine (troy) ounces, valued at $1.65 billion.

The increase of 0.4 million ounces in a year was derived partly from the continued expansion of South African mines, which contributed 30,879,700 ounces, or about 64.5% of the estimated world gold production. The United States, the USSR, and the Philippines also registered gains.

U. S. MINE PRODUCTION OF RECOVERABLE GOLD
(In troy ounces)

State	1963	1964	1965	1966
Alaska	99,573	58,416	42,249	27,325

Total output	1,454,010	1,456,308	1,705,190	1,803,420
Total value	$50,887,000	$50,971,000	$59,682,000	$63,119,700

[1] Includes Pennsylvania. (Source: U.S. Bureau of Mines.)

In the first six months of 1967, South Africa's output was 15,300,000 ounces. Gold production in Canada for the first seven months of 1967 dropped to 1,769,030 ounces, compared with 1,963,870 ounces in the same period of 1966. (See also MINING.)

U. S. refinery production of gold in 1966 rose to 1,801,600 ounces, an increase over the 1,675,000 ounces refined in 1965. Placer mining operations declined in Alaska and increased in California. Output of by-product gold was down in Arizona and up in Montana. Production increased substantially in Utah and Nevada.

In the first eight months of 1967, the gold mines in the United States totaled about 1,102,593 ounces, compared to 1,126,178 ounces in the same period in 1966. Net sales of gold for industrial, professional, and artistic use in the United States in 1966 totaled 6,062,100 ounces, valued at $212,173,500.

GRAINS

Production of the four major livestock feed grains in the United States in 1967 was 11% greater than in 1966 and 20% above the 1961–65 average, establishing a new record.

For human consumption, American farms increased their output of wheat, rye, and rice 15% in 1967. A sharp increase in winter wheat production was responsible for the increase in food grain.

Feed Grains. The output of the major livestock feed grains—corn, oats, barley, and sorghum—totaled 175,100,000 tons in 1967, compared with 157,183,000 tons in 1966. The nation's feed grain supply included 37,000,000 tons carried over from preceding years.

The composite feed grain yield of 1.74 tons per acre was up from both the 1.61 ton yield of 1966 and the 1.44 ton yield of the 1961–65 average. Production was down 6% for barley, down 2% for oats, up 15% for a record corn crop, and up 7% for sorghum. Feed grain acreage harvested was 3% more than in 1966.

To obtain government payments, farmers diverted an estimated 30,000,000 acres from corn and grain sorghum production for 1968, compared with 22,500,000 acres in 1967.

[1] Preliminary estimates for Northern Hemisphere countries; for Southern Hemisphere countries, preliminary forecasts are based largely on acreage and weather conditions. Years shown refer to harvests in Northern Hemisphere. Harvests in Southern Hemisphere come early in the following year. [2] Excluding Communist areas. (Source: Foreign Agricultural Service, U.S. Department of Agriculture.)

The use of feed grains increased steadily from 1957 to a peak of 154,000,000 tons in 1961. Use reached 170,400,000 tons in the 1965–66 marketing year (a record), and 162,600,000 tons in 1966–67.

The national average price support per bushel produced in 1967 was $1.35 for corn, 90 cents for barley, and 63 cents for oats. The rate for sorghum grains was $2.14 per hundredweight. Under the Food and Agriculture Act of 1965, the voluntary price-support and acreage-diversion programs in effect since 1961 were continued through 1969. An important change in the 1968 feed grain program was the reinstatement of voluntary acreage diversion for payment provisions for corn and sorghum.

Food Grains. Total production of wheat, rye, and rice for human consumption reached 50,900,000 tons in 1967, up from 44,380,000 tons in 1966 and one fourth more than the 1961–65 annual average. Production of winter wheat, the main food grain, was a record 1,212,000,000 bushels.

Wheat. The Food and Agriculture Act of 1965 extended the voluntary wheat acreage reduction and marketing-certificate program through 1969. However, the 1967–68 wheat program did not require diversion of wheat acreage and provided no cash payment for doing so. The other incentives were offered producers who planted within their acreage allotments.

The U. S. crop of 1,524,000,000 bushels of wheat in 1967 was 67,000,000 bushels above the previous record for the crop, set in 1958. The 1967 all-wheat acreage allotment was increased to 68,200,000 acres, with no acreage diversion provisions. This encouraged farmers to plant 25% more acreage of wheat. Acres planted to wheat totaled 68,000,000, the highest since 1953. Growers harvested 59,000,000 acres, 18% above 1966 and 23% above the 1961–65 average.

Rye. The U. S. rye crop of 24,100,000 bushels in 1967 was 13% below the 1966 crop and 26% below the 1961–65 average. Acres harvested for grain totaled 1,072,000, down 16% from 1966. The yield per acre was 22.5 bushels, within a fraction of the 1965 record of 22.6 bushels. The 1967 world crop was 32,700,000 metric tons or 1,288,000,000 bushels.

Rice. U. S. production of rice in 1967 set a record for the sixth consecutive year. The rough rice crop totaled 89,600,000 bags (of 100 pounds each), or 5% above the previous year's record of 85,020,000 bags and well above the 1961–65 average. Yields averaged a record 4,550 pounds per acre—228 pounds more than in 1966. Acreage harvested was 1,970,100, about the same as in 1966. The 1966–67 world crop was 163,000,000 metric tons.

Corn. Production of corn for grain in the United States in 1967 totaled a record 4,700,000,000 bushels. The average yield of 78.2 bushels also established a new record. The world corn crop—an all-time record—was 235,860,000 metric tons, or 9,285,300,000 bushels.

Oats. The 1967 U. S. oats crop was the smallest crop since 1934. The crop totaled 782,000,000 bushels, 2% less than in 1966 and 18% below the 1961–65 average. The 16,000,000 acres harvested for grain was the smallest since 1879. World production in 1967 was 43,850,000 metric tons or 3,020,700,000 bushels.

Barley. The 1967 barley crop in the United States dropped to 370,000,000 bushels, 6% below the 1966 figure and 7% below the 1961–65 average. The 1967 yield per acre was 40.3 bushels, close to the 1965 record of 42.9 bushels. World production in 1967 was a record 104,960,000 metric tons or 4,820,800,000 bushels.

Sorghum Grain. U. S. sorghum grain production in 1967 totaled 766,000,000 bushels, setting a record high for the third consecutive year. This was 7% above the 1966 output and 14% above 1965. The average yield per acre, 50.7 bushels, was below the 1966 record of 55.8 bushels. Sorghum grain was harvested from 15,100,000 acres, 18% more than in 1966 and 25% above the 1961–65 average.

GREAT BRITAIN

The chronic economic problems created by a continuing balance of payments deficit in Britain came to a head in November 1967, causing a financial crisis that resulted in devaluation of the pound accompanied by stringent supportive measures.

GOVERNMENT AND ECONOMY

The popularity of the Labour government of Prime Minister Harold Wilson declined sharply as its harsh economic policies failed to achieve their desired goal of a favorable balance of payments.

Elections. The waning popularity of the government was demonstrated in the by-elections that took place in 1967. Of 11 seats contested before the end of November, Labour lost 4 to the Conservatives and one to a Scottish Nationalist, and its vote was substantially reduced in the other 6 contests.

Cabinet Changes. A number of ministerial changes were announced on January 6. The most important was the appointment of Patrick Gordon Walker as minister without portfolio. Gordon Walker, a former foreign secretary who lost office as a result of defeat at the polls, had returned to the House of Commons in 1966. Minor changes also took place on February 15 and 16, March 31, and July 25.

A major reorganization took place on August 28 when the Prime Minister assumed direct responsibility for the department of economic affairs. Michael Stewart, who remained in the cabinet as first secretary of state, lost his post of secretary of state fo economic affairs to Peter Shore. Anthony Crosland became president of the board of trade; Patrick Gordon Walker succeeded him as minister of education and sciences; and George Thomson entered the cabinet as secretary of state for Commonwealth affairs. Several lesser changes took place on the same date and on September 2. On November 29 in the wake of the devaluation, James Callaghan until then chancellor of the exchequer, and Roy Jenkins, the home secretary, exchanged posts.

Leadership Changes. Jo Grimond, the leader o the Liberal party for a decade, resigned on January 17. The next day the party's 12 members of Parliament elected Jeremy Thorpe. Thorpe, a 37-year-old bachelor from Devon, is noted for political independence and an aggressive political style.

Direct Government Controls. At the beginning o the year the government relaxed the virtual freeze

PICTORIAL PARADE

on wages and prices that it had imposed under the authority granted to it in July 1966 by the Prices and Incomes Act. In July 1967 a second Prices and Incomes Act became law. It gave the government year-long power to delay wage and price increases up to seven months.

The government also relaxed controls on installment buying during the spring and summer, and the Bank of England reduced the bank rate from 7% to 6½% on January 26, to 6% on March 16, and finally to 5½% on May 4.

The initial success of the government's austerity program was demonstrated in a report published on August 31 by the National Board of Prices and Incomes. The report showed that export prices rose by less than 1% between July 1966 and May 1967, retail prices by less than 3%, and average earnings by only 2%. However, the favorable effects of the anti-inflationary measures on Britain's balance of payments failed to develop. On July 24, Callaghan reported to the House of Commons that exports had not expanded as anticipated and that imports had risen considerably in the first half of the year. On October 19 the bank rate was returned to 6% to stem an outflow of funds, and by the second week of November rumors of devaluation were circulating widely. Spectators mounted a severe attack on the pound, and on November 18 the government announced that it was devaluing the pound from U. S.$2.80 to $2.40, or 14.3%. (All sterling figures in this article are converted at the new rate of $U. S. $2.40 to the pound.)

Domestic measures in support of devaluation included raising the bank rate to 8%; limiting the amount of bank credit available to all but exporters and other priority borrowers; tightening installment buying controls on cars; increasing the corporation tax from 40% to 42½%; withdrawing the selective employment tax rebate from all manufacturers except those in development areas; and terminating the 2% corporate tax rebate paid to exporters. The government also proposed to cut public spending by $960 million, including cuts of $240 million in defense spending and $240 million in capital outlays for nationalized industries.

The government forecast that its harsh measures would reduce domestic spending in the private sector by between $1.8 billion and $1.9 billion and create balance of payments surpluses of $480 million in 1968 and $1.2 billion in 1969. To sustain

PICTORIAL PARADE

PRINCE CHARLES began his first term as a student at Trinity College, Cambridge University, in October 1967.

the pound in the meantime, overseas central banks agreed to extend about $3 billion in fresh credit. (See also INTERNATIONAL FINANCE.)

Taxation. The 1967–68 budget, introduced on April 11, contained neither major tax innovations nor new incentives for industrial investment, the theory being that as the year progressed the economy would begin to pick up speed. While income and sales rates were unchanged, deductions for dependent relatives and allowances for widows, widowers, and other people with sole responsibility for dependent children were raised.

Total government income for 1966–67 was $24,699,000,000—$576,000,000 less than the budget estimate. Expenditures of $22,682,000,000 were $166,200,000 more than estimated. April budget estimates for 1967–68 forecast revenues of $28,090,000,000 and expenditures of $26,551,000,000. Projected major outlays included $5,570,000,000 for defense, $2,810,000,000 for health and welfare, $3,691,000,000 for economic services, $780,000,000 for education.

Balance of Payments. Britain's gold and hard currency reserves totaled $2,428,000,000 on June 30, 1967, compared with $2,656,800,000 on Dec. 31, 1966, and $2,808,000,000 on June 30, 1966.

Reserves had increased each month from January until May 1967, when repayment of $415,200,000 to the International Monetary Fund caused them to fall. In June, service payments on loans combined with the first costs of the Middle East crisis reduced Britain's reserves $103,200,000 more. By November Britain's reserves would have fallen to less than $1 billion had not the government disposed of $489,600,000 worth of government-held securities in the United States and added their value to the reserve account. With that addition the reserves totaled $1,223,000,000 on November 30.

Support arrangements negotiated with European banks and the Bank of International Settlements in June 1966 were renewed on March 13, and a consortium of Swiss banks provided Britain with a loan of $90 million at 5½% interest on October 10. On November 29, after the devaluation of the pound, a standby loan of $1.4 billion was arranged with the International Monetary Fund.

Foreign Trade. The pattern of British trade in 1967 was disrupted by the Middle East crisis—particularly by the closing of the Suez Canal—and by dock strikes that held up exports, notably in London and Liverpool, from October 2 to November 27. But even in the first half of the year, before the disruptions began, the average monthly gap between visible imports and exports was $50.8 million. Although the average fell to $43.2 million over an 8-month period, the actual gap had risen to $256.8 million by October. Exports during the first nine months of 1967 totaled $9.3 billion. Imports totaled $11.4 billion, and reexports $327.8 million.

Britain's trade gap in 1966 had been estimated at $345 million, compared with $662 million in 1965. In the last quarter of 1966 an average monthly surplus of $67.2 million had been achieved.

Production. During the first eight months of 1967, British industrial production showed no increase, mainly as a result of the government's anti-inflationary policies. Unemployment, which had reached a peak of 2.5% in January, fell to 2.1% in June and July, rose again to 2.4% in August, September, and October, and returned to 2.5% in November.

Industrial production as a whole rose 1% in 1966. However, steel output, at 24.3 million tons, was 10% below the record level of 1965. Output of passenger cars fell by 7%, but engineering and electrical products rose by 5.5% and machine tool deliveries by 5%.

Industrial Power Development. The average daily output of electricity generated by nuclear reactors in Britain in 1966 was 51.8 million kilowatt hours, equivalent to about 10% of Britain's daily output from all sources. In 1966–67 the atomic energy authority's expenditure on civil nuclear research and development amounted to $121 million, $26.4 million of which was capital expenditure. Foreign users ordered $6.2 million worth of power from the authority, and purchasers of radioisotopes spent $6 million.

The first samples of North Sea gas reached points on the east coast of Britain in March 1967, and actual sales began at the end of July. The supply will be extended to northern and southwestern England by 1969 and to Wales and Scotland by 1970.

On November 14 the government announced a series of long-term policy decisions designed to extract the maximum benefit from the introduction of nuclear power and natural gas. The principal decision was to eliminate 35,000 jobs a year to 1970 in the nationalized coal industry. On the same day the government announced that it would extend about $364 million in aid to the areas most seriously hurt.

DOMESTIC AFFAIRS

The government was able to carry out much of its domestic program despite criticism that parts of the program, especially those relating to social welfare, were a luxury the nation could not afford.

Steel. The government's promised renationalization of Britain's steel industry was completed in 1967. On July 28 the assets of the country's steel-producing companies were vested in the British Steel Corporation under the provisions of the Iron and Steel Act of 1967, which became law on March 22

PICTORIAL PARADE

DUKE AND DUCHESS of Windsor, in a ceremony held at Marlborough House in June, made their first public appearance with Queen Elizabeth since his abdication.

Defense. The annual defense review, published on February 16, was essentially a progress report on what had been accomplished in reducing expenditures to relieve the strain on the balance of payments. Estimates for 1967–68 showed a reduction of $108 million over 1966–67, to $5.29 billion.

A second statement on defense, published on July 18, detailed further plans for reductions of overseas forces and marked the end of the major review of defense policy begun in 1964. The statement revealed plans to reduce manpower in the armed forces by 37,000 to a total of 380,100 by April 1971 (Royal Navy, 88,400; Army 181,200; and Royal Air Force, 110,500). About 30,000 British civilian employees and 50,000 local employees overseas will also be cut, and research expenditures will be reduced $72 million. A further planned reduction of $240 million in defense outlays in the 1968–69 budget was announced on November 23 in the crisis immediately following the devaluation.

On Jan. 16, 1968, the government canceled plans to buy 50 U. S. F-111 swing-wing military aircraft and announced that Britain would recall all of its forces east of Suez by the end of 1971. Britain's action prompted the United States to announce at the end of January that it was reviewing its planned defense spending in Britain.

In February 1967, the distribution of British armed forces was as follows: United Kingdom, 243,300; Europe, 63,460; Mediterranean and Near East, 20,300; Middle and Far East, 72,560; elsewhere, 43,290.

Crime. The most notable of a series of large and elaborately planned gang robberies in the London area was staged at the London Cooperative Society's headquarters at Stratford on the weekend of November 11–12. Gangsters forced the vault and escaped unnoticed with an estimated $2.4 million. Crimes of violence continued to increase. The number of convictions for such offenses in Britain rose from 1,583 in 1938 to 16,036 in 1966.

Royal Family. Queen Elizabeth ended two longstanding taboos in 1967. On February 9 she received Soviet Premier Aleksei N. Kosygin for dinner at Buckingham Palace. The occasion was the first on which a British monarch had entertained a Soviet premier. On June 7 the Queen joined the Duke and Duchess of Windsor for the dedication of a memorial to Queen Mary in London. The reunion marked the end of 30 years of family ostracism of the Duke and his twice-divorced wife.

On a state visit to Canada from June 29 to July 5, the Queen and Prince Philip attended Canadian Centennial celebrations and visited Expo 67. On September 20, Elizabeth christened Britain's newest luxury liner, the 58,000-ton *Queen Elizabeth II*, at Clydebank, Scotland.

Prince Charles entered Cambridge University on October 8. Before his investiture as Prince of Wales on July 1, 1969, Charles will spend a term in Wales at University College, Aberystwyth, studying Welsh history and language.

Education. Total expenditure on education in Britain in 1965–66 was $4.3 billion, representing 5.5% of the gross national product. There were 8.4 million students in state-aided secondary schools in January 1966 and 189,500 students—about 26% of them women—at universities that fall. A committee to plan the University of the Air, with instruction by television, was formed in September.

Health and Welfare. Expenditure by the central and local governments in England and Wales on health and welfare services was estimated at $3,300,000,000 in 1966–67, compared with $2,980,000,000 in 1965–66. Central government estimates for 1967–68 total $2.8 billion. The total number of doctors in the medical services fell by 188 to 21,315 during the year ending Oct. 1, 1966, but the number of British students graduating from medical schools in 1966 rose by 130 to 1,750.

The number of prescriptions dispensed in 1966 in England and Wales rose by 7.2% over 1965 to just less than 262 million, costing about $331 million. At the end of 1966 the total number of hospital beds, 468,295, was 1,468 less than in 1965. Nursing staff in 1966 was at an all-time high of 184,212 full-time and 74,463 part-time nurses and midwives. The estimated expenditure on hospital building in 1966–67 was $180 million.

Social Security. Higher social security benefits were announced on June 21. The new basic rates of unemployment and sickness benefits and widows' and retirement pensions were $11.80 a week for single persons and $17.52 for married couples.

Transportation. Britain's nationalized railroads incurred a working deficit of $171.8 million in 1966, some $3.6 million less than in 1965. Gross receipts from total traffic amounted to $1.1 billion, and capital expenditure totaled $256.3 million. A $448 million electrification program was completed on March 6 with the introduction of new, fast passenger service between London and Birmingham, Wolverhampton, Coventry, and Stoke-on-Trent. Electrification of the system in southeast England between the Thames and the south coast was completed in July.

British Overseas Airways Corporation (BOAC) carried more than 1.5 million passengers and made a record profit of $57.4 million in 1966–67. British European Airways (BEA) made a profit of $1.7 million in the same year.

A final decision to build a third major airport for London at Stanstead, Essex, in spite of strong local opposition, was announced on May 12.

The Cunard liner *Queen Mary* was sold to Long Beach Calif., for $3.4 million on July 26. The *Queen Mary* and *Queen Elizabeth*, which will also be sold, will be replaced by the *Queen Elizabeth II*.

***Torrey Canyon* Disaster.** Britons spent several days in March defending the beaches of Cornwall and Devon from tons of floating crude oil that escaped from the tanker *Torrey Canyon* and floated toward shore. The ship, owned by the Union Oil Company of California, ran aground off Land's End on March 18 and, after disgorging most of its cargo from its slowly disintegrating hull, was finally destroyed by British bombers on March 28–30. Despite well-organized efforts to prevent the sludge from ruining resort beaches in the area, damage was severe.

Foot-and-Mouth Epidemic. A severe epidemic of foot-and-mouth disease, which broke out on October 25 in northwest England, caused losses estimated at $60 million to British farmers and occasioned the slaughter of more than 250,000 animals by mid-December. Horse racing, sports events, and agricultural shows were cancelled, and the movement of livestock was controlled or prohibited throughout Britain.

Death of Attlee. Former Prime Minister Clement Attlee died in London on October 8. (See ATTLEE.)

FOREIGN AFFAIRS

Foreign Affairs in 1967 were dominated by the government's efforts to join the European Economic Community (Common Market).

European Economic Community. On May 10, Britain applied for membership in the EEC, the European Coal and Steel Community (ECSC), and the European Atomic Energy Community (Euratom). The application followed a series of exploratory talks by Prime Minister Wilson and chiefs of the six EEC member states. The Prime Minister and Foreign Secretary George Brown visited Rome on January 15–17, Paris on January 23–25, Brussels on January 31–February 1, Bonn on February 14–16, The Hague on February 26–27, and Luxembourg on March 7–8.

The principal problems in entering the market from Britain's standpoint were set out in detail by Wilson in a speech to the House of Commons on May 8 and by other ministers on May 9 and 10. The problems concern the common agricultural policy of the EEC countries and its effect on Britain's government-supported agriculture and British retail food costs; means of safeguarding the interests of Commonwealth countries; and the preservation of the purpose of British regional policies designed to ensure industrial and social development of depressed domestic areas.

Britain's application was considered by the EEC council of ministers and referred, on June 26, to the European Commission, which reported favorably on September 29. The chief obstacle to British admission, as in 1961–62, when a Conservative government applied, appeared to be the policy of French President Charles de Gaulle, as he outlined it at press conferences on May 16 and November 27. On May 16 de Gaulle limited his statement to an expression of the problems as he saw them, but on November 27 he raised a variety of objections that amounted almost to a veto. In a speech at a parliamentary press gallery lunch on November 29, however, Prime Minister Wilson reinforced the government's statement of the previous day that the British application would not be withdrawn, and he replied in detail to President de Gaulle's objections to British membership.

Commonwealth Affairs. The major problems in Rhodesia and South Arabia (Aden) continued to complicate Commonwealth affairs during the year. At the end of the year a solution in Rhodesia seemed as remote as it had been at the beginning. A mission undertaken in June by Lord Alport, a former British high commissioner in the Federation of Rhodesia and Nyasaland, to assay prospects for successful negotiations with the rebel government of Prime Minister Ian Smith, offered hope of a solution at the time. But in the view of the British government a number of points raised by Smith needed clarification before any progress could be made. George Thomson, secretary of state for Commonwealth affairs, who visited Salisbury on November 8 and 9, submitted very gloomy reports to the House of Commons on November 14 and December 13.

Britain's problems in South Arabia were resolved late in the year. On September 5, Britain recognized the National Liberation Front as representative of the people. On November 14, Foreign Secretary Brown announced that British forces would be withdrawn by the end of the month. Final details of South Arabian independence were worked out in a conference with the Front at Geneva on November 21–29. The British high commissioner, Sir Humphrey Trevelyan, left Aden on November 28, and South Arabia became independent on November 30.

United States. Relations with the United States during the year were outwardly uneventful. There was considerable criticism in Britain of U. S. actions in Vietnam, but the government supported the American position while seeking to facilitate a political settlement on the basis of the Geneva accords.

Disturbances erupted in Britain, however, when the U. S. Senate, on September 13, adopted an amendment to the Defense Appropriations Act providing that no U. S. naval vessels could be constructed in foreign yards. The amendment was in-

UPI

terpreted in Britain as a threat to an Anglo-American understanding that the cost of 50 F-111 fighter bombers that Britain had agreed to purchase from the United States would be offset by U. S. defense purchases in Britain. On Jan. 16, 1968, Britain canceled the order in an economy move.

Prime Minister Wilson visited President Johnson in Washington on June 2 in the course of a visit to Canada, the United States, and the United Nations. The principal topic discussed was the crisis in the Middle East.

Soviet Union. The outstanding event in Anglo-Soviet relations during the year was the official visit to Britain of Soviet Premier Kosygin from February 6 to 13. Premier Kosygin and Prime Minister Wilson repeatedly tried to produce a basis for settling the Vietnam war.

A new Anglo-Soviet cultural agreement covering a 2-year period beginning on April 1 was signed in London on February 24.

West Germany. Proposals to offset the greater part of the foreign exchange costs of British forces in West Germany were adopted in negotiations between Britain, the Federal Republic of Germany, and the United States on April 28, and an agreement embodying them was signed on May 5. Britain's contribution to NATO defenses in Germany will be substantially reduced.

France. Despite President de Gaulle's hostility to Britain's Common Market bid, the two countries continued to cooperate in a number of fields, notably in aircraft production. In addition to the Concorde supersonic jet airliner project, which yielded a prototype displayed at Toulouse, France, on December 11, Britain and France agreed in January on the joint development of three new helicopters. Both countries and West Germany are cooperating on development and production of a short-to-medium-haul air bus. (See also AVIATION.)

Communist China. Britain's relations with Communist China were unsettled by anti-British demonstrations in Hong Kong that began on May 1 and continued for several months. On June 26, China protested the treatment of Chinese in the British colony, and on August 14 it protested Britain's retaliatory action in closing the Chinese-Hong Kong frontier.

Following Britain's rejection of both protests, China increased its harassments. Bands of Red Guards sacked the British mission in Peking on August 22 and seized the office of the British representative in Shanghai on September 13.

In retaliation against Chinese maltreatment of British personnel and the Chinese government's refusal to grant them exit permits, Britain placed restrictions on Chinese personnel in London. Britain lifted the restrictions on November 21, and relations were further improved on November 29 when the Chinese adopted reciprocal measures.

Spain. Relations with Spain continued to be complicated by the question of the future of Gibraltar. (See also COMMONWEALTH OF NATIONS.)

GREECE

The overthrow of Greek parliamentary government by a military coup on April 21, the King's abortive counter coup against the military leaders on December 13, and the threat of war with Turkey over Cyprus dominated the year 1967 in Greece.

Overthrow of the Government. The government of John Paraskevopoulos, which had been in office since December 1966, resigned on March 30. Failing in attempts to form a coalition government, King Constantine II on April 3 entrusted the formation of a new ministry to Panayotis Kanellopoulos of the National Radical Union. The designation was criticized by the Center Union party, largest in the country, and its leader, George Papandreou, who had resigned as premier in July 1965. Premier Kanellopoulos dissolved the chamber on April 14 and set national elections for May 28.

During the early morning hours of April 21—while Constantine was at his country home, Tatoi, 16 miles (25 km) north of Athens—a take-over of the country was staged by a group of rightist army officers. Leaders were the army chief of staff, Lt. Gen. Gregory Spandidakis, and three junior officers, Brigadier Stylianos Patakos, Col. George Papadopoulos, and Col. Nicholas Makarezos. Prominent political leaders, including Premier Kanellopoulos, Papandreou, and Papandreou's son, Andreas, a former minister, were placed under arrest, while thousands of other persons were deported to Aegean prisons. Andreas Papandreou was subsequently accused of conspiracy to commit treason, but he was released from custody on December 24 and in January 1968 left the country.

The leaders of the coup, who emerged as members of a new government, announced that they had acted to prevent a revolution by Andreas Papandreou and to forestall a Communist seizure of Greece. A civilian, Constantine V. Kollias, chief prosecutor of the supreme court, was named premier. The May elections were canceled.

Though the coup leaders proclaimed their devotion to him, King Constantine was obviously distressed by the destruction of the parliamentary structure of his country. It was he who persuaded the officers to accept Kollias as prime minister. Undoubtedly trying to avoid a bloody civil war, Con-

COLONEL GEORGE PAPADOPOULOS (*right*), a key figure in the new Greek government, at a news conference in May.

LONDON DAILY EXPRESS

COL. GEORGE PAPADOPOULOS headed the Greek right-wing military junta that, on April 21, 1967, overthrew the interim government of Premier Panayotis Kanellopoulos, declared martial law, suspended constitutional liberties, and arrested thousands of suspected leftists. Within the new government, which was formally headed by Premier Constantine V. Kollias, Papadopoulos, assuming the office of minister to the premier, retained the main authority. During his early months in power he took steps to reorganize the bureaucracy and the Greek Orthodox Church, to reduce living costs, and to "create a new basis for relations between citizen and state." After King Constantine's flight to Rome in December, Papadopoulos became premier.

Papadopoulos was born in Arakhova, Greece, about 1919. During World War II he fought with Greek resistance forces under George Grivas.

stantine emerged as a moderating influence with the military. On May 21 he announced that a committee would draft a new constitution for the country, and that that this would be submitted to the populace for approval. The committee began its work in June.

Constantine's Counter Coup. After several months, Constantine decided to move against the military regime. On December 13 the King flew to Kaválla, 280 miles (460 km) northeast of Athens, to direct a counter coup. In a recorded proclamation broadcast over a shortwave station at an airbase in Lárisa, he dramatically criticized the military government and appealed for support from the armed forces. Constantine's action, to return Greece to "democratic normalcy," may have been well timed (the government's prestige had suffered from the resolution of the Cyprus crisis in November, and Papadopoulos was scheduled to publish the new constitution in two days), but it failed badly. The king was unable to muster enough support from the armed forces, and early on December 14 Constantine and his family fled to Rome. Premier Kollias accompanied them.

Papadopoulos assumed the post of premier; Lt. Gen. George Zoitakis was appointed regent; and issuance of the constitution was postponed. An amnesty was promised those officers who had sided with the King. The military regime sent envoys to Rome to confer with Constantine on the possibility of his return, but by year-end the king's terms and those of the military government had not been reconciled. On December 20, Papadopoulos, Patakos, and Makarezos retired from the army to give the regime an appearance of civilian rule.

Foreign Affairs. The military seizure of power in April caused widespread criticism outside the country, and the United States limited important military items sent to Greece. The Danish government and Danish public opinion seemed particularly vehement in denouncing the Greek situation. Constantine's wife, Queen Anne-Marie, a Danish princess by birth, did not attend the wedding of her eldest sister in Copenhagen in June; nor did Anne-Marie's parents, the King and Queen of Denmark, attend the baptism of her son, Prince Paul, born on May 20. In November the Greek government announced that imports from Denmark would not be allowed in Greece.

Following Constantine's unsuccessful attempt to overthrow the military regime and his flight, the

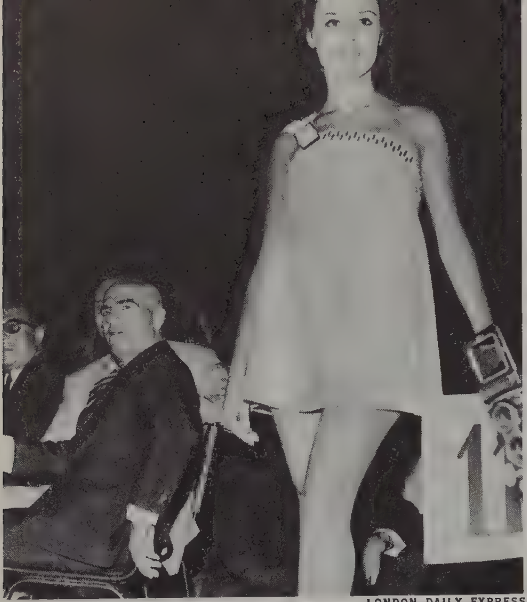
---

CONSTANTINE II, who became king of Greece upon the death of his father, on March 6, 1964, subsequently was involved in almost continuous political turmoil. His dispute with leftist army officers and liberal forces led by former premier George Papandreou came to a head on April 21, 1967, when a right-wing military junta, claiming it was acting to avert a Communist take-over, staged a coup and instituted martial law. Constantine, who reportedly had no hand in the coup, tried unsuccessfully to unseat the junta on December 13 and fled to Rome.

The son of the late King Paul and of Queen Frederika, Constantine was born at Psykhikon, near Athens, on June 2, 1940. He was trained at the army, navy, and air force academies and at the University of Athens. On Sept. 18, 1964, King Constantine married Princess Anne-Marie of Denmark. He became the father of an heir on May 20, 1967.

AFTER AN UNSUCCESSFUL COUNTER COUP, Constantine arrives in Rome, December 14, with his queen, Anne-Marie.

UPI



LONDON DAILY EXPRESS

MINISKIRTS, first banned by the new regime, eventually won approval from junta member Stylianos Patakos (*left*).

United States and other partners of Greece in the North Atlantic Treaty Organization initially withheld recognition of the regime. British Prime Minister Wilson denounced the junta's "barbarous methods." The sending of envoys from Athens to Constantine in Rome was seen as an attempt to preserve the legitimacy of the monarchy in foreign eyes.

The Cyprus Question. The problem of Cyprus embittered Greek-Turkish relations, as it had in previous years. In September, Premier Kollias and Premier Süleyman Demirel of Turkey met but came to no agreement over the island, whose Greek Orthodox majority favored enosis (union) with Greece. In November, following an attack by Greeks on Turkish Cypriotes, the Turkish government mobilized to invade the island. Diplomatic intervention by the United States, NATO, and the United Nations, along with acceptance by Greece of Turkish demands for withdrawal of Greek troops from Cyprus, quieted the crisis. (See also CYPRUS.)

Economy. The April coup resulted in a decrease in the number of tourists. The Kollias government, however, said that the Greek economy had been strengthened after April by such measures as a lowering of prices and an increase in foreign investments. Heavy summer rains damaged the fig crop, causing a probable 19% drop in output from 1966.

GUATEMALA

Communist-led guerrilla movements were placed on the defensive in 1967, but a new threat to the constitutional regime of President Julio César Méndez Montenegro arose from right-wing terrorism.

Terrorism. A 3-month state of siege was ended at the close of February and replaced by a state of alarm. The latter suspension of rights was administered by the national police, while the former had been implemented by the military forces. The state of alarm had to be lifted after its abuse by various right-wing extremist groups, who used police uniforms as a cover for their terrorist activities. Threats, tortures, kidnappings, and assassinations continued into May without abating. It was estimated at midyear that rightist terrorism had claimed the lives of more than 1,000 persons, some of whom had little or nothing to do with politics.

Pacification Efforts. Guatemalan bishops announced in May that they could not remain silent while violence and disruption were aggravating the social, moral, and economic problems of the country. They joined Archbishop Mario Casariego in offering to mediate between leftist and rightist groups.

The military forces, with assistance from various ministries, had been given the task of removing leftist guerrillas and pacifying the countryside. That campaign drove many of the irregulars into the capital of Guatemala City. Police were given the responsibility for curbing violence in urban areas. To

better accomplish its assignment, the multifaceted police operation had to be reorganized and placed under the jurisdiction of the ministry of the government. Plans were announced to add up to 2,000 to the existing police forces.

Although the government was able to diminish terror from leftist groups, the rash of rightist organizations presented authorities with even more danger than they had experienced from the left. Army elements, especially junior officers, were accused of assisting the rightist underground. Observers who feared that the growing turmoil would provoke a military take-over of the country were reassured by Defense Minister Col. Rafael Arriaga Bosque, who insisted that the armed forces would adhere to the constitution. Speaking on Armed Forces Day, June 30, the defense minister appeared to enjoy the support of a major portion of the military establishment in proclaiming the loyalty of the Armed forces.

Political Parties. President Méndez Montenegro presented his annual message to the National Congress and the nation at the outset of a new legislative session that convened in June. His review of the administration's efforts presented the opposition Movimiento Liberación Nacional (MLN) with an opportunity for a partisan attack on the failure of the moderately leftist Partido Revolucionario (PR) to restore peace after one year in office. According to a widely held belief, the rightist MLN was supporting organized terrorist activities.

Economy. Because of unstable political conditions, Guatemala has lagged behind some other Central American economies in attracting foreign investments. A group of 32 Mexican businessmen, however, visited Guatemala in June to study its investment climate and the possibility of joint ventures with local capital.

A new industrial and agricultural finance company was started with an initial capital of $6.8 million. The formation of the finance unit, which will be a part of the Central American Bank of Economic Integration, was made possible through a $5 million loan from the U. S. Agency for International Development and the participation of 84 Guatemalan businessmen.

Thousands of new houses were constructed in 1967, financed by an $11 million fund made up of loans from the Inter-American Development Bank and Guatemalan public funds, as well as contributions from the intended occupants of the dwellings. The Méndez Montenegro administration also built schools and expanded faculties.

Cultural Award. In October, novelist Miguel Angel Asturias was awarded the Nobel Prize for literature. The 68-year-old Asturias is the Guatemalan ambassador to France. (See also NOBEL PRIZES.)

GUINEA

Guinea celebrated in May 1967 the 20th anniversary of the Parti Démocratique de Guinée (PDG) and the 10th anniversary of a Guinean government. Such celebrations, however, could not disguise the growing isolation of President Sékou Touré from the mainstream of West African development.

On May Day, Touré demanded the "total Africanization" of the Christian churches in Guinea. He denounced the Roman Catholic and Protestant churches for their slowness in training an African clergy and ordered all foreign clergymen to leave Guinea by June 1. Despite high-level conferences and strong protests, the deportation order, which mainly affected French nationals, was carried out. The action was a further example of Guinea's fear of European domination—a fear that accounts for Guinea's negative attitude toward regionalization, the Organisation Commune Africaine et Malgache, and any association of French-speaking Africa.

Foreign Relations. In response to an appeal by Prime Minister Sir Albert Margai of Sierra Leone, Guinean troops were sent to the border in February, ostensibly to bolster Margai's position before the scheduled elections. This action, however, instead of strengthening the existing regime helped to create the atmosphere that made possible the military coup in Sierre Leone the following month.

After the extremely provocative actions toward the military regime of Ghana in 1966, Touré modified his position of unqualified support for former Ghanaian President Kwame Nkrumah, who still lives quietly in Guinea.

The antipathy between Guinea and the Ivory Coast that led in 1966 to a brief war scare continued in 1967. An Ivory Coast trawler was seized on February 17 and its personnel interned on the charge of violating Guinean waters. Despite mediation attempts by President William V. S. Tubman of Liberia, Guinea refused to release the captives.

On June 27, Ivory Coast authorities retaliated by seizing a group of Guinea diplomats from a Dutch airliner that was forced to make an emergency landing at Abidjan while en route to Conakry, Guinea, from a meeting at the United Nations. Ivory Coast spokesmen stated that such action was necessary to force the release of its citizens held by Guinea. Touré accused the Dutch and the United Nations of complicity and temporarily detained all resident Dutch airline personnel.

Liberia, Mali, Niger, and the United Nations tried to mediate without success. Finally, on September 21, Touré capitulated and released the Ivoirien citizens. Four days later the Guinea diplomats were allowed to leave the Ivory Coast. This confrontation was the year's most dramatic event in the bitter ideological struggle between Guinea and the Ivory Coast, the state Touré regards as a "neocolonial tool" of the French.

Economy. Guinea showed a slower economic growth rate than comparable African states in 1967. It continued, however, to be successful in securing foreign aid. Communist China underwrote the construction of a dam and hydroelectric plant. It also advanced 40-year interest-free loans to Guinea, and financed the new Peoples Palace in Conakry.

In February an agreement was signed that allows the use of Liberia's roads and railroads to import goods into southern Guinea. In March the United States agreed to restore its $25 million per year aid program to the full level existing before the anti-American activities of November 1966. West Germany, in January, granted long-term credits of $750 million for railroad modernization, and in September new agreements were signed with the Soviet Union for increased development funds.

GUYANA

Disagreements within the governing coalition and between the government and the opposition People's Progressive party marked Guyana's first year of independence (celebrated May 26, 1967).

Internal Affairs. Serious frictions developed in 1967 in Guyana's two-party government coalition. The parties are the People's National Congress, led by Prime Minister Linden Forbes Burnham, and the smaller United Force, led by Finance Minister Peter D'Aguiar. A series of disagreements arose over certain policies, particularly a highly restrictive law on internal security. D'Aguiar resigned his cabinet post in September and was succeeded by Ptolemy Reid, first deputy prime minister and a close associate of Burnham.

The passage of the National Security Act at the end of 1966 provoked a parliamentary walkout by members of the government's militant opposition, the leftist People's Progressive party, led by former prime minister Cheddi Jagan. The new law provided for the preventive detention of persons deemed a threat to public order and severe jail sentences for unlawful possession of firearms and explosives. It also granted extensive "stop and search" powers to the police. The governor-general was empowered to initiate press censorship and deport noncitizens considered politically undesirable.

Foreign Affairs. Prime Minister Burnham assumed regional leadership by advocating in August the extension of Guyana's free-trade arrangement with Barbados and Antigua to other Commonwealth countries in the Caribbean. At a Caribbean conference of heads of government in Barbados in October, an enlarged free trade area was endorsed and steps were taken to establish a Regional Development Bank.

Economy. The government continued to stress economic development with an increasing emphasis on expansion in the agricultural sector. A Youth Corps was initiated for the unemployed between the ages of 15 and 20; members are to live together at a campsite in the interior and take a 2-year training course in vocational skills. To facilitate the projected development of the vast interior, large-scale hydroelectric, forestry, and geological surveys were made by the government.

A sharp decline in Guyana's foreign exchange position in 1966 was caused partly by a widening gap of imports over exports. As countermeasures, the government imposed additional duties on imports and stressed its "buy local" campaign. To stimulate industrial growth, the government in its 1967 budget offered special concessions to overseas investors by extending its initial 5-year tax holiday for another five years and permitting duty-free importation of industrial raw materials.

NORTH AMERICA
SOUTH AMERICA

Area: 10,714 square miles (27,750 sq km).
Population: 4,485,000 (July 1, 1966 est.).
Chief Cities (1965 est.): Port-au-Prince, the capital, 151,220; Cap-Haïtien, 27,538; Gonaïves, 15,373.
Government: *President*—François Duvalier (took office for life term, June 22, 1964). *Parliament*—National Assembly, 58 members (all belonging to the Parti Unique de l'Action Révolutionnaire et Gouvernementale).
Religious Faiths: Roman Catholics, 90% of population.
Education: *Literacy rate* (1950), 10.5% of population aged 10 and over. *Total school enrollment* (1964)—302,901 (primary, 276,398; secondary, 18,995; teacher-training, 192; technical, 5,611; university, 1,705).
Finance (1967 est.): *Revenues*, $28,140,000; *expenditures*, $28,140,000; *public debt* (1962), $54,360,000; *monetary unit*, gourde (5 gourdes equal U. S.$1).
Gross Domestic Product (1965): 377,000,000.
Cost of Living Index (1960), 117 (1958=100).
Manufacturing (metric tons): Sugar (1966), 62,000; wheat flour (1965), 53,000; cement (1965), 42,000.
Crops (metric tons, 1966–67 crop year): coffee, 30,000; bananas (1964), 25,000; sisal, 19,026; cocoa beans, 2,200.
Minerals (metric tons, 1965): bauxite, 428,000; limestone (1964), 394,000; salt, 11,000; copper, 4,000; silver, 92,000 troy ounces; gold, 8,000 troy ounces.
Foreign Trade (1966): *Exports*, $31,780,000 (chief exports, 1965: coffee, $19,400,000; sisal, $3,680,000; sugar, $2,500,000); *imports* (1965), $36,260,000 (chief imports, foodstuffs; cotton fabrics; motor vehicles; industrial machinery). *Chief trading partner* (1963): U. S. (took 54% of exports, supplied 60% of imports).
Transportation: *Roads* (1964), 2,024 miles (3,257 km); *motor vehicles* (1965), 7,353 (automobiles, 6,576); *railways* (1965), 187 miles (301 km); *merchant vessels* (1966), 4 (23,000 gross registered tons).
Communications: *Telephones* (1966): 4,400; *television stations* (1965), 1; *television sets* (1965), 3,500; *radios* (1965), 63,000; *newspapers* (1965), 6 (circ., 23,000).

HAITI

Despite continuing economic and political troubles (and predictions of an early demise), the dictatorship of President François Duvalier seemed firmly entrenched throughout 1967. The economy, except for the tourist trade, showed no improvement. The government attempted to improve its international standing, but its efforts brought few results.

Political Affairs. Although Haiti entered 1967 in turmoil over plots and rumors of plots and invasions, it was reported in April that roadblocks and army patrols in and about the capital were less in evidence than at any recent time. During this peaceful interlude, Duvalier celebrated jointly his 60th birthday and his 10th year in power.

This calm was interrupted at the end of May when five cabinet ministers were dismissed, two of them disappeared from sight after being stripped of their civil rights and property. This move was followed by the execution on June 8 of 20 officers, half of whom were members of the elite presidential guard. Moreover, at the end of June four men, identified as bodyguards of one of Duvalier's sons-in-law, were executed for an assassination attempt on the dictator, and the son-in-law himself was ordered home from Europe to stand trial. He ignored the order. Other personal troubles came to light when Duvalier publicly criticized his wife.

In addition, during the course of the summer, more than 25 other political prisoners were shot and scores were jailed. A few suspects took to boats while others sought asylum in embassies. At one point a curfew was imposed, with troops concentrated around the presidential palace.

The country remains politically primitive. Neither the regime nor its opponents have well-organized political support. Duvalier can rely on only a handful of persons around him, and on the vague loyalty of the militia and the Ton-Ton-Macoute (the secret police)—as long as he pays them well. The masses are passive and perhaps fearful; the opposition is divided into factions.

Economic Affairs. Haiti, with a population of about 4.5 million, had annual expenditures of only about $28 million in 1967. According to Alliance for Progress statistics, Haiti ranks lowest in Latin America in per capita gross national product (as well as in life expectancy, per capita caloric intake, and literacy). The International Monetary Fund (IMF) reported the country's foreign exchange reserves at —$3.5 million, while the (U.S.) National Foreign Trade Council described the economy as recessive, with unemployment high, prices rising, the budget unbalanced, and the debt soaring.

Although U.S. tourists began to return in small numbers during the winter of 1966–67, the economy as a whole fared badly. Hotel owners remained deeply in debt. Public services continued to be virtually nonexistent. The economy suffered an additional reverse when Hurricane Inez in late 1966 destroyed part of the coffee crop, Haiti's main source of income. The regime opportunely received a $1.3 million loan from the Inter-American Development Bank. But owing to depressed conditions, tax collections fell off sharply, and the government withdrew funds from the Central Bank early in 1967. As a consequence, the IMF barred further withdrawals from Haiti's standby fund. Coffee production seemed slightly higher during 1967, but the amount available for export will probably not be appreciably higher for the marketing year beginning Oct. 1, 1967, than it was for the previous marketing year.

Foreign Affairs. With the exception of continued good neighborliness toward the Dominican Republic, Haiti experienced a further deterioration in its hemisphere relationships. Duvalier refused to send a delegation to the meeting of foreign ministers at Punta del Este, Uruguay, in April; Ecuador broke relations in July; and in August, Duvalier denounced four inter-American treaties on the right of asylum. U.S. aid remained minimal for malaria control and a medical school, but some food continued to come through private sources.

To counter his growing estrangement from the other American states, Duvalier has attempted to strengthen ties with Africa through a variety of means, including the establishment of new diplomatic posts in Africa. The regime has also continued to improve its relations with the Roman Catholic Church. Throughout 1967 contacts between church and state remained correct but hardly cordial, with the Holy See and the Haitian Roman Catholic hierarchy passively accepting the regime.

INJECTING LSD into a spider, a Canadian scientist participates in experiments conducted throughout 1967 to study the effects of hallucinogenic drugs. Spiders that have been subjected to the influence of LSD tend to spin oversized webs.

HALLUCINOGENIC DRUGS

Although exact figures on the number of persons taking hallucinogenic drugs are not available, there was reason to suspect a substantial increase in their use throughout the United States in 1967.

Hallucinogenic drugs cause subjective changes in a person's sense of himself and his surroundings. Often also known as "psychedelic drugs," they cause modifications in sense perception and produce reactions ranging from euphoria to severe depression.

Increases in drug use during 1967 were particularly apparent among groups of young people known as "hippies," who congregate in such areas as San Francisco's Haight-Ashbury section and New York's East Village. Most hippies range in age from 17 to 23 years. The use of hallucinogenic drugs was not, however, limited to hippies; increasing numbers of college students and adult middle class groups also started using the drugs.

The increased use of drugs by college students led to concern among both college administrators and the students themselves. The National Association of Student Personnel Administrators sought to educate deans and other college administrators on how to cope with the problem of drug use on campus. In September, Princeton University students published their own pamphlet, *Psychedelics and the College Student.* This pamphlet, which was distributed to Princeton undergraduates and made available to other colleges, discusses the arguments for drug use and candidly assesses the risks involved.

Types of Hallucinogenic Drugs—*LSD*. The best-known hallucinogen, d-lysergic acid diethylamide—commonly known as LSD—was the subject of much medical research in 1967. In March, Dr. Maimon M. Cohen, who headed a research team at the School of Medicine at the State University at Buffalo, reported changes in human white blood cells grown in a test tube to which small amounts of LSD had been added. He stated that LSD damages or breaks chromosomes (hereditary material in the nucleus of all cells) in white blood cells. Some other investigators substantiated this research, but others, at the University of Caifornia at Berkeley, challenged these findings. They found no significant increase in chromosomal abnormalities in the white blood cells of LSD users.

Other medical research on LSD, conducted at the Harvard University Health Service, found that cats given large doses of LSD had significant changes in their brain wave patterns. Scientists at the University of California also investigated the possibility of LSD-induced epileptic seizures.

The first murder trial in which LSD figured occurred in the fall of 1967 in state supreme court in Brooklyn, N. Y. Steven Kessler was accused of stabbing his mother-in-law to death in April 1966. His defense contended that he was suffering from LSD-induced "total amnesia" at the time of the murder. He was acquitted on grounds of insanity.

***STP*.** A new hallucinogen, known as STP, was increasingly used in 1967. Its popular name, after the trademark of a motor fuel additive, has no relation to its chemical composition, which was identified as an experimental compound (DOM) developed by a chemical company. STP is reportedly much stronger than LSD, and it has been called a "megahallucino-

POET ALLEN GINSBERG urges the legislation of marihuana (pot) in a New York City demonstration in February.

gen." Its effects last for 3 or 4 days, compared with the 8- to 12-hour effects of LSD.

Marihuana. Marihuana is a mild hallucinogen that causes changes in mood, frequently a feeling of euphoria, and relaxation; it often produces changes in sense perceptions. The movement to legalize marihuana attained considerable momentum in 1967, and there was extended professional and public discussion of the effects of the drug. On September 12, Dr. J. Constandinos J. Miras of the University of Athens told a seminar at the University of California at Los Angeles that after observing chronic marihuana smokers in Greece for 20 years he concluded that the substance adversely affects personality, causing slow speech, lethargy, and loss of inhibitions. He also warned that marihuana could have a permanent effect on the brain. Other researchers, however, have challenged this view.

The arguments for and against the use of marihuana were presented in extensive detail in September 1967 during hearings in Boston prior to the trial of two men accused of possessing marihuana. Their attorney, seeking to overthrow the Massachusetts marihuana laws, maintained that marihuana should not be classified as a dangerous drug and penalties for its possession are unconstitutionally harsh.

The case attracted nationwide attention because Massachusetts marihuana laws are typical of the marihuana laws found in 25 other states, and because of the thoroughness with which both sides marshaled evidence on their behalf. Typical of the sharply differing views cited were the contention of Henry Brill, a New York psychiatrist, that unrestricted use of marihuana leads to a significant amount of vagabondage, dependency, and psychiatric disability, and the testimony by Joel Fort, a San Francisco psychiatrist, that marihuana is not likely to lead to sexual excess, deviant conduct, mental illness, or automobile accidents.

Although there is controversy about the effects of marihuana, many medical authorities agree that legal sanctions against marihuana and its grouping with heroin and other more dangerous drugs are wrong. The National Crime Commission noted that adequate knowledge of marihuana is not available and that "differences of opinion are absolute and the claims are beyond reconciliation." Four of the commission's 19 members protested what they termed its evasive treatment of the problems, and the commission's task force report included a recommendation by Michael P. Rosenthal, a professor of law, that "neither use nor simple possession of marihuana should be the subject of criminal prohibition by either Federal government or the states."

In September a U. S. Circuit Court of Appeals upheld the 30-year sentence and $30,000 fine against Timothy Leary, former Harvard University faculty member and a leading advocate of the use of hallucinogenic drugs, for illegally importing marihuana into Laredo, Texas, in 1965.

One important breakthrough in marihuana research in 1967 was the development by American and Israeli scientists of an economical way to synthesize tetrahydracannibinol, or THC, the compound thought to be the main active ingredient of marihuana. It is hoped that controlled experiments with THC will help resolve much of the controversy about marihuana.

Amphetamines. In 1967 there was also an increase in the use of amphetamines (dexedrine, benzedrine, and methedrine). Amphetamines are not hallucinogens; they are stimulants that act on the central nervous system, keeping the individual awake, decreasing fatigue and appetite, and elevating mood. When given for weight reduction, the usual oral dose is 5 to 30 milligrams a day. However, many drug users have started the practice of intravenous injection of 100 to 300 mg of amphetamines every 2 hours for a period of 3 to 6 days. It has been estimated that as many as 4,000 persons in San Francisco are injecting amphetamines regularly. Injection of amphetamines over a period of time could lead to psychosis or brain damage.

Treatment. Several new programs were developed in 1967 to treat the users of hallucinogenic drugs. In New York City a program known as "Encounter" was directed at young persons who are beginning to use "soft" drugs, such as LSD or marihuana. It is staffed by former drug users, most of whom are teenagers interested in doing preventive work.

In June 1967, Dr. David E. Smith opened the Haight-Ashbury Medical Clinic in San Francisco to treat problems associated with the use of LSD and other hallucinogenic drugs. Although the clinic averaged about 750 patients per week, it closed in September for lack of funds. Another program, called "LSD Rescue," was established in San Francisco to assist persons having a bad experience resulting from LSD.

HAWAII

A mixture of conflict and progress marked the year 1967 in Hawaii. Conflict was evident in labor problems, the continuing battle for land reform on the island of Oahu (where 80% of the people of the state live), and the intensification of rivalries within the Democratic party. Progress was reflected in record income from tourism and the defense industry and in the enactment of experimental legislation of national interest.

Labor Problems. A 68-day strike by the Teamsters Union against the Honolulu Rapid Transit ended successfully for the union in April with an improved wage package. A construction strike, which began on September 2, halting work on Hawaii's new state capitol and other major projects on the island of Oahu, was ended by mid-September with substantial wage increases. Late in November the International Longshoremen's and Warehousemen's Union, which represents the majority of Hawaii's pineapple workers, warned of a strike if wage demands were not met before its 3-year contract expires on Jan. 31, 1968.

Political Conflict. The expected fight over leadership of the state Senate took place between Nelson K. Doi, of the island of Hawaii, and Nadao Yoshinaga, of Oahu. The two Democrats, old political rivals, battled until February 25 (10 days after the session began), when John J. Hulten, of Oahu, emerged as a compromise president of the Senate.

Appointments to Hawaii's supreme court by Gov. John A. Burns provoked a controversy that extended the Senate leadership battle to another area. Central to the controversy was the appointment of former Senate President Kazuhisa Abe, a political ally of Senator Yoshinaga and a rival of Senator Doi. The Senate finally confirmed the Abe appointment.

Legislation. The transit strike so concerned the legislature that it passed a bill giving counties the power to purchase, condemn, build, and operate mass transit systems. The legislature also succeeded in passing a moderate land reform bill. The measure, bitterly opposed by the large landowning groups, enables the Hawaiian housing authority to determine that the amount of land on Oahu not held in huge estates is insufficient for the demand for homesites and on that basis to condemn lots and sell the parcels. Condemnation also may be made when one half of the persons who own homes on a tract petition the authority for the right to buy the property. The constitutionality of the bill is expected to be challenged in the courts.

Three enactments of an experimental nature attracted national attention. One was a rent subsidy bill to provide aid for low- and moderate-income renters and homeowners. The bill permits the housing authority to provide supplements up to $50 a month, enables public housing tenants to contract with the authority to convert their rent payments to purchase payments, and includes provisions for subsidy to nonprofit builders of low- and moderate-income housing. Another bill, the first of its kind to be enacted by a state legislature, authorizes the office of ombudsman, an independent office charged with investigating citizens' complaints about acts of government officials. The third bill, which provides compensation up to $10,000 for persons who are victims of criminal attack, makes Hawaii among the first states to enact such legislation.

Finally, the legislature provided for a constitutional convention, which is expected to convene on July 15, 1968.

HAWAII • Information Highlights

Area: 6,424 square miles (16,638 sq km).
Population: 741,000 (July 1, 1966 est.).
Chief Cities (1965 est.): Honolulu, the capital, 315,000; Kailua-Lanikai, 33,000; Hilo, 26,200; Wahiawa, 18,500.
Government: *Chief Officers*—governor, John A. Burns (Democrat); lt. gov. and secy. of state, Thomas P. Gill (Democrat); atty. gen., Bert T. Kobayashi (Democrat); director of finance, Andrew T. F. Ing; supt. of pub. instr., Ralph H. Kiyosaki; chief justice, William S. Richardson. *Legislature*—(convened Feb. 15, 1967): Senate, 25 members, (10 Republicans, 15 Democrats); House of Representatives, 51 members (12 Republicans, 39 Democrats).
Education: *School enrollment* (1965–66)—public elementary, 94,500 pupils (3,554 teachers); public secondary, 68,100 pupils (2,403 teachers); nonpublic schools, 33,400 pupils (1,250 teachers); college and university (fall 1965), 19,247 students. *Public school expenditures* (1965–66)— $78,107,000 ($515 per pupil); average teacher's salary, $6,820.
Public Finance (fiscal year 1967): *Revenues,* $491,790,580 (4% sales tax, $49,005,749; motor fuel tax, $20,316,761; federal funds, $103,495,802). *Expenditures,* $529,207,489 (education, $179,113,342; health, welfare, and safety, $70,246,687; highways, $46,083,699). *State debt,* $386,031,606.
Personal Income (1966): $2,230,000,000; average annual income per person, $3,124.
Public Assistance (fiscal year 1967): $13,666,366 to 22,350 recipients (blind, disabled, and aged $3,180,762; dependent children, $8,538,045).
Labor Force (employed persons 1967): *Agricultural,* 16,910; *nonagricultural* (wage and salary earners), 261,870 (9.4% manufacturing, 21.2% trade, 24.7% government). *Unemployed persons* (1967)—9,960.
Manufacturing (1965): Value added by manufacture, $288,928,000 (food and products, $180,122,000; stone, clay, and glass products, $16,427,000; nonelectric machinery, $4,014,000.
Agriculture (1966): *Cash farm income,* $199,339,000 (livestock, $37,291,000; crops, $162,048,000). *Chief crops* (tons)—sugarcane, 11,805,000 (ranks 1st among the states); papayas, 9,620; macadamia nuts, 4,573; taro, 4,493; bananas, 4,398.
Mining (1966 est.): *Production value,* $20,839,000. *Chief minerals* (tons)—stone, 5,098,000; pumice, 356,000.
Fisheries (1965): *Commercial catch,* 19,588,300 pounds ($3,602,224). *Leading species*—skipjack tuna, 16,157,309 pounds ($2,013,856); bigeye scad, 449,571 pounds ($239,262); striped marlin, 384,955 pounds ($118,291).
Transportation: *Roads* (1965), 3,308 miles (5,323 km); *motor vehicles* (1967), 251,228; *railroads* (1965) 8 track miles (13 km); airports with scheduled service (1967), 13.
Communications (1967): *Telephones* (1966), 324,000; *television stations,* 5; *radio stations,* 25; *newspapers,* 8 (daily circulation, Sept. 1965, 218,109).

HEART DISEASE

Research on heart disease covered many aspects of this condition, the leading cause of death in the United States. Many investigators were concerned with reducing blood levels of cholesterol, while others studied the relationship between alcoholism and heart disease. Among other advances were the development of new drugs and surgical techniques.

Cholesterol Research. The principal investigators of the National Diet-Heart Study reported on a preliminary feasibility survey to test the effect of diet on blood cholesterol levels and the incidence of coronary artery disease. The study was carried out on 2,400 men between the ages of 45 and 54. Some volunteers were placed on control (normal) diets while others ate experimental diets that differed from the typical American diet in that they contained less saturated fats and cholesterol and more polyunsaturated fats. It was found that the cholesterol levels fell an average of 11% for all the men on the experimental diets.

As a result of other studies of cholesterol, two new drugs for lowering cholesterol and fat levels were made commercially available. One of these drugs, ethyl chlorphenoxyisobutyrate (Atromid-S), acts by reducing the rate of cholesterol synthesis in the body. In one study of 26 patients, the cholesterol values of all of them were lowered to normal. In 9 of 10 patients with advanced coronary artery disease there was an improvement in angina (chest pain), with the pain disappearing completely in 7 of them. The second of the two new drugs, sodium dextrothyroxin (Choloxin), is a synthetic thyroid hormone that is believed to act by increasing the breakdown of cholesterol in the body. At present, it is not considered safe enough to use in patients with known organic heart disease.

The National Heart Institute plans a large-scale project in which the effects of these two compounds as well as those of nicotinic acid (niacin) and estrogen (a female sex hormone) will be studied. The study will include 8,500 men between the ages of 30 and 64 who have had previous coronary artery occlusions. The men will be observed over a 5-year period at 55 centers throughout the country.

Studies of Alcoholism. In 1967, reports from Britain, Canada, and the United States suggested that chronic alcoholism may be responsible for cardiac enlargement and congestive heart failure. The relationship between abstinence from alcohol and clinical improvement was convincing, while continued alcoholism was directly related to clinical deterioration. These reports indicate that alcoholism is a causative factor in heart disease, but the exact role of alcohol is hard to determine, especially since many alcoholics suffer from dietary deficiencies.

Drug Therapy. The drug propranolol (Inderal), which blocks certain of the nerve impulses influencing the rate, force of contraction, and rhythm of the heart, is under intensive investigation in a number of medical centers and will soon be commercially available. Studies of propranolol indicate that the drug is valuable in the treatment of angina pectoris and certain irregularities of the heart, as well as in the reduction of high blood pressure.

Japanese investigators believe that another new compound, pyridinol carbamate, prevents the formation of fat deposits in arterial walls. In clinical trials in Japan, improvement was reported in patients with angina pectoris and peripheral arterial disease.

Heart Surgery. Probably the greatest advance in heart surgery during 1967 was the transplantation of a human heart, performed by Christian Barnard in South Africa. (See also SURGERY.) At other medical centers doctors began replacing diseased aortic valves with valves obtained at autopsies rather than the artificial valves that had been previously used. Experience has shown that these valves, removed from individuals who died from causes other than heart disease, function very efficiently.

From Australia, New Zealand, and France have come reports of a high rate of success using transplants of aortic valves obtained from calves. Such valves are also being used successfully in the United States.

There has been improvement in the use of artificial hearts as auxiliary pumps to supply blood to the body when heart failure has resulted in decreased cardiac output by the heart itself. At this time, however, such a pump cannot be used for prolonged periods to replace a diseased heart.

Use of Computers. Doctors at the Mayo Clinic and in the Public Health Service are using computers for routine clinical interpretation of electrocardiograms. Electrocardiograms can be sent by radio or telephone to the computer, where they are rapidly and accurately interpreted. Computers are also being used for monitoring cardiac patients in intensive care units. The computer is said to predict and analyze difficulties more rapidly than can a person watching the same vital factors, such as blood pressure and heart rate.

ARNOLD INGLAUER, M. D.
University of Cincinnati

HIGHWAYS

The highway program of the United States was bolstered in 1967 by the establishment, within the newly created U. S. Department of Transportation, of the Federal Highway Administration. The new agency continued the federal program, inaugurated in 1916, of giving financial aid to states to improve their highways.

The Federal Highway Administration functions through three operating components—the National Highway Safety Bureau, the Bureau of Motor Carrier Safety, and the Bureau of Public Roads. The Bureau of Motor Carrier Safety, formerly a component of the Interstate Commerce Commission, has jurisdiction over the safety performance of motor carriers engaged in interstate commerce.

Of the 3.7 million miles (5.9 million km) of roads and streets in the United States in 1967, about 910,000 miles (1,464,200 km) were in designated federally aided systems. Since the program began in 1916, federal aid has risen from a level of $5 million per year to $4.4 billion in 1967. Planned spending for the fiscal year 1969 is $4.8 billion.

The nationwide investment for highways in 1967 totaled $16.1 billion, with $9.4 billion spent for new construction and improvements and $6.7 billion for maintenance, administration, law enforcement and safety, and debt interest and retirement.

The Bureau of Public Roads continued to administer federal highway aid to the states. In addition, it administered the Highway Beautification Program and the highway construction phase of the Appalachian Regional Development Program; supervised road building in national parks and forests and other federal lands; conducted extensive programs in highway research, safety, and planning; and assisted other countries in developing road programs.

The reduction of traffic congestion in urban areas by increasing the capacity of roads, and the advancement of safety were promoted by the Bureau of Public Roads in 1967 through its Traffic Operations Program to Increase Capacity and Safety (TOPICS). This program involved an expansion of the federal-aid primary system to finance traffic-engineering improvements of certain principal streets and downtown grids in areas of 5,000 or more population. Through relatively modest investments the bureau expected to increase traffic speed on urban arteries as much as 25%.

Federal-Aid Programs. Federal aid to the states was available under two major programs in 1967. One provided the states with 50% of the cost of improving main rural highways, secondary roads, and urban streets on the federal-aid primary and secondary systems, totaling about 870,000 miles (1.4 mil-

APPORTIONMENT OF FEDERAL-AID HIGHWAY FUNDS AUTHORIZED FOR THE FISCAL YEAR 1969

lion km). The other provided aid to the states for 90% of the cost of constructing the National System of Interstate and Defense Highways, a 41,000-mile (65,900-km) network of controlled-access highways.

The need for constant improvement of highways was pointed up by the increase in the number of motor vehicles and in motor vehicle travel in 1967. Preliminary figures indicated that 103 million motorists drove 97.5 million vehicles a total of 967 billion vehicle-miles (1.6 trillion vehicle-km). Of these motor vehicles, 81 million were passenger cars and 16.5 million, trucks and buses. In addition, 2.2 million motorcycles used the highways.

Most of the $4.4 billion federal authorization was allocated to the Interstate Highway System. A reduction of $1.1 billion, made in the fall of 1966, was restored in 1967. In the fiscal year ending June 30, 1967, an additional 2,500 miles (4,023 km) of the Interstate System were opened to traffic, bringing the total in use by the public to 24,100 miles (38,777 km), or 59% of the system.

As of June 30, 1967, an estimated $9,285,700,000 worth of work was under way or authorized on the Interstate System, and $3,826,400,000 worth of work was under way or authorized to improve federal-aid primary, secondary, and urban highways. The federal-aid highway program is financed through the Highway Trust Fund mainly drawn from motor-fuel taxes. Income to the fund in fiscal 1967 was $4,455,000,000.

Highway Beautification. The design and construction of attractive highways had high priority during 1967. The Highway Beautification Program provided for control of billboards and junkyards along Interstate and federal-aid primary system highways, and for landscaping and scenic enhancement along selected portions of all federal-aid highways. Many states acquired strips of land adjacent to federal-aid roads to preserve their natural beauty, or to develop them as rest and recreation areas.

New Freeway Plans. With 2,500 miles (4,025 km) of urban freeways yet to be built under the Interstate program, the Federal Highway Administrations has proposed a "joint development concept" to make maximum use of space and funds in urban areas. The key to the plan lies in the acquisition of entire blocks of property rather than the minimum required for freeway right-of-way. This would be cheaper than buying land piecemeal for housing, recreation centers, parks, etc. Of the total property acquired, the highway department would keep only a right-of-way. The rest of the property—over, under, and adjacent to the freeway—could be used for local purposes.

The effects of new highways on resources and values, as well as the impact on local people, were given new emphasis throughout the planning, routing, design, and construction of highways in 1967.

Road and Highway Safety. A program aimed at eliminating hazardous points on older roads by the end of 1969 moved ahead rapidly. As of June 30, 1967, the states had programmed 2,833 spot-improvement projects costing $515,873,000 on federal-aid systems. There were 20,600 such locations in the nation which could be corrected at a total cost of about $2,094,000,000.

The new National Highway Safety Bureau was the focal point for the new and expanding federal interest in highway safety. Two major enactments by Congress in 1966 provided the means for the first broad national effort aimed at reducing highway accidents, injuries, deaths, and property damage.

The National Traffic and Motor Vehicle Safety Act empowered the secretary of transportation to promulgate safety standards for vehicles sold in the United States, and 20 such standards became effective on Jan. 1, 1968. The Highway Safety Act of 1966 empowered the federal government to establish performance standards for state and local highway safety programs. Federal standards were issued in 1967 in 13 categories. All states are obliged to have their programs approved before the end of 1968, on penalty of loss of 10% of their federal-aid highway funds.

NORTH AMERICA
SOUTH AMERICA

Area: 43,277 square miles (112,088 sq km).
Population: 2,445,000 (June 30, 1967 est.).
Chief Cities (1961 census): Tegucigalpa, the capital, 170,535 (1965 est.); San Pedro Sula, 58,632; La Ceiba, 24,863; Puerto Cortés, 17,048.
Government: *President*—Oswaldo López Arellano (took office June 6, 1965); *Parliament*—Constituent Assembly, 64 members (party seating, 1967: Nationalist party, 35; Liberal party, 29).
Religious Faiths: Roman Catholics, 97% of population.
Education: *Literacy rate* (1961), 45% of population aged 15 and over. *Total school enrollment* (1964)—290,598 (primary, 267,177; secondary, 16,024; teacher-training, 2,966; technical, 2,192; higher, 2,239).
Finance (1966 est.): *Revenues*, $60,850,000; *expenditures*, $61,350,000; *public debt*, $52,250,000; *monetary unit*, lempira (2 lempiras equal U. S.$1).
Gross National Product (1966): $543,000,000.
National Income (1965): $442,000,000; average annual income per person, $194.
Economic Indexes: (1966): *Agricultural production* (1965), 138 (1965–57=100); *cost of living*, 115 (1958=100).
Manufacturing (metric tons): sugar (1966), 41,000; beer (1965), 19,000; wheat flour (1964), 18,000.
Crops (metric tons, 1966–67 crop year): Bananas (1964–65), 917,000; maize (1965–66), 414,000; sorghum (1964–65), 62,000; dry beans, 51,000; coffee, 28,500.
Minerals (metric tons, 1965): Limestone (1964), 118,114; zinc, 11,124; salt, 9,977; lead, 9,652; cadmium, 87; silver, 3,670,659 troy ounces; gold, 3,546 troy ounces.
Foreign Trade (1966): *Exports*, $145,100,000 (chief exports: bananas, $72,250,000; coffee, $19,850,000; wood, $10,550,000; silver, $3,150,000); *imports*, $149,050,000 (chief imports, 1965: Textile yarn and fabrics, $14,356,500; nonelectrical machinery, $13,695,500; road motor vehicles, $10,395,000). *Chief trading partners* (1965): U. S. (took 56% of exports, supplied 45% of imports).
Transportation: *Roads* (1964), 2,175 miles (3,500 km); *motor vehicles* (1965), 18,700 (automobiles, 10,201); *railways* (1965), 716 miles (11,520 km); *merchant vessels* (1966), 12 (51,000 gross registered tons); *principal airports*, San Pedro Sula, Tegucigalpa.
Communications: *Telephones* (1966): 8,852; *television stations* (1965), 3; *television sets* (1965), 8,000; *radios* (1965), 135,000; *newspapers* (1964), 7.

development and also encouraged the growth of Honduras' basic source of income, agriculture.

Political Affairs. The opposition Liberal party announced its affiliation with the progressive "democratic left" movement of Latin America in 1967. This ideological shift from a type of old-line laissez-faire liberalism was not universally accepted by party stalwarts, and some who objected were purged from party ranks.

Disunity was manifest in the leading Nationalist party, which was broken up into factions, partly as the result of an announcement by incumbent President Oswaldo López Arellano that he would not seek reelection when his term expired in 1967. A splinter group was formed late in the summer to promote Col. Armando Velásquez Cerrato for the presidency. Another early presidential hopeful, Gonzalo Carías Castillo, claimed that Nationalist party unity was impossible until his faction, the Popular Progressive group, was officially recognized. Other Nationalist leaders evinced a preference for Ricardo Zúñiga Agustinus, the minister of the presidency (who carries on the administrative duties of the presidency) and strong man of the regime.

Economic Affairs. Gains in the gross national product fell short of those registered during 1966. At midyear the growth rate was set at 1.4%, as opposed to 4% for the corresponding period of 1966. In part, the growth pattern was attributed to the government's policy of leaving development largely in the hands of the private sector.

A $3.5 million investment in a $92 million pulp and paper mill project was made by *Adela,* a consortium of industrial and banking interests from various countries interested in investment in Latin America. The plant, to be built on the Mame River, will supply Central American and United States markets. Alto Hornos de México, an iron and steel firm, proposed an investment of $25 million in a branch factory at Tegucigalpa. Signal Exploration Company reported normal progress in its search for petroleum in the Gracias a Dios department.

In order to quicken the pace of economic activity, additional loans were obtained from the United States for advancing road construction. Priority has been given to the completion of the Western Highway, which will provide the industrial center of San Pedro Sula with easier land access to the country's main port at Puerto Cortés and to El Salvador.

Although banana and coffee shipments were down, sugar was exported from Honduras for the first time, in 1967. Some 412,000 bags of Honduras' 1967–68 coffee crop will probably be placed in the world market, representing a 42% increase in Honduras' coffee export quota.

Social Affairs. A maternity and children's hospital was opened in Tegucigalpa in 1967, and the initial stages of building a new suburban campus for the National University of Tegucigalpa were completed. A $7 million loan from the U. S. Agency for International Development will be used for a basic reorganization and expansion of high school instruction.

The third convention of the National Peasant Association considered the increasing problem of border incidents, rural violence, and delays in implementing the agrarian reform law. National Agrarian Institute director Rigoberto Sandoval replied that it was his intention and also that of President López to carry out agrarian reform in accordance with constitutional guarantees and existing agrarian codes.

Foreign Affairs. A prolonged disturbance occurred near an ill-defined section of the El Salvador-Honduras border in the late spring, when Salvadoran civilians, accompanied by national guardsmen, invaded Honduran territory, kidnapping a rancher and six of his farm hands. The rancher had been accused of murdering a Salvadoran. The incident led to partial mobilization on both sides of the disputed boundary, with resulting deaths and the taking of prisoners. More violence was averted when the matter was turned over to boundary commissioners. Both sides later agreed to mediation by the foreign ministers of Nicaragua, Guatemala, and Costa Rica.

President López exchanged official visits in 1967 with Anastasio Somoza Debayle, the president of Nicaragua, and also made an official visit to Costa Rica. In April, López participated in the meeting of American presidents at Punta del Este (Uruguay).

HONG KONG RIOTERS are attacked by club-swinging police. The Communist-led demonstrations took place in May.

HONG KONG

Riots and sporadic violence disrupted the British Crown Colony of Hong Kong in 1967 and raised a question about its political future. Following the devaluation of the pound by Britain on November 18, Hong Kong devalued its currency by 14.3%, then revalued it upward by 10%.

The Riots. Outbursts growing out of labor disputes began in the Kowloon area in May. Strikers were joined by mobs of demonstrators who shouted quotations from the works of Mao Tse-tung and fought with the police. In June the strikes spread, crippling transportation and affecting public utilities. When the demonstrators failed to intimidate British authorities, leftists resorted to terrorism.

Attempting to prevent further provocations, the Hong Kong government closed the bridges to Communist China at Mankamto and ordered the suspension of three pro-Communist China newspapers. Peking protested these and other actions, and when the British refused to accede to demands, rioters in Peking attacked the British compound, burned the buildings, and beat the chargé d'affaires and other members of the staff. Finally, in November, there were reports of an accord between the two governments, and the crisis subsided.

Background. The failure of the strikes and riots pointed up the fact that the "left" in Hong Kong is badly led and lacking in organization. Fragmented groups merely identify with leftist or Communist leaders. One reason for the weak trade union movement is that the colony was chiefly an entrepôt and transshipment point until about 20 years ago, which means that industrial development in Hong Kong is of fairly recent origin. The average factory employs 37 persons, and the 308 labor unions have a total membership of only 131,306 out of a labor force of 1,500,000.

The political situation is further complicated by the fact that Hong Kong has no viable representative institutions. The franchise is restricted, and of the nearly 4 million inhabitants there are only about 26,000 registered voters, or slightly more than one half of 1%.

Although it is difficult to estimate what the people want, it appears that a majority of the inhabitants have rejected both the Chinese Nationalist and Communist political systems. Once again the Reform Club candidates for the Urban Council were defeated in elections held in the summer of 1967.

Role of Communist China. The general belief of observers and diplomats is that the disturbances of 1967 were primarily local in origin and inspiration rather than a serious attempt by the Communists to take Hong Kong. Communist China earns more than $600 million a year from its trade and commercial interests in Hong Kong, and according to the colony's officials the riots scarcely affected trade or tourism. The outbreaks in both Macao and Hong Kong were most likely a spillover of the cultural revolution in China. T'ao Chu, who controlled Kwangtung province and the South-central Bureau, probably put pressure on local Communists to prove that they were as revolutionary as the current political climate demanded. Once these groups had initiated confrontation politics in Hong Kong, Peking had little choice but to support them.

Throughout the period, the pro-Communist China press in Hong Kong never really emphasized

such controversial issues as industrial relations, housing, and the weakness of representative institutions, although at times it criticized British administration and called for changes in local administration and full adult franchise. The main emphasis in Hong Kong and in Peking was on Chinese nationalism, and appeals were made on the basis of ethnic ties with mainland China.

ISHWER C. OJHA
Boston University

HOPPER, Edward

U. S. painter: b. Nyack, N. Y., July 22, 1882; d. New York, N. Y., May 15, 1967.

Edward Hopper, one of the most important realist painters of the 20th century, once said: "My aim in painting has always been the most exact transcription possible of my most intimate impressions of nature." He took his subjects from the commonplace and the local in the big city, the small town, and the American countryside, always avoiding the spectacular, the quaint, and the conventionally beautiful. In both his oils and his watercolors, he chose to picture a Manhattan office building or low-priced restaurant, a frame house, or drugstore.

Hopper represented these places in a deceptively matter-of-fact way, creating an illusion of almost photographic truthfulness, and yet giving them a formal power and a poetic quality suggesting lonely resignation and mysterious expectancy. In an era dominated by abstract and fantastic art, he was virtually the only representationalist painter with originality and integrity enough to hold the admiration of even the most avant-garde artists and art lovers.

Education. After graduating from high school in Nyack, N. Y., Hopper went to New York City to study illustration at a commercial art school. His interest soon turned to painting, and he enrolled at the New York School of Art, where from 1900 to 1906 he studied with Robert Henri, Kenneth Hayes Miller, and George Luks. From these American realists, Hopper acquired a lifelong interest in painting from everyday life. Between 1906 and 1910 he made three visits to Europe, spending most of his time in Paris painting city scenes and studying the work of realists such as Goya, Manet, and Degas. Picturesque travel experiences and current artistic developments such as expressionism and cubism had little effect on Hopper's basic vision.

Early Career. By 1910 all the elements of Hopper's style had been defined. Early works such as *Corner Saloon* (1913, Museum of Modern Art) already show the cool detachment and the sensitivity to light and structure that remained the hallmarks of his originality throughout his long career. His work attracted little attention, however, and was regularly rejected by exhibition juries. He turned to commercial art to support himself and gradually did less and less painting. In 1915 he took up etching, the medium that brought him his first success in exhibitions. About 1920 he again began to paint in oils, and in 1923 he started working in watercolor.

Success. The year 1923 marked a turning point in Hopper's career. He was awarded two major prizes for etchings, and the Brooklyn Museum bought one of his watercolor paintings of Gloucester, Mass., houses. This was his first sale since 1913, when he sold a painting at the Armory Show. As his reputation grew, Hopper gave up commercial art. In 1924 he married the painter Josephine Verstille Nivison, and the following year he painted *House by the Railroad* (Museum of Modern Art), perhaps his first masterpiece.

Hopper lived at 3 Washington Square North in New York City from 1913 until his death. He spent his summers at South Truro, Cape Cod, and made an occasional trip to Vermont or to the Far West.

Among his most important paintings are *Manhattan Bridge Loop* (1928, Addison Gallery of American Art, Andover, Mass.); *Early Sunday Morning* (1930, Whitney Museum of American Art, New York City); *Room in Brooklyn* (1932, Museum of Fine Arts, Boston); *Gas* (1940, Museum of Modern Art, New York City); and *Nighthawks* (1942, Art Institute of Chicago).

He was twice chosen to represent the United States in international shows, in the Venice Biennale (1952) and the São Paulo, Brazil, Bienal (1967).

HOSPITALS

Hospitals in 1967 continued to be faced with a variety of problems. They had to make multiple adjustments to inflation, to meet the demands of the rapid advancement of medical science, and to satisfy the growing expectations of a service-minded public. They were also required to meet the problems raised by the Medicare and Medicaid programs, which completed their first year on July 1, 1967.

There was a small increase in the daily hospital census in 1966, and in the percentage of hospital occupancy as well, largely as the result of a higher proportion of older patients with a corresponding increase in length of stay. Maternity service experienced another year of decline, but outpatient service attained a new high.

With payroll expense approximately 65% of total expense, the increase in the number of employees required (5.4%) and the higher wages paid (4%) as the result of workers' unprecedented pressure caused expenses to advance an unusual 8.3% in a single year. Inaugurated only in the latter part of 1966, the full impact of present wage increases has not yet been seen. However, the total expense per patient day already averages $48.15, with future acceleration likely for community hospitals (short-term, nongovernmental, nonprofit, voluntary hospitals).

Accompanying statistics, showing the trends of the past 20 years, indicate more beds in the same number of hospitals per 100,000 population. However, the marked increase in the use of in-patient and out-patient services demonstrates the growing importance of the hospital as a community medical resource.

Immediate emphasis in the unique health economy market during the present era of great public concern has been on the proper control of expenditures and on measures to ensure a high level of performance in a service involving human lives. Regional medical programs, area-wide planning, creation of facility-sharing complexes, utilization review, and the introduction of modern techniques of hospital management are the matters of concerned priorities. Blue Cross, acting as intermediary agent for producers and consumers alike, is developing a significant and unprecedented role in health history.

[1] Includes interns, residents, and students. [2] Excludes 66,618 physicians and dentists. [3] Excludes 50,179 physicians and dentists. (Source: *Hospitals*, American Hospital Association Journal, August 1967.)

Patients, now endowed with a "right," with their doctor and hospital fees theoretically paid for by government, are expecting a changed atmosphere in clinic and ward service. With hospitals no longer burdened with unpaid charity cases, hospital employees feel free to demand wages more commensurate with those in other industries.

The task of obtaining highly skilled labor in sufficient quantity remains the greatest challenge to hospital management. Recruitment and health career development are two ways in which, it is hoped, new people will be attracted to health and hospital work. It is also hoped that career development programs will increase the productivity of workers already in the field. A constantly improving management with highly developed organizational, human, and conceptual skills is imperative to achieve the programs required to meet the nation's hospital needs.

Emeritus Professor, Hospital Administration
University of Minnesota

HOTELS AND MOTELS

A number of mergers and diversification moves were among the most notable trends in the United States lodging industry in 1967. Recognizing the fact that adequate lodging facilities are required to develop tourism and that there is an increasing demand for the packaging of airline and hotel reservations, two major American airlines moved into the overseas business in 1967 by buying United States-based hotel companies. Trans World Airlines took over Hilton Hotels International, which operates 34 overseas properties. Eastern Air Lines bought an interest in Rockresorts, which manages Laurance Rockefeller's resort hotels in Puerto Rico, the Virgin Islands, and Hawaii. The International Telephone & Telegraph Corporation announced plans to purchase the Sheraton Corporation of America, which owns or operates 155 hotels and motels in the United States and foreign countries. (See also TRAVEL.)

Lodging Statistics. Gross income for the 65,850 hotels and motels in the United States rose to $5,256,000,000 in 1967 from $5,110,000,000 in 1966. The nation's hotel room occupancy for 1967 equaled the 64% average of the preceding year. In the three previous years hotel occupancy had shown a slight gain.

New Hotels. The $18 million 800-room Regency Hyatt House Hotel in Atlanta was the largest U. S. hotel to make its debut in 1967. For the first time in a decade three new major hotels opened in the same season in the Miami Beach, Fla., area. The new establishments are the Sheraton Four Ambassadors in Miami, with 450 hotel suites and 300 apartments; the 550-room Marco Polo; and the 500-room Statler Hilton Plaza, the last two in Miami Beach.

Among the larger new hotels completed outside the United States in 1967 were the 401-room Hotel

Bonaventure and the 300-room Château Champlain in Montreal, Canada; the 301-room Brussels Hilton, Brussels, Belgium; the 265-room Sheraton-Philippines Hotel, Manila, Philippines; the 200-room Hotel Inter-Continental Lahore, Lahore, Pakistan; the 200-room Hotel Inter-Continental Rawalpindi, Rawalpindi, Pakistan; and the 168-room Sheraton-Oceanus Hotel (North), Freeport, Grand Bahama Island, Bahamas.

New Motels. Holiday Inns of America opened 67 new motels having 10,259 rooms in 1967. The largest of these was the 333-room inn in Dearborn, Mich. Other U. S. motels completed by major systems in 1967 included 41 Howard Johnson's motor lodges with a total of 3,799 rooms; 17 Sheraton motor inns with a total of 2,257 rooms; 11 new Statler Hilton inns having a total of 2,536 rooms; and 33 TraveLodge Corp. motels with a total of 1,689 rooms.

American Hotel & Motel Association

HOUSING

Rioting and looting in Detroit, Mich., Newark, N.J., New Haven, Conn., and other American cities in the summer of 1967 revealed dramatically the frustrations that had developed among the Negroes living in the ghettos of large metropolitan areas. As the gravity of the nation's urban problems—including housing—became evident, leaders in public and private life groped for an understanding of the conditions and for ways to ameliorate them.

Many legislative remedies were introduced in Congress. Sen. Charles H. Percy of Illinois proposed a National Home Ownership Foundation Act, reflecting his conviction that stability could best be brought to slum and ghetto areas by providing residents with the opportunity to become homeowners. Sen. Robert F. Kennedy of New York introduced a legislative proposal designed to encourage private enterprise to build low-cost housing in slum areas.

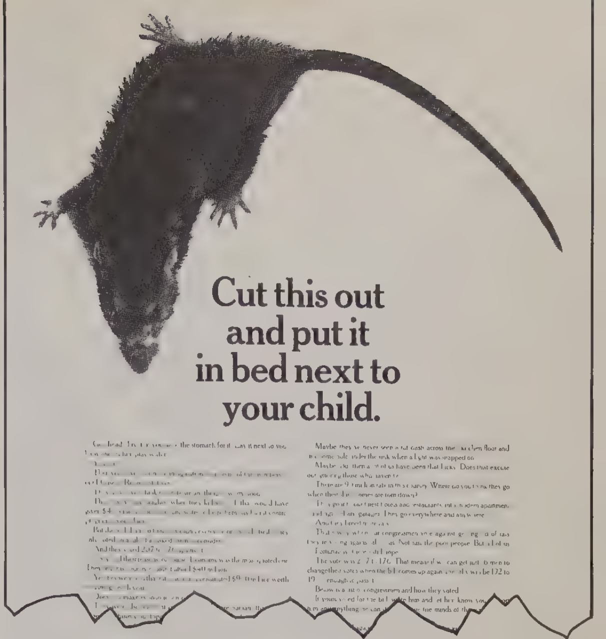
Governmental Activity. In the housing field in late 1966 and in 1967, governmental activities centered on these major developments:

(1) The Demonstration Cities and Metropolitan Development Act of 1966 was passed, and 63 cities were selected in November 1967 to receive a total of $11 million in federal funds to plan "model cities" programs. Later these cities were to receive $200 million in supplemental grants to carry out the plans plus $100 million for urban renewal projects in "model cities" areas.

(2) The administration proposed and Congress considered bills for housing and urban redevelopment and national flood insurance.

(3) Congress and the executive branch attempted to evaluate and develop appropriate measures for dealing with the deep-seated social tensions evidenced by the urban rioting.

Demonstration Cities. On Nov. 3, 1966, President Johnson signed into law the Demonstration Cities and Metropolitan Development Act. This legislation authorized the secretary of housing and urban development to provide grants and technical assistance to help communities of all sizes to plan, develop, and carry out comprehensive city demonstration programs. The programs are designed to rebuild and restore entire sections and neighborhoods of slum and blighted areas. They involve the concentrated and coordinated use of all available federal aids together with local, private, and governmental resources. The legislation also authorized supplemental grants to state and local public bodies. These grants may amount to up to 20% of the cost of projects receiving aid under certain federal programs in metropolitan areas where development is being carried out under metropolitan planning and programming. The supplemental grant was designed to be an incentive to coordinated, planned metropolitan development.



COURTESY OF BERT STEINHAUSER AND CHARLES KOLLEWE

RAT CONTROL BILL defeated by Congress in the summer of 1967 brought sharp criticism from leaders concerned with urban housing and inspired this advertisement in newspapers. After considerable publicity and repeated prodding by President Johnson, a bill was finally passed, and $40 million was allocated to combating a major health menace.

The law provided, in addition, authority for Federal Housing Administration (FHA) mortgage insurance to support (1) the development of new communities, (2) the construction of facilities for the group practice of medicine, and (3) the rehabilitation by nonprofit groups of substandard housing for sale to low-income families. The new law also modified the urban renewal program to emphasize projects that provide a substantial number of housing units for low- and moderate-income families.

Urban and Flood Legislation. On April 5, 1967, Sen. John Sparkman of Alabama introduced the administration's housing and urban development bill. One provision would authorize the secretary of housing and urban development to make grants to units of general local government for rat control and extermination. The measure also proposed an increase in the maximum interest rate permitted on FHA multi-family mortgage insurance programs to 6% and modified the formula for establishing the interest rate on loans for college housing. In November 1967 the Senate Banking and Currency Committee reported favorably on this bill, and it added a provision to encourage home ownership among the poor through an interest-rate subsidy.

The administration also proposed to the Congress the national flood insurance bill. It would authorize a national program under which insurance can be made available to protect homes against flood loss in flood-prone areas through the cooperative efforts of the federal government and the private insurance industry. The federal government would subsidize some of the premium cost of the flood insurance policies issued by private companies. The legislation was also designed to encourage state and local governments to adopt land use provisions to restrict the future development of land that is exposed to flood hazard.

Other Activities. The controversial rent supplement program, first granted funds by Congress in 1966, got under way, but in 1967 Congress appropriated only $10 million of the $40 million requested by President Johnson to continue the program.

President Johnson established a special body, the National Commission on Urban Problems, under the chairmanship of former Sen. Paul H. Douglas. In addition, the President appointed a Committee on Urban Housing and named Edgar F. Kaiser chairman. The committee will examine every possible means to establish institutions that would encourage private industry to rebuild in a large-scale, efficient way. The committee's job, the President said, is "to harness the production power of America—which has proved it can master space and create unmatched abundance in the marketplace—to the most pressing unfilled need of our society."

The President also announced a pilot demonstration program of public housing, constructed and managed by private enterprise. In addition, he announced that, in a number of cities, federally owned land would be used to build "new towns in town"—that is, communities within existing cities. These would be well-balanced communities, providing housing and other facilities for families representing a wide spectrum of economic and social achievement.

Federal Financing. Federally assisted urban renewal activity in 1967 continued at a high level. Federal funds for this purpose amounted to $774.5 million in 1966, and to $306.3 million for the first half of 1967. By June 1967, total grants made since the beginning of the urban renewal program in 1949 amounted to $6.1 billion, and over 2,200 urban renewal projects and related programs had received federal financial support.

Federally assisted low-rent public housing units completed, under construction, or planned increased from 780,865 at the end of 1966 to 837,473 in June 1967. Capital grants for urban mass transportation increased from slightly over $190 million at the end of 1966 to nearly $280 million in June 1967. Grants for open-space land—that is, to preserve and create open land for parks, recreation, and scenic or recreational purposes—rose from slightly over $100 million at the end of 1966 to about $132 million in July 1967.

By August 1967, the new programs authorized by the Housing and Urban Development Act of 1965 were gaining momentum. Approved grants included nearly $33 million for neighborhood facilities, nearly $12 million for 115 urban beautification projects, and almost $175 million for 363 water and sewer projects. Nearly 2,000 direct loans at 3% interest—a $9 million outlay—had been approved by August 1967 for rehabilitation in urban renewal or code enforcement areas. Over 3,000 grants, totaling $4.6 million, had been made to low-income homeowners in urban renewal areas to assist them in rehabilitating their homes.

Private groups seeking to build rent-supplement projects to house low-income families had applied for over $45 million in annual rent-supplement contract payments. These applications involved 591 projects and over 62,000 living units.

Residential Construction. The number of new, permanent, nonfarm private housing units started in the United States in 1966 was estimated at 1,141,500—significantly below the 1,450,600 started in the preceding year. The reduction resulted from a critical shortage of mortgage funds.

The drop became steepest in the last three months of 1966 when starts fell below an annual rate of 1 million. As the supply of mortgage funds improved, the rate of housing starts rose gradually. In January 1967 housing starts stood at an annual rate of 1,079,000 units, and by August 1967 preliminary estimates showed that the annual rate of housing starts had reached 1,355,000. This, however, was still below the 1965 rate.

Of the privately financed nonfarm housing units started in August of 1967, 81.3% were financed through conventional loans without direct government assistance, 14.1% through FHA-insured loans, and 4.6% through loans guaranteed by the Veterans Administration (VA).

Construction Costs. The average cost of building a nonfarm single-family dwelling unit in the United States has climbed steadily. In 1959 the average was $13,425, but by 1966 it had risen to $16,875, and in June of 1967 it was $17,375. The E. H. Boeckh residential construction cost index (1957–59 = 100) stood at 115.2 in 1965, 120.2 in 1966, and 129.4 in July 1967. Costs of residential construction are rising partly because houses are larger, better constructed, and contain more amenities.

Market Conditions. The shortage of funds available for investment in mortgages, which had reached crisis proportions in 1966, eased somewhat in early 1967. Interest rates nevertheless remained high, as did the discounts charged by lenders purchasing fixed-interest loans insured by the FHA or guaranteed by the VA. FHA reports show that the average conventional mortgage interest rate for new homes ranged between 6% and 6.7% during 1966; in January 1967 the average rate was 6.65%, and by September 1967 it had dropped only slightly to 6.55%. Reflecting this relatively small drop in mortgage interest rates, prices paid for FHA-insured 6% loans with 30-year maturity and minimum down payment rose from $93.20 per $100 of loan in December 1966 to $94.80 in September 1967.

Federal Housing Administration

HOUSTON

Houston, Texas' largest city (1965 est. pop.: 1,100,000), maintained in 1967 the high rate of growth that has made it the nation's sixth largest city (after New York, Chicago, Los Angeles, Philadelphia, and Detroit).

The Houston metropolitan area, which consists of Brazoria, Fort Bend, Harris, Liberty, and Montgomery counties, shared in this growth, both economically and in population (July 1, 1966 est. pop.: 1,740,000). The Port of Houston continued to be the nation's third largest port, with an annual tonnage exceeded only by New York and New Orleans.

In August the National Aeronautics and Space Administration announced the appointment of 11 new astronauts, most of whom reported for duty at the Manned Spacecraft Center near Houston.

Employment and Earnings. The number of employed persons in the Houston area stood at 642,200 in October 1967, compared with 627,600 in October 1966. Of these, the largest numbers were employed in wholesale and retail trade (173,000) and manufacturing (127,400). Next, in order, were services (90,600), government (71,300), and contract construction (63,400). The weekly earnings of production workers on manufacturing payrolls averaged $133.88 in October 1967, compared with $129.08 a year earlier.

Construction. The Houston Chamber of Commerce reported that the city ranked third nationally in dollar value of contract construction during 1967. The total (a record) was $706.3 million. Another $400 million in petrochemical and refinery construction within the metropolitan area gave a 1967 total of more than $1.1 billion.

The multimillion-dollar Convention and Exhibition Center in the downtown Civic Center complex was completed and formally dedicated. Construction started on a 100-acre amusement complex, Astroworld, which is expected to open in 1968 as a part of the Astrodome-Astrohall Exhibition Center facilities.

Student Riot. One policeman was killed and two policemen and a student were injured in the early morning hours of May 17, when police and students exchanged gunfire during a riot at Texas Southern University, a predominantly Negro state-supported institution in Houston. The officers who were struck by bullets were members of a group proceeding toward a dormitory from which shots had been fired at them. More than 450 students were arrested, and felony charges were filed against 5, who later (June 2) were convicted. The riot grew out of a rally held on the evening of May 16 to urge picketing of a nearby public school in protesting alleged unequal punishment of Negro and white pupils.

Cassius Clay Trial. On June 20 a federal jury in Houston convicted Cassius Clay, deposed heavyweight boxing champion, of violating U. S. Selective Service laws by refusing to be drafted. He was given the maximum sentence of 5 years in prison and a $10,000 fine and later released on bond. Clay had refused to be inducted into the Army on April 28 in Houston (his official residence at the time) on the ground that he was a full-time Black Muslim minister and thereby exempt. S. R. B.

HOVING, Thomas P. F. See biographical sketch under ART.

HUMPHREY, Hubert Horatio

Vice president of the United States: b. Wallace, S. Dak., May 27, 1911.

Vice President Humphrey experienced another strenuous year in 1967 as President Johnson continued to place heavy responsibilities on his shoulders. He served as a spokesman for the administration throughout the nation and in other parts of the world. His chief task was to combat criticism of Johnson's policies and rebuild support for them.

Vietnam. The defense of administration policies in Vietnam remained at the top of Humphrey's agenda. He maintained that U. S. security was threatened by developments in Southeast Asia and charged that critics of the war were prolonging the struggle by leading the enemy to believe that Americans would soon accept their terms for peace. The vice president insisted that U. S. military efforts in Vietnam were an effective and essential means of obtaining an acceptable settlement there.

UPI

VICE PRESIDENT HUMPHREY joins group singing in a refugee village during a tour of South Vietnam in October.

The Cities. Humphrey did not neglect the major problems in U. S. urban centers. He asserted that the nation could attack problems at home even while waging a costly war in Asia, and he criticized congressmen intent on reducing domestic spending. When riots erupted in the cities in the summer, he called for a "Marshall Plan" to meet the social and economic evils that he regarded as the source of the violence. He sought to draw business leadership into the battle against urban poverty and helped two Negro Democrats win election as mayors of Gary, Ind., and Cleveland, Ohio.

The Democratic Party. The vice president also devoted some of his seemingly boundless energy to problems within his party. He sought to strengthen party organization and block Democratic participation in anti-Johnson movements. He tried unsuccessfully to dissuade Sen. Eugene McCarthy of Minnesota from seeking to replace Johnson as the party's candidate. Once a hero of the liberal movement, Humphrey had become an alien to many of its members. He criticized them for cutting themselves off from the President.

Foreign Travel. The vice president made four major trips outside the United States in 1967. In March and April he spent two weeks conferring with leaders in Europe. He traveled to South Korea for the inauguration of President Park Chung Hee on July 1 and, late in October, returned to Asia to participate in inauguration ceremonies in South Vietnam and to visit Malaysia and Indonesia. At the end of the year he journeyed to Africa in the hope of providing evidence of U. S. interest in that continent.

Prospects. Whatever Humphrey's standing among liberals, Johnson apparently was pleased with his lieutenant and, as the year ended, Humphrey's political future seemed to depend primarily on the fate of his chief.

Background. Hubert Humphrey earned degrees at the University of Minnesota and the University of Louisiana. In the early 1940's he served in the Work Projects Administration and the War Manpower Commission. Humphrey was elected mayor of Minneapolis in 1945, and was elected to the U. S. Senate in 1948. Frustrated in his bid for the Democratic presidential nomination in 1960, he became Senate majority whip the following year. In 1964, President Johnson selected Humphrey for the vice presidency.

University of Missouri

HUNGARY

The attention of Hungary's leaders was absorbed chiefly by internal affairs in 1967. Hurried preparations were made for the institution of the New Economic Mechanism, to be effective on Jan. 1, 1968. In foreign affairs, János Kádár, first secretary of the Hungarian Communist party, promoted Danubian economic cooperation and followed the Soviet Union's leadership closely.

Internal Affairs. The year began with several shifts in official leadership. Ferenc Nezvál, minister of justice, was ousted from his post and from the Communist party's central committee. His place was taken by Mihaly Korom. A strong advocate of economic reform, István Szurdi, replaced János Tausz as minister of internal trade. In December 1966 the central committee of the Communist party was expanded to 101 members, and candidate membership was abolished. In 1967 only 58 full members and 17 former candidate members were reelected to the new central committee.

Further changes took place in April 1967 as Jenő Fock took over from Gyula Kállai as premier. Fock, who was deputy premier and who has been a party member for 35 years, said in his inaugural address on April 14 that a complete change in the management of economic affairs would follow. István Dobi also resigned from the chairmanship of the presidential council. He was replaced by Pál Losonczi, former minister of agriculture. The appointment of two new deputy premiers, both economic experts, emphasized the government's determination to reform. They are Miklós Ajtai, a former chairman of the state planning office, and Mátyá Timár, former minister of finance. The two remaining deputy premiers are Antal Apró, an expert on eastern Europe's Council of Economic Mutual Assistance (COMECON), and Lajos Fehér, the government's adviser on agriculture.

Liberalization of political life went hesitantly forward. For the first time since 1947, Hungarians were allowed some choice of candidates for political office. On March 19 there were multiple candidates for 9 of 349 parliamentary districts, and 743 of 84,635 county, district, and local council seats. None of the "opposition" candidates won, but an important precedent was set.

The first session of the new National Assembly, July 12-14, tested the government's earlier promises of a larger role for Parliament in national affairs. Delegates voiced criticisms of the use of governmental decrees, complained about some aspects of the reforms, and demanded more power to legislate.

In other, less liberal, moves, the government pressed its prosecution of spies, counter revolutionaries, and former war criminals. Death sentences were given to János Hamusics, who blew up a railway line on March 28, 1966, and to three ex-members of the fascist Arrow Cross party for war crimes in 1944–45. The anticlerical campaign, begun in 1966, continued. József Cardinal Mindszenty's asylum in the U. S. embassy in Budapest was still an embarrassment to the Kádár regime and a stumbling block to a Vatican accord. In the summer of 1967, Cardinal Mindszenty announced his wish to leave his asylum in the fall. However, at the request of the Vatican, he did not carry out his plan.

Economic Developments. Preparations for the New Economic Mechanism were made throughout 1967. To reduce bureaucratic interference and expenses,

Crops (metric tons, 1966): Maize, 3,907,000; sugar-beets, 3,569,000; potatoes, 2,433,000; wheat, 2,202,000.
Minerals (metric tons, 1966): Lignite, 25,992,000 (ranks 5th among world producers); bituminous coal, 4,356,000; crude petroleum, 1,704,000; bauxite, 1,428,000; iron ore, 746,000; lime (1965), 709,274; manganese ore (1965), 175,960; natural gas, 1,518,000,000 cubic meters.
Foreign Trade (1966): *Exports*, $1,593,000,000 (chief exports, 1965: nonelectrical machinery, $202,273,000; transport equipment, $176,594,000; electrical machinery, $110.939,000; iron and steel, $101,627,000); *imports*, $1,565,000.000 (chief imports, 1965: nonelectrical machinery, $253,581,000; transport equipment, $110,530,000; iron and steel, $103,041,000). *Chief trading partners* (1965): USSR (took 36% of exports, supplied 38% of imports); Czechoslovakia (took 12% of exports, supplied 9% of imports).
Transportation: *Roads* (1964), 18,169 miles (29,240 km); *motor vehicles* (1965), 99,395; automobiles (1964), 35,000; *railways* (1965), 5,036 miles (8,103 km); *state airline*, Hungarian Air Lines; *principal airport*, Budapest.
Communications: *Telephones* (1966): 566.026; *television stations* (1965), 11; *television sets* (1965), 831,000; *radios* (1965), 2,484,000; *newspapers* (1965), 24.

the directorates of the Motor and Tractor Industry Trust and four other industrial trusts were abolished. This was followed by the industry-wide amalgamation of several service, industrial, and agricultural trusts. Staff reductions of up to 50% were required of a number of government ministries.

The Hungarian economy improved slightly in 1967. More consumer goods—imported and domestic—were on sale. About 49 billion forints—7% more than in 1966—were invested in the economy.

Several less-productive coal mines were closed so that richer ones could be more heavily mined. Work was begun on a 10 billion forint system of dams, navigation locks, and power stations on the Tisza River. From the new petroleum fields near Szeged, Hungary hopes to produce 20 million tons of crude oil and 25–30 billion cubic meters of natural gas over the next 20 years. In 1966 Hungary produced about 1.7 million metric tons of crude oil and more than 1.50 billion cubic meters of natural gas.

Farm problem remains unsolved. State and collective farms, which control 67.4% of arable land, yield only 44% of the gross national agricultural product. To encourage more peasant cooperation and greater efficiency, the collectives were given more freedom to sell directly to restaurants, retailers, state agencies, and other collectives. They were even allowed to export produce.

Foreign Affairs. Hungarian-Soviet relations were very cordial in 1967. János Kádár criticized Communist China and called for an international Communist party conference to deal with Chinese "bourgeois" isolationism and nationalism. The Hungarians supported the Soviet Union in the meeting of European Communist parties at Karlovy Vary, Czechoslovakia, April 24–26, and signed a new pact of friendship with the USSR on September 7.

Kádár promoted Danubian economic cooperation and signed scientific and technical exchange agreements with several neighboring states. Foreign Minister János Péter stated that cooperation between "those living on the border between two social systems . . . could be an important factor in the development of European peace and the system of European security."

Relations with the United States continued to be cool despite President Johnson's policy of conciliation toward the East European bloc. The Vietnam conflict and the Israeli-Arab war of 1967 made improvement of relations difficult.

WAYNE S. VUCINICH
Stanford University

HUNTING AND FISHING

In 1967 the Department of the Interior reported that hunters and fishermen spent more than $139 million for over 42 million state hunting and fishing licenses, tags, permits, and stamps in the fiscal year ended June 30, 1966. There was a decrease of 1,436,897 hunting and 807,486 fishing sales, but the payments for licenses reached new highs of over $64 million and $75 million, respectively.

Federal Activities. The Bureau of Sport Fisheries and Wildlife's activities are grouped under four categories: recreation; environmental research, rehabilitation, and improvement; Indians and territories; and forage and timber.

Over 80% of the bureau's funds and almost 70% of its manpower were allotted in 1967 to the provision of recreational opportunities in the areas of fish and wildlife. Activities included research programs, river basin studies, waterfowl habitat acquisition and management, and hatchery fish production.

Environmental research programs were concerned with animal population control, pesticide review, mining area restoration, and the protection of rare and endangered species. Benefits from these activities include safer surroundings, protected investments, and more places of beauty.

Studies under way in 1967 were expected to enhance and conserve the fish and wildlife resources on Indian lands and to increase economic benefits. Better timber management produced salable products amounting to about 520,000 cubic feet on 65 refuges in 1967.

Tuna Research. The Woods Hole Oceanographic Institution (in 1954) and the Fisheries Research Board of Canada (in 1964) initiated marking programs to define the migratory cycles, populations, and growth rates of several large pelagic species. A joint report in 1967 presented a significant result concerning the transatlantic migration of young bluefin tuna. A study of 16 tags revealed that these had been attached to transatlantic migrants in a relatively small area, the New York Bight area, during July and August of 1966. The tuna were closely grouped when recaptured by French and Spanish fishermen in the Bay of Biscay. Except for one taken in October, the fish were caught once again in the summer months. Thus the distance between release and recovery was practically the same for each fish.

The times at large were nearly five years for two fish and averaged just over one year for the others. This signified that the ocean crossing for the latter must have been mainly between summers. Size data indicated their ages to be from two to three years.

Waterfowl. Despite a small spring increase in the duck breeding population, rapidly deteriorating nesting conditions due to drought on the Northern Prairies reduced fall flights. The 1967–68 waterfowl regulations, which all states use in selecting their hunting seasons, reduced the Atlantic and Mississippi flyway seasons by five days; and provided more protection for mallards in the Atlantic and Mississippi flyways, canvasbacks in all flyways, black ducks in the Atlantic flyway, and wood ducks in the Mississippi and Central flyways.

Fishing Records. *Field & Stream* magazine issued the first world record for redeye bass: 6 pounds ½ ounce, caught by Thomas E. Sharpe at Hallawakee Creek, Ala., on March 24.

The International Game Fish Association recognized these saltwater all-tackle records: cod (81 pounds), by Joseph Chesla at Brielle, N. J., on March 15; and Pacific blue marlin, equaling the record (1,100 pounds), by Hale L. Erickson at Kailua, Hawaii, on May 23.

Three changes appear in the American Casting Association's 1967 list of fly and bait casting records; Combined Event Records, Intermediates, Accuracy Flies—William Peters, 198 points; Skish Combined Events, Accuracy Baits for Men—B. L. Farley, 174 points; and Intermediates, All Accuracy—Steve Monnig, 233 points.

ICELAND

The major event of 1967 in Iceland was the parliamentary election in June, but this brought no basic political changes. A variety of reform proposals were considered in the Althing (parliament), most reflecting concern over economic recession.

Domestic Affairs. Althing elections on June 11 slightly increased the majority of Premier Bjarni Benediktsson's coalition of the Independence and Social Democratic parties, and the cabinet remained in office. Several major pieces of legislation were approved by the parliament, such as lowering the voting age to 20 and continuing of economic controls. Subsidies for the fishing industry, modernization of the fishing fleet, and improvement of the fish-processing plants were motivated by grave concern for the plight of Iceland's major industry and chief source of foreign income.

Foreign Policy. Another economic problem was handled at the Nordic prime ministers' meeting at Reykjavik in October. This was the matter of securing landing rights throughout Scandinavia for Loftleidur (Icelandic Airlines). Iceland depends heavily on this company's income, and an expansion in flights would provide increased revenue. The ministers were generally favorable, but decision was deferred to the ministers of commerce. The removal of U. S. troops from the Hvalfjord air base and its transfer to NATO control marked a major improvement in U. S.-Icelandic relations, and the appointment of Karl Rolvaag as U. S. ambassador furthered the good feeling.

Economy. Because of declining world prices for fish and the poor catches of 1966 and 1967, the Icelandic economy faced a major crisis. The 1967 cod catch was the worst since 1914, and the resulting unemployment created many problems. The government supported improvements in the fleet and in the industry in general and provided price subsidies for the fishermen. The foreign reserves were expected to support this investment, although continuing inflation required control measures on wages and prices. No wage increases or new taxes were discussed during 1967.

Cultural and Social Affairs. Among the measures proposed by the Althing were increased pensions for artists and writers and prizes for outstanding productions. The gift of a priceless medieval manuscript for Iceland's national museum and news of the impending return of the medieval Icelandic documents from Denmark occasioned real celebrations. The decision to convert to right-hand driving in 1968—against the advice from Swedish experts, caused no rejoicing but led to heated argument.

IDAHO

Politics and forest fires dominated the headlines in Idaho in 1967. Donald Samuelson, the new conservative Republican governor, was inaugurated on January 2, and the newly reapportioned, Republican-dominated legislature convened the same day.

Legislation. Governor Samuelson, who had objected to executive leadership when he was a state senator, did not submit an itemized budget for six weeks but set a 10% increase (from $136 million to $152 million) as his goal. The legislature finally decided on a figure of about $159 million.

This lack of direction by the governor, together with a state Supreme Court decision declaring unconstitutional a law that taxes utilities at 40% of true value while taxing other property at only 20%, combined to produce a record 89-day session. Eventually the tax law problem was settled by allowing an adjustment to be effected over a 10-year period.

The legislature increased appropriations for higher education by 25% but gave public schools only a 5% increase. However, the lawmakers voted to include teachers in the new state retirement system and charge the $6.5 million cost to the state.

A bill was passed providing for phasing out of the inventory tax over a 4-year period, the loss of income to local governments to be made up with one fifth of the revenue from the 3% general sales tax. A new municipal code was enacted, allowing only one class of city and only the mayor-council and commission forms of government. Another new law raised the legal marriage age for boys from 18 to 21, and another changed the date of elections in odd-numbered years from May to November. Eight constitutional amendments were prepared for submission to the voters in 1968. These include pro-

Area: 83,557 square miles (216,413 sq km).

Population: 699,000 (July 1, 1967 est.).

Chief Cities (1965 est.): Boise, the capital, 54,500; Pocatello, 42,500; Idaho Falls, 38,000; Twin Falls, 21,000; Nampa, 19,600; Coeur d'Alene, 14,800; Caldwell, 13,500.

Government: *Chief Officers*—governor, Donald Samuelson, (Republican); lt. gov., Jack M. Murphy (R); secy. of state, Pete T. Cenarrusa (R); atty. gen., Allan G. Shepard (R); treas., Marjorie Ruth Moon; supt. of pub. inst., D. F. Engelking; chief justice, C. J. Taylor. *Legislature* (convened Jan. 2, 1967): Senate, 35 members (22 Republicans, 13 Democrats); House of Representatives, 70 members (39 R, 31 D).

Education: *School enrollment* (1965–66)—public elementary, 100,170 pupils (3,650 teachers); public secondary, 83,387 pupils (3,530 teachers); nonpublic, 10,300 pupils (410 teachers); college and university (fall 1965), 20,788 students. *Public school expenditures* (1965–66)—$64,789,000 ($388 per pupil); average teacher's salary, $5,685.

Public Finance (fiscal year 1965): *Revenues*, $196,195,000 (motor fuel tax, $17,600,000; federal funds, $56,374,000). *Expenditures*, $182,239,000; (education, $47,069,000; health, welfare, and safety, $28,469,000; highways, $58,701,000). *State debt*, $1,111,000 (June 30, 1965).

Personal Income (1966): $1,704,000,000; average annual income per person, $2,445.

Public Assistance (fiscal 1967): $17,431,666 to 18,855 recipients (aged, $3,168,961; dependent children, $6,006,355).

Labor Force (employed persons, calendar year 1966): *Agricultural*, 50,200; *nonagricutural* (wage and salary earners), 267,900 (19.3% manufacturing, 24.4% trade, 22.7% government). *Unemployed persons* (1966)—11,100.

Manufacturing (1965): Value added by manufacture, $436,362,000 (transportation equipment, $6,850,000; lumber and wood products, $101,698,000; nonelectrical machinery, $5,437,000; chemicals and allied products, $95,046,000; food and products, $129,441,000).

Agriculture (1966): *Cash farm income*, $579,543,000 (livestock, $239,854,000; crops, $302,110,000; govt. payments, $37,579,000). *Chief crops* (tons)—potatoes, 3,302,500 (ranks 1st among the states); sugar beets, 2,322,000 (rank, 3d); hay, 3,123,000; wheat, 1,148,340; barley, 562,440.

Mining (1966 est.): *Production value*, $105,609,000. *Chief minerals* (tons)—sand and gravel, 9,500,000; stone, 1,500,000; lead, 68,865; zinc, 60,490; clays, 44,000; silver, 19,382,000 troy ounces; gold, 4,043 troy ounces.

Fisheries (1965): *Commercial catch*, 1,394,000 pounds ($75,000,000).

Transportation: *Roads* (Dec. 1966), 53,591 miles (86,228 km); *motor vehicles* (1966), 486,289; *railroads* (1966), 2,956.1 line miles (4,756 km) *airports with scheduled services* (1967), 9.

Communications: *Telephones* (1966), 276,900; *television stations* (1967), 6; *radio stations* (1967), 43; *newspapers* (1967), 11 (daily circulation, 133,797).

visions for annual legislative sessions and for allowing legislators to set their own salaries. On June 19 the legislature held a special session to appropriate funds to meet an emergency in the public assistance department, caused by the legislature's failure to appropriate money to match federal funds.

Forest Fires. Idaho was plagued by forest fires during an extremely dry August and September, and fire-fighting funds soon were exhausted. Governor Samuelson asked President Johnson to declare Idaho a disaster area, but the President refused because human life was not threatened. Intervention by Sen. Frank Church brought a $250,000 appropriation.

Attempted Recall of Senator Church. On May 7 a local right-wing group known as the Committee for Victory in Vietnam filed initiatory recall papers against Idaho's senior U. S. senator, Democrat Frank Church. The move was inspired by the senator's opposition to escalation of the war. The filing of the papers led immediately to the question of whether a state's recall laws can be used to remove a U. S. senator or representative. Acting on his opinion that it could not be so used, Idaho's attorney general advised the secretary of state not to accept the papers. The group then sought to compel acceptance, but a U. S. district judge ruled on September 30 that state recall of a U. S. senator would violate the provision of the U. S. Constitution that Congress shall be the sole judge of its members.

University of Idaho

ILLINOIS

The question of open housing was a major issue in Illinois in 1967, particularly in the 75th General Assembly which convened on January 4. Although the Assembly was newly reapportioned on a "one man, one vote" basis, there was no evidence that such apportionment resulted in more "urban legislation" than in previous sessions. One indication of this was the fate of the open-occupancy question.

Open Housing. When the Assembly failed to pass any occupancy law in its regular session the issue was renewed in a fall session, but all attempts to introduce such legislation were blocked. Some civil rights groups sought unsuccessfully to have Congress withhold approval of Weston, Ill., as the site of the Atomic Energy Commission's proposed atom smasher (see below), pending the state's adoption of open-housing legislation.

In September there were rock-throwing incidents, curfew violations, and a number of arrests in Aurora when the City Council rejected a fair housing ordinance. Despite inaction by the state legislature and certain city councils, the number of Illinois communities with open housing ordinances reached 26 by the end of the year. The village trustees of Weston had passed a fair-housing ordinance in February. These 26 communities represent almost half the total population of the state.

Stevenson 3d; supt. of publ. instr., Ray Page; chief justice, Ray I. Klingbiel. *Legislature*—General Assembly (convened Jan. 4, 1967): Senate, 58 members (38 Republicans, 20 Democrats); House of Representatives, 177 members (99 R, 78 D).

Education: *School enrollment* (1965–66)—public elementary, 1,411,403 pupils (52,622 teachers); public secondary, 751,597 pupils (36,199 teachers); nonpublic, 599,100 pupils (17,970 teachers); college and university (fall 1965), 305,107 students. *Public school expenditures* (1965–66)—$1,165,000,000 ($612 per pupil); average teacher's salary, $7,123.

Public Finance (fiscal year 1966): *Revenues*, $1,864,774,166 (3.5% sales tax, $665,969,050; motor fuel tax, $180,295,892; federal funds, $427,975,498.) *Expenditures*, $2,083,010,353 (education, $653,148,258; health, welfare, and safety, $663,981,143; highways, $607,488,982). *State debt*, $376,730,500 (June 30, 1966).

Personal Income (1966): $38,089,000,000; average annual income per person, $3,532.

Public Assistance (fiscal year 1967): $306,201,563 to 418,903 recipients (aged, $64,469,542; dependent children, $152,809,612).

Labor Force (employed persons, June 1967): *Agricultural*, 169,000; *nonagricultural* (wage and salary earners), 4,649,800 (29.8% manufacturing, 19.3% trade, 12.2% government). *Unemployed persons* (June 1967)—155,000.

Manufacturing (1963): Value added by manufacture, $14,640,121,000 (transportation equipment, $601,088,000; primary metals, $1,176,747,000; nonelectrical machinery, $2,264,672,000; electrical machinery, $1,806,838,000; fabricated metals, $1,366,458,000; food and products, $2,059,037,000).

Agriculture (1966): *Cash farm income*, $2,884,144,000 (livestock, $1,326,109,000; crops, $1,436,982,000; govt. payments, $121,053,000). *Chief crops* (tons)—corn for grain, 23,392,320 (ranks 2d among the states); soybeans, 4,461,156 (rank, 1st); hay, 3,784,000; wheat, 1,751,520; oats, 870,720; apples, 49,200; rye, 16,464.

Mining (1966): *Production value*, $644,000,000. Chief minerals (tons)—bituminous coal, 63,212,697; stone, 47,200,000; sand and gravel, 37,251,000; clays, 2,100,000; fluorspar, 176,175; crude petroleum, 61,982,000 barrels.

Fisheries (1965): *Commercial catch*, 7,492,000 lbs. ($682,000).

Transportation: *Roads* (Dec. 1966), 128,389 miles (206,578 km); *motor vehicles* (1966), 4,945,701; *railroads* (1965), 11,005 track miles (17,710 km); *airports with scheduled service* (1966), 67.

Communications: (1966): *Telephones*, 5,823,300; *television stations*, 21; *radio stations*, 190; *newspapers*, 83 (daily circulation, Sept. 1965, 3,863,426).

UPI

MILK DUMPING by farmers in Illinois was part of a concerted effort in March by members of the National Farmers Organization to obtain a higher price for milk.

Legislative Action. Although open housing was of major concern, it was not the only legislative issue. The Republican-controlled Assembly instituted a number of procedural changes designed to make the legislative process more effective and to avoid the typical late-session logjam. For the first time in 50 years the Assembly did not adjourn indefinitely at the end of its regular biennial session on June 30. Sessions were held in the fall to review gubernatorial vetoes and to consider a small number of new bills, and another session was planned for March 1968.

Almost 20% more bills were introduced in the 1967 session than in the 1965 session. More than 2,200 bills were enacted into law—an increase of 13% over enactments in the previous session. Noteworthy measures signed into law included a registration bill for owners of firearms and legislation relating to low-income housing. Not passed was a gubernatorial proposal to raise additional revenue by broadening the sales tax to cover certain services. Instead the sales tax was increased by 1% (from 4% to 5%) and extended to only a few services. Utility, motor fuel, and cigarette taxes also were raised. Illinois cities were given an additional 0.25% of the sales tax increase, thus bringing the cities' share to 0.75% of the 5% tax.

Two significant proposals passed by the Assembly are subject to referendum, to be voted on at the 1968 general election. One is a $1 billion bond issue to alleviate the statewide problem of water pollution. The other is a constitutional convention to modernize the state constitution, which was adopted in 1870.

Politics. There were no major elections in Illinois in 1967 with the exception of the mayoralty election in heavily Negro-populated East St. Louis—where the incumbent Alvin Fields received approximately 70% of the vote against Negro challenger Elmo Bush—and the election in Chicago (see CHICAGO).

As the year ended there was increased speculation about important races that are expected in 1968. U. S. Sen. Everett M. Dirksen (Republican), the Senate minority leader, will stand for reelection to another 6-year term. The governor's office also will be contested, but it was not clear whether Gov. Otto Kerner would seek a third term. Governor Kerner received wide publicity as a result of his appointment by President Johnson on July 27 as chairman of the Special Presidential Advisory Commission on Civil Disorders.

Civil Disturbances. A number of Illinois cities experienced sporadic incidents of racial disturbance in 1967. Governor Kerner sent National Guardsmen into Cairo, a small city at the southern tip of Illinois, when charges of police brutality developed into three nights of rioting there in mid-July. Complaints that there were no Negroes in a homecoming queen contest led to disturbances in a high school in Maywood, a suburb of Chicago. Racial incidents also occurred in Waukegan, Evanston, Peoria, Rockford, Elgin, and Madison.

Teachers' Strikes. In East St. Louis, 600 of the school system's 850 teachers went on strike before the 1967–68 school year began. The striking teachers, members of a local affiliate of the American Federation of Teachers, returned to the classrooms on September 12 after agreeing with the board of education to submit the salary issue to a fact-finding committee.

Atom Smasher. The Atomic Energy Commission authorization bill, which was signed in July by President Johnson, included a $7.3 million allocation for planning the proposed atom smasher at Weston. In October, Governor Kerner appointed a nine-man group to clear the way for state acquisition of a 6,800-acre site for the facility. (See also ATOMIC ENERGY.)

SAMUEL K. GOVE
University of Illinois

IMMIGRATION

A record number of persons were inspected and admitted into the United States during the fiscal year ending June 30, 1967. The all-time high of more than 206,800,000 persons exceeded the previous year's figure of 197,000,000 by 5%. Multiple crossings over the Canadian and Mexican land borders, and multiple landings of crewmen, accounted for 96% of the total number of persons admitted. Alien admissions exceeded 120,000,000, while U. S. citizen admissions totaled 86,600,000.

Immigration Regulation. The Immigration and Nationality Act of Oct. 3, 1965, set a numerical limitation of 170,000 imigrants for countries outside the Western Hemisphere. After a transition period ending June 30, 1968, there will be an annual ceiling of 120,000 immigrants for countries of the Western Hemisphere, if not provided otherwise by Congress. Within the numerical limitations, priority preferences are made for relatives of citizens and resident aliens, and aliens with talents and skills needed in the United States.

Until July 1, 1968, visa numbers not used in one year are placed in a pool from which preference visa numbers may be drawn in subsequent years. The act exempts from numerical limitations "immediate relatives" (children, spouses, and parents of U. S. citizens) and "special immigrants," which includes natives of the Western Hemisphers, returning resident aliens, ministers of religion, and others.

Section 212(a)(14) of the Immigration and Nationality Act of 1952, as amended by the act of Oct. 3, 1965, provides that aliens who are coming to the United States to be gainfully employed are ineligible for the issuance of an immigrant visa unless the secretary of labor has certified that there is a shortage of qualified workers in the fields in question in the United States and that the alien's employment will not adversely affect the wages and working conditions of persons employed in similar occupations in the United States.

TABLE 1—IMMIGRANT ALIENS ADMITTED TO THE UNITED STATES
(Year ended June 30, 1967)

Country or region of birth	Total admitted	Quota immigrants	Nonquota immigrants
All countries	361,972	153,079	208,893
Europe	139,514	102,871	36,643
Austria	1,101	804	297
Czechoslovakia	1,406	1,042	364
Denmark	1,158	881	277
France	3,440	2,035	1,405
Germany	16,041	7,353	8,688
Greece	14,905	11,986	2,919

Immigrants. A total of 361,972 aliens were admitted to the United States for permanent residence in the fiscal year 1967. This exceeded the 1966 figure by 12% and was the largest number admitted since 1924, the last fiscal year before an annual quota of 163,000 was established. Of the total, 290,007 obtained immigrant visas abroad and were newly admitted, while 71,965 were already living in the United States and adjusted their status. Cuban refugees qaulifying for benefits under the Cuban Refugee Act of Nov. 2, 1966, accounted for 25,752 of the total number of adjustments.

Immigrants exempt from numerical limitations totaled 208,893. Included were 46,904 "immediate relatives" and 126,370 "special immigrants," most of whom were natives of Western Hemisphere countries. The 18% decrease in "special immigrants" is due largely to the labor certification requirement, which often cannot be met by applicants in unskilled or semiskilled occupations. Parents of U. S. citizens numbered 8,803, compared with 3,799 in 1965 when, before the new law was passed, they were subject to quotas.

Immigrants subject to numerical limitations totaled 153,079. This increase of 18% over the fiscal year 1966 is accounted for in large measure by the relative preferences and visa pool provisions of the 1965 act. Countries of southern Europe and Asia benefited most by these provisions. During the year, 79,672 close relatives of U. S. citizens and permanent resident aliens were admitted to the United States under preference provisions, a 31% increase over 1966.

Under the occupational preference provisions, a total of 14,885 aliens with professional skills or other needed occupations were admitted in the fiscal year 1967. They were accompanied by 10,478 spouses and children. Within the preferential categories, 6,651 refugees were also admitted into the United States or adjusted their immigration status. Immigrants admitted under the Immigration and

Nationality Act's limitation of 170,000 within the nonpreference categories declined from 53,700 in 1966 to 40,635 in 1967, indicating a growing use of the preference provisions of the law.

Nonimmigrants. Nonimmigrants are aliens admitted to the United States for temporary periods of time. Exclusive of the multiple entries at land borders and of alien crewmen, 2,608,193 nonimmigrants came to the United States as tourists, students, exchange visitors, aliens in transit, and representatives of foreign governments. This was an 11% increase over the fiscal year 1966. Tourists, mostly from Canada, Mexico, the United Kingdom, and Germany numbered 1,628,638. Students totaled 63,370; exchange visitors, 38,630; temporary workers and trainees, 70,010; aliens in transit, 204,936; visitors admitted on a temporary basis to conduct business with U. S. firms, 220,361; and foreign government and NATO officials, 45,358.

Deportable Aliens. The number of deportable aliens located was 161,608, a 17% increase over 1966. About half (81,283) were aliens who became deportable by violating the status for which they were admitted. The remainder (80,325) were aliens who entered the United States illegally. Mexican aliens accounted for 67% of all deportable aliens located. Aliens deported numbered 9,260, and those required to depart without formal proceedings totaled 142,343.

Naturalizations. In the fiscal year 1967, 104,902 persons were naturalized. Included were 78,544 persons whose petitions were granted under the general provisions of the law; 23,518 spouses and children of U. S. citizens; 2,691 who entered under special provisions for military personnel; and 149 others. Certificates of citizenship were awarded to 15,918 children born abroad to American parents and to 17,205 persons who acquired citizenship through the naturalization of parents.

Commissioner of Immigration and Naturalization
U. S. Department of Justice

INCOME

National income in the United States increased at a much slower pace in 1967 than it had during any of the three preceding years. National income is the aggregate earnings of labor and property that are derived from the current production of goods and services by the nation's economy.

The slowing in the growth of national income reflected a drop in output during the opening quarter of the year as business firms sharply reduced the rate at which they added to inventories. Production recovered modestly during the second quarter, and, despite widespread strikes, it expanded vigorously in the second half of the year.

The first-half weakness in production held down the contribution of real output to the growth in national income. Increases in final-product prices, however, were larger in 1967 than in 1966, and they contributed a larger share to the observed growth in national income during 1967 than in 1966. Because of accelerated price rises and the resumption of economic expansion in the second half of 1967, there was widespread public debate on the adoption of appropriate fiscal and monetary policies to moderate inflation without inhibiting economic growth.

National Income. The national income of the United States, about $650 billion in 1967, was 5.3% higher than in 1966. National income had risen 9.6% in the previous year, when economic growth had been more vigorous.

NATIONAL INCOME BY TYPE OF INCOME, 1964-67
(In billions of dollars)[1]

	1964	1965	1966	1967
National income	$518.1	$562.4	$616.7	$649.6

Source of data: Office of Business Economics, U. S. Department of Commerce.

Almost all types of income grew at a slower pace in 1967 than in 1966. Employee compensation, at $469.6 billion, was up only 7.78% in 1967, compared with a 10.5% gain registered in 1966. Nonfarm proprietors' income, at $43.6 billion, was up less than 1% in 1967; in 1966 these earnings had risen 3.25%. Net interest, at $22.4 billion, rose 10.75% in 1967; the previous year it had increased 12.75%. Farm proprietors' income did not rise in 1967; at $14.8 billion it was 8.1% below 1966. In 1966 farm income had risen 8.75%.

Corporate profits also fell in 1967. Corporate earnings of $79.1 billion were 3% lower than they had been in 1966; in the previous year profits had risen 9.75%. The only exception to the general weakening in the rate of growth of income in 1967 was the rental income of persons, which at $20.1 billion was up 3.75%, contrasted with a 2.25% gain in 1966.

Personal Income. The slowdown in the rate of increase in national income was not fully carried through to personal income, which is the current income received by persons from all sources, inclusive of transfers from government and business. Personal income, at $626.3 billion in 1967, was 7.25% above the previous year; in 1966 the rate of increase had been 8.5%. Personal income performed better than national income in 1967 for these reasons:

(1) A large share of the slowdown in national income was absorbed by the drop in corporate profits, which is not a component of personal income.

(2) Despite the drop in corporate profits, corporations stepped up their dividends by 6% to $22.8 billion.

(3) Transfer payments, at $51.9 billion in 1967, were 18.5% above 1966, while the 1966 rate of gain in transfer payments had been 10.5%.

Personal tax payments grew at a much slower pace relative to personal income than they had during 1966, because the transition to a graduated withholding system in 1966 reduced the volume of final settlements required in 1967. As a result, disposable personal income (the income of persons available for spending or saving) at $544.6 billion was 7.04% above 1966, a gain slightly below the 7.75% rise registered in 1966.

Although disposable personal income was well maintained, personal consumption expenditures rose much less than in 1966: at $491.6 billion in 1967, such outlays were up only 5.52% over 1966. In contrast, they had risen 7.5% in 1966. The fast rise in disposable personal income (faster than in consumption expenditures) was reflected in sharp gain in personal saving: at $38.7 billion in 1967, saving was up 29.8% over the 1966 figure, and the saving rate moved up from 6% to 7% of disposable personal income. This latter saving rate had not been recorded for a full year since 1958.

PERSONAL INCOME
BY STATES AND REGIONS, 1966 and 1967

Region and state	Total personal income[1] (in billions of dollars) 1966	2d quarter 1967[2]	Per capita 1966	Percent of national per capita income 1966

Personal Income, by States. The slowing in the growth of personal income was reflected in the figures for most states. Data for the first half of 1967 show that 36 states and the District of Columbia reported either a slower annual rate of growth than during the full year 1967 or an actual decline in income.

The slowing was particularly marked in the Plains and Southwest regions, where the decline in farm proprietors' income carried an especially heavy weight in holding down total personal income. The Great Lakes region mirrored the national movements in personal income; there a first-half-year slowdown in manufacturing activity and a decline in farm proprietors' income largely offset continued growth from other income sources.

The Mideast and Rocky Mountain regions both reported a better-than-average performance, with income gains during the first half of 1967 outstripping the 1966 rates of growth.

Gross National Product. The slowing in the rate of growth of economic activity during 1967, which led to the relatively small gains in national income, can be analyzed in term of the gross national product (GNP). The GNP is the market value of the output of goods and services produced by the nation's economy GNP rose 5.62% in 1967 to reach a total of $785.1 billion. During 1966, the rate of increase in GNP had been nearly 9%.

GROSS NATIONAL PRODUCT OR EXPENDITURE, 1964-67
(In billions of dollars)[1]

	1964	1965	1966	1967
Gross national product	$632.4	$683.9	$743.3	$785.1
Personal consumption expenditures	401.2	433.1	465.9	491.6
Durable goods	59.2	66.0	70.3	72.1
Nondurable goods	178.7	191.2	207.5	217.5
Services	163.3	175.9	188.1	202.1

Government purchases of goods and services	128.7	136.4	154.3	176.3
Federal	65.2	66.8	77.0	89.9
State and local	63.5	69.6	77.2	86.4

[1] Detail may not add to totals because of rounding of figures. Source of data: Office of Business Economics, U. S. Department of Commerce.

The 1967 slowdown in the rate of growth in GNP reflected principally a marked reduction in the rate at which inventories were accumulated. Inventory accumulation totaled $5.1 billion in 1967, an amount only two fifths as large as the addition to inventories in 1966. Fixed investment outlays also expanded less in 1967 than in 1966; at $107 billion, such investment was up 2.29% in 1967, compared with a 6.71% rise in the previous year.

The weakness in some market categories, including personal consumption, was partially offset by faster growth in government purchases and in net exports. Federal government purchases, at $89.9 billion in 1967, were 16.75% above 1966; these outlays had risen 15.25% in the previous year.

The step-up in federal purchases occurred in the nondefense portion. Although defense spending was the fastest-rising component of GNP, its rate of growth did not accelerate over 1966. State and local governments purchased $86.4 billion of goods and services, 12% more than in 1966, when such outlays had risen 11%. Net exports, at $5 billion, were virtually unchanged from the 1966 rate; in 1966 they had declined.

RAGHUBIR SINGH, FROM NANCY PALMER

POLLING PLACE in Old Delhi during India's fourth general election, February 15–21. The electorate totaled over a quarter of a billion persons.

INDIA

INDIA

On Aug. 15, 1967, India marked the 20th anniversary of its independence in a rather somber mood. There was a widespread feeling of disillusionment for performance had fallen short of expectations, and the country had experienced a succession of "natural calamities and human failures," to quote President Sarvepalli Radhakrishnan in his eve of Republic Day broadcast on January 25. The mood was somewhat lightened by the end of 1967; but the economic situation remained precarious, and the political outlook, which had been altered greatly by setbacks experienced by the long-dominant Congress party in the February elections, was uncertain.

DOMESTIC AFFAIRS

The fourth general election overshadowed domestic events in India in 1967. Voting was preceded by disorders, and the Congress party's reverses ushered in a new era of political instability. Nevertheless, Prime Minister Indira Gandhi retained her post, and her candidate for the presidency, Zakir Husain, was elected. Long-term issues of ethnic differences and leftist agitation provoked further strife.

Elections. The first weeks of 1967 witnessed the final and most intensive stages of the turbulent election campaign. Shortly before the voting, while addressing an election meeting in Bhubaneswar, Orissa, Prime Minister Gandhi was hit in the face by a stone, and Madhu Limaye, a prominent leader of the Samyukta Socialist party (SSP), was waylaid and beaten. For a time the agitation against the slaughter of cows threatened to develop into a major issue, but this became less significant after a Hindu holy man ended a 73-day fast on February 1.

In several states opposition parties entered into electoral arrangements and alliances. In West Bengal there were two united left fronts: one led by the Left Communists; the other by the Bangla Congress, which split off from the regular Congress party. In Kerala the Left Communists led a 7-party united front, and in Madras a strong state party, Dravida Munnetra Kazhagam (DMK), received support from diverse parties.

Between February 15 and 21 some 61% of the more than 250 million eligible voters went to the polls in the world's largest democratic elections. The balloting went off smoothly, with few irregularities and only isolated acts of violence. When the results

WIDE WORLD

INDIRA GANDHI, reelected prime minister, suffered a broken nose when hit by a stone during an election rally. With her is President Radhakrishnan, who retired in May.

became known, it was apparent that the political scene had been radically transformed.

The Congress party's share of the total popular vote, which had been about 45% in the three previous elections, fell some 5%, and the loss of seats was much greater. In the Lok Sabha (lower house) the Congress majority was reduced by some 80 seats—to 282 out of 520. The main opposition parties were the rightist Swatantra (44 seats), the Jan Sangh (35 seats), the DMK (25 seats), the SSP (23 seats), the Right Communists (22 seats), and the Left Communists (19 seats).

The Congress party found itself without a majority of seats in the legislative assemblies of 8 of the 17 states—Bihar, Kerala, Madras, Orissa, the Punjab, Rajasthan, Uttar Pradesh, and West Bengal—and ruling only a minority of the population at the state level. It fared especially poorly in Kerala and Madras. Many of the top leaders of the Congress party, including its president, K. Kamaraj Nadar, were victims of the electoral "blitz."

After the elections, non-Congress governments of many different political hues were formed in Bihar, Haryana, Madhya Pradesh, and Uttar Pradesh—the last three after the collapse of short-lived Congress governments. In Rajasthan a Congress government was installed only in late April, after five weeks of presidential rule.

Post-Election Politics. Early in March the disorganized Congress party turned to the task of selecting a new prime minister and a new government. In spite of contrary predictions, Mrs. Gandhi was reelected in a contest with Morarji Desai, who was persuaded to accept the posts of deputy prime minister and finance minister.

Early in April, President Radhakrishnan announced his plan to retire on the expiration of his 5-year term in May. There followed a two-way contest for the presidency—first within the top ranks of the Congress party and then between the Congress and the main opposition parties. An influential group within the congress, headed by its president, Kamaraj, wanted Dr. Radhakrishnan to continue, but Mrs. Gandhi led a successful fight to nominate the vice president, Zakir Husain, a prominent Indian Muslim. Then Husain had to face the challenge of Chief Justice K. Subba Rao, the presidential candidate of the major opposition parties. On May 6, Husain was elected by a considerable majority, and V. V. Giri, governor of Mysore, was elected vice president.

Internal Strife. Throughout the year the government was faced with challenges to law and order arising from demonstrations, strikes, and other forms of public protest and mass agitation, although not to the same extent as in 1966. In Kashmir serious riots broke out because of a marriage between a Hindu and a Muslim in August. In Rajasthan many lives were lost after the elections and before the imposition of presidential rule on March 13. On New Year's day 1967, Calcutta was the scene of an

UPI

CHINESE embassy officials in New Delhi are beaten by Indian demonstrators in retaliation for attacks on Indian diplomats in Peking. The incident occurred in June.

unusually serious riot, and after the new United Front government of West Bengal was installed the city became a center of recurrent unrest.

In June and July serious disturbances, apparently organized by Communist agitators, with possible assistance from the Chinese Communists, occurred in Naxalbari, a strategically and politically sensitive area of West Bengal, near Sikkim and Bhutan. Recurrent disturbances also broke out in the Mizo Hills area of Assam and in Nagaland.

On November 21 the central government dismissed the unstable opposition state governments in West Bengal and Haryana, claiming that circumstances there necessitated such a move. Soon after the United Front in the Punjab also fell.

The language issue continued to be a particularly sensitive one. In Hindu-speaking areas tradition-based parties such as the SSP and Jan Sangh demanded speedy changeover to Hindi, while the increased strength of the DMK gave a greater voice to opponents of "Hindi imperialism." On December 16, Parliament passed a bill retaining English as an associate national language (with Hindi, the official language) until all state legislatures agree to give it up. The government plan to replace English as the medium of instruction in universities with regional languages within 5 years led to the resignation of Foreign Minister Mahomedali Currim Chagla, who branded the plan as "hopelessly unrealistic."

Economy. During the first months of 1967 the economic outlook was grim, with the worst conditions in Bihar and eastern Uttar Pradesh. By the end of the year, however, the picture had improved considerably, largely due to the first good monsoon rains in three years and to the effective use of new seeds and fertilizers. It was estimated that food grain production for 1967 reached a record 95 million tons. The government still hoped to achieve self-sufficiency in food production by 1971.

On May 25, Finance Minister Desai presented to Parliament a "realistic" budget, calling for an expenditure of approximately $3.9 billion, nearly 40% of which was for defense. All development spending not directly aimed at increasing food production was drastically curtailed.

The fourth 5-year plan, which officially began on April 1, 1966, was in effect shelved. An annual plan envisaged an outlay of about $2.8 billion in the public sector for 1967–68. As usual, heavy reliance had to be placed on outside aid. In April a 10-nation consortium accepted a target of $1.38 billion for such aid for 1967–68.

In accordance with the recommendations of the administrative reforms commission, the role of the planning commission was considerably reduced, being confined mainly to formulating plans and evaluating performance. The membership of the planning commission was almost wholly changed, with D. R. Gadgil, a well-known economist and frequent critic of Indian planning, assuming the post of deputy chairman on September 1. Mrs. Gandhi took over the portfolio of planning minister from Asoka Mehta, who remained in the cabinet.

FOREIGN AFFAIRS

Relations with Communist China and with Pakistan remained strained. India and the United States differed over foreign policy and other matters. In the Middle East crisis, India took a strong pro-Arab stand. Efforts were made to improve relations with European Communist nations.

Conflict with China. As in previous years, India was the target of military and political pressures from Communist China in 1967. China's explosion of a hydrogen bomb on June 17 was viewed with "grave concern" by the Indian government. In June, India and China engaged in bitter diplomatic exchanges as a result of China's expulsion of two officials of the Indian Embassy in Peking, who were charged with espionage. In retaliation India levied espionage charges against Chinese diplomats in New Delhi, and expelled some of them.

On June 16 several hundred Indian students besieged the Chinese embassy in New Delhi and stoned and beat eight Chinese officials. In September and October, in the area of the Nathu La and

U. S. WHEAT, provided for the relief of famine, being weighed and distributed in Rajasthan, near New Delhi.

RAGHUBIR SINGH, FROM NANCY PALMER

Cho La passes between Tibet and Sikkim, Indian and Chinese troops were involved in the most serious clashes since the border war of 1962.

Relations with Pakistan. On Jan. 10, 1967, the first anniversary of the Tashkent Declaration, and on other occasions throughout the year, Prime Minister Gandhi and other government spokesmen reaffirmed India's desire for cooperation and peaceful relations with Pakistan and expressed regret that, in their judgment, Pakistan had not reciprocated. Further steps were taken to resume contacts that had existed prior to the fighting in 1965.

The Svetlana Case. In March a diplomatic furor was stirred up by the request of Mrs. Svetlana Alliluyeva, daughter of the late Soviet dictator Joseph Stalin, for asylum in the American Embassy in New Delhi and by her departure from India without the knowledge of either Russian or Indian officials. Mrs. Alliluyeva had gone to India on Dec. 20, 1966, with the ashes of her late Indian husband, Brajesh Singh, the uncle of Dinesh Singh, then a minister of state—and later minister of commerce—and a confidant of Prime Minister Gandhi. The Svetlana case was the subject of criticism in the Indian parliament, and it led to Soviet protests to India and Indian protests to the United States. (See also biographical sketch of Mrs. Alliluyeva under UNION OF SOVIET SOCIALIST REPUBLICS.)

Stand on Middle East. In May, as the Israeli-Arab crisis was building, the Indian government protested an Israeli attack on Indian members of the UN Emergency Force, and upheld UAR President Nasser's closing of the Gulf of Aqaba. India was one of the most vocal supporters of the UN Security Council's call for an immediate cease-fire and withdrawal to positions held prior to the outbreak of hostilities and of the draft resolution along these lines adopted by an emergency special session of the UN General Assembly. Its position in this crisis aroused more internal opposition than almost any other foreign policy issue since independence.

Relations with the United States. Mutual criticism and sensitivity upset relations between India and the United States in 1967. Indians were disturbed by delays in American food shipments to India, which eventually amounted to some 6.6 million tons. It was charged that the U. S. Central Intelligence Agency had intervened in India's elections by providing funds for opposition parties and individual members of the Congress party—an allegation denied by U. S. Ambassador Chester Bowles and by all the Indian parties and leaders named.

YOUNG VICTIMS of the famine in Bihar, northwest of Calcutta, listlessly await the distribution of food rations.

RAGHUBIR SINGH, FROM NANCY PALMER

India also objected to the U. S. announcement of April 12 that the ban on military aid to both India and Pakistan would continue, with consideration of requests for spare parts on a case-by-case basis; to trends in the United States toward protectionism and curtailment of foreign aid; and to U. S. conduct of the war in Vietnam. Americans, in turn, were impatient with India's apparent weakness in leadership, failures in economic development efforts, opposition to the nuclear nonproliferation treaty, criticisms of American policies, and position on the Middle East crisis.

Diplomatic Visits. Throughout 1967 many foreign dignitaries visited India, and several Indian leaders made official visits abroad. In June and July, Foreign Minister Chagla visited several countries of Southeast Asia, and in September Deputy Prime Minister Desai toured many countries of Asia and western Europe; he also visited the United States and Brazil for meetings of the World Bank and the International Monetary Fund. In September, Mrs. Gandhi made a state visit to Ceylon, and in October to several countries of eastern Europe, with stops in the Soviet Union and the United Arab Republic.

INDIANA

The 9-week session of the 95th General Assembly, municipal elections, and the outbreak of racial violence in July overshadowed other events in Indiana during 1967.

Legislation. The biennial session of the Indiana General Assembly, which met from January 5 to March 10, produced few significant new measures. Democratic control of the Senate and Republican domination of the House resulted in a political stalemate that was favorable to only modest innovations. The sales tax adopted in 1963, combined with gross income and other established revenues, provided an enlarged tax base which made any major change in tax levies unnecessary.

The 1967 legislature approved a biennial budget of $2.3 billion, compared with $1.7 billion for the previous biennium. Large increases were given to public schools and universities, while lesser increments went to highways and mental health programs. A precedent was established when 8% of the revenue from both sales and gross income taxes was earmarked for return to local governments to help restrain soaring property tax levies. Some revenue was lost through reductions on state income tax returns for donations to colleges and universities.

Reapportionment. Legislative reapportionment, achieved by the 1965 Assembly, gave citizens of urban areas an increased voice in the 1967 session. In a January ruling, however, the U. S. Supreme Court vacated a lower court ruling that upheld the 1965 congressional redistricting act, and ordered the lower court to reconsider the law. Congressional reapportionment became an unresolved bone of contention in the 1967 legislature.

Following the session, a bipartisan committee chosen by the General Assembly made repeated but unsuccessful efforts to break the deadlock. As the year ended, legislative leaders were making another attempt to find a solution.

Elections. In the November 7 elections, Richard D. Hatcher, a Democrat, defeated his Republican opponent, Joseph B. Radigan, by a slim margin to become mayor of Gary, the state's second largest city. His election to the office was the first such victory for a Negro in an Indiana municipality. The election of Negroes to various city councils in November was less unusual.

INDIANA • Information Highlights

Area: 36,291 square miles (93,994 sq km).

Personal Income (1966): $15,230,000,000; average annual income per person, $3,076.
Public Assistance (fiscal year 1967): $51,097,282 to 72,830 recipients (aged, $22,258,787; dependent children, $19,879,376).
Labor Force (employed persons, July 1967): *Agricultural*, 66,900; *nonagricultural* (wage and salary earners), 1,773,900 (36.7% manufacturing, 17.2% trade, 13.6% government). *Unemployed persons* (July 1967)—77,600.
Manufacturing (1963): Value added by manufacture, $7,726,942,000 (transportation equipment, $1,119,585,000; primary metals, $1,456,412,000; nonelectrical machinery, $678,261,000; electrical machinery, $1,125,703,000.
Agriculture (1966): *Cash farm income*, $1,552,758,000 (livestock, $799,691,000; crops, $660,976,000; govt. payments, $92,091,000). *Chief crops* (tons)—corn for grain, 11,088,168 (ranks 3d among the states); soybeans, 2,048.592 (rank, 6th); popcorn, 52,500 (rank, 2d); hay, 2,402,000; wheat, 1,264,560; oats, 293,760; potatoes, 88.850.
Mining (1966): *Production value*, $283.091,950. *Chief minerals* (tons)—sand and gravel, 26,521,056; crushed limestone, 23,873,448; coal, 17,072,941; clay and shale, 2,103,931; cement, 33,631; crude petroleum, 10,616.748 barrels.
Transportation: *Roads* (1967), 90,592 miles (145.763 km); *motor vehicles* (1966), 2.808.505; *railroads* (1966), 6,590 first main line miles (10,605 km); *airports* with scheduled service (1967), 10.
Communications: (1966): *Telephones*, 2,262,200; *television stations*, 18; *radio stations*, 130; *newspapers*, 329 (daily circulation, 3,291,445).

The municipal elections netted further gains for the Republicans, who already held most Indiana towns and cities. Their victories in Indianapolis, the state capital and Indiana's largest city, and in Terre Haute, a longtime Democratic stronghold, however, were largely offset by Democratic triumphs in Gary, Muncie, Richmond, and other cities.

Racial Unrest. On July 25, bands of Negro youths roamed through South Bend, throwing rocks and fire bombs. On the second night of violence, Gov. Roger D. Branigin ordered 1,000 National Guardsmen into the city shortly after Mayor Lloyd Allen had imposed a curfew. By July 28 the situation was under control. Except for the outbreak of violence in South Bend, and state avoided severe and costly urban riots during the year.

Other Events. Cancellation of passenger service on the Monon Railroad in September ended more than a century of service on the famous Hoosier line.

A long-simmering debate on bank interest reached a climax in December when increases made Indiana banks competitive with those of other states.

UPI

INDONESIA

General Suharto and his government continued to struggle with Indonesia's grave political and economic problems throughout 1967. Indonesia resumed its participation in international organizations. Having reentered the United Nations in the fall of 1966, it rejoined the International Monetary Fund on Feb. 21, 1967, and the World Bank on April 13. Indonesia's relations with Communist China steadily worsened during 1967, and in October diplomats from both nations returned home. The year also saw the final fall from power of President Sukarno, after 21 years of leadership.

Sukarno. At the beginning of the year President Sukarno remained a threat to the new regime and its program, but a frontal attack by Suharto on the man who since 1945 had been the charismatic leader of millions of Indonesians would have plunged the country into civil war. Sukarno had strong support in central and eastern Java, as well as in some branches of the armed forces, particularly in the air force, marines, and navy.

During the trials of the leaders of the Oct. 1, 1965, attempted coup, it was divulged that Sukarno knew of and possibly was involved in the plot. It was also charged that he had misappropriated $7 million in public funds. Anti-Sukarno sentiment mounted, and demands that he be brought to trial increased. Committed to constitutional procedures, Suharto wanted the removal of Sukarno to come as an expression of the people's will. At first Sukarno refused to resign, but finally on February 20 he transferred his executive powers to Suharto.

On March 12 the People's Consultative Congress, originally handpicked by Sukarno, formally stripped him of all executive powers and remaining titles, retroactively to February 22. He was also forbidden to engage in any political activities until after the next general election. General Suharto became the acting president and will hold the title until elections for president are held.

Politics. The Suharto government pledged to follow the principles of the revolution as expressed in the *Pantjasila,* the 5-point state philosophy first expressed by Sukarno. It listed Indonesia's guiding principles as belief in God, democracy, social justice, humanitarianism, and nationalism.

UPI

SUHARTO, de facto ruler of Indonesia since March 1966, took over the remaining executive powers from President Sukarno on Feb. 20, 1967, and was appointed acting president by the People's Consultative Congress on March 12. A political moderate, he has aimed his policy at achieving economic stability and preventing a resurgence of Communist forces. Although his foreign policy centers around friendly relations with the West and safeguards against threats from Communist China, his policy is one of nonalignment.

Suharto was born in Djokjakarta, Java, on June 8, 1921. Educated in military schools, he served briefly in the Dutch colonial army before the Japanese occupation and fought in the war for independence from Dutch rule after World War II. Following the establishment of the independent Republic of Indonesia in 1950, he served in various army command posts. As commander in chief of ground and air defenses he led the suppression of the Communist-inspired coup attempt of Oct. 1, 1965, and joined with other generals in establishing a military junta.

In 1967, Suharto failed to stimulate the development of new political parties to oppose the parties that remained from Sukarno's regime. In May the acting president strengthened his government by shifting the top army officers, and in a cabinet reshuffle on October 11, he abolished a 5-man inner cabinet, the Presidium. All ministers who formerly reported to the Presidium henceforth became responsible to Suharto. Key ministers remained in their posts, and Suharto retained the most vital position, that of minister coordinator for defense and security.

A general election was promised for August 1968, but Parliament adjourned in April without enacting the legislation that must be passed 18 months before the election date. The politicians opposed the military's demand for a guarantee of 25% of the seats in a future parliament. Nonmilitary members were concerned that the military would take over completely. Nearly half of the top cabinet and subministerial positions, as well as 20 of Indonesia's 36 ambassadorial posts, are filled by the military.

The Chinese in Indonesia. One of Indonesia's biggest economic and political problems involves race relations. Of the nearly 3 million Chinese in Indonesia, one third are Indonesian citizens. About one half of the Chinese are stateless and, by agreement with Peking, may not become Indonesian citizens. The Indonesians have long resented the Chinese, who dominate the retail business of the country and control a considerable part of its economic life. The Indonesians, moreover, cannot presently replace either Chinese skill or capital. Regardless of this fact, local military commanders have taken repressive measures. In some instances they have attempted to deport Chinese residents, and in others, they have barred them from wholesale and retail trade. This seriously affected many Indonesians, who were then unable to sell their fish or crops.

Relations with Peking. Following the attempted coup by pro-Peking Indonesian Communists in 1965, relations between Peking and Djakarta have steadily deteriorated. Accusations that the Chinese in Indonesia financially supported and sympathized with the Indonesian Communist party increased the tension. The government's vacillating policy of sometimes encouraging and sometimes restraining attacks on the Chinese did not help to alleviate the problem.

In April a Chinese who had been arrested as a suspected Communist agent died in jail, and a large group of Chinese demonstrated against Suharto's government. As a result, a mob of 2,000 Indonesians invaded the Chinese section of Djakarta, beat the inhabitants and looted the stores. The riots were contained after Foreign Minister Malik and other moderates intervened. Two Chinese officials were expelled on charges of subversion. To ease the problem, the extension of Indonesian citizenship to acceptable stateless Chinese was considered.

Hostilities flared again when, on August 5, some 500 young Indonesians attacked the Chinese embassy in Djakarta, and three youths and a soldier were shot. Indonesia again expelled Chinese diplomats, and Peking in reprisal restricted the personnel of the Indonesian embassy and refused them exit permits. Immediately demands were renewed for severing diplomatic relations with Communist China. Another mob stormed the Chinese embassy on October 1, burned one of the buildings, and destroyed Chinese equipment. On October 31 the diplomatic staffs of both countries returned home, and diplomatic relations were suspended.

Foreign Policy. Suharto announced that Indonesia's foreign policy would be one of nonalignment. At

INDONESIANS of Chinese origin in 1967 had to change their names from Chinese to Indonesian or be deported.

UPI

Bangkok in early August, Indonesia joined Singapore, the Philippines, Malaysia, and Thailand in forming the Association of Southeast Asian Nations. The organization is intended to promote economic, social, cultural, and technical cooperation among its members.

Economy. The stagnant economy slowly responded to governmental measures to spur recovery. At a meeting in Paris in December 1966, Indonesia's Western creditors provided a breathing space by rescheduling the country's debts. The Communist creditors granted a moratorium. Representatives of Indonesia's 14 creditor nations met in Amsterdam in February and agreed that instead of being given project aid, Indonesia should be granted the financial assistance necessary to make up the anticipated $200 million foreign exchange deficit.

In Scheveningen, the Netherlands, in June, Indonesia's creditor nations reported favorably on economic progress made during the preceding five months. Following guidelines laid down by the International Monetary Fund, the government made some headway toward economic stability. A tightening of credit was accompanied by a drop in the cost of living, although it put some shaky enterprises out of business. For the first time in years, Indonesia tried to balance its budget. Expenditures were reduced, and the military budget was cut from the 1965 figure of $414 million to $271 million for 1967. The government's primary goal for the next five years is to provide adequate food and clothing at low prices. The Suharto government promoted foreign private investment and promised to provide a favorable investment climate. It promised to return the industries seized by Sukarno, and in October the first return of a confiscated plantation was made to a U. S. company. The government stated that it hoped to make private-investment guarantee agreements with other countries similar to the one concluded with the United States on January 7.

Indonesia still lacked the technical and managerial skills needed to modernize and stabilize the economy. The chief and most insidious economic problem was inflation, which had reached incredible proportions. Failure in the 1967 rice crop caused the cost of living to rise beyond the anticipated 65% to 80%. The country was also burdened with extreme population density in Java, universal underemployment, a vast underpaid bureaucracy, and smuggling. Because the middle and lower echelons of government officials are paid extremely low salaries, "moonlighting" and bribery have remained common practices.

University of Tennessee

INDUSTRIAL HEALTH AND SAFETY

"Biomedical sciences now play such a large role in national life," Dr. René Dubos, Rockefeller University scientist, said in 1967, "that the strategy for their conduct cannot be entrusted exclusively to biomedical scientists." Dr. Dubos' observation, made in a colloquium of the American College of Physicians at San Francisco in April, exemplifies a rapidly increasing public concern that the traditional attitudes of health scientists may result in inadequate protection of the health and welfare of the public.

Linton Report. Two "action goals" of particular interest to industial hygienists were included in a major report that was submitted to Secretary of Health, Education, and Welfare John W. Gardner on June 12, 1967. Recommended for accomplishment by 1970, the goals included:

(1) Extending the benefits of occupational health programs to all of the nation's 80 million employees. They now reach fewer than half.

(2) Requiring approval of all new chemicals by the Department of Health, Education, and Welfare (just as new drugs and food additives come under control of the Food and Drug Administration).

The report covered environmental pollution. It was made by a six-member special task force headed by John W. Linton, former staff director of the Senate Committee on Public Works.

Industrial Hygiene Meeting. Management of health problems arising out of industry's operations, products, or wastes was discussed at the 32d annual meeting of the Industrial Hygiene Foundation. The foundation, a nonprofit research association of industries, met in Pittsburgh, its headquarters city, on Oct. 10–11, 1967.

Assistant Surgeon General Richard A. Prindle addressed the meeting and described the work of the Bureau of Disease Prevention and Environmental Control, which was established in the Public Health Service at the start of 1967. Dr. Prindle, who heads the bureau, reported that one of its five national centers concerns itself with urban and industrial health, including occupational health, accident prevention, safe water supply, solid wastes disposal, environmental engineering, and milk and food protection. The other four national centers are concerned with air pollution, radiation health, chronic disease control, and communicable diseases.

Dr. Paul Gross, director of the Industrial Hygiene Foundation Research Laboratory, received the 1967 Adolph G. Kammer Merit in Authorship Award from the Industrial Medical Association. His article, "Alveolar Clearance: Its Relation to Lesions of the Respiratory Bronchiole," was published in the *American Review of Respiratory Diseases* in July 1966. The article explains localization of silicosis and emphysema, and it deals with a new method of experimental emphysema production by injecting an enzyme (papain) directly into the trachea of the laboratory animal.

The most advanced techniques of high-resolution

INDUSTRIAL SAFETY in a modern Pennsylvania steel mill includes special protective clothing completely covering a worker who is about to tap an open-hearth furnace.

BETHLEHEM STEEL CORPORATION

electron microscopy and diffraction, as well as probe analysis, have been introduced into the study of ferruginous (so-called asbestos) bodies, which may be found in the lungs of most urbanites if sufficient care is used. Bodies that appear identical were produced experimentally by Dr. Gross from respirable filamentous dusts of clay (aluminum silicate) and abrasive (silicon carbide), as well as from glass fibers. A discussion on this subject, "Asbestos Bodies and Bio-effects—A Detective Story," was presented to the Foundation by Dr. John M. G. Davis of the University of Cambridge, England, who had collaborated with Dr. Gross in this work.

Many of the nation's 18,000 occupational health nurses can aid in industrial mental health programs. Harris H. Shettel of the American Institutes for Research described this project at the annual meeting. Begun by Industrial Hygiene Foundation in 1966 under a $639,522 grant from the National Institute of Mental Health, this project will use selected companies in the development and testing of instructional materials.

Industrial Hygiene Foundation of America, Inc.

INDUSTRIAL PRODUCTION

Industrial production in the United States increased slightly in 1967, tracing a pattern of slow decline in the first half of the year and general but irregular recovery in the second.

By November 1967 the Federal Reserve Board's seasonally adjusted production index stood at 159 (1957–59=100)—2.5% above the June low and about equal to the previous peak, reached in December 1966. For the first 11 months of 1967 the increase in industrial production over 1966 was 0.4%. It compared with a gain of 9% from 1965 to 1966 and an average annual increase of 7% from 1961 through 1966.

Because manufacturing capacity rose steadily while output increased more slowly, the rate of capacity utilization in U. S. factories gradually declined. The Federal Reserve reported that the utilization rate (seasonally adjusted) dropped from 90.6% in the September 1966 quarter to 83.8% in the September 1967 quarter—the lowest rate since late 1963.

Major 1967 Movements. The production rate dropped in the first half of 1967, in the first significant reversal of the strong uptrend in output that began early in 1961. For the most part, the reduced rate reflected the slowing down of inventory buying from the high rate of accumulation in late 1966. A rise in output began in July. It was attributable in large part to the completion of the inventory adjustment by producers and to an improvement in overall demand, particularly for producer and consumer durables. The rate of advance in industrial operations was temporarily halted in September and October because of labor disputes in important manufacturing areas, including automobiles. With settlement of the auto and tractor strikes by early November and with widespread increases in demand for final products, the pace of the advance quickened late in 1967.

Consumer goods output in 1967 held at around the 1966 level despite an appreciable decline in autos and household appliances. Output of equipment, including defense products, increased. Industrial materials showed little change over the year.

Of the four broad industry groups—durable goods, nondurable goods, mining, and utilities—only durable goods remained below the 1966 rate of output, and that group was only slightly lower. For the 21 major manufacturing divisions, production increases over the year about equaled decreases. Most of the decreases occurred in the durable goods sector. In the closing months of 1967, about half of the industries operated at new highs or close to earlier highs.

Durable Manufactures. Production of primary metals fell in volume in 1967 mainly because of lower output of iron and steel. Raw steel production generally remained well below that of most months of 1966. It totaled about 127 million tons for all of 1967, some 5% under the record volume of 134 million tons in 1966. The decline in output reflected reduced demand from such important consuming markets as construction, motor vehicles, appliances, and railroad equipment.

Although overall demand for finished steel products in 1967 was below that of 1966, U. S. imports of foreign-produced steel were maintained at a high rate in the first 10 months of 1967. Steel imported in this period totaled 9.1 million tons, 300,000 tons more than in the corresponding 1966 period. The January-October steel inflow equaled about 13% of shipments by domestic mills, somewhat above the 1966 rate.

In nonferrous metals, mixed trends prevailed in 1967, and total output was lower than in 1966. Production of primary aluminum increased to a new high. Operations of lead and zinc producers showed little change. Copper activity was sharply curtailed by a work stoppage that encompassed virtually all of the industry. The copper strike began in mid-July and continued for the rest of 1967. Demand for copper exceeded total supplies (domestic production plus imports) for the fifth year in a row. The shortage of refined copper was made up by increased imports, from inventories, and from releases from the U. S. government stockpile.

ANNUAL SURVEY OF MANUFACTURES, 1966[1]

Industry Group	Number of employees	Payroll (millions)	Value added by manufacture (millions)
All manufacturing establishments, including administrative and auxiliary units, total	19,121,528	$125,561	$251,014
Operating manufacturing establishments	18,205,253	116,277	251,014
Food and kindred products	1,642,145	9,542	24,896
Tobacco manufactures	72,363	356	1,872
Textile mill products	927,339	4,243	8,028
Apparel and related products	1,359,833	4,539	9,221
Lumber and wood products	569,837	2,689	4,786
Furniture and fixtures	428,125	2,186	3,978
Paper and allied products	633,939	4,236	9,417
Printing and publishing	1,017,581	6,751	13,264
Chemicals and allied products	822,491	6,130	22,812
Petroleum and coal products	140,765	1,128	4,737
Rubber and plastics products	491,823	3,072	6,277
Leather and leather products	341,078	1,426	2,481
Stone, clay, and glass products	618,550	3,838	8,495
Primary metal industries	1,296,541	9,913	20,908
Fabricated metal products	1,252,294	8,245	15,792
Machinery, except electrical	1,804,255	13,474	27,041
Electrical machinery	1,814,302	11,985	23,544
Transportation equipment	1,890,397	15,454	29,250
Instruments and related products	362,504	2,521	5,845
Miscellaneous manufacturing	418,563	2,153	4,394
Ordnance and accessories	300,528	2,395	3,973
Administrative and auxiliary[2]	916,275	9,283	—

[1] Preliminary. [2] Includes storage warehouses, power plants, research laboratories, garages, repair shops, and similar facilities that serve the manufacturing establishments of a company rather than the general public. Source: U. S. Department of Commerce, Bureau of the Census.

Activity in the machinery industry reflected the slower rate of growth in business spending for new capital equipment. Expenditures in 1967 were about

$61.5 billion, only 1.5% above 1966, compared with a 16.5% rise from 1965 to 1966. Factory output of nonelectrical and electrical machinery declined 7% between October 1966, the high month, and June 1967. In the next two months it rose 3%, but then the index generally held steady at the August rate. The improvement in the last half of 1967 helped raise the total production of machinery for the year to a level just slightly below the 1966 volume.

U. S. INDUSTRIAL PRODUCTION INDEX
(1957–59 = 100)

	1960	1966	Jan.–Nov. 1967[1]
Industrial production, total	108.7	156.3	156.9
Major industry groupings			
Manufacturing, durable and nondurable	108.9	158.7	158.4
Mining	101.6	120.3	123.5
Utilities	115.6	173.4	183.3
Major marketing groupings			
Final products, total	109.9	155.4	157.4
Consumer goods	111.0	147.4	147.4
Equipment	107.6	172.6	179.0
Materials	107.6	157.1	156.4

[1] Seasonally adjusted. (Source: Board of Governors of the Federal Reserve System.)

Output of nonelectrical machinery, which had shown only a modest decline from the October 1966 peak to the June 1967 trough, averaged a little higher for the year. Production of electrical equipment, which had experienced a much sharper drop during the same period, averaged somewhat lower.

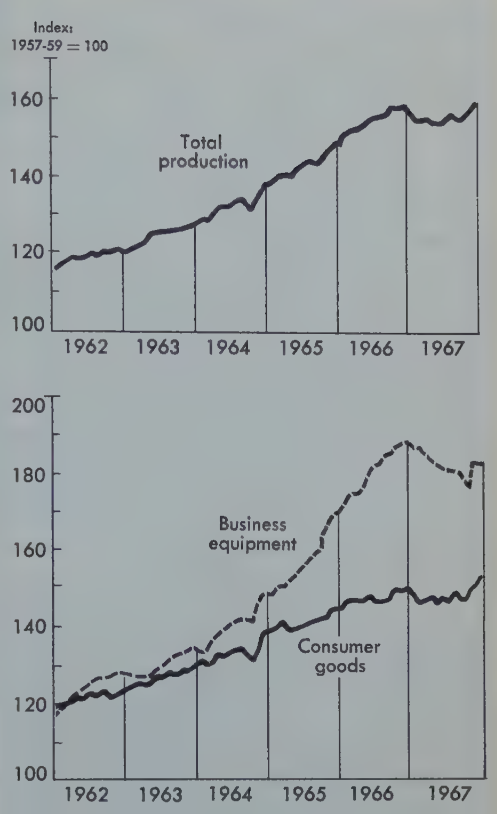
Assemblies of motor vehicles, which had increased each year from 1961 through 1965 and declined in 1966, dropped further in 1967. In the first half of the year, production was cut back because of falling retail sales of new cars. Shortly after production of the 1968 models began, a prolonged strike in the Ford plants sharply reduced output. For all of 1967, assemblies of passenger cars and trucks totaled 9 million units, down 13% from the 10.3 million produced in 1966 and nearly 20% from the 11.1 million turned out in the record year of 1965. (See also AUTOMOBILES.)

The aircraft and parts industry was the only major manufacturing group to show a steady uptrend in output during 1967. Strength in this industry stemmed from the continuing military buildup and from further sizable orders for private and commercial planes. The increase in output over the year amounted to 10%, the largest gain by far among manufacturing industries. Despite the higher rate of output, backlogs continued to rise. (See also AEROSPACE INDUSTRY.)

Producers of railroad equipment maintained shipments of freight cars close to the 1966 level, but this was done at the expense of their order backlogs. The inflow of new orders was sharply below the 1966 rate, even though the investment tax credit was restored in late spring of 1967. Capital expenditures by railroads in 1967 were about one fifth below the 1966 total. (See also RAILROADS.)

Nondurable Manufactures. Production in the typically more stable nondurable goods industries declined less than half as much as the durable goods sector in the first half of 1967. The subsequent rebound was rapid, with output in August and September back to the December 1966 high.

U. S. INDUSTRIAL PRODUCTION



Source: *Federal Reserve Bulletin*, January 1968

All major industries shared in the recovery. Despite the lower production rates in the first half of 1967, seven of the ten major nondurable manufacturing divisions—paper, printing and publishing, chemicals, petroleum products, rubber and plastics, food and beverages, and tobacco products—equaled or exceeded the 1966 volume. Growth trends in these less cyclical product groups have generally been affected only mildly by postwar recessions.

Output of the more cyclical lines of nondurables—textiles, apparel, and leather and footwear—averaged roughly 3% lower in 1967 for the group as a whole. These markets were noticeably affected by imbalances between inventories and sales in the early months of 1967.

Minerals. Largely because of higher coal and crude oil output, production of minerals increased in 1967. Bituminous coal output increased from 534 million tons in 1966 to about 545 million tons in 1967, the highest volume since 1948. Much of the increased output of coal went into inventories, since domestic consumption and U. S. exports of coal held about even with the 1966 production. Crude oil production increased in the United States as a result of lower imports from the Middle East during the war crisis. (See also MINING.)

Utilities. The output of electric power continued to grow, with a rise of 6% in 1967. This increase was well below the 1960–66 average and the 8.5% gain from 1965 to 1966, when demand for electric power for air conditioning was stimulated by the abnormally hot summer months of 1966.

INSURANCE

Urban rioting, several multimillion-dollar fires, and a record number of traffic accidents harassed U. S. property and liability insurers in 1967. Both the life insurance and the health insurance industries achieved continued growth during the year.

PROPERTY AND LIABILITY INSURANCE

Underwriting profit-and-loss statements for capital stock property and liability insurance companies edged into the black by a fraction of a percentage point in the first half of 1967. Premiums written increased to about $8.3 billion, 10% over the volume for the same period in 1966. Aggregate loss and expense ratios totaled 99.9%, compared with 98.8% a year earlier.

Fires and Catastrophes. Unusually heavy fire damage contributed to the higher loss ratio. The January-to-June fire loss in 1967 amounted to $914,532,000—22% over the 1966 figure. Destruction of Chicago's McCormick Place, the nation's largest convention center, resulted in an insured loss of $22.5 million, not including the value of the exhibits. Another fire, in Rossville, Ga., inflicted estimated insured damages of $15 million to textile plants.

Twenty-three other catastrophes caused estimated insured damages of almost $150 million. One storm alone hit Iowa, Illinois, Indiana, and Michigan in April at a cost of $40 million.

Urban Riots. The spread of racial disturbances during the summer was a major concern to insurers. Violence broke out in nearly 100 cities, resulting in estimated insured losses of nearly $100 million. Present riot coverages and rates, insurance executives agree, are clearly inadequate to bear the economic cost of social upheavals of such proportions.

Automobile Accidents. Automobile insurance lines continued to produce discouraging results as traffic accidents reached a new high of 15,896,000 in 1966. Government and industry interest in the fundamental concepts of the liability system indicates that this aspect of insurance may be the industry's chief problem for years to come.

T. Lawrence Jones
President, American Insurance Association

LIFE INSURANCE

The average American family had $19,100 in life insurance coverage at the end of 1967. About 94%—or $1.08 billion—of the life insurance owned in the United States is with the legal reserve life insurance companies. Policyholders also had over $60 billion in life insurance with the Veterans Administration, fraternal societies, assessment associations, and banks.

New Purchases. Purchases of new life insurance amounted to about $134 billion in 1967. About $97 billion of this sum represented individually bought, ordinary insurance. New purchases of group life insurance, for the most part issued through employers and unions, totaled $30 billion.

Benefit Payments. In 1967 life insurance companies paid a record sum of over $13 billion in benefits to policyholders and in death payments to their beneficiaries in the United States. About 58% of the payments went to policyholders themselves, and the rest went to beneficiaries. About $5 billion was paid under health insurance policies held with the companies.

Investments. The total assets of the more than 1,700 legal reserve life insurance companies reached $177 billion in 1967. These guarantees of future obligations to policyholders and beneficiaries have been a chief source of investment capital. Corporate securities accounted for about $76 billion of the life companies' 1967 holdings and about $27 billion of acquisitions; mortgages accounted for $68 billion of holdings and $8 billion of acquisitions. The net earning rate on life insurance company investments before federal taxes was 4.85%.

Canada. Canada has the world's highest ratio of life insurance ownership to national income. At the beginning of 1967, Canadian families owned nearly $82 billion worth of life insurance. Benefits and annuity payments totaled $981 million, with 66% of the total representing payments to policyholders.

Blake T. Newton, Jr.
President, Institute of Life Insurance

HEALTH INSURANCE

At the beginning of 1967, more than 158 million persons in the United States, or 81% of the civilian population, were protected by hospital expense insurance or had indemnity benefits payable while hospitalized. This coverage was provided by insurance companies, Blue Cross-Blue Shield organizations and medical society-approved plans, and independent plans. The total represented an increase of some 5 million in a year. Of those with hospitalization insurance, 92% also had surgical expense insurance and 74% had regular medical (nonsurgical) protection.

Between 1956 and 1966, the number of persons protected by hospital-expense plans increased by 44 million, and the number of persons covered by surgical insurance increased from 98 million to nearly 145 million. In addition, the number of persons covered by regular medical protection increased from about 64 million to over 116 million.

Policies. More than 1,000 insurance companies issue health insurance policies in the United States. At the end of 1966, these policies protected over 97 million persons for hospital expenses, over 90 million for surgical expenses, and 61 million for regular medical expenses.

Insurance companies also provided major medical expense insurance to 57 million persons, compared with 9 million in 1956. This insurance provides benefits usually up to $10,000 or more to help pay for medical care, both in and out of hospitals, prescribed by a physician.

Benefits. Health insurance benefits totaling $10.2 billion were paid out by all types of insuring organizations in 1966, compared with $9.6 billion in 1965.

Loss-of-Income Policies. Coverage under loss-of-income insurance provides benefits that help replace income lost because of disability. In 1966, 41 million persons were protected in this way by insurance companies.

Of the total employed U. S. civilian labor force in 1966, an estimated three fourths (54 million persons) were protected by loss-of-income policies or by other formal salary-continuation plans. Insurance companies paid over $1 billion in loss-of-income benefits during the year.

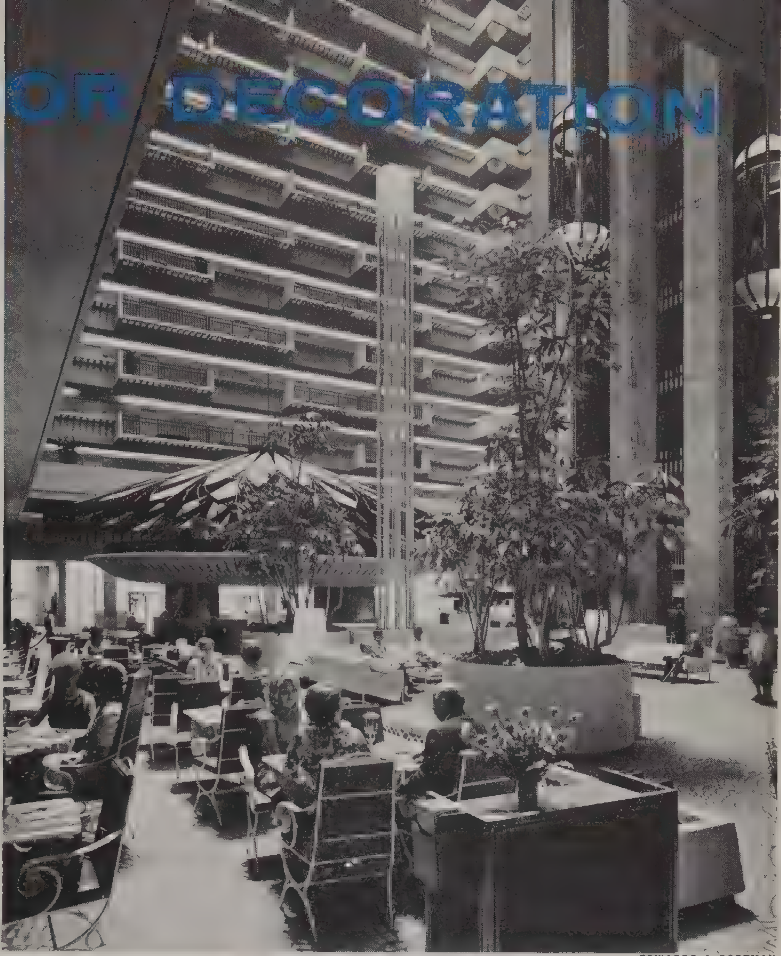
INTERIOR DECORATION



NEW HOTEL, the Regency Hyatt House in Atlanta, has a 21-story lobby with dining facilities, elevated cocktail lounge, and a 70-foot fountain.

EDWARDS & PORTMAN

INTERIOR DECORATION

The most exciting, stimulating, and colorful happening of 1967 in the general field of design was Expo 67 in Montreal. The exposition excelled architecturally, and its theme, "Man and His World," was beautifully planned and coordinated.

With the exception of Habitat, a model apartment house of the future, however, there was little exhibited specifically in interior decoration at the fair. The Scandinavian Pavilion showed a few items of furniture, and Japan demonstrated with a model room how that country combines and assembles furnishings from other countries with those of its own.

Hotels and Restaurants. One of the most overwhelming architectural achievements of the year was the Regency Hyatt House in Atlanta, Ga., an 860-room hotel designed by Edwards & Portman, and with public spaces by Roland Jutras. The hotel's most striking feature is an indoor courtyard, or atrium, that rises through the building's full 21 stories. Contributing to the feeling of fantasy that this space gives are exterior elevators (running on tracks on one wall of the atrium), a 70-foot fountain, and a parasol-shaped cocktail lounge suspended above the floor by a cable attached to the roof of the atrium. On the roof of the hotel, a domed restaurant revolves 360° each hour to provide patrons a panoramic view of Atlanta.

Another unusual restaurant, Anthony's Fish Grotto, was opened in San Diego, Calif. It is a covered wharf built out over the bay, where diners are made pleasantly aware of the surrounding waters. Most of the furnishings, as well as the accessories, were designed by the interior decorator Gerald Jerome of Furniture Forum. The architects were Liebhardt & Watson.

The most important hotel to be built in Canada in recent years—and the most luxurious—is Canadian Pacific Hotels' Le Château Champlain in Montreal. Interior decorator David T. Williams and associate interior decorator Earle A. Morrison spent two years planning, designing, and supervising the installation of the interiors, which are in five different color schemes and feature works of art by Canadian artists. The 38-story structure has two floors of executive suites in addition to 600 guest rooms.

The first hotel to be opened in Paris in 30 years was the Paris Hilton, an 11-story, glass-fronted cube with 493 guest rooms. Architect Pierre Dufan designed the hotel in modern style; the interiors, also in modern style, were by Raymond Loewy-William Snaith, under the direction of William Raiser.

The 743-suite Century Plaza Hotel, part of a multimillion-dollar urban development in West Los Angeles, Calif., was the largest hotel erected during the year. Minoru Yamasaki was the architect, and Donald A. Robbins was the senior interior designer. Still under construction at the development are five office buildings, four apartment houses, and a 15-acre shopping center with underground parking.

Public Buildings. Interior decoration was represented in the field of education by Lawson Hall, built by Southern Illinois University at Carbondale, Ill., which exemplified the unique properties essential to an audiovisual facility. Its four triangular

LE CHÂTEAU CHAMPLAIN, Montreal's new luxury hotel, has an Aubusson tapestry behind the grand staircase.

auditoriums form a semicircle on one side of the classroom core; on the other side are hexagonal classrooms, with a total capacity of 1,644 students. A continuous lobby surrounds the auditoriums with outside entrances opening directly to the classrooms. The interior decorator-architect was Mittelbusher & Tourtelot.

Of the new buildings completed in Washington, D. C., the headquarters of the International Monetary Fund is notable for interiors in the modern style, both colorful and supremely comfortable. The exterior of the 13-story structure is characterized by strong vertical pylons to shield windows from the sun. Interior decorators were Don D. McAfee Associates.

A handsome entertainment wing, combining the elegance of the 18th century with the efficiency of the 20th, was added to Gracie Mansion, official residence of the mayor of New York. The two-story structure, added to the existing 18th century house, was designed by architect Mott B. Schmidt.

New Store. Bonwit Teller's new branch store in Westchester County, N. Y., comprising 50,000 square feet of space, was completed in 1967. The building was designed on one level in the contemporary style, with interior areas radiating from a 7,900-square-foot center and featuring marble floors, crystal chandeliers, and murals. The decorator was Harry L. Hinson III, Bonwit's director of store planning.

Private Club. The Lancers Club, atop the Ling-Temco-Vought Tower Building, in Dallas, Texas, had interiors developed in 17th century English decor by John Astin Perkins. The spacious rooms had strong designs which made use of beamed ceilings, wood paneling, and Jacobean furniture.

Vacation Home. A new concept in vacation houses—movable, self-contained, and fully insulated—was offered by the Outboard Marine Corporation, in cooperation with the Aluminum Company of America. The little pavilion house, called "Hide-out," was designed by Andrew T. Costanecki, recipient of the Alcoa Industrial Design Award "for notable achievement" in the imaginative use of aluminum.

Special Train. A three-car train, complete with dining-lounge car, modern kitchen, bar, and sleeping quarters, was designed by Margaret Campbell of Allied Design Associates for Permacel, a division of Johnson & Johnson. It is to be used for training the company's salesmen. The special train was remodeled from obsolete railroad cars.

Conferences. The fourth annual conference of the National Society of Interior Designers was held June 10–15 in Venice, Italy, on the island of San Giorgio Maggiore. The 36th annual conference of the American Institute of Interior Designers was held September 8–14 in Washington, D. C. A new graphics symbol to represent the interior decoration profession was introduced at the meeting.

A significant opportunity for interior designers to update their lighting knowledge was provided by General Electric, sponsor of an interior decorators' conference on lighting. The conference, held in Cleveland, was attended by interior decorators from all parts of the country.

INTERNATIONAL COURT OF JUSTICE. See INTERNATIONAL LAW; UNITED NATIONS.

UPI

THE NEW YORK STOCK EXCHANGE (*above*) was a beehive of activity in the first trading session following the devaluation of the British pound, while the Stock Exchange in London (*right*), normally bustling, remained closed.

INTERNATIONAL FINANCE

The world economy paused in 1967. After extraordinarily rapid growth in production and trade in the previous six years, several major countries—including Britain, West Germany, and to a lesser extent the United States—experienced a slowdown in growth. This in turn reduced the growth in world trade and induced a fall in the prices of some primary products. By year-end, however, economic activity had resumed its rapid increase in most countries. Britain was an exception to this increase, and in mid-November the British authorities devalued the pound sterling in an effort to improve the balance of payments and permit a resumption of economic growth.

The event of the year of potentially the most enduring importance was the agreement among financial officials at Rio de Janeiro on September 29 to plan for creating "special drawing rights" for all members of the International Monetary Fund (IMF). While countries were taking this major step forward, however, they were reducing their financial assistance to the poor countries of the world despite the increasing need for such assistance.

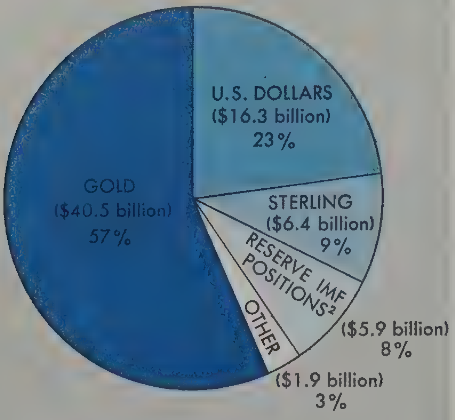
Britain's Devaluation. On November 18, Britain devalued the pound by 14.3%, from $2.80 to $2.40. Twenty-two other countries—mostly members of the sterling area and also Denmark, Israel, and Spain—devalued their currencies by the end of the month. The pound had last been devalued in 1949, when most other currencies of the world were also devalued against the dollar. The devaluation followed nearly five years of payments deficit. Although the balance of payments had improved substantially since 1964, that improvement was purchased by a marked slowdown in Britain's economic growth and, in 1967, by a sharp rise in unemployment.

The devaluation in Britain was precipitated by a speculative run on sterling, but that in turn was related to poor trade performance and to the view that expansionary measures would have to be taken soon. In the week following the devaluation there was sharp speculation on a rise in the price of gold. Seven central banks cooperated to stabilize the gold price in London, the largest private market, by selling nearly $1 billion worth. These countries also provided financial support to Britain to persuade the public that the new exchange rate would be held. The devaluation can be expected to improve Britain's trade position and to permit a reduction of unemployment and a resumption of growth on the basis of strong export demand.

Agreement on International Liquidity. After four years of discussion and negotiation, the "Group of Ten" (comprising Belgium, Britain, Canada, France, Italy, Japan, the Netherlands, Sweden, the United States, and West Germany) in the summer of 1967 agreed on a plan for the creation of a new form of international liquidity, called "special drawing rights," at the IMF. This plan was approved by the 106 members of the IMF at its annual meeting of governors in September, and the proposal was to be ready by the spring of 1968 for submission to parliaments for ratification.

The basic features of the plan call for the creation of special drawing rights (SDR's) for each member of the IMF. The total amount of such drawing rights is to be determined for a 5-year period on the basis of an assessment of the need for long-run growth in international liquidity; and the distribution among countries is to take place on the basis of current IMF quotas or a related formula. No new subscriptions would be required by participating countries. The SDR's would be available to settle imbalances in international payments among countries, just as gold is used today. Countries having balance-of-payments surpluses would agree to accept SDR's in exchange for their own currencies up to a stipulated limit. Like gold in many countries, SDR's would be used only by governments and central banks, not by the public.

COMPOSITION OF WORLD MONETARY RESERVES[1]
(In billions of dollars, June 30, 1967)



[1] Excluding international financial institutions and also the USSR, eastern European countries, and Communist China.

[2] Amounts that can be drawn virtually automatically from the International Monetary Fund, corresponding to members' gold subscriptions, amounts of their currencies sold by the IMF to other members, and outstanding lendings by the IMF.

Data from International Monetary Fund.

The significance of this agreement arises from the fact that international transactions have been growing much more rapidly than acceptable means of international settlement. New supplies of gold, originating largely in South Africa and the Soviet Union, have been inadequate to meet growing private demand for industrial use, jewelry, and hoarding, and at the same time to provide adequate growth in central bank reserves. In fact, in 1966 and 1967 official gold reserves actually diminished, because central banks had to supply private markets with gold to prevent the price from rising much above $35 an ounce.

U. S. dollars have filled the gap between a growing demand for reserves and the inadequate supply of gold, but the short-term lending to the United States that this implies has become unacceptable to a number of other countries. In addition, continued reliance on the dollar carries dangers for the stability of the international payments system, since U. S. short-term liabilities would have to exceed U. S. gold reserves by ever-increasing amounts.

Once they become firmly established and widely accepted as a form of international reserves, SDR's can supplement gold and the dollar and, by mutual agreement, can be increased sufficiently to meet growing demands for reserves. The decision of 1967 thus may be a prelude to creating a new kind of international money, a "paper gold" analogous to Federal Reserve credit in the U. S. economy, and to converting the IMF into a true international central bank for central banks.

Not all countries are agreed on the urgency with which the SDR plan should be activated. France, with the support of several other European countries, has argued that SDR's are unnecessary now. It may thus be a number of years before the new arrangement is finally agreed to on all details and put into operation.

The IMF and World Bank. In the meantime, the IMF carried on with its normal activities, lending over $500 million in 16 currencies to member countries in balance-of-payments difficulty in 1967.

New loans by the World Bank, which engages in long-term development lending rather than short-term balance-of-payments support, were also at a high level. But new loan commitments of the International Development Association (IDA), an affiliate of the World Bank that lends on easier credit terms to countries with repayment difficulties, came to a standstill because donor countries could not agree on the amounts or conditions to be attached to new subscriptions to IDA. The United States, in particular, favored a substantial increase in IDA lending but wanted to impose conditions to mitigate the impact of new IDA lending on the U. S. balance of payments.

Other forms of development assistance were in short supply. The U. S. Congress reduced economic aid funds for countries other than Vietnam in 1966 and again in 1967, and foreign aid was not popular in other major countries either. The slowdown in economic assistance was to be one of the topics to be taken up at the second United Nations Trade and Development Conference in New Delhi in 1968. The less developed countries used the first UNCTAD, in 1964, to air their grievances with respect to the trade and aid policies of developed countries, and to proffer their own solutions.

Interest Rates and Securities Markets. In 1966 interest rates reached 20-year highs in many industrial countries, and the stringent credit conditions threw several securities markets into confusion. In February 1967 finance ministers from Britain, France, West Germany, and the United States held a dramatic meeting at Chequers, England, to agree on a cooperative reduction in interest rates. As economic activity slackened, interest rates in the industrial countries fell markedly until mid-1967 (the 3-month U. S. Treasury bill rate fell from 5.4% in October 1966 to 3.5% in June 1967, for instance), but later in the year interest rates turned upward again. Securities markets in Europe, although still tight, returned to a more normal condition.

The international bond market continued to grow at a remarkable rate, and total new issues approached $2 billion in 1967. This market, consisting of bond issues in "foreign" currencies, had been negligible before 1963. The imposition of the interest equalization tax on new foreign bond issues

in the U. S. market induced many foreign borrowers to turn elsewhere, and consortia of European banks and underwriters agreed to place the bonds in Europe. Most of the bonds—90% in 1967—were denominated in U. S. dollars.

U. S. Balance of Payments. The U. S. payments position in 1967 worsened sharply as compared with 1966. Again the war in Vietnam was a major source of the outflow, with annual military expenditures in the Far East running $1.3 billion above the levels prevailing in 1963–64. Imports remained high but stable, in marked contrast to the dramatic increase in 1966, but export growth was blunted by the economic slowdown in Europe. A drastic new program to curb outflows and to discourage foreign travel was announced in early 1968.

INTERNATIONAL LAW

The United Nations again served in 1967 as the chief vehicle through which most major developments in international law were planned or took place. These developments included the adoption by the UN International Law Commission of draft articles on the law of special missions. The articles will serve as the basis for an international convention defining the status, privileges, and immunities of special missions sent by one state to another.

The General Assembly adopted declarations of legal principles concerning territorial asylum and the elimination of discrimination against women. Eighteen states were elected members of a new UN Commission on International Trade Law, established to promote the progressive harmonization and unification of the law of international trade.

Among the many significant events of the year, those of greatest import for the future of international law concerned UN peacekeeping, space law, and disarmament and arms control.

UN Peace-Keeping. On May 18, 1967, in response to a request from the host country, the United Arab Republic, UN Secretary General U Thant ordered the UN Emergency Force (UNEF) to withdraw from the UAR-Israel border. The withdrawal of UNEF focused attention on the serious inadequacies of present concepts of UN peacekeeping.

UNEF's initial mandate, defined by the General Assembly in 1956, was to "secure and supervise the cessation of hostilities" between the UAR and Israel. The force was admitted into the UAR with no clear agreement as to when or under what conditions it would be withdrawn, other than an expression on both sides of a "willingness to maintain UNEF until its task is completed." In these circumstances, the central legal question presented by a request for withdrawal is whether the "task" of the force had been completed. This question raises subsidiary questions as to who should make this judgment on the part of the United Nations and how the parties should resolve a difference in opinion concerning the underlying question.

The secretary general's response to the UAR request, however, assumes that the only relevant factor is the UAR decision to revoke its consent to the presence of UNEF. The result is to place the continued existence of "consent" forces, as distinguished from enforcement forces, under the control of the host state. In the view of the secretary general, a "consent" force is voluntary in all aspects.

This view may accurately reflect the realities of the Middle East conflict, but its expression as a constitutional principle of UN peacekeeping action was seen by many as a backward step. The establishment of UNEF represented a major advance in providing the United Nations with a practical means of dealing with dangerous situations in which no Security Council enforcement action could be had. The consent of the UAR was required for the stationing of the force, but the United Nations defined its duties and might have been thought to have voice in defining its duration. (See also MIDDLE EAST.)

Space Law. On Jan. 20, 1967, the Treaty of Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies, was opened for signature at London, Moscow, and Washington. The treaty was quickly signed and ratified by nearly every major state including the United States and the USSR, and it entered into force on Oct. 10, 1967.

The basic principles established by the treaty are that international law and the UN Charter apply in outer space; that the "exploration and use of outer space, including the moon and other celestial bodies, shall be carried out for the benefit and in the interests of all countries"; and that "outer space is not subject to national appropriation by claim of sovereignty, by means of use or occupation, or by any other means."

The treaty also establishes the first major arms control provision to be accepted by the leading powers since the 1963 nuclear test ban treaty. In the space treaty, the parties "undertake not to place in orbit around the earth any objects carrying nuclear weapons or any other kinds of weapons of mass destruction, install such weapons on celestial bodies, or station such weapons in outer space in any other manner." The parties also agree to open to inspection by representatives of the other parties all "stations, installations, equipment, and space vehicles on the moon and other celestial bodies."

Disarmament and Arms Control. On Aug. 24, 1967, the United States and the Soviet Union submitted separate but identical texts of a Draft Treaty on the Non-Proliferation of Nuclear Weapons to the Geneva Conference of the 18-nation disarmament committee. The draft submitted was a complete treaty text except that the inspection provision was left blank because the United States and the Soviet Union had been unable by then to reach a formula that would be acceptable to all states whose support would be necessary to make the treaty a reality.

Under Article I of the U. S.-Soviet draft, states possessing nuclear weapons would undertake "not to transfer . . . nuclear weapons or other nuclear explosive devices or control over such weapons or explosive devices" to any recipient whatsoever. The article would also obligate the nuclear powers not to assist, encourage, or induce "any non-nuclear-weapon States" in acquiring nuclear weapons.

Article II would place a parallel obligation on the non-nuclear-weapon states "not to receive the transfer . . . of nuclear weapons or other nuclear explosive devices." The article would also obligate the non-nuclear-weapon states "not to manufacture or otherwise acquire nuclear weapons."

The U. S.-Soviet draft is the result of years of negotiation on the intractable problem of halting the spread of nuclear weapons. Many of the non-nuclear states are in agreement with the goal of nonproliferation but have raised basic questions concerning (1) their future security without nuclear weapons, (2) the impact of the treaty limitations and inspection procedures on their development of peaceful uses for nuclear energy, and (3) the degree to which they can be assured of sharing in the progress that the nuclear-weapon countries may make in peaceful use technology. The need to answer these questions has served to delay conclusion of the treaty, but it may also produce an increased willingness among the nuclear-weapon states to consider far-reaching changes in international security systems. (See also UNITED NATIONS.)

INTERNATIONAL TRADE

The strong growth of world trade in recent years was interrupted in 1967 by a general slowdown in the expansion of the world economy. Devaluation of the pound sterling and other currencies occurred too late in 1967 to exert any major effect on the year's total trade.

The major development in international trade in 1967 was the successful conclusion of the Kennedy Round of the General Agreement on Tariffs and Trade (GATT) in Geneva, Switzerland. It is estimated that the tariff concessions negotiated in the Kennedy Round affect about $40 billion worth of trade in the non-Communist world. Import duties on a wide range of industrial products were cut in half by the major countries. (For details on the Kennedy Round, see below, *Tariffs.*)

TRADE DEVELOPMENTS

Following several years of fast growth, exports by non-Communist countries expanded slowly in 1967. Based on returns for the first nine months, exports were expected to reach a total of about $190 billion for the year. The 5% rate of gain over 1966 was less than half the average rate of the three preceding years.

A general economic slowdown in many of the largest trading countries was the main reason for this relatively sluggish increase in trade. In the United States and most countries of western Europe the level of industrial production in 1967 was no higher than in the previous year, and the expansion in the gross national product moderated considerably.

Devaluation. Devaluation of currencies by more than a score of countries tended to affect the value of world trade adversely in the final weeks of the year. Britain, the third largest non-Communist trading nation, devalued the pound sterling by 14.3% on November 18. Sizeable trading areas that followed Britain in devaluation—although in some cases the cuts were smaller—included Denmark, Hong Kong, Spain, and New Zealand.

In the long run the exports of the countries that devalued may be expected to expand because prices will be lower. However, uncertainties about the par value of the currencies—especially of the pound, one of the world's two reserve currencies—probably had a negative effect on trade in the period immediately preceding and following devaluation.

VOLKSWAGENS are unloaded in Los Angeles from a ship that carries 1,750 automobiles on each trip from Germany.

United States. U. S. exports in 1967 climbed to a new peak of over $31 billion, while imports also broke records to reach about $26.5 billion. Rising sharply in January, exports remained on a high plateau through September. They dropped off in October as demand for U. S. products eased with generally slowing expansion abroad. The U. S. export total in 1967, based on data for the first 10 months, was 5% higher than in 1966. That rate of advance compared with a gain of 10% between 1965 and 1966.

Foreign goods arriving in the United States were at their highest level for the year in January, second only to the all-time peak of September 1966. Imports averaged about $100 million a month lower during the rest of the year. For 1967 as a whole, imports were about 3.5% over 1966, a significantly lower rate than the exceptional 20% expansion from 1965 to 1966.

U. S. Exports. All of the export expansion in 1967 stemmed from increased sales of nonagricultural products. Farm exports fell from their 1966 peak level by about 8%. Sharp declines in wheat and feed grain shipments were mainly responsible for the reduction. Improved crops abroad and a reduction in the crop carry-over in the United States (which limited aid shipments) caused wheat exports to fall in value by about 25% in the first three quarters of the year. Sales of corn (maize) to western Europe dropped notably in the face of stiff competition from South Africa and Argentina.

Nonagricultural exports were about 10% higher than in 1966. Nearly half of that gain stemmed from crude petroleum and aircraft, and automotive shipments to Canada.

Crude petroleum, normally not exported from the United States except in relatively small quantities, added about $100 million to the export sales total. These shipments went mainly to Britain, West Germany, and Canada because their supplies were disrupted as a result of the Israeli-Arab war in June.

U. S. aircraft deliveries to major foreign airlines were stepped up in 1967 with the lessening of pressure on production of engines for the Vietnam conflict. Through September, aircraft sales were one third above the level in the same months of 1966.

The U. S. agreement with Canada by which new automotive equipment and parts move duty-free between the two countries continued to provide a major stimulus to trade. By the end of September, exports of new passenger cars were more than double their 1966 total to that country, while truck shipments were 80% greater. The automotive strikes in the United States were expected to limit shipments to Canada to some extent in the final months of the year.

Increases in U. S. exports in 1967 were almost entirely in sales to developed countries, especially Canada and Japan, where the economies continued to expand with considerable strength. Sales to western Europe, where most countries had no rise in production levels since early 1966, were only 3.5% higher. The developing countries also provided only sluggish markets for U. S. goods, except for East and Southeast Asia, to which shipments of rice, cotton, and steel-mill products were particularly expanded.

Another record volume of new authorizations for loans, guarantees, and insurance on U. S. exports by the Export-Import Bank was achieved in the fiscal year ending June 30, 1967. Loans and special credits totaling $2.5 billion were provided to finance capital equipment and services for buyers in 39 countries. These included jet aircraft and petrochemical, nuclear power, and synthetic rubber plants. Also included in the total was financing for defense articles and services purchased by friendly foreign governments.

Legislation was introduced in the Congress that would extend the life of the Export-Import Bank and substantially increase the amount of loans, guarantees, and insurance permitted.

Two unresolved problems related to the Export-Import Bank's role were widely discussed in the Congress during the year: (1) the financing or guaranteeing of shipments to Communist countries or to countries exporting to North Vietnam, and (2) the export of military equipment to developing countries under sales arranged by the Department of Defense.

U. S. Imports. With a pause in U. S. economic expansion in 1967, demand for imported goods became relatively sluggish. Arrivals of industrial supplies, which make up nearly 50% of total imports, were at a lower level than in 1966. As manufacturers drew on inventories, imports of wool, textile yarns and fabrics, ores, wood pulp, and other products dropped below the value of 1966.

Foreign consumer goods, however, continued in strong demand, especially footwear from Italy and Japan and television sets and other electrical household goods. New automobiles from Canada also were imported in substantially greater quantities. Metalworking machinery, trucks from Canada, and other capital equipment purchases brought the total for such goods to about a fifth higher than in 1966. In that year, however, such purchases had soared by more than two fifths over 1965.

Agricultural imports remained about the same in total value as in 1966. Sharp drops in green coffee imports and in purchases of animals for food were approximately balanced by advances in sugar, meat, cocoa, and vegetable arrivals.

U. S. Balance of Payments. In the first three quarters of 1967, the deficit in the U. S. balance of payments expanded to $2.3 billion at a seasonally adjusted annual rate. This total represented a deterioration of about $1 billion from the level in each of the two preceding years. Had not the merchandise trade balance improved at a rate of over $700 million (on a balance of payments basis), the deficit would have expanded even more.

The major adverse movements in the first nine months of 1967 compared with the same period of 1966 were: (1) a large net outflow of capital through the banks; (2) a decline in net receipts from foreign purchases of certificates of deposit and nonmarketable, nonconvertible government securities; and (3) an absence of nonscheduled repayments on U. S. government credits.

Favorable factors included: (1) an increase in transactions in foreign securities in the United States and (2) larger cash receipts associated with military sales contracts.

Trowbridge Testimony. In the second half of 1967, several members of the U. S. Congress introduced bills that would limit U. S. imports by imposing quotas. In testifying against those bills before the Senate Finance Committee on October 18, Secretary of Commerce Alexander B. Trowbridge stated that they "bring into question the entire direction of the foreign trade policy which this nation has followed for more than 30 years .... Our trading relations with the rest of the world would undergo a serious setback if these proposed measures were approved ... Enactment ... [would] provoke very serious countermoves against our exports." No action was taken by the committee in 1967.

Canada. The foreign trade of Canada continued to advance at a fast rate in 1967. Exports and imports rose through September about 11% each, resulting in an export surplus of about $270 million (in Canadian dollars).

The United States continued to be Canada's major trading partner, accounting for an overwhelming portion of Canada's foreign purchases and providing the largest market for Canadian products. In the first nine months, exports to the United States soared by 17.5% to a total of $5.3 billion (Canadian). At the same time purchases from the United States were up by nearly 14% to $5.9 billion (Canadian).

Trade with Britain, Canada's second largest trading partner, was largely static in 1967. Imports were off slightly from the previous year, and exports rose only marginally, with the result that the normal favorable trade balance with that country rose to $366 million (Canadian). Canada helps to balance its large trade deficit with the United States by trade earnings from Britain and other countries. In 1967, Canada's net earnings from the rest of the world dropped as imports rose faster than exports.

By far the major part of the increase in Canadian exports in 1967 stemmed from greater shipments of automotive equipment. This growth largely resulted from the expanded production facilities developed after the agreement with the United States that automotive products should move duty free between the two countries.

None of Canada's other major commodity exports were particularly expansive. There was little further change in the level of newsprint shipments or wheat sales, following their large rises in 1966. Some gains were registered in exports of copper, aluminum, and wood pulp, but sales of lumber were below the 1966 level.

Canadian imports were also swelled by automotive products. Purchases of foreign machinery, consumer goods of various types, and food registered sizable advances.

The Canadian balance of international payments in the first half of 1967 showed a current account deficit of $555 million (Canadian), a decline of over $200 million from the same period of 1966. A sharp improvement in the balance of trade and a reduced deficit from nonmerchandise transactions accounted for the change. The main reason for the narrowing of the nonmerchandise deficit was substantial earnings from tourism—a result of foreigners' visits to Expo 67 in Montreal. The second quarter of 1967—the beginning of the Expo season—showed a surplus of $120 million (Canadian), rather than the deficit that is normal for a second quarter.

The net inflow of capital into Canada was $29 million (Canadian) lower than in 1966, and did not fully cover the deficit on current account. Thus, official reserves were reduced by $68 million (Canadian) in the first half of 1967.

Latin America. Reflecting lower prices for major commodities and the effects of stagnation in many of their major industrial markets, exports from Latin America ceased to grow in the first half of 1967. Although imports continued on the uptrend, their rate of expansion was considerably below that of the previous year.

With the exception of cocoa, prices of all major export commodities from this area were lower in 1967 than in 1966. Copper, lead, sugar, beef, wool, and coffee all sold at substantially less than a year earlier. The index of Latin American export commodity prices for the first half of the year was 10% below that in the same period of 1966.

This situation helped to point up the need for regional integration. At the Punta del Este meeting of American chiefs of state in April a commitment was made to form a Latin American common market by 1985. Such a market would evolve from the five-nation Central American Common Market (CACM), which has grown dynamically in the last five years, and the 11-nation Latin American Free Trade Association (LAFTA), which has moved more slowly to eliminate tariffs among member countries.

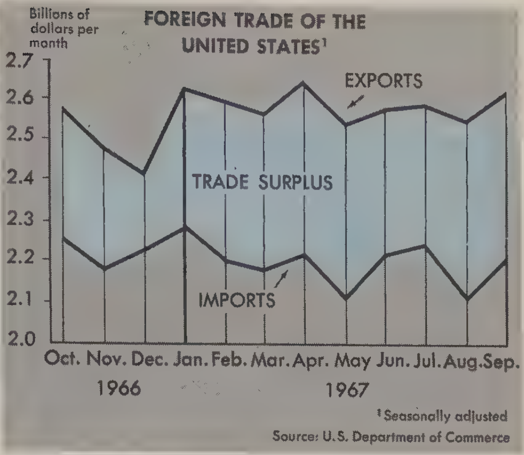
Among the major Latin American countries, Mexico experienced an expanded trade deficit in 1967. Poor cotton and coffee crops helped reduce the level of exports through June, while imports rose in line with industrial growth, which was expected to be 10% higher than in 1966.

The trade of Argentina, in surplus since 1963, continued to be favorable in 1967, although earnings from trade through September were somewhat below those of 1966. Imports, stimulated by liberalization of capital goods purchases, rose marginally.

Brazil appeared on the way to a trade deficit for the first time since 1963 if trends in the first three quarters continued to the end of the year. Rising imports as a result of the government's liberalization policy and declines in exports because of lower commodity prices brought about a slight trade deficit in the January-September period.

(See also LATIN AMERICA.)

Western Europe. The continued stagnation in production and the relatively slow growth in domestic demand in western Europe caused imports to rise by no more than 3.5% in the first nine months to an annual rate of about $100 billion. Export growth held up better, but it also lacked the buoyancy of recent years.



FOREIGN TRADE OF THE UNITED STATES[1]

[1] Seasonally adjusted

Source: U.S. Department of Commerce

The trade of the European Economic Community (EEC), or Common Market, was dominated by the situation in West Germany where the slackening in economic activity led to reduced demand for imports and a more vigorous export drive. Through August, while most countries of the EEC had a trade deficit with the world outside the community, West Germany ran such a large surplus that it overshadowed the others' deficits and caused the EEC as a whole to be in substantial surplus.

Exports from most EEC countries were adversely affected in 1967 not only by the subdued economic trends in major countries but by the closing of the Suez Canal, which limited exports, particularly to Asia. After midyear, the prices of many imports were affected by increased freight costs resulting from the Middle East crisis. Imports were also greater in some countries as stocks of raw materials and semimanufactures began to be rebuilt in anticipation of expanding production and trade.

Trade of the European Free Trade Association countries was strong in the first six months of 1967, especially with other member countries and with the world outside the EEC. Exports to member countries expanded over the first six months of 1966 by an exceptional 14.5%. Imports were only slightly less buoyant.

Because of its great size, the trade of Britain overshadows that of the other EFTA countries. In the first nine months, both British exports and imports were 4% above their 1966 level. Exports moved strongly in the first half. Adversely affected by the Middle East situation, by dock strikes that started in September, and by weakness in overseas markets, exports fell back in the third quarter. Foreign purchases by Britain rose sharply through June as a result of the removal of the import surcharge in November 1966 and a high level of food and fuel purchases. They eased in the third quarter, despite the marked increase in the cost of fuel (because it could not be shipped through the Suez Canal).

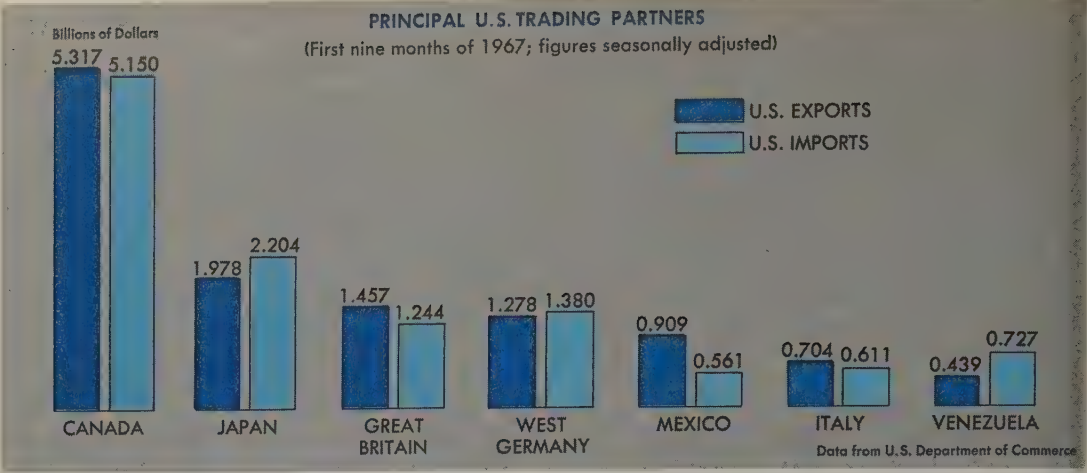
TARIFFS

The extensive trade negotiations that had begun in 1964 under the auspices of the General Agreement on Tariffs and Trade (GATT) were completed in 1967. Further advances were achieved during the year in the development of regional economic groups.



PRINCIPAL U.S. TRADING PARTNERS

(First nine months of 1967; figures seasonally adjusted)

Data from U.S. Department of Commerce

GATT. The sixth round (known as the Kennedy Round) of GATT multilateral trade negotiations—the most comprehensive ever conducted—was concluded in Geneva on June 30, 1967. The General Agreement on Tariffs and Trade, to which a total of 75 countries had adhered by the close of 1967, consists of a code of conduct for international trade and a schedule of tariff concessions by each contracting party to the others. It also provides a framework for negotiations to reduce barriers to trade, and a forum for the discussion of commercial policy.

Approximately 50 countries, accounting for about 80% of world trade, participated at Geneva. Unlike earlier negotiations, the Kennedy Round was conducted on a linear (across-the-board) basis, rather than item by item. It dealt with agricultural as well as industrial products, considered nontariff as well as tariff barriers to trade, and provided special negotiating procedures for the developing countries.

The principal result of the 3-year negotiations was a tariff reduction of 50% by the major participants on most industrial products, and a reduction of 30% to 50% on others. The average reduction in duty on industrial articles was about 35%.

The negotiations on chemical products were particularly complex because of the U. S. system of basing the dutiable value of certain chemicals on their American selling price rather than on their export value, which is the customary basis. The use of what is known as "American selling price" (ASP) resulted in a higher dutiable value than would be obtained by the use of export value. European countries at first refused to negotiate on chemical products unless the use of ASP was eliminated. Inasmuch as it could be eliminated only by the U. S. Congress, however, somewhat limited concessions on chemicals were agreed to in the Kennedy Round. Moreover, through a separate arrangement, more extensive European tariff reductions on chemicals were made contingent on the U. S. abolition of ASP.

In the textile sector, the existing Long-Term Cotton Textile Arrangement was extended to 1970. (This arrangement is designed to prevent market disruption in countries importing cotton textiles, and at the same time facilitates the expansion of cotton textile production in developing countries.) The extension was accompanied by more liberal access to import markets under the arrangement, and by tariff reductions on numerous individual textile articles.

Import duties were reduced on numerous agricultural products, but the reductions were less impressive than those on industrial products. They were accompanied, however, by a world arrangement guaranteeing higher minimum trading prices on grains and establishing a program to supply 4.5 million tons of food annually to developing countries.

[1] Exports exclude "special category" shipments on which information is withheld for security reasons.

The most significant accomplishment in the field of nontariff trade barriers was the development of a code on antidumping practices. The code supplemented earlier GATT procedures to be followed in antidumping actions.

Other important accomplishments regarding nontariff barriers were included in the conditional chemical agreement. Contingent upon the U. S. elimination of valuation based on the American selling price, France, Italy, and Belgium agreed to eliminate discriminatory aspects of automobile road-use taxes; Switzerland agreed to modify regulations on canned fruit; and Britain agreed to reduce the margin of preference accorded to Commonwealth countries on unmanufactured tobacco.

A number of concessions, for which reciprocal concessions were not required, were granted by the developed countries on products of particular interest to the developing countries. Although most of the tariff reductions agreed upon in the round were to be phased over a period of years, the concessions to the developing countries were to be implemented, if possible, immediately.

Regional Arrangements. In recent years regional economic arrangements—for example, free-trade associations and customs unions—have been negotiated to reduce or eliminate trade restrictions among member countries and, in some cases, to establish a common external tariff. The increasing recourse to such arrangements continued in 1967 with agreements to create a Latin American common market, a West Indies free-trade area, and an East African common market.

Major regional organizations already in operation were the European Economic Community, the European Free Trade Association, the Latin American Free Trade Association, and the Central American Common Market.

European Economic Community (EEC). The EEC, the first regional economic arrangement, was established by the Treaty of Rome in 1958. The community was initially composed of Belgium, France, Italy, Luxembourg, the Netherlands, and West Germany. After 1961, Greece, Turkey, and a number of other countries (principally former French colonies) became associate members. The full-member countries have a population of approximately 185 million people.

On July 1, 1967, the full members of the EEC reduced by a further 5% the duties on industrial imports originating within the community. This action constituted the ninth in a series of reductions designed to attain free trade in industrial products among the members. The resulting duties were 15% of those existing on Jan. 1, 1957 (the base date). Although the Treaty of Rome did not call for the elimination of duties on intracommunity trade in manufactured goods until 1970, their elimination was expected by July 1, 1968.

During 1967 the community established a common market for fruits and vegetables (January); eggs, pork, and poultry (July); and rice (September). Eggs, pork, poultry, and rice constituted about 35% of the community's agricultural production. The duties on most agricultural products traded among members, however, had not been reduced as much as those on industrial products.

The member states of the EEC made no further attempt in 1967 to align their national tariffs with the EEC's projected common external tariff. Two of three stages toward such alignment had been completed by the close of 1963, reducing (with certain exceptions) the difference between the 1957 rates of the individual members and the rates in the common external tariff by 60%. Common external rates were scheduled to be applied to imports from nonmember countries on July 1, 1968.

In preparation for the customs union planned to be fully effective by July 1, 1968, the community members began to harmonize their customs legislation, unify technical standards, and simplify customs inspections and other formalities between member states. To achieve more complete economic union—the ultimate goal of the Treaty of Rome—EEC would have to attain free movement of workers and capital as well as common policies for transportation, foreign trade, and economic development.

European Free Trade Association (EFTA). EFTA was formed in 1960 by Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and Britain. Finland became an associate member in 1961 and from then on enjoyed the rights of a full member. The EFTA countries encompass approximately 100 million people.

EFTA became the first regional arrangement to establish a free-trade area for industrial goods when, on Dec. 31, 1966 (three years ahead of schedule), it eliminated nearly all the remaining duties on industrial products traded among members. At the same time, Finland made a further reduction of 10% in its duties on manufactured products, thereby reducing such duties to only 10% of their base (1960) level. With the abolition of internal tariffs, members began in 1967 to consider other areas of economic cooperation, such as nontariff trade barriers and rules of fair competition.

Unlike the EEC, EFTA did not seek to establish a common tariff on imports from nonmember countries or to reduce duties on agricultural commodities traded within the association. However, EFTA undertook to stimulate intraregional trade in agricultural products.

On May 11, 1967, in an effort to promote the creation of a single European market, Britain formally applied for membership in the EEC. Denmark, Ireland, Norway, and Sweden likewise submitted applications for membership. Although France had rejected Britain's bid, by the close of 1967 Britain had not withdrawn its application. (See also EUROPE.)

Latin American Free Trade Association (LAFTA). LAFTA was formed in 1961 by nine countries—Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Paraguay, Peru, and Uruguay. With the accession of Venezuela in 1965, LAFTA became the largest regional economic group in the world, with a population of about 190 million.

At their sixth annual conference in late 1966, the LAFTA members agreed on 500 tariff reductions affecting raw materials and agricultural and industrial products. Although the number of concessions was smaller than that agreed upon in the preceding year, tariffs were reduced on many significant items, including petrochemicals, oil-drilling equipment, tools, farm machinery, and home appliances. The members also agreed to establish a supreme organ composed of the foreign ministers of the member nations and approved Bolivia's application for membership.

At two extraordinary sessions in 1967, the members continued negotiations on Venezuela's tariff adjustments on imports from other countries in the group, considered margins of preference, and examined proposals for the second set of additions to the common schedule—a list of products that the members agree to free of virtually all barriers to intra-LAFTA trade by 1973. At the end of the year, products accounting for more than 50% of the value of trade between the members had been placed on the common list.

Members of LAFTA, like those of EFTA, continued in 1967 to apply their individual tariffs to imports from nonmember countries. LAFTA's long-range plans, however, included the eventual establishment of a common external tariff.

Latin American Economic Integration. In 1967, Latin American countries agreed to form a common market by 1985 through the union of the 11-member Latin American Free Trade Association and the 5-member Central American Common Market. Efforts to develop uniform regional policies had been obstructed by currency instability and by wide differences in the economic development of the countries. A coordinating commission consisting of representatives of both associations was appointed in 1967 to initiate studies and to prepare recommendations.

Acting Chairman, U. S. Tariff Commission

IOWA

Most of the significant news in Iowa in 1967 was related to the proceedings of the state's General Assembly, which met in its longest session to date. The regular session convened on January 10 and did not adjourn until June 30.

Legislation. The largest tax increase ever voted by an Iowa General Assembly was signed into law in July. The bill raised state taxes $102 million to a total of $373 million. The sales tax was increased from 2% to 3%, and a 3% tax was imposed on a long list of services, including advertising.

The Iowa legislature gave second approval to five proposed constitutional amendments. The amendments would grant home rule to Iowa cities and towns; provide for annual sessions of the General Assembly; give the governor an item veto on appropriation measures; provide a new legislative apportionment plan on a strict population basis, calling for a Senate of 50 members and a House of Representatives of 100 members; and give the legislature authority to fix salaries, expenses, and allowances for succeeding legislatures. Iowa citizens are to vote on all five amendments in November 1968.

In his budget message, Gov. Harold E. Hughes indicated that his recommendations for expenditures would reduce the state's treasury surplus of approximately $100 million to about $20 million. The budgeted items amounted to more than $400 million.

The legislature approved most of the recommendations but made a major tax increase necessary by increasing state aid to schools. The state's share of support to public elementary and secondary schools was increased by the 1967 legislature's record appropriation from approximately 12% of the typical budget to nearly 36%.

In other notable legislation, the salary of the governor was raised from $25,000 to $30,000 and that of the attorney general from $16,500 to $21,500. Salaries of other members of the state executive council (the secretary of state, state treasurer, secretary of agriculture, and state auditor) were increased from $15,000 to $18,500.

Two major reorganization bills were passed by the General Assembly. One bill replaced the state tax commission with a department of revenue headed by a director of revenues. The other abolished the state board of control and state social welfare commission and replaced them with a single director.

Economy. For 8 of the last 10 years Iowa's corn crop was the largest in the nation; but in 1967, for the second time in that period, it ranked second to that of Illinois. The state's soybean harvest, however, again set a record.

Racial Unrest. Bands of Negro youths roamed the streets of Waterloo, throwing stones and setting fires, on two nights in July. It was the second successive summer that violence had erupted in the city. On July 16 a similar disturbance occurred in Des Moines. In August, Governor Hughes initiated a campaign to increase employment opportunities for Negroes in the state.

Local Government. Voters in Des Moines approved a referendum, permitted by action of the 1967 legislature, to convert the city's council-manager form of government to allow direct election of a mayor by the people. Burlington voters approved a change from commission government to a council-manager system.

Highways. The east-west Interstate Highway 80 was completed across Iowa from its eastern entry at Davenport to its western exit at Council Bluffs.

IOWA • Information Highlights

Area: 56,290 square miles (145,791 sq km).

Population: 2,753,000 (July 1, 1967 est.).

Chief Cities (1965 est.): Des Moines, the capital, 216,000; Cedar Rapids, 103,000; Davenport, 94,500; Sioux City, 91,000; Waterloo, 74,000; Dubuque, 59,500.

Government: *Chief Officers*—governor, Harold E. Hughes (Democrat); lt. gov., Robert D. Fulton (D); secy. of state, Melvin D. Synhorst (R); atty. gen., Richard C. Turner (R); treas., Paul Franzenburg; supt. of pub. instr., Paul F. Johnston; chief justice, T. G. Garfield. *Legislature*—General Assembly (met Jan. 9, 1967; convenes Jan. 13, 1969): Senate, 61 members (29 Republicans, 32 Democrats); House of Representatives, 124 members (89 R, 35 D).

Education: *School enrollment* (1965–66)—public elementary, 468,500 pupils (14,800 teachers); public secondary, 190,500 pupils (11,200 teachers); nonpublic schools, 110,400 pupils (4,240 teachers); college and university (fall 1965), 86,588 students. *Public school expenditures* (1965–66)—$299,000,000 ($503 per pupil); average teacher's salary, $6,003.

Public Finance (fiscal year 1966–67): *Revenues*, $881,786,291 (2% sales tax, $113,555,000; motor fuel tax, $102,261,000). *Expenditures*, $816,782,875. *State debt*, $80,540,000 (June 30, 1967).

Personal Income (1966): $8,258,000,000; average annual income per person, $2,992.

Public Assistance (fiscal year 1967): $65,974,901 to 81,000 recipients (aged, $33,063,016; dependent children, $20,274,833).

Labor Force (employed persons, June 1967): *Agricultural*, 294,200; *nonagricultural* (wage and salary earners), 852,200 (25.7% manufacturing, 24.6% trade, 17.6% government). *Unemployed persons* (June 1967)—39,300.

Manufacturing (1966 est.): Value added by manufacture, $3,397,000,000 (transportation equipment, $26,781,000; primary metals, $107,979,000; nonelectrical machinery, $476,926,000; electrical machinery, $252,644,000; fabricated metals, $101,304,000).

Agriculture (1966): *Cash farm income*, $3,670,367,000 (livestock, $2,573,229,000; crops, $887,137,000; govt. payments, $210,001,000). *Chief crops* (tons)—corn for grain, 25,248,944 (ranks 1st among the states); hay, 7,797,000 (rank, 3d); soybeans, 4,205,992 (rank, 2d); oats, 1,627,312 (rank, 2d); popcorn, 67,575 (rank, 1st); sorghum grain, 67,200.

Mining (1966 est.): *Production value*, $116,670,000. *Chief minerals* (tons)—stone, 26,500,000; sand and gravel, 18,000,000; gypsum, 1,256,000; clays, 1,105,000; bituminous coal, 1,050,000.

Fisheries (1965): *Commercial catch*, 3,001,000 pounds ($231,000).

Transportation: *Roads* (1967), 112,308 miles (180,704 km); *motor vehicles* (Dec. 1966), 1,817,017; *railroads* (1966), 11,821 track miles (19,020 km); *airports with scheduled services* (1967), 13.

Communications (1967): *Telephones*, 1,373,900; *television stations*, 13; *radio stations*, 101; *newspapers*, 48.

IRAN

On his 48th birthday, Oct. 26, 1967, Shah Mohammed Reza Pahlavi crowned himself and his 29-year-old wife, Farah, during colorful ceremonies at the Golestan Palace in Teheran. The shah had occupied the throne of Iran for 26 years but had postponed his coronation until a time when he felt the country had vindicated its position as a fully sovereign and independent state and had made significant social and economic progress.

The economic prosperity of the previous two years continued during 1967. The closing of the Suez Canal in early June as a result of the Israeli-Arab war, however, adversely affected Iranian commerce, forcing a rerouting of some oil exports and increasing the carrying charges on many imports. In foreign affairs, Iran maintained its membership in the pro-Western Central Treaty Organization (CENTO) but adopted an increasingly independent stance. Iran kept close ties with the United States and the European Common Market countries but at the same time cemented its recently developed good relations with the Soviet Union and the Communist states of eastern Europe.

Provision for a Regency. In internal political developments, the shah undertook to solidify the position and continuity of the monarchy by arranging for the orderly transition of power in case of his incapacity or death. On March 14, Parliament passed legislation calling for the election of a constituent assembly to provide for these contingencies by constitutional amendment. On September 7, the assembly, which had been elected in August, unanimously approved provisions that would permit Empress Farah to serve as regent until 6-year-old Crown Prince Reza becomes 20.

Economic Development. The government's Plan Organization, charged with implementing Iran's economic development program, established a budget of $972.9 million for 1967–68, the final year of the third economic development plan, which had been inaugurated in 1962. At the same time, a fourth economic development plan (1968–73) was announced, looking toward a better-balanced economy through the creation of 1 million new jobs outside agriculture. Total expenditures on the new program were estimated at $4.5 to $5.3 billion, and the government expected that Iran could meet most of those costs out of its own resources. Foreign experts believed that the nation would need at least $300 to $350 million in foreign grants or credits.

Foreign Relations. Iran's improved relations with the Soviet Union were evidenced in 1967 by an arms purchase agreement and by considerably expanded Soviet-Iranian trade. On February 19, Premier Amir Abbas Hoveida informed Parliament that Iran would buy $110 million worth of Soviet military equipment. Payment was to be made over an 8-year period, at first in cotton and light manufactured goods, and after the completion of a pipeline to the Soviet frontier in 1969, in natural gas. This purchase of a limited quantity of Soviet military material in what was essentially a barter deal conserved Iranian foreign exchange but did not fundamentally alter the position of the United States as Iran's major supplier of military equipment. On March 2, Iran signed a new trade agreement with the Soviet Union providing for $540 million worth of trade over a 5-year period.

In late August, following a visit of the shah to Washington, Iran agreed to buy a second squadron of 16 F-4 Phantoms from the United States at an estimated cost of $40 million.

During the Israeli-Arab war and at the emergency special session of the United Nations that attempted in June and July to arrange a settlement of the conflict, Iran adopted a moderately pro-Arab position. The Iranian delegation supported in the General Assembly a Yugoslav resolution that, without condemning Israel as an aggressor, demanded Israeli evacuation of all territories occupied in the war.

Foreign Aid. In 1967 the United States was engaged in terminating its programs of technical assistance, economic grants, and low-interest loans to Iran on the grounds that the country was no longer an underdeveloped area. An agreement was signed on Jan. 16, 1967, however, by which the United States provided $6.5 million in long-term credits to assist Iran in the expansion of its electric power resources. On April 13, the U. S. Export-Import Bank announced a loan of $60 million to the Iranian government to finance the purchase of American equipment for a $172.5 million petrochemical plant. The plant is being constructed at Bandar Shahpur, on the Persian Gulf, by a corporation jointly owned by the government's National Iranian Oil Company and Allied Chemical Corporation of New York.

Iran also received economic aid from the Soviet Union and other Communist countries. The construction of a large steel complex at Isfahan was being financed in part through a Soviet loan, arranged early in 1966, of $268 million. On March 19, 1967, Rumania provided a $31 million credit for the purchase of Rumanian products.

Petroleum Production. Oil production, estimated to have provided revenues of $700 million for the Iranian government in 1967, was still largely in the hands of a consortium of European and U. S. oil concerns that has been in operation since 1954 in behalf of the National Iranian Oil Company. The role of the consortium, however, was being gradually reduced. In March 1967 the international group honored a December 1966 agreement by surrendering over 25,000 square miles (64,750 sq km) of its concession area for direct exploitation by the national oil company or for reassignment to other oil producers. On April 15 the National Iranian Oil Company reached an agreement with the Soviet Union permitting Soviet technicians to explore for oil in Iran.

Work also proceeded throughout the year on the development of an offshore oilfield in the waters of the Persian Gulf. There the Lavan Petroleum Company, jointly owned by the National Iranian Oil Company and four American firms, was opening wells, laying an underwater pipeline, and constructing a deepwater dock. This field was expected to commence production in mid-1968 with a capacity of 1.8 million tons annually, increasing to 10 million tons in 1969.

IRAQ

A provisional regime headed by President Abdul Rahman Arif continued to govern Iraq in 1967. The transition to a constitutional government, which had been scheduled for May 1967, was postponed because of political factionalism, continued restlessness among the Kurdish minority, a sluggish economy, and declining oil revenues. In June, Iraq joined the United Arab Republic, Syria, and Jordan in the 6-day Israeli-Arab war.

Constitutional Developments. Early in 1967, the cabinet of Premier Naji Talib began preparations for the first national elections to be held since the overturn of the monarchy in the revolution of July 1958. On January 28 it published an electoral law providing compulsory voting for men and permissive voting for women. Representatives of the country's major ethnic, economic, and political groups met in Baghdad on February 24 to discuss the reorganization of Iraq's only legal political party, the Arab Socialist Union.

By late March, however, factional disputes had upset the government's timetable. Elections were postponed, and the 3-year transitional period leading to constitutional government was extended until May 1968. On April 3 a joint session of the cabinet and the Higher Defense Council extended the one-year term of President Arif until a constitutional regime could be instituted.

Cabinet Changes. Premier Talib was unable to persuade the various factions to cooperate, and on May 7 he submitted his resignation. Three days later, President Arif assumed the premiership himself and headed a widely representative 25-member cabinet. The new government promised to reorganize the Arab Socialist Union, to move the country toward constitutionalism, to fulfill promises made to the Kurds of political decentralization and economic reconstruction in the north, to bring about economic prosperity within the framework of Arab socialism, and to speed up the development of mineral resources. It also stated that it would pursue good relations with neighboring Turkey and Iran and continue the policy of close cooperation with the United Arab Republic. On July 10, pleading the pressure of presidential duties, President Arif surrendered the premiership to Lt. Gen. Taher Yahya, who had been prime minister between 1963 and 1965.

Economic Conditions. The Iraqi economy still suffered in 1967 from the effects of political instability and the 1964–65 nationalization program. The government's 5-year development plan (1967–70) called for total expenditures of $2.3 billion, with $380 million budgeted for 1967; but the implementation of projects was often slow and uncertain. The Israeli-Arab war and the closing of the Suez Canal adversely affected Iraq's commerce, and oil production declined. As a result, imports had to be restricted.

Petroleum Production. In a dispute with the internationally controlled Iraq Petroleum Company over pipeline transit payments, the Syrian government blocked the movement of oil from Iraq's northern fields to the Mediterranean coast from Dec. 12, 1966 to March 2, 1967. During that time, oil production in the northern area was virtually halted.

During and following the Israeli-Arab war, there was further curtailment of petroleum production. On June 6, the pipelines to the Mediterranean were closed, and the Iraqi government prohibited the sale of oil to the United States, Britain, and West Germany in retaliation for their alleged aid to Israel. Although the pipelines were reopened in June and

the Arab summit conference at Khartoum (August 29–September 1) authorized full resumption of oil sales, Iraq maintained its embargo against shipments to the three countries throughout the fall.

It was estimated that Iraq's oil production in 1967 would be less than 75% of the 1966 output. To assure increased production and to reduce dependence on the Iraq Petroleum Company, the government entered into negotiations with Italian, French, and other oil concerns to exploit Iraq's undeveloped petroleum resources in partnership with its own national oil company. In November a French government-controlled consortium won a concession to explore for and produce oil in southern Iraq. On December 24 an agreement was signed with the USSR that laid a basis for Soviet technical assistance in the exploitation of Iraqi petroleum and aid in its marketing.

The Israeli-Arab War. As tensions between Syria and the United Arab Republic, on the one hand, and Israel, on the other, increased in mid-May, Iraq offered support to its fellow Arabs. On May 24 the government entered into a military agreement with Syria and, on June 4, signed a protocol making Iraq a partner in the recently negotiated Jordanian-UAR mutual assistance pact. On June 5, following the outbreak of hostilities between Israel and the United Arab Republic, Iraq's air force attacked Natanya in Israel. On the following day, Iraq broke diplomatic relations with the United States and Britain, accusing them of aiding Israel. The acceptance by Jordan on June 7 of the United Nations demand for a cease-fire ended Iraq's limited participation in the war.

During the weeks that followed, President Arif took a leading part in efforts to formulate a common Arab policy, to recoup the losses of the war, and to assure continued Soviet support of the Arab position. On July 3 and 4, President Podgorny of the Soviet Union visited Iraq on his swing through the Middle East, and on July 18, President Arif conferred in Moscow with Soviet leaders. At the emergency special session of the UN General Assembly in June and July, Iraq demanded the condemnation of Israel as an aggressor and immediate Israeli withdrawal from all occupied territories.

IRELAND

The Republic of Ireland failed once again in 1967 in its attempt to enter the European Economic Community (EEC), or Common Market, and such associated organizations as the European Atomic Energy Community (Euratom).

On May 11 the Irish government reactivated its application for full membership in conjunction with a similar move by Britain. Hoping to strengthen Ireland's case for admission into the EEC, Prime Minister John (Jack) Lynch, who succeeded to the leadership of the governing Fianna Fáil party in November 1966 upon the retirement of Sean Lemass, paid formal visits to the capitals of the EEC countries in late June and July. Accompanied by Minister for Finance Charles Haughey, he won assurances of support from the governments of the Netherlands, West Germany, Belgium, Italy, and Luxembourg. But the opposition of President Charles de Gaulle of France ended both Irish and British hopes of joining the Common Market in the near future.

Economic Developments. The Irish economy registered some solid gains in 1967 as external reserves rose to an all-time high of £272 million in August. Government figures indicated that exports increased by almost 20% and imports by 8½% during the first eight months of the year. However, the overall sluggishness of the economy led some experts to call for more investment in the modernization of agriculture and industrial plants and equipment to place the nation's industries in a more competitive position.

Because the Irish economy is so closely linked with that of Britain, Ireland was forced to devalue its pound on November 18, the same day the British pound was devalued from $2.80 to $2.40.

Ireland took part with 52 other nations in the final stages of the Kennedy Round tariff negotiations in Geneva. The result of the accord will be an eventual reduction of tariffs on some 60,000 items for all the signatories of the General Agreement on Tariffs and Trade (GATT).

Elections. On June 28 local elections to the councils were held throughout the country for the first time in seven years. Fianna Fáil, the government party, won about 41% of the votes cast, compared with 33% for Fine Gael, 16% for Labour, and 10% for all other parties. By winning six new seats in Dublin constituencies, the Labour party became the second largest party in the capital.

Education. Minister for Education Donagh B. O'Malley announced on April 18 a plan for the merger of Dublin's famous Trinity College and University College. Under the proposed scheme, a single executive authority would govern the new multidenominational University of Dublin, but the predominantly Protestant Trinity College and Roman Catholic University College would retain most of their traditional identity. Financial considerations played a major role in launching the proposal, but personal attachment to one or the other of the two historic universities prevented a number of Irishmen from enthusiastically supporting the projected merger.

Belfast Meeting. Prime Minister Terence O'Neill of Northern Ireland and Prime Minister Lynch conferred in Belfast on December 11.

ISRAEL

The 1967 event that far overshadowed all others in Israel—and was, indeed, of major international concern—was the "Six Days' War" waged by Israel in June against its Arab neighbors—Syria, Jordan, and the United Arab Republic (Egypt). By the time a cease-fire was effected on June 10, Israel had occupied territory in all three countries.

Background of Conflict. While the Arab states had consistently maintained that, notwithstanding the armistices of 1949, they were still at war with Israel, a more immediate cause of the war was Israel's pumping of irrigation water from the Jordan River from 1964 onward. Collective Arab failure to interrupt this had led the Syrian government to train and equip a military organization (el-Fatah) for sabotage raids into Israel across its extensive armistice lines with Jordan and Lebanon, in addition to direct Syrian-Israeli clashes in the upper Jordan River valley and the Sea of Galilee area.

After Israel had retaliated on April 7, 1967, in a battle in which Israeli aircraft penetrated to within sight of the Syrian capital, Premier Levi Eshkol on May 11 threatened renewed aerial counteraction if the Syrian-inspired raids continued. The Syrian government then invoked its November 1966 defense pact with the UAR, and furnished Cairo with intelligence reports alleging a massive Israeli military buildup. The UAR mobilized its armed forces, ordered the UN emergency force out of the buffer positions in Sinai that it had held since 1957, and proclaimed the resumption of the blockade of Israel's Red Sea port of Elath. The port is Israel's commercial link with Asia and East Africa and the inlet of its pipeline.

War and Occupation. After two weeks of futile international diplomacy, and amid Arab propaganda and visions of victory, Israel replied on June 5 with an air and land offensive. The six days of fighting relieved Israel of the threat of slow strangulation and gave it shorter and more defensible borders. With the cease-fire, Israel held the Golan highlands from which the Syrian forces had harassed it; the entire West Bank of the Jordan River; the Old City of Jerusalem; the Gaza Strip; and the entire Sinai Peninsula west to the Suez Canal, except for the town of Port Fuad opposite Port Said.

While the United Nations had in 1947–48 fruitlessly recommended the internationalization of Jerusalem, Israel on June 28 proclaimed the absorption of the Arab sector of the divided city and announced plans to reconstruct the former Jewish quarter within the medieval walls, evicting Arab refugees settled there since 1949. Israel announced in September the resettlement of two localities, one near Hebron and the other near Jericho, that it had had to abandon in the 1948 war, and the settling of outpost positions in the Golan heights.

Aftermath of the War. Through the mediation of the International Red Cross, Israel parleyed with the Jordan government over readmitting to the West Bank some 200,000 Arabs who had fled east across the Jordan River during and after the June fighting. The Jordanian radio, however, called on those returning to harass the Israeli authorities, and by August 31 (the deadline imposed by Israel), Israel had issued permits to only 20,000 of some 130,000 applicants. An Israeli offer in October to accept some 40,000 more returning Arabs contained conditions unlikely to satisfy the Jordanian government.

Meanwhile, initial Israeli hopes of cooperation from the mayors of Arab West Bank towns were marred by strikes by teachers and others, which led Israel to deport five Arab notables in September. A wave of sabotage attacks, directed from Syria with Jordan's connivance, was answered by the Israeli Army's capture of some 270 raiders and the demolition of houses believed to be used by saboteurs.

In the UN General Assembly debate on the crisis, Israel insisted on Arab recognition and direct negotiation with Israel. These tortuous maneuvers were punctuated by artillery and aerial exchanges across the Jordan River and the Suez Canal, which the UAR blocked with sunken ships.

PICTORIAL PARADE

MOSHE DAYAN was appointed defense minister of Israel on June 1, 1967, shortly before the outbreak of war between Israel and its Arab neighbors. Following the Israeli victory in the 6-day struggle, he met with UN officials to arrange for a truce. In reply to demands that Israel restore conquered Arab territories, Dayan declared that direct negotiation between Israel and the Arab states was a prerequisite of a territorial settlement.

Dayan was born on a kibbutz at Deganiya, Palestine, on May 20, 1915. He was educated at an agricultural high school at Nahalal and received his military training as a member of Haganah, the Jewish militia. Later he served as an aide to British Capt. Orde Wingate. In 1939, when Haganah was outlawed, he was imprisoned by the British, but he was later released for World War II intelligence work in Syria. As a colonel in the Israeli Army he fought with distinction in the war against Arab forces in 1948–49. As chief of staff, he led Israeli forces to victory in the 1956 Sinai campaign.

ISRAELIS of all ages pitch in to prepare their country for war with Arab neighbors prior to the hostilities in June.

PARIS MATCH

On October 21, just as the British and Egyptian governments were reporting progress in talks that London hoped might lead to the reopening of the canal, Egyptian ships using Soviet rockets sank a British-built Israeli destroyer patrolling close to the 12-mile-limit of Egyptian territorial waters. Israel replied three days later by shelling the oil refinery at the port city of Suez, destroying some 80% of the UAR's refining capacity. A Soviet flotilla was moved to Port Said as a warning to Israel, and Egyptian spokesmen renewed their complaints of U. S. partisanship for Israel. Meanwhile, the U. S. State Department was reputed to be more conciliatory toward the Arabs.

On November 22 the UN Security Council unanimously adopted a British resolution embodying conditions for establishing peace in the Middle East: withdrawal of Israel from occupied Arab territories; the end of all states of belligerency; and acknowledgment of the territorial integrity and political independence of all countries in the area. A representative (Gunnar Jarring, a Swedish diplomat) was dispatched by the United Nations to promote agreement, but the immediate prospects for his success were not good.

(See also MIDDLE EAST; UNITED NATIONS.)

Economic Affairs. Before the June fighting, the campaign against chronic inflation and balance-of-payments deficits had produced in Israel an unprecedentedly high level of unemployment. This was only temporarily relieved by the mobilization of the armed forces. Finance Minister Pinhas Sapir, appealing in New York in October for renewed efforts by the Israel Bond Organization to restore the "dislocated economy," admitted that the war had cost hundreds of millions of dollars. While fund-raising abroad appreciably increased Israel's hard-currency reserves, a conference of 60 wealthy Jewish businessmen from 13 countries, convened in Jerusalem in August, told officials that private investment in Israeli industry was discouraged by limitless bureaucracy, heavy taxation, and the immense power of the Histadrut labor union.

The reuniting of divided Jerusalem and the opening up of the West Bank gave an immediate stimulus to tourism from abroad, though this depended on Israel's ability to maintain security against Arab guerrilla attacks. In the absence of negotiations with Jordan, Israeli policymakers contemplated the creation on the West Bank (with its population of 600,000, plus 70,000 Arabs in annexed Jerusalem) of an autonomous Arab state economically linked with

Israel, as proposed by the United Nations in 1947. To make the economy of such a state viable, however, would require long-term financial aid from Israel unless international support could be found. And such support—like that for an ambitious proposal to build nuclear-powered plants for the large-scale distillation of sea water—was awaiting nonexistent signs of a lowering of Israeli-Arab tension.

In November, in the wake of Britain's devaluation, Israel devalued its currency by 14.3%. It was expected that this stringent measure would help ease the basic problems of Israel's economy.

Political Affairs. Just before the war, Premier Eshkol had yielded to public pressure and widened his coalition government, appointing as defense minister Maj. Gen. Moshe Dayan, who had accompanied the former Premier David Ben-Gurion in the "Rafi" secession from Eshkol's Mapai party in 1965. Talks aimed at the reintegration of Rafi into a united labor party that would have a near-absolute majority in the Knesset were successful in January 1968, but the struggle for control persisted, with a revolt against Eshkol still a possibility.

Behind the public demonstrations of antagonism between Eshkol and Dayan there was essentially a conflict of age groups, in which the 72-year-old premier represented the Zionist old guard (largely immigrants from eastern Europe), while a younger generation favored the succession of Dayan or of Yigal Allon, the minister of labor. Both these men, aged 52 and 49 respectively, were born in Israel, spoke Arabic, had distinguished military records, and were reputed to have a more realistic approach to the issues that would decide Israel's next election in 1969.

ITALIAN LITERATURE

The competition for Italian literary prizes was not as lively in 1967 as it has sometimes been in recent years. The main awards failed to provoke the controversy they have so often in the past.

Prize Fiction. The greatly coveted Strega Prize went to *Poveri e semplici,* a new novel by Anna Maria Ortese, an author who is respected in Italian literary circles as a person of high moral qualities and endurance. She was previously known for her neorealistic novel *Il mare non bagna Napoli,* and for her fantasy *Iguana.* In the prizewinning *Poveri e semplici* she has tried to portray a group of Communist youths in post-war Milan who endure hardships and gradually lose their political illusions.

A more colorful prize-winner was *Il gabbiano azzurro* by Raffaelo Brignetti. This collection of short stories, winner of the Viareggio Prize, exalts the freedom of the sea, the beauty of the Mediterranean islands, and the mysteries of the ocean depths.

The most interesting author among the winners of minor literary prizes was Luigi Santucci. The hero of his prize-winning novel *Orfeo in paradiso* recalls his own childhood and then goes back in time to reconstruct his mother's life until the day of his own birth.

Other Fiction. Despite all the publicity given the prize laureates, the Italian public made best sellers of books by other authors. Leading the 1967 list of popular fiction was *La cosa buffa* by Giuseppe Berto, published at the end of 1966. This unusual love story of a poor Venetian student and a girl from a rich bourgeois family sold thousands of copies—even though it is a difficult book to read. Written in an original stylistic key, some sections of *La cosa buffa* sound like a parody of the 19th century narrative style. However, Berto's language is actually animated by a truly modern spirit of irony, humor, and psychological sophistication.

The popular success of Renato Chiotti's *Lo Scacco alla regina* is due not so much to its artistic merit as to its provocative subject matter. It tells of the sadomasochistic experiences of a rich and beautiful young woman who is engaged as the servant-slave of a despotic movie star.

Another popular novel, *I cattivi pensieri* by Sandro de Feo, also deals with sexual problems, but in a less pathological way. The hero of this novel loves his wife because she is so naturally feminine, but he ultimately contaminates her with his own intellectuality, and their marital relations suffer a dangerous reversal.

A short novel that attracted many readers in 1967 was Ercole Patti's *Un bellissimo novembre.* It portrays the passion of an adolescent for his young and flighty aunt.

Other widely read works were *Una cosa è una cosa,* a collection of 49 tales by Alberto Moravia; *Le notti della paura,* by Antonio Barolini, a novel about the Italian resistance movement in 1944; *L'assoluto naturale* by Goffredo Parise, a half-fictional dissertation on alienation in love; and *Violenza* by Maryse Ferro, a grim Gothic novel of passion and death.

The well-known representatives of the Italian school of neorealism continued to write in their usual manner, which appears quite dated today. Carlo Cassola's *Storia di Ada* is dry, linear, and monotonous; and Vasco Pratolini's *Allegoria e delusione,* the third volume of his historical chronicle of the Italian labor movement, lacks the freshness and vivacity of his early Tuscan novels.

On the other hand, the avant-garde writers also failed to produce anything significant, with the possible exception of Edoardo Sanguinetti, whose bizarre novel *Il gioco dell'oca* appeared in 1967.

Nonfiction. *Eros e Priapo* by Carlo Emilio Gadda, an outstanding chronicle of the Fascist era written with passion and indignation in the author's inimitable style, was published in 1967. Using newly coined words, mixing dialect with refined literary idiom, and alternating fantastic metaphors with verbal twists, Gadda depicts Italy as a raped victim of brutality, and offers a psychological and sexological interpretation of Mussolini's dictatorship.

Among books of a more academic character, *Storia delle crociate* by Francesco Tognasso emerges as a work of scholarship and imagination. Prizes were awarded to *Pensiero storico classico* by Santo Mazzarino and *Idea di città nel mondo romano* by Lydia Storono. Indro Montanelli's popular histories of Italy in various periods sold enormously well.

The centenary of Luigi Pirandello's birth gave rise to numerous essays and monographs on the playwright. The deaths of Emilio Cecchi, the dean of Italian literary critics, and of Enrico Emanueli, an outstanding journalist, were widely noted in the Italian press.

Poetry. The Viareggio Prize for poetry was awarded to the octogenarian Diego Valeri for his distinguished lifework, which includes numerous collections of poems, translations, and critical essays.

CAGE holds 152 alleged members of the Sicilian Mafia, brought to trial in October. Because the Catanzaro court was not big enough, case was heard in a gymnasium.

ITALY

The Italian economy fully recovered in 1967 after the devastating floods of late 1966. The nation's "center-left" government suffered some strains but remained intact as the country prepared for parliamentary elections in June 1968.

POLITICAL DEVELOPMENTS

Parliamentary debate in 1967 focused on economic issues. On February 9, Premier Aldo Moro's coalition government of Christian Democrats and Socialists suffered a narrow defeat in the Senate when it sought to impose a temporary freeze on welfare workers' wages. Although the coalition was split on this issue, the government decided not to resign, and on February 14 it won a vote of confidence.

A month later the Chamber of Deputies rejected Communist criticisms of the government's agricultural policies. Next it proceeded on March 17 to pass (306 to 203) the government's proposed 5-year economic plan for 1966–70. The Senate concurred on July 25. The 5-year plan is designed to achieve an annual average growth rate of 5%. On July 31 the cabinet approved a record $15.7 billion budget for 1968.

Sicilian Crisis. A political crisis in Sicily, stemming from the fall of the regional government in December 1966 amid charges of Mafia penetration, also aroused much controversy.

As Sicily prepared in May to celebrate the 20th anniversary of its regional autonomy, public confidence in the island's ability to govern itself effectively seemed to have reached a low ebb. Yet when elections took place on June 11 for a new Sicilian Assembly, the center-left ruling coalition won 54 seats, one more than in the previous election. The Communist party suffered a 10% loss of strength.

Other Issues. Elections also took place on the mainland in June and November for various municipal councils. There the Communists held their losses to a lower figure than in Sicily. In general, these elections bolstered the center-left coalition. Meanwhile, it was reported in April that membership in the Italian Communist party was down to 1,467,000—some 7% below 1966.

In the last half of 1967, Parliament approved an amendment to the constitution fixing the future terms of judges of the Constitutional Court at 9 years, without possibility of reappointment. Under the previous arrangement the term was 12 years.

The possibility of legalizing divorce under certain conditions came to the fore in January when the constitutional committee of the Chamber of Deputies ruled that such legislation was permissible, despite Vatican opposition.

Some anticlerical elements in the government wished to carry opposition to Church involvement in Italian affairs further and have Parliament terminate completely Italy's 1929 Concordat with the Vatican. Premier Moro proposed a compromise, calling for revision of certain clauses in the treaty. On October 5 his government won a vote of confidence on this policy in the lower house (304 to 204).

On October 31, after two weeks of filibuster from rightist foes, the Chamber of Deputies ap-

PREMIER Aldo Moro, after a temporary defeat for his government in the Senate, later won a vote of confidence.

ALDO MORO, premier of Italy, managed to retain control of his center-left coalition government in 1967 and continued to support the Atlantic alliance, western European unity, and improved East-West relations. In January he received Soviet president Nikolai Podgorny in Rome, and in April he conferred with President Lyndon B. Johnson in Cologne. In May he met with heads of Common Market nations in Rome.

Moro was born on Sept. 23, 1916 in the town of Maglie in southeastern Italy. He studied law at the University of Bari and taught there after obtaining his doctorate in 1940. A Christian Democrat, he entered national politics in 1946, became minister of justice in 1955, and was elected political secretary of his party in 1959. On Dec. 5, 1963 he formed the first coalition government since 1947 that included left-wing Socialists, and he became Italy's youngest premier.

proved a bill calling for elections in 1969 of semi-autonomous regional governments that have yet to be organized throughout the republic.

In December the Christian Democratic party held its 10th congress in Milan. It reaffirmed the center-left coalition and sought to give assurances that the party would not be a tool of the Vatican. It also emphasized that no Communists would be admitted to the government in the foreseeable future.

NATIONAL DEFENSE

On February 5, Italy launched an 8,850-ton guided missile cruiser the *Vittorio Veneto*, which will become the Italian navy's flagship. A month later Italy's first submarine built since World War II, the *Enrico Toti*, slid down the ways.

In January, President Giuseppe Saragat opened the NATO Defense College, which had been transferred from Paris to Rome. That same month Gen. Guido Vedovato succeeded Gen. Umberto de Martino as NATO Chief of Allied Land Forces, Southern Europe. In April, General Vedovato also assumed the post of Italian army chief of staff.

FOREIGN AFFAIRS

One of the most interesting developments in foreign relations during 1967 was the week-long visit in January by President Nikolai Podgorny of the USSR. He was the first Russian head of state to go to Italy since the visit of Nicholas II in 1909. Podgorny held talks with President Saragat, Premier Moro, and Communist party leader Luigi Longo. He also conferred with Pope Paul VI.

Italo-Soviet Accord. A joint communiqué issued by Presidents Saragat and Podgorny declared their agreement on the importance of "peaceful coexistence"; the need for general nuclear disarmament under effective international control; the desirability of studying further the possibilities of a general European conference to bring about better relations between eastern and western Europe; and a shared "concern over the situation in Vietnam, which is a danger to peace." The communiqué also expressed satisfaction at the extension of bilateral Italo-Soviet cooperation in economic, scientific, technical, and cultural fields, and stressed the importance of the

STEEPLE is all that can be seen of a church inundated by the waters of the Lago de Résia reservoir, a water storage area newly created by damming the Adige River in the north of Italy. The river, which flows down from the Italian Alps, is an important source of hydroelectric power.

agreement whereby the Italian firm of Fiat is to manufacture automobiles in the USSR.

The two chiefs of state revealed that talks were under way to facilitate construction of a pipeline to bring natural gas from the USSR to Italy; that an Italian industrial fair would be held in Moscow in 1968; that negotiations would soon begin for an agreement on oceangoing shipping between the two countries; and that an Italo-Soviet consular convention had been initialed.

In mid-May, Foreign Minister Amintore Fanfani traveled to Moscow for talks. He and Soviet Foreign Minister Andrei Gromyko signed the Italo-Soviet consular convention and other accords that had been initialed during Podgorny's recent visit to Italy. Simultaneously, the Italian airline Alitalia inaugurated service between Italy and Moscow.

European Matters. Relations with Austria were under strain in 1967 as a result of continuing disagreement over the status of German-speaking inhabitants of the South Tyrolean provinces of Italy. Although the Sudtiroler Volkspartei in Bolzano province approved on March 22 a "package" offer of autonomy made unilaterally by the Italian government, many South Tyroleans remained dissatisfied, and terrorism increased. On July 8, Austria threatened to take the case to the United Nations. Italy responded by threatening to oppose Austrian efforts for association in the Common Market and the European Steel and Coal Community.

The 10th anniversary of the Treaties of Rome that established the European Economic Community (EEC) and the European Atomic Energy Community (Euratom) was commemorated in Rome's Campidoglio on May 29 when President Saragat welcomed French President Charles de Gaulle and the foreign ministers of the member states. Italy tried in vain to persuade de Gaulle to modify his opposition to early admission of Britain into the EEC.

Relations With the United States. Italo-American relations continued to be good though not quite as serene as in previous years. Washington's efforts to win Italian support for the nuclear nonproliferation treaty and U. S. policies in Vietnam did not find an enthusiastic response.

When Vice President Hubert Humphrey visited Italy on March 30–April 3, he was spattered with paint at the Rome Opera House by demonstrators protesting American policy in Vietnam. Humphrey's talks with Italian officials were concerned chiefly with the nonproliferation treaty, the Kennedy Round of tariff negotiations, and problems of international monetary stability. During talks with Pope Paul VI, Humphrey discussed both Vietnam and the Vatican's plea for an intensified campaign against famine.

On September 18–19, President Saragat and Foreign Minister Fanfani visited President Johnson in Washington in the course of a three-week world tour. They made it clear that they were authorized to affirm Italy's basic support of NATO as a "fundamental guarantee of peace and security." They expressed reservations, however, about key provisions in the proposed treaty on nuclear nonproliferation. In their estimation, the present nuclear powers were asking too much of countries that did not possess nuclear weapons and giving too little in return.
